## EXPLANATION OF TABLES

## Overview

The tables in this booklet illustrate the foreign assistance budget request for FY 1996, which is a part of the President's Budget. The tables also include budget levels for FY 1994 and FY 1995 for comparison and, in Table 3, FY 1993. The levels for FYs 1994 and 1995 are based on the FY 1994 and FY 1995 appropriations acts and also reflect enacted rescissions. A proposed FY 1995 supplemental is reflected in Table 1 only.

The U.S. Agency for International Development (USAID) administers certain U.S. bilateral assistance programs including Development Assistance (DA), which includes the Development Assistance Fund, the Development Fund For Africa, other specialized DA accounts for credit programs and disaster assistance; the Economic Support Fund (ESF); programs for Central and Eastern Europe under the Support for East European Democracy Act (SEED); the New Independent States of the former Soviet Union (NIS) under the Freedom Support Act; and Food For Peace Titles II and III (P.L. 480). The tables follow USAID funding from the overall account summaries to the individual country program levels. There are differences between some of the tables because of the alternative budget concepts being presented.

Each table describes funding from one of several approaches. New budget authority (also referred to as new obligational authority or NOA) refers to the funding levels appropriated by Congress in a given year after certain legislatively mandated transfers or rescissions. For the actual results of the prior year, total budget authority (BA) refers to the new budget authority plus reappropriations (such as deobligations and reobligations) and transfers. The program level (or obligation level) is the same as the total BA plus obligations of unobligated balances carried over from prior years less unobligated balances carried into subsequent years. Funds appropriated are not always obligated within the same year if they are available for more than one year.

Table 1 and tables 4a and 4b reflect actual budget authority for FYs 1994 and 1995. Table 3 and tables 5a and 5b reflect program or obligation levels for FYs 1994 and 1995.

Amounts shown for FY 1996 represent proposed new budget authority on all tables and assume no unobligated balances from prior years.

## International Affairs Budget Authority Tracker - FYs 1994-1996

Budget Function 150 Summary (Table 1)

The International Affairs budget function "150 Account" is the portion of the President's Budget which pertains to International Affairs. Table 1 shows the budget authority for subfunctions of the 150 account for FY 1994 and FY 1995, and the request for FY 1996. Subfunction 151, International Development and Humanitarian Assistance, includes multilateral and bilateral assistance for Development Assistance and P.L. 480 food assistance. Programs under subfunction 152, International Security Assistance, help countries of strategic importance to the United States through Military Assistance and the Economic Support Fund (ESF). Subfunction 153, Conduct of Foreign Affairs, relates principally the operations of the State Department. Subfunction 154, Foreign Information and Exchange Activities, pertains to the operations of the U.S. Information Agency, the Board for International Broadcasting, and other public information activities. Subfunction 155, International Financial Programs, provides funding for the Export-Import Bank and

the Foreign Military Sales Trust Fund. The 150 account is under the direction of the Secretary of State.

Budget Authority by Account (Table 2)

Programs and activities within the International Affairs 150 Account fall under the jurisdiction of three appropriation subcommittees. Table 2 shows the 150 account subdivided according to subcommittee jurisdiction (Foreign Operations, Agriculture, and Commerce/Justice/State) for FYs 1994 through 1996.

- o Foreign Operations contains most of the programs under subfunction 151 (International Development and Humanitarian Assistance) including USAID-administered DA and humanitarian assistance, and subfunction 152 (International Security Assistance) including the USAID-administered ESF programs. Other programs in the Foreign Operations classification include multilateral assistance, other bilateral assistance agencies such as the Trade and Development Agency, the Peace Corps, and the African Development Foundation, plus military assistance, and Export-Import Bank contributions.
- o The Agriculture portion of the 150 Account refers principally to the food assistance provided under P.L. 480 (subfunction 151) which is appropriated to the U.S. Department of Agriculture (USDA), but, in the case of Title II and Title III programs, is managed by USAID.
- o The Commerce/Justice/State portion of the budget reflects Department of State administrative operations (Subfunction 153), the operations of the United States Information Agency (USIA) and other public information programs, and assessed contributions to international organizations (subfunction 154).
- o The Mandatory portion of the budget includes receipts and certain reconciling items such as trust funds which are outside the responsibility of the appropriations committees.

Table 2 shows total budget authority levels for both FYs 1994 and 1995 and the request level for FY 1996. The total for the 150 account is the same as that indicated for Table 1.

USAID Program Trends: FYs 1993-1996 (Table 3)

This table compares obligations (program levels) for all USAID-administered accounts for FYs 1993 through FY 1996. In any given year the program level varies from the new budget authority shown on other budget tables (see explanation in overview).

"All Spigots" - U.S. Economic and Military Assistance Levels Appropriated Levels: FYs 1994-1996 (Tables 4A, 4B and 4C)

There are two sets of "all spigots" tables: One set (Tables 4A, 4B and 4C) shows appropriated levels for FYs 1994 and 1995 and the requested appropriations for FY 1996; the other set reflects the program levels for FYs 1994 and 1995.

The appropriations tables show the levels by bureau and country for DA, ESF, SAI, NIS, Peace Corps, Narcotics, PL 480, and Military Assistance accounts.

Appropriated levels are those enacted by the Congress and do not include carryover amounts, transfers or funds available under the deobligation/reobligation authority.

**NOTE:** For FYs 1995 and 1996, country totals include, for USAID-managed programs, attributions from regional or central funds. Affected regional or central programs will show a decrease from prior year funds due to these attributions.

**"All Spigots" - U.S. Economic and Military Assistance Levels- Program (Obligation) Levels: FY 1994 (actuals) and FY 1995 (estimates) - (Tables 5A and 5B)**

These "All-Spigots" tables show the program level (obligations) by bureau and country for DA, ESF, SAI, and NIS. The Peace Corps, Narcotics, PL 480, and Military Assistance data, however, is the same as in the appropriation spigots.

The FY 1995 program level on Table 5 equals the funds available for obligation on the FY 1995 program trends table 3. Table 5 represents new budget authority plus any country allocations of prior year funds which are known at this time. (Not all of the unobligated prior year funds are allocated to specific countries at this time). Table 5 FY 1995 allocations change until the year's obligations are finalized at the end of the fiscal year.

The program level tables for FY 1994 and FY 1995 are included because the obligated level is considered to be the most complete picture of assistance actually provided to a particular recipient in a given year.

**NOTE:** Country totals for FYs 1995-1996 include, for USAID-managed programs, attributions from regional or central funds for programs that can be directly attributed to a particular country. Affected regional or central programs will show a decrease from prior years due to these attributions.

#### **International Organizations and Programs (IO&P) (Table 6)**

USAID cooperates with the Department of State on the planning and monitoring of voluntary contributions to the United Nations and other international organizations. Table 6 shows the BA funding levels for FYs 1994-1995 and the request level for FY 1996 for the International Organizations and Programs. The table, which is also presented in the FY 1996 Department of State Congressional Presentation, breaks out IO&P funding by the categories of Building Democracy and the four sustainable development themes. These contributions are different from the assessed contributions to the United Nations which are included under subfunction 153.

#### **P.L. 480 Spigots - Titles II and III Program Levels (Tables 7A and 7B)**

USAID is responsible for the administration and implementation of P.L. 480 Titles II and III. Table 7A (Title III) and Table 7B (Title II) show actual program levels for FY 1994, estimated levels for FY 1995 and the FY 1996 request for transport, voluntary agencies (Volags), the World Food Program (WFP), and the International Emergency Food Reserve (IEFR). Tables for Title II programs are broken out into two sections. The first section reflects funding at the country level. The second section reflects tonnage amounts.

## EXPORT-IMPORT BANK OF THE UNITED STATES

FISCAL YEAR 1996 BUDGET REQUEST

The Export-Import Bank is chartered by Congress by the Export-Import Bank Act of 1945, as amended. Its basic purpose is to assist in financing the export sale of U.S. goods and services. The Bank's authority and resources are used to assume commercial and political risks that exporters or private sector institutions are unable to undertake, overcome limitations in private sector export financing, assist U.S. exporters to meet foreign officially sponsored export credit competition, and provide leadership and guidance in export financing to the U.S. exporting and banking communities and to foreign borrowers. The Bank is also actively assisting small and medium-size businesses to increase their exports.

To accomplish its objectives the Bank is requesting appropriations totaling \$870 million for fiscal year 1996. Specifically, the Bank is requesting:

- o an appropriation of \$723 million for the cost of providing loan, guarantee, and insurance commitments,
- o an appropriation of \$100 million specifically for tied aid grants,
- o an appropriation of \$47 million for administrative expenses

These levels provide for an increase over probable FY 1995 activity levels. The FY 1995 enacted levels are:

- o an appropriation of \$686.6 million for the cost of providing loan, guarantee, and insurance commitments,
- o an appropriation of \$100 million specifically for tied aid grants,
- o an appropriation of \$45.2 million for administrative expenses.

## BUDGET REFORM FOR CREDIT PROGRAMS

The Federal Credit Reform Act of 1990 introduced major changes in the way federal credit programs are treated in the budget. Credit reform attempts to institute a consistent and comparable basis of measuring the costs of cash and credit transactions by recognizing and appropriating the subsidy costs of the program up front. The essence of credit reform is to separate the subsidy costs from the nonsubsidized cash flows of credit transactions and to focus on the former for budgeting and analysis.

Under the current treatment all appropriations for subsidy costs arising from direct loan obligations and loan guarantee commitments made in FY 1992 and beyond will be recorded in program accounts shown in the budget. In FY 1996, Ex-Im is requesting several appropriations totaling \$870 million for the estimated costs of providing loans and guarantees and for the Bank's administrative expenses. The appropriation for loans, tied aid grants, guarantees, and insurance activity is \$823 million; of which up to \$100 million may be used for tied aid grants; and a \$47 million appropriation is requested for administrative expenses.

### **SUBSIDY CALCULATION**

The subsidy was calculated using a model developed by OMB. The projected cash flows were generated using estimates of average disbursement and repayment patterns, and interest and fee income. These cash flows were then adjusted for possible defaults using the OMB estimated risk premium for various risk categories. The resulting projected net cash flows were then discounted to arrive at a present value subsidy for the budgeted level of activity.

The subsidy appropriation for program activity represents the Bank's best estimate of the potential costs of the FY 1996 credit programs over time. The appropriation provides a reserve for contingencies, defaults, and losses in future years. Given all of the economic and financial variables which could change, the Bank believes that the total appropriation requested for its credit programs will be sufficient to meet critical demand.

### **MULTI-YEAR AUTHORITY**

The Bank's FY 1995 appropriation provides for a two year commitment period for \$786.5 million and provides that \$100 million may be used for Tied Aid purposes and is available until expended. The Bank's FY 1996 budget also requests that the \$823 million subsidy appropriation remain available for two years with the \$100 million request for tied aid grants remaining available until expended.

## REINVENTING EX-IM BANK

During the past two years, a variety of Ex-Im bank task forces have examined virtually all aspects of the Bank's programs and the way that those programs are administered with the objective of making the Bank a more efficient and effective supporter of U. S. exports. These task forces have made a number of recommendations which have been vetted within the Bank and the exporting community.

The Bank's budget reflects the intent to make the Bank's subsidy appropriation have the maximum possible impact on increasing U. S. exports. In particular, the Bank will increase its exposure in more risky markets where U.S. exporters' need for the Bank is the greatest and will pursue a more aggressive use of funds budgeted for tied aid. The Bank intends to stretch its subsidy to support such activities through fee adjustments, encouraging limited risk sharing, and tightening programs such as the Credit Guarantee Facilities.

## IMPLEMENTATION

Ex-Im's activity is shown in four different budget accounts:

Liquidating Account - this account shows activity for obligations incurred prior to FY 1992. Outlays from the activity in this account are counted in the budget totals and affect the government deficit. For FY 1995, outlays are projected to be a negative \$5.9 million and for FY 1996, a negative \$624.2 million.

Program Account - this account shows the amount of the FY 1996 subsidy by program and the estimated activity supported by the subsidy. The direct loan subsidy is \$97,900 thousand based on an estimated loan level of \$5,307 million for a subsidy rate of 1.84%. Tied-aid authorizations are estimated at \$100 million. Since these are 100% grants, the subsidy is \$100 million. The guarantee and insurance subsidy is \$658,300 thousand based on an estimated authorization level of \$15,210 million for a subsidy rate of 4.33%. The subsidy amounts will be "disbursed" to the financing accounts (described below) over time as loan disbursements and claim payments are made on the underlying transactions. The amount of the subsidy disbursed in a given year to the financing accounts will be counted as outlays in the budget totals and will affect the government deficit. For FY 1996 these outlays are estimated to be \$669.6 million.

Loan Financing Account - The loan financing account will show all of the cash flows associated with loans authorized in FY 1992 and beyond; disbursements, repayments, interest income, interest expense, and subsidy payments from the program account. The outlays, or net cash flows of the financing account will not be counted in the budget totals and will not affect the total government deficit.

Guarantee Financing Account - Identical to the loan financing account except that it will reflect the cash flows for the government associated with the guarantee and insurance programs.

DIRECT CREDIT PROGRAM

The direct credit program addresses the inability of the private sector to offer financing for U.S. capital goods exports on terms sufficiently competitive to enable a sale to go forward when compared to financing offered by foreign official export credit agencies to their exporters. By addressing this problem, the U.S. Government attempts to ensure that U.S. exporters do not suffer widespread losses of export sales as a result of subsidized financing offers by other governments to their exporters.

The decision to operate subsidized U.S. Government supported direct credit program is based on a belief that the long-run benefits to the U.S. economy resulting from U.S. capital goods manufacturers being competitive from a financing standpoint with their foreign counterparts outweigh the costs of offering subsidized credits to finance such exports. That is, the economic benefit of a subsidized direct loan program arises from using the program's resources to neutralize the effect of export credit subsidies offered by other governments. If Ex-Im targets its resources to those export transactions which face such foreign credit competition, the Bank permits foreign buyers' purchase decisions to be based on market factors (price, technology, service) as opposed to a non-market factor (the availability of subsidized credit from a foreign government). To the extent that Ex-Im activities allow market forces to determine purchase decisions, Ex-Im helps to maintain the optimal level of U.S. productivity by ensuring that U.S. capital goods industries operate at market-determined (not foreign government determined) output levels.

The interest rates charged by Ex-Im bank are the minimum rates adopted by member nations of the Organizations of Economic Cooperation and Development (OECD). The OECD interest rate system was revised effective February 15, 1992 to significantly reduce the subsidy in lending by official export credit agencies. For most markets, the minimum interest rates are now based on a system which more closely reflects market rates. These rates which change monthly, are based on average U.S. Treasury bond rates plus a spread and are calculated as follows:

<u>Repayment Period</u>	<u>Formula</u>	<u>Current Rates</u>	
		<u>2/15/95</u>	<u>3/14/95</u>
Up to 5 yrs.	3-yr. Treasury rate + 1%	8.66	
over 5 - 8.5 yrs.	5-yr. Treasury rate + 1%	8.76	
over 8.5 yrs.	7-yr. Treasury rate + 1%	8.79	

For the poorest countries (OECD country category III) an alternate minimum interest rate continues to exist based on the weighted average of interest rates on government bond issues of the following countries: U.S., U.K., Japan, Germany, France. This rate is subject to review semiannually and may be used if lower than the applicable market-based rate above. The rate of 7.35% is currently in effect and applicable through July 14, 1995.

Interest rates for aircraft loans are reviewed every two weeks. At February 28 they were 8.80% for loans up to 10 years and 9.35% for loans over 10 years. Due to the market related nature of aircraft financing, credit support is generally offered under the Financial Guarantee Program rather than Direct Loan Program to effectively meet foreign competition.

#### TIED AID GRANTS

Ex-Im bank's tied aid is reviewed annually. In FY 1993 the Bank committed \$26.7 million for tied aid cases. The FY 1993 Appropriation Act permitted the Bank to carry-over into FY 1994 up to \$200 million of that year's appropriation to be used for tied aid purposes. The Bank's actual carry-over totaled \$121.4 million.

In FY 1994 the Bank did not obligate any of the \$171.4 million appropriation available in FY 94 for tied aid (the \$121.4 million carryover plus the \$50 million additional provided in the FY 1994 Appropriations Act). The Bank expects to commit \$100 million in FY 1995 and FY 1996 for tied aid grants with an anticipated carryover from FY 1996 into FY 1997 of \$171.4 million.

#### GUARANTEE AND INSURANCE PROGRAMS

The Bank increases private financial participation in U.S. export sales by guaranteeing or insuring banks and exporters against certain commercial and political risks of non payment involved in export transactions. Since financing is a critical element in many export sales, the guarantee and insurance programs help exporters increase their export sales through increased availability of financing from private capital markets.

The exporter insurance program encourages additional exports by overcoming financing and risk perception constraints by efficiently providing risk protection for those exports requiring short-term (up to 180 days) and medium-term (up to five years) credit terms and for which private sector credit insurance is not available. At the present time the capacity of the private sector to offer export credit insurance is limited, indicating an important role for the Bank in this area, particularly with regard to small and medium-size businesses.

For FY 1996 it is estimated that guarantee and insurance authorizations will be \$15,210 million.

FINANCIAL CONDITION

At the end of FY 1994, the Bank's reserve for possible loan and claim losses amounted to \$4.1 billion. The reserve is based on the Bank's evaluation of its loan, guarantee, and insurance portfolio taking into consideration a variety of factors, including repayment status of loans, assessment of future risks, and worldwide economic and political conditions. The \$4.1 billion reserve, composed of \$2.5 billion for loans and \$1.6 billion for guarantee and insurance claims is equal to about 40% of the Bank's outstanding loans and outstanding and pending guarantee and insurance claims.

It is important to emphasize that a loss reserve does not mean that loans are written off. It is simply a recognition that because of current economic conditions, the prospects at this point in time for full collection of some loans and guarantees is sufficiently far into the future that a reduced value for these types of loans should be recorded in the Bank's financial statements. This is reviewed on a semiannual basis and adjustments are made to the reserve as appropriate.

The provision for loan and claim loss reduced the Bank's gross income in FY 1994 by \$902.8 million. This added to an operating loss of \$22.8 million resulting in a total reported net loss for FY 1994 of \$806.3 million. Beginning in FY 1992 the Bank receives permanent indefinite appropriations for the purpose of paying principal and interest due the Federal Financing Bank. The estimated amount to be used for FY 1995 is \$890 million. The amount for FY 1996 is \$100 million.

The existence of a loan loss reserve will not change the analysis of judgments currently being made to approve or deny new loan applications. Since the inception of the Bank, in order to approve a new loan, the Board of Directors has had to determine that the loan provides reasonable assurance of repayment. This criteria will continue to be met.

Operating losses during the period 1982 to 1993 were caused for the most part by negative interest rate spreads. This was caused by foreign export credit agencies offering interest rates lower, at times substantially lower, than Ex-Im Bank's cost of funds. To counter foreign competition, Ex-Im Bank was forced to match these lower interest rates and then borrow at much higher rates to fund them. Indeed, in 1986, Congress mandated that Ex-Im Bank offer competitive interest rates.

Ex-Im Bank strongly supported negotiations to implement rules that would avoid interest rate mismatches. The OECD did not adopt such rules until 1991, and implementation did not become complete until this year. During this 15 year period of skewed competition Ex-Im Bank incurred "losses" due to interest rate mismatches of \$4.5 billion. Significant interest rate mismatches should not occur again barring sudden, dramatic movements in US interest rates. Rather we have achieved an international arrangement where interest rates will be tied to Ex-Im Bank's cost of borrowing.

ADMINISTRATIVE EXPENSES

The administrative expense budget of the Bank provides funding for personnel, support services, and operating expenses. The Bank's FY 1996 budget requests an appropriation of \$47,000,000 for administrative expenses that will support a full-time equivalent personnel level of 436. Of the \$47,000,000 requested, \$32,105,000 (68%) is for compensation and benefits, \$3,713,000 (7.9%) is for rent of office space, \$1,143,000 (2.4%) is for computer system development and computer upgrades, \$1,484,000 (3.2%) is for travel. The remaining balance of \$8,555,000 will be used for necessary operating expenses such as telecommunications, purchases of supplies, support services, equipment leasing and maintenance, printing, postage, and other service contracts.

The Bank is committed to providing necessary services to the exporting community on a timely basis, increasing debt collection efforts, processing claim payments expediently and recovering those payments to the fullest extent possible, providing a thorough portfolio and risk analysis on a regular basis, reaching new exporters and expanding small business awareness of their export potential, and continuing an intensive Management Information System effort which will provide critical information to help management evaluate risk, target program resources and evaluate program results. The requested increase in the administrative expense appropriation is planned to be used to continue and complete the reinvention process.

I. Appropriations Request	

**EXECUTIVE SUMMARY OF APPROPRIATIONS REQUEST**

For FY 1996, the Administration requests the authority for OPIC to spend \$34 million of its own resources for subsidy to support its global credit program. This will support approximately \$1.1 billion in direct and guaranteed loans (in areas other than the New Independent States (NIS)). As was done last year, this request is in the form of a limitation on amounts to be transferred from OPIC's revolving fund rather than a direct appropriation.

In addition, the Administration requests \$45 million in subsidy as a direct appropriation to support OPIC credit programs in the NIS. This appropriation will support approximately \$690 million in financing activity. This direct funding to OPIC will replace time-consuming transfers from other agencies' appropriations -- the mechanism that was used for funding OPIC's NIS credit program in previous years.

As in FY 1995, OPIC will source its global credit subsidy and administrative expenses from its revolving fund -- consistent with OPIC's statutory authority to operate as a self-sustaining government corporation.

### Summary of OPIC's FY 1996 Budget Request

OPIC's budget request for FY 1996 is outlined below. The program results on page 3 demonstrate the significant leverage of OPIC's budget authority. To implement its programs prudently, OPIC obtained additional personnel resources for FY 1995 and 1996. With the assistance of these increased personnel resources, OPIC is better positioned than ever to achieve positive results. Not only will OPIC achieve the development and economic results listed below, but it will generate \$96.5 million in negative budget authority from its collections to offset the costs of other international affairs programs.

SUMMARY OF OPIC's FY 1996 BUDGET REQUEST				
(\$000's)	FY 1993	FY 1994	FY 1995 Est.	FY 1996 Req.
<b>Funding Sources</b>

## **POLITICAL RISK INSURANCE PROGRAM**

OPIC's political risk insurance program represents a highly successful effort to provide long-term "catastrophic risk" protection, unavailable from commercial sources, to U.S. investors on a basis consistent with sound underwriting principles. Without such protection, much potential U.S. investment--and the associated benefits of that investment for host country economies and for U.S. economic and foreign policy interests--would not occur. The insurance program, like OPIC's finance program, is customer-driven and policy-constrained. It must be flexible and responsive to client needs or it will neither provide the protection required for investment to go forward, nor permit OPIC to achieve the balance of portfolio risks that is the essence of prudent underwriting. Like the finance program, it must operate within strict policy guidelines to assure that the benefits of the investment supported are not offset by harmful effects. In reality, OPIC insurance constitutes a bargain between OPIC and investors: OPIC provides a service that would otherwise be unavailable, and in exchange the investor agrees both to pay insurance premiums and to conduct the project in a manner that is consistent with OPIC policy--be it with respect to environmental impact, worker rights, U.S. job protection or other criteria.

The insurance program must respond to investment trends and opportunities. Although it is sometimes difficult to predict the future, it is possible to examine existing trends as a basis for planning for resource requirements in FY 1996.

### **Insurance Program Trends and Developments**

OPIC responds to clients by developing new products and contract forms, as well as by tailoring coverage to meet investor needs. In FY 1994, we completed revision of the institutional lenders contract for financial institutions. This coverage has been used primarily by banks over the past few years as an important tool in facilitating limited recourse project financing. OPIC is working with rating agencies and investment banks to develop coverage that would appeal to the capital markets, a virtually untapped source of new capital for projects sponsored by U.S. investors in developing countries. We anticipate that this will comprise a growing part of the portfolio by FY 1996.

There has also been renewed interest in OPIC's oil and gas coverage, particularly in Russia and the NIS. In anticipation of increased activity, OPIC retained an outside expert to ensure that OPIC staff has a thorough understanding of the oil and gas business and the implications for OPIC's insurance contracts. The results of this study will also be used to revise contracts to provide better coverage to investors during the exploration phase of investment. OPIC anticipates that during the next two years, oil companies will be seeking significant incremental coverage for investment in this sector.

Insurance officers regularly review and revise other contract forms as well. If a contract does not exist to fit a proposed investment format, OPIC will tailor one to the new

requirements. Over the past year, appropriate coverage has been developed for a number of unusual investment structures in Russia and elsewhere. This approach is labor intensive, but client responsive, and is expected to continue to play an important role in the insurance program's business in FY 1996.

To attract a broader book of business from clients with multiple investments, OPIC has also developed a risk sharing arrangement. The purpose of this arrangement is to encourage a given company to insure with OPIC a diversified range of risks in a broad group of countries and to retain additional risk. These arrangements are expected to enhance OPIC's ability to keep existing clients and to improve portfolio balance. OPIC executed the first agreement in FY 1994, and by FY 1996, this new product will be an important tool for maintaining balance in the insurance portfolio.

### **Program Objectives**

OPIC issued over \$6 billion of insurance in FY 1994, a 116 percent increase over the \$2.8 billion issued in FY 1993. For FY 1995, over \$1 billion of approved coverage will be for projects in Russia and the New Independent States. In other regions, new issuance will represent at least a 50 percent increase over last year to maintain appropriate balance in portfolio concentrations. New opportunities in Asia and Latin America are important for this very reason. Since assistance for U.S. private investment in the NIS is an important foreign policy goal, and OPIC expects to continue to be in the forefront of encouraging U.S. business by providing insurance, it is critical that we make the most of opportunities in other regions to maintain adequate balance in the portfolio.

The more insurance that OPIC issues elsewhere in the world, the more it can prudently issue in foreign policy target regions including the NIS, South Africa and Gaza/West Bank. The windows of opportunity in Asia include a number of large infrastructure projects (especially power) that are scheduled for private investment within the next few years. OPIC is well positioned to assist U.S. companies competing for these opportunities.

### Summary of Insurance Activity

The table below provides an overview of the past and projected volume of insurance activity (see definitions below).

(\$000)	Actual FY 1993	Actual FY 1994	Estimate FY 1995	Estimate FY 1996
<b>INSURANCE PROGRAM ACTIVITY</b>				
Aggregate insurance outstanding (MIA), start of year:	\$11,857,282	\$11,991,668	\$16,177,487	\$17,872,759
Aggregate insurance issued during year:	\$2,827,922	\$6,059,677	\$6,500,000	\$8,000,000
Aggregate insurance reductions and cancellations:	(\$2,693,537)	(\$1,873,878)	(\$4,804,708)	(\$5,308,210)
Aggregate insurance outstanding (MIA), end of year:	\$11,991,668	\$16,177,467	\$17,872,759	\$20,564,550
<b>STATUS OF INSURANCE AUTHORITY</b>				
Statutory authority limitation:	\$9,000,000	\$9,000,000	\$13,500,000	\$13,500,000
Maximum contingent liability (MCL), end of year:	\$6,518,871	\$8,229,353	\$9,651,290	\$11,104,857
Current exposure to claims, end of year:	\$4,465,410	\$5,086,836	\$6,612,921	\$7,608,883
<b>Insurance premium revenue</b>	<b>\$44,073</b>	<b>\$48,257</b>	<b>\$55,000</b>	<b>\$65,000</b>

#### Aggregate Maximum Insured Amounts (MIA)

Aggregate MIA is OPIC's primary measurement of issuance. It reflects the face value of all coverage issued.

#### Maximum Contingent Liability (MCL)

MCL is the basis used to measure OPIC's outstanding insurance, which is limited by the statutory authorization in the Foreign Assistance Act. Under most outstanding OPIC contracts, investors may obtain all three coverages--inconvertibility, expropriation, and political violence--but aggregate claim payments may not exceed the single highest coverage amount for each contract. The measurement of MCL is limited accordingly.

#### Current Exposure to Claims

Actual exposure to claim payments is less than total outstanding insurance as measured by MCL, because insured investors elect "current" coverage levels that reflect the current value of their investment, which may be significantly below their maximum insured amount. Thus MCL, like MIA, includes insurance for which OPIC is committed but not currently at risk. Current exposure to claims is based on the assumption that the coverage under which a claim would be brought would be the coverage with the highest amount of current insurance in force.

## **FINANCE PROGRAM**

Through loan guaranties and direct loans, OPIC provides medium- and long-term project financing to ventures involving significant equity and/or management participation by U.S. businesses. OPIC's Finance program operates as an investment bank, customizing and helping to structure a complete financial package for each project. OPIC works closely with other financial institutions on projects requiring multiple lenders.

OPIC also supports growth funds--unique blends of public and private sectors--through which additional equity capital can be made available to projects involving U.S. investors. The owners of the OPIC-supported growth funds usually are institutional investors, such as insurance companies and pension funds. The managers generally are firms with venture capital investment expertise. OPIC supports them with a guaranty of debt covering a significant portion of their capitalization. OPIC participates in the fund management through advisory boards and may make political risk insurance available to cover the funds' investments.

### **Finance Program Trends and Developments**

To meet the sizable increases in demand and current investor needs, the amount of financing that OPIC may commit to a single project has been raised to a new maximum limit of \$200 million per project.

We expect the trend toward larger projects will continue in fiscal year 1996. We further expect our average lending per project to increase to over \$80 million in FY 1996. This increase in size is due to the growing percentage of new financing outside the NIS to support large, complex infrastructure projects, primarily in Asia and Latin America. Examples of such projects committed in FY 1994 include two power projects in India, funded in part with OPIC-guaranteed loans totaling \$175 million, which collectively are expected to generate nearly \$1 billion in estimated initial U.S. procurement. Another example is OPIC's FY 1994 commitment of \$200 million in financing to support a portion of a large telecommunications project in Argentina, which has initial U.S. procurement estimated at \$360 million. Because these large projects in other regions produce truly impressive U.S. and developmental effects as well as provide balance for our growing NIS portfolio, we believe they are a very effective use of OPIC's resources.

In addition to the surging demand for large projects, OPIC is also developing new mechanisms for better serving its small business clients. For example, OPIC recently approved a \$20 million direct loan to the Allied International Small Business Fund which will make equity and quasi-equity investments in projects sponsored by U.S. small businesses in OPIC-eligible countries. In Haiti, OPIC recently provided a \$50 million loan guaranty to the Bank of Boston for on-lending to multiple projects, many of which will be sponsored by U.S. small businesses. Other efforts to improve customer service include developing standard documents to streamline the legal process and

consideration of mechanisms by which OPIC could offer an equity component along with OPIC loans or loan guarantees as part of a project finance package.

### **Credit Subsidy**

The Federal Credit Reform Act has had a substantial impact on OPIC's Finance program operations. Prior to Credit Reform, OPIC operated like a commercial lending institution, recording loss reserves and reporting revenues in accordance with Generally Accepted Accounting Principles (GAAP). OPIC's credit management, based on a capital adequacy concept, was considered sound and prudent according to its independent financial auditors.

When Credit Reform was adopted, OPIC's method of operation changed. The primary objective of Credit Reform is to identify the present value of the anticipated long-term costs of loans and guarantees to be issued each year, so that they may be compared more easily with the costs of other federal programs. This cost is referred to as the "subsidy" cost of credit programs. With the advent of Credit Reform, OPIC's focus shifted from overall capital adequacy to the estimation of year by year subsidy.

As it has done each year since the inception of Credit Reform, OPIC analyzed actual cash flows from FY 1980 through FY 1993 and reviewed historical averages in preparing its projections of subsidy costs for the FY 1996 budget. Using this basis, and reflecting the specific industry and geographic trends cited earlier, OPIC has developed different subsidy allocation formulas for its FY 1996 global projects and its projects in the NIS.

Global projects: This category represents OPIC's worldwide portfolio (excluding activities in the NIS) in traditional investment sectors such as oil and gas, agribusiness, mining and manufacturing, plus the burgeoning area of large infrastructure project development. There has been a recent surge of interest on the part of U.S. companies in investing in large infrastructure projects. This increase in infrastructure development, particularly in Asia and Latin America, should also increase the demand for financing for other types of projects since non-infrastructure projects are supported by the presence of better infrastructural components such as transportation, telecommunications, and power generation.

OPIC expects to allocate approximately 30 percent of its global subsidy budget authority to non-infrastructure projects and 70 percent to infrastructure projects (because of their large per-project size). Projects in OPIC's global portfolio are generally lower risk than NIS projects and thus have lower default and higher recovery ratios. The FY 1996 weighted average subsidy for the global projects portfolio is expected to be 3.03 percent.

NIS: While OPIC's portfolio has historically been carefully balanced in terms of regional and industry concentrations, the demand for financing has increased significantly in the New Independent States. In response to this unique demand, and in recognition of the

higher relative risks associated with this region, OPIC has developed separate subsidy assumptions relating specifically to the NIS. This is the first time OPIC has calculated risk on a regional basis, but such action was deemed an important step in recognition of the reality that a large share of OPIC financing is likely to be dedicated to major projects in the region.

The average subsidy for NIS projects is 6.54 percent, more than double the global subsidy rate. The higher subsidy estimate reflects OPIC's conservatism as well as its recognition of the higher political, business and regulatory risks associated with countries simultaneously undergoing both political change and transition to market economies.

### **Program Objectives**

In FY 1994, OPIC committed \$1.7 billion in financing. Of this amount over \$1 billion is supporting projects located in 18 developing countries in Asia, Latin America, Africa and Eastern and Central Europe, with the remaining \$700 million in the NIS. OPIC achieved this extraordinary production volume (more than quadrupling the dollar amount committed the prior year) within existing staffing levels by reallocating existing administrative resources to the finance program.

Recognizing the intensive effort required to manage this expanded portfolio, OPIC has added the additional staff necessary in 1995 and 1996 to complete the project analysis, project reviews, documentation and disbursement of these project loans. The NIS and infrastructure projects in particular are complex, requiring intensive negotiations and specialized due diligence.

Project commitment represents only one stage in the "life cycle" of a loan. Although it is the crucial, early stage during which many critical project issues are identified and resolved, it is followed by other equally important developmental benchmarks. Each of these stages requires the consistent and long-term attention of professional staff. Now, despite the overall trend to reduce the size of the government, the Administration has allocated additional staff to OPIC to manage the remaining stages of the process as prudently as possible.

Each OPIC loan officer must perform wide-ranging duties in order to ensure the quality of the loan portfolio. To reach the "*commitment stage*" of a project, a loan officer must prepare a loan paper, perform comprehensive due diligence, and assure that the project is structured to meet OPIC's credit policy requirements. This stage also involves general research, financial analysis, domestic and international site visits, and procurement of technical experts to assess various aspects of new projects, and pre-commitment negotiations with project sponsors, attorneys and co-lenders.

As projects reach the "*disbursement stage*", following commitment, more detailed negotiation of loan terms and conditions is required. These sessions may include not

only co-lenders and sponsors, but also corporate trust agents, local counsel, sponsor and OPIC counsel, financial advisors, placement agents and government officials.

Following initial disbursement, a project enters the "monitoring stage", and at this time a loan officer closely oversees developments pertaining to each project in his/her assigned portfolio. Monitoring requires the active involvement of a loan officer and, at critical points, an OPIC attorney and Treasury personnel in diverse tasks ranging from approving subsequent loan disbursements, reviewing a project's quarterly financial and operating reports, performing foreign site visits, recommending and approving project changes or amendments, determining compliance with loan terms, and preparing annual reviews and monitoring plans.

The loan officers in the Finance Department are supported by legal counsel, economic and environmental policy analysts, loan administration and portfolio analysis personnel in the Treasury Department, loan workout officers, and the Treasurer's independent credit review function.

### Summary of Finance Request

The table below provides an overview of the past and projected volume of finance activity. OPIC is maintaining a conservative approach to subsidy estimates as program authorities grow and as the nature of its business evolves.

(\$000)	<u>Actual</u>	<u>Actual</u>	<u>Estimate</u>	<u>Estimate</u>
	<u>FY 1993</u>	<u>FY 1994<sup>1</sup></u>	<u>FY 1995<sup>2</sup></u>	<u>FY 1996</u>
Global Subsidy BA	\$9,800	\$21,065	\$33,944	\$34,000
Average Global Subsidy Percent	2.42%	2.33%	2.50%	3.03%
New Global Loan Commitments	\$405,333	\$1,054,000	\$1,357,000	\$1,122,000
NIS Subsidy BA	--	\$54,000 <sup>3</sup>	\$57,000	\$45,000
Average NIS Subsidy Percent	--	4.30%	5.00%	6.54%
New NIS Loan Commitments	--	\$699,000 <sup>3</sup>	\$1,140,000	\$688,000
Total Outstanding Finance Portfolio	\$1,367,000	\$2,906,795	\$4,636,012	\$5,752,114
Total Number of Active Projects	110	132	157	179

<sup>1</sup> FY 1994 subsidy includes a \$54 million transfer for the NIS and a \$12 million transfer from Ex-Im Bank.

<sup>2</sup> FY 1995 subsidy includes a \$57 million transfer for the NIS.

<sup>3</sup> \$699 million in NIS commitments occurred in FY 1994. An additional \$450 million associated with FY 1994 subsidy budget authority has been approved.

## **PROGRAM MANAGEMENT AND SUPPORT**

For the first time since the advent of Credit Reform in FY 1992, both the Administration and Congress approved a unified administrative budget for OPIC for FY 1995, funded from OPIC's revolving fund. For the first three years under Credit Reform, OPIC had direct appropriations for its credit activities and separate funding from OPIC's revolving fund for its noncredit programs. The approval of a unified administrative budget allowed for greater synergy among OPIC's internal operations and offered management the flexibility necessary to respond effectively and immediately to changing needs. OPIC also received additional administrative budget authority for fiscal 1995, sufficient to cover the costs of the expanded program activity.

For FY 1996 the Administration again proposes a unified administrative budget funded from OPIC's revolving fund. This is consistent with OPIC's self-sustaining mandate and will help to maintain synergy between the credit and non-credit programs. It also acknowledges the multi-year nature of OPIC's programs and the fact that use of the revolving funds is the most effective means of insuring that the resources essential for prudent credit and insurance operations are available without regard to fiscal year limitations.

## **CONCLUSION**

The FY 1996 OPIC budget proposal represents consensus on the critical role OPIC's trade and investment programs play in today's rapidly globalizing economy. OPIC has taken a leadership role in promoting U.S. investment in new emerging markets. The results speak for themselves in terms of U.S. jobs created, U.S. exports generated and foreign policy goals achieved.

## Appropriations Request

As in FY 1995, OPIC is requesting only a limitation on the amount of subsidy it can incur in its global credit program rather than a direct appropriation for that purpose. OPIC proposes language similar to that approved in FY 1995, which provided that funds will be derived from the agency's reserves for all worldwide programs. In addition, OPIC requests a direct appropriation of subsidy budget authority to fund the Finance program in the NIS.

### NONCREDIT ACCOUNT

The Overseas Private Investment Corporation is authorized to make, without regard to fiscal year limitations, as provided by 31 U.S.C. 9104, such expenditures and commitments within the limits of funds available to it and in accordance with law as may be necessary (including an amount for official reception and representation expenses which shall not exceed \$35,000): *Provided*, That project-specific transaction costs, including direct and indirect costs incurred in claims settlements, and other direct costs associated with services provided to specific investors or potential investors pursuant to section 234 of the Foreign Assistance Act of 1961, shall not be considered administrative expenses for the purposes of this heading.

### PROGRAM ACCOUNT

For the cost of direct and guaranteed loans, \$34,000,000, as authorized by section 234 of the Foreign Assistance Act of 1961, to be derived by transfer from the Overseas Private Investment Corporation Noncredit Account: *Provided*, That such costs, including the cost of modifying such loans, shall be as defined in section 502 of the Congressional Budget Act of 1974: *Provided further*, That such sums shall be available for direct loan obligations and loan guaranty commitments incurred or made during fiscal years 1996 and 1997: *Provided further*, That such sums shall remain available through fiscal year 2004 for the disbursement of direct and guaranteed loans obligated in fiscal year 1996, and through fiscal year 2005 for the disbursement of direct and guaranteed loans obligated in fiscal year 1997. For the cost of the direct and guaranteed loans in the New Independent States of the Former Soviet Union, \$45,000,000, to remain available until expended, as authorized by section 234 of the Foreign Assistance Act of 1961. In addition, sums for administrative expenses to carry out the credit program may be derived from amounts made available for administrative expenses to carry out the credit and insurance programs in the Overseas Private Investment Corporation Noncredit Account and merged with said account.

CONGRESSIONAL PRESENTATION  
Fiscal Year 1996

## U.S. TRADE AND DEVELOPMENT AGENCY

March 1, 1995

To the United States Congress:

We at the U.S. Trade and Development Agency (TDA) are pleased to submit to you our budget request for FY 1996. The Agency is administered under the authority of Section 661 of the Foreign Assistance Act of 1961, as amended, most recently by the Jobs Through Exports Act of 1992.

The U.S. Government has a strategic interest in promoting U.S. exports as part of our development assistance efforts overseas. TDA uses its limited resources to enhance American sales to infrastructure and industrial projects in developing and middle-income countries. This assistance advances the development priorities of these countries while creating jobs for Americans through U.S. exports.

TDA has four basic products to accomplish this goal: *Feasibility studies*, or business plans, that evaluate the technical, economic, and financial aspects of a development project and are required by financial institutions in assessing the project's creditworthiness; *Orientation visits*, or reverse trade missions, and U.S. business *conferences* which serve to familiarize foreign decision makers with U.S. goods and services and to provide them an opportunity to meet with U.S. suppliers; Trade-related *training grants* that provide technical and managerial training on the use of U.S. equipment and technology; and *Technical assistance* on an as-needed basis to respond to the complex demands of a given project when required expertise is unavailable from the host country. Through flexibility, the appropriate mechanism, and quick responsiveness, TDA is able to provide strategic assistance to help U.S. companies get a toe-hold in projects overseas.

We look forward to working with the Congress to make our program a model of efficiency and effectiveness.

Sincerely,

J. Joseph Grandmaison  
Director

Room 309 SA-16, Washington, D.C. 20523-1602  
Telephone (703) 875-4357 • Fax (703) 875-4009

## I. EXECUTIVE SUMMARY

The Administration is requesting \$67 million to fund the U.S. Trade and Development Agency (TDA) in FY 1996. The following table compares the FY 1996 budget request with appropriations from past years.

Table I. Appropriations History  
(\$ in Millions)

FY 1989	FY 1990	FY 1991	FY 1992	FY 1993	FY 1994	FY 1995	FY 1996 Request
\$25	\$31.5 <sup>1</sup>	\$35	\$34.6 <sup>2</sup>	\$40	\$40	\$44.98	\$67 <sup>3</sup>

1 The original appropriation was \$32 million; the amount shown is the post-sequester amount.

2 The original appropriation was \$35 million; the amount shown is the post-sequester amount.

3 The request includes funding for the NIS. FY 1995 Appropriations with NIS funding was \$62 million.

In the past year TDA has continued its efforts to be a signature agency. It has sharpened its operating procedures to become even more entrepreneurial in its management style; maintained its low overhead and lean level of staffing; continued to work closely with other government agencies, especially within the context of the Trade Promotion Coordinating Committee (TPCC); and broadened and strengthened its ties with the U.S. business community. It is these and other factors that enable TDA to make a contribution to the President's and Congress' agenda of export promotion and job creation that is far in excess of the dollars it spends.

Other countries have established sizable and sophisticated programs to assist their firms in securing contracts on major infrastructure projects, which they recognize as representing significant market opportunities for their goods. TDA's role, in part, is to assist in efforts to create a level playing field for American businesses competing in these markets. This task becomes more and more challenging as foreign governments continue to implement their commercially-oriented foreign assistance programs.

TDA is able to respond quickly to the needs of U.S. companies as they attempt to develop and maintain markets throughout a changing and increasingly competitive world. Through the funding of project planning activities, TDA gets U.S. companies in at the ground level of major infrastructure projects in developing and middle-income countries. The involvement of American firms at this stage provides them with market entry, exposure, and information, thus helping them to establish a position in markets that are otherwise difficult to penetrate.

As a small and flexible Federal government agency, TDA is able to creatively leverage our resources by working closely with our colleagues in other departments and agencies. Over the past year, TDA has accepted a leadership role in the workings of the Trade Promotion Coordinating Committee (TPCC). This has helped establish even closer working relationships between TDA and the other trade promotion agencies, especially the other trade finance agencies -- OPIC and Ex-Im. We have also developed close working relationships with other agencies throughout the government. TDA works closely with the State Department, and the agency takes special pride in the relationship we enjoy with many of our American Ambassadors. We are one of the relatively few tools that our Ambassadors have to further U.S. business interests abroad. TDA relies upon our embassies overseas for leads on projects that might warrant our attention and involvement.

TDA also relies upon the Department of Commerce's U.S. & Foreign Commercial Service to assist in identifying projects. Since we do not maintain foreign offices, US&FCS is crucial to our success. TDA makes use of the expertise in technical agencies including the Department of Energy, the Federal Aviation Administration, and the Environmental Protection Agency.

TDA has a clear-cut focus: to create jobs for Americans through the promotion of U.S. exports. As a foreign assistance program, we are able to create the linkage between U.S. engineering and equipment manufacturing companies and the large development projects of the countries in which we operate. It is this mission that TDA will continue to fulfill as aggressively as its budgetary resources allow.

## II. TDA's BUDGET REQUEST

The Administration's FY 1996 budget request for the U.S. Trade and Development Agency is \$67 million. This includes \$17 million for the NIS program, which in previous years has been provided to the agency as a transfer, and \$50 million for the core budget. Of the total funds, \$61.5 million is allocated for program activities and \$5.5 million for operating expenses.

Overhead accounts for less than 10 percent of the agency's expenses. In fact, between FY 1993 and FY 1994, when the TDA program budget (including transfers) increased by 39 percent, the OE budget decreased by 2 percent. The following table summarizes the request and provides recent historical information.

	<b>FY 1994 Actual</b>	<b>FY 1995 Estimate</b>	<b>FY 1996 Request</b>
TDA Appropriations	\$40,000	\$44,986	\$67,000
TDA Obligations	\$58,551	\$76,986	\$67,000
Programs	\$54,013	\$71,891	\$61,500
Operating Expenses	\$4,538	\$5,095	\$5,500

FY 94 obligations include a total of \$18,557 in transfer funds

FY 1995 estimates include a total of \$32,000 in transfer funds

\$13,700 FY 1994 unobligated transfers

\$18,300 of new transfers

The Administration is requesting \$5,000 to be made available for representational purposes, which is important to the agency's outreach efforts. These funds will allow the Director to present the agency in an appropriate

fashion to high level government and business officials and to meet official representational needs in the growing number of countries where TDA has programs.

The Administration is also requesting that FY 1996 funding remain available for TDA obligation until it is expended. NIS funds, which are included in the FY 1996 budget request, have been "no year" funds in the past. In addition, the decisions of foreign entities to accept our grant offers are not always driven by fiscal year deadlines, and work with overseas posts is complicated by distance. "No year" status will ensure that program funds are spent most effectively on the purposes for which they are appropriated.

In FY 1996, TDA commits itself to be even more effective in responding to the commitment of the Administration and Congress to encourage and support the American business community in their efforts to sell U.S. goods and services in foreign markets and thereby preserve and create jobs here at home.

### III. TDA GETS RESULTS

In FY 1994, TDA obligated \$54 million for 383 program activities in 67 countries around the world. These activities support 299 major infrastructure projects, each offering export opportunities for U.S. companies. Over the next five years, the agency expects these projects to be associated with \$1.35 billion of additional exports, thus supporting thousands of jobs in the United States.

Since its inception in 1980, projects assisted by TDA have been associated with over \$6 billion worth of sales for U.S. companies -- more than twenty-five times the amount TDA expended on its support of the projects. As additional projects that TDA has assisted have reached the stage of implementation, even more exports will be forthcoming. A partial list of U.S. companies that have already sold goods or services to TDA-assisted projects is contained in Appendix A of this document.

This year's evaluation of TDA's past projects has produced further evidence of our contribution to expanded U.S. exports. Some recent examples are discussed below:

- This past year TDA provided a \$450,000 training grant to Weather Information Technologies, Inc. (WITI), a company with 25 employees located in Boulder, Colorado. The TDA grant helped them win a contract worth \$15.3 million. WITI was competing against a British company for the design and installation of a wind shear warning system at the new airport in Hong Kong. While the quality of the U.S. equipment was recognized as being state-of-the-art, the cost of the British system was significantly lower. The TDA training grant added value to the WITI bid and tipped the balance in WITI's favor. In addition, WITI's expertise in weather radar and foothold in Hong Kong on this project was influential in Raytheon Company of Lexington, Massachusetts winning a contract to supply \$12.8 million in weather radar to this project -- Raytheon's first sale of this radar outside the United States.

- Also this year, TDA made a \$75,000 grant to the Hungarian firm Hungaro DigiTel for a technology comparison of the various VSAT (Very Small Aperture Terminal) satellite communications systems manufactured throughout the world. The study found U.S. technology to be superior, which resulted in Hungaro DigiTel's interest in an AT&T VSAT hub station. The Ex-Im Bank provided a \$3 million loan to facilitate the purchase. Additional exports of \$3-5 million are expected over the next three years.
- TDA funded feasibility studies on three projects involving the protection of the environment in Mexico, representing over \$500 million of potential business for U.S. companies. Earlier last year TDA hosted a conference on the results of these feasibility studies. Over 100 American companies came to the conference to meet Mexican government officials and Mexican firms, to learn first hand about the nature of the export opportunities, and to get a head start on the foreign competition.

#### IV. THE TDA APPROACH

TDA is managed very much like a small business. It is lean, with an authorized ceiling of 38 positions. Because of its size and the way it is managed, TDA is able to respond quickly to changes in policy brought about by changing world conditions. It is this rapid response capability that is one of the agency's distinguishing characteristics.

TDA focuses on infrastructure projects undertaken by middle-income and developing countries. Drawing upon information from the U.S. business community and other government agencies -- such as the Commerce Department's U.S. and Foreign Commercial Service (US&FCS) and the State Department's economic officers -- TDA identifies those projects with significant export potential. By working closely with foreign governments to get large and small American businesses involved in the early stages of project planning, TDA builds partnerships that can mature into significant business opportunities as the project moves from the planning to implementation stage.

When TDA selects a project, it considers a number of factors, ranging from U.S. foreign policy objectives to the project's size. But the major consideration is the potential return on the foreign assistance dollars -- measured by the project's likely impact on the exportation of U.S. goods and services, and creation of jobs here in the United States.

Every TDA project must meet the following criteria:

- **Development Priority.** The odds must favor the implementation of a project; it must be a priority of the host country. Before TDA becomes involved, the agency must receive a formal request from the host country, and the U.S. embassy must endorse TDA's participation.
- **U.S. Export Potential.** A project must represent an opportunity for U.S. goods or services sales that are many times greater than the cost of TDA assistance.

- **Financial Availability.** Implementation financing that is not tied to non-U.S. sources must be available or likely, and the procurement process must be open to U.S. firms.
- **Competition.** A project must present a situation in which it is likely that U.S. companies will face strong competition from foreign companies that receive subsidies and other support from their governments.

In each project, TDA strives to maximize the leverage of the funds by making grants when the money is most needed and when it will most likely impact favorably U.S. exports.

### **Financial Packaging**

While TDA does not offer project financing, it assists the project sponsor in developing a financing strategy and a bankable document necessary for approaching potential lending sources. The majority of capital projects in the developing world are financed either by the multilateral development banks (MDBs), such as the World Bank and other regional banks, or through bilateral development assistance programs. To date, TDA activities have been focused on projects that are likely to be financed by the MDBs, the Ex-Im Bank, OPIC, private commercial banks, or a host country's own resources.

A financial strategy component is normally included in any TDA-funded feasibility study. The competitiveness of the financing package offered by a U.S. firm is a key determinant of whether U.S. exports follow a feasibility study, and TDA is placing increased emphasis on this phase of the project.

### **Small Business Outreach**

Our small size also makes us sensitive to the needs of small businesses, and they are an important part of the TDA program. Many of the contractors chosen to arrange orientation visits and technical symposia for TDA are small companies. All of TDA's pre-feasibility studies are done by small companies, which enables them to gain experience and exposure in international business. And historically, small businesses have won over 12 percent of the

feasibility studies we fund. Moreover, small businesses are often used as subcontractors on TDA-funded feasibility studies.

An analysis of the key components of TDA's program indicates that more than half of all TDA-funded activities are carried out by small and minority-owned businesses, and that these companies receive 20% to 25% of all disbursements of TDA funds. But we want to do more, and we have already increased our outreach efforts in an attempt to make more small businesses aware of our program.

TDA publishes two monthly newsletters -- the *Early Bird* and the *Bi-Weekly* -- which provide to U.S. companies early notice of project opportunities. We often participate in conferences throughout the United States to inform businesses about TDA's programs. We encourage small businesses to bid on TDA-funded feasibility studies and to pursue subcontracting opportunities with newly approved contractors of feasibility studies announced in the TDA newsletters. We also encourage small companies to register in our data base and to bid on TDA Definitional Missions where appropriate.

In FY 1996, TDA will continue to pursue an aggressive outreach to small and minority-owned businesses.

## V. REGIONAL PROGRAMS

The budget request for FY 1996 would be used to meet the anticipated demand for TDA's traditional activities: feasibility studies, orientation visits, and training grants, which are carried out in developing and middle-income countries around the world.

In 1995, TDA significantly increased its funding of programs in the Newly Independent States (NIS) and responded to emerging opportunities in the Middle East which resulted from the Administration's efforts to assist with the peace process. The agency also continued its funding of requests from Central Europe, Latin America, the expanding economies of Asia, and the emerging markets in Africa.

Each of these program areas has experienced increasing demand for TDA assistance as a result of various factors, including:

- the propensity of industrialized nations in Europe and Asia to provide direct business subsidies and soft loans to secure business for their commercial sector that places U.S. businesses in an unfair competitive position;
- increased opportunities in those countries experiencing rapid economic growth;
- widespread knowledge of the nature and effectiveness of TDA's program among developing and middle-income country officials, U.S. Government officials, and U.S. and foreign private sector entities;
- increased privatization brought about by the demise of centrally-planned economies;
- hesitancy and/or limited resources of many U.S. firms to underwrite the costs of feasibility studies in regions where there is political and economic uncertainty; and

- heightened demand for technology to modernize and/or expand transportation infrastructure, telecommunications, management and information, power generation, environmental, and numerous other systems.

As TDA becomes more widely known for its role in the U.S. Government's export promotion initiative, demand for the TDA program is similarly increasing. In addition, the cumulative number of projects managed places new and increasing pressure on the organization's support infrastructure because these projects are active for three years or more, and they must be monitored even as new activities come on line. The composite number of projects under active monitoring in any year in the FY 1994-1996 period is over 1,000.

The Administration's requested FY 1996 budget will allow the agency to continue to play an important role in export enhancement at a time when both the need and the opportunity exist for increasing American business involvement in foreign capital projects.

#### **AFRICA/MIDDLE EAST**

FY 1994 investment:

*\$5 million*

*50 activities*

*9.3% of budget*

TDA signed its first grant in this region thirteen years ago. Since that time, over 100 grants have been awarded to assist the economic development process in the 65 countries in the region and to help position U.S. firms to capture export opportunities in capital projects. Already TDA's investments in the region has been associated with \$440 million in U.S. exports.

The political and economic liberalization taking place in many countries of Africa and the Middle East have created exceptional export opportunities for American companies in the region. TDA's involvement helps ensure that U.S. business can capture a share of these markets as foreign competitors

quickly move to assist in the rebuilding process. In FY 1994, TDA funded activities in 15 countries, and procurement officials from at least 15 other countries participated in TDA orientation visits to the United States. Already TDA's investment in the region has been associated with \$440 million in U.S. exports.

Africa is the least developed of the regions in which TDA operates. Consequently, the emphasis of TDA's Africa and Middle East program has predominantly been on projects that enhance basic economic needs and priorities. As such, TDA's most dominant activity in this region is feasibility studies, primarily due to the demand for technology to support the needs in power, water, telecommunications and transportation systems. While most capital projects in Africa are sponsored by government entities, private investor projects are increasing. In certain areas, such as the West Bank and Gaza and South Africa, orientation visits have served initially to meet the agency's goals and the U.S. Government foreign policy initiatives.

TDA has seen increased interest on the part of U.S. firms in project development in South Africa since elections were held last April. This profound political change, and the lifting of international sanctions against South Africa, provide an opportunity for U.S. firms to impact the European stronghold on this market. South Africa has been designated a "Big Emerging Market" by the Trade Promotion Coordinating Committee, and TDA plans to act strategically to promote U.S. commercial involvement in major infrastructure projects there and in the surrounding countries.

#### **ASIA/PACIFIC**

FY 1994 investment:

*\$11 million*

*71 activities*

*20.5% of budget*

TDA has long recognized the export potential in the Asia/Pacific region and historically has allocated a large proportion of its resources to this market. In FY 1994, TDA funded activities in 11 countries, primarily in the energy, transportation, and telecommunications sectors. It is estimated that projects

supported by the agency have been associated with over \$2.8 billion in sales by American companies, 53% of all TDA associated exports.

Over the past several years, this region -- particularly the member countries of the Association of Southeast Asian Nations (ASEAN) -- has experienced strong economic growth. Most Asian governments, in an effort to keep pace with this aggressive economic expansion, have embarked on ambitious infrastructure development plans costing billions of dollars and covering a wide range of sectors. TDA, with its involvement in the planning stages of infrastructure and industrial projects, is naturally positioned to help U.S. companies pursue the opportunities that are arising as a result of these investments.

TDA's program emphasizes host country technical definition of priorities, strong inclusion of host project sponsors in management of the project, and development of long-term business relationships between the project sponsors and the U.S. private sector. This cooperative approach often results in local counterpart agencies committing to cost-sharing TDA-supported initiatives. Because most countries in Asia normally have the resources to follow through to project implementation, these relationships can result in significant business opportunities for U.S. companies prepared to pursue them.

The energy sector is expected to remain one of the largest growth markets in the region over the next few years, with a shift in emphasis towards private sector projects. Increasingly TDA funding for power projects is geared towards activities supporting the private sector involvement; in other words, a shift away from funding feasibility studies, toward training grants and orientation visits.

TDA has also seen a rapid expansion of investment in airports and air safety infrastructure throughout the region, a trend which is expected to continue through the end of the decade. Despite possessing a strong technological edge, U.S. firms face stiff competition in this sector from European and Japanese companies, which bring strong political and financial support from their governments. During FY 1994, TDA initiated studies, orientation visits, and training grants aimed at leveraging U.S. exports in airport and air traffic control

projects in Indonesia, Malaysia, Thailand, Macao, Hong Kong, and South Korea. For example, a TDA training grant offered in support of a U.S. company bid on satellite equipment resulted in the selection of the U.S. firm for the contract valued at more than \$60 million.

TDA has responded and will continue to respond to the booming economic growth in this region. The Asia Region includes four Big Emerging Markets (Indonesia, South Korea, China Region and India) as defined by the Trade Promotion Coordinating Committee, and TDA will concentrate its FY 1995 and FY 1996 funding to reflect the priority assigned to expanding exports in those countries.

## EUROPE

FY 1994 investment:

*\$11.5 million*

*99 activities*

*21.3% of budget*

TDA began its program in Central and Eastern Europe in 1989, when trade relations were re-established after four decades of central control. While these emerging economies are relatively small, opportunities for U.S. exports are excellent. In Turkey, TDA has been active since 1982, providing over \$12 million in funding for feasibility studies and other activities. During FY 1994, the 14 countries in which TDA funded activities were: Albania, Bulgaria, Croatia, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Macedonia, Poland, Romania, Slovak Republic, Slovenia, and Turkey. To date, projects supported by the agency in this region have been associated with over \$670 million in U.S. exports.

As this region continues its transformation toward building a democracy and a functioning free economy, TDA is moving effectively to ensure U.S. company participation in modernization projects in their core infrastructural sectors, primarily energy, manufacturing, transportation, and telecommunications. In Prague last January, President Clinton pledged support to help build the infrastructure in the region with the help of the U.S. private sector.

With privatization taking hold, U.S. technology is being sought to help Central and East European manufacturers define their technology needs in such areas as process control technology, information management, and pollution reduction.

Also as a result of the demand for modernization and efficiency, TDA is supporting projects that promote cooperative efforts at sharing resources among countries. This is true in the energy sector where TDA provided funding for an electric power grid control system feasibility study for Estonia, Latvia and Lithuania which will help the three countries manage electricity sharing, and in the development of regional transportation infrastructure, specifically in the areas of air traffic, rail and bridge projects. For example, TDA has begun an effort to assist the Balkan countries in the development of their transportation infrastructure, providing feasibility studies for airport development and air traffic control in Macedonia and Bulgaria. A rail project and the Danube River bridge project are also being considered.

In FY 1996, it is expected that both the energy and telecommunications sectors will continue to be important, and demand is expected to increase in manufacturing and information and process control technology. It is also expected that there will be increasing demand for TDA to provide financial packaging assistance with East European enterprises that plan to make capital investments.

TDA is giving more support to private sector investor projects in the region as U.S. companies are increasingly requesting TDA's help to overcome strong West European competition and the risks associated with working in emerging markets. With Poland and Turkey recently designated as "Big Emerging Market" countries by the TPCC, and with the proposed phasing out of U.S. A.I.D. funding for some of the Central and East European countries, TDA resources will become even more important to keeping the U.S. competitive in this region.

**LATIN AMERICA/CARIBBEAN**

FY 1994 investment:

\$10 million

67 activities

18.4% of budget

Given its proximity to the United States, Latin America is viewed as a natural market for U.S. exporters. TDA has maintained an active program in Latin America since the agency's inception more than a decade ago, and activities in the region have been associated with over \$1 billion in U.S. exports. In FY 1994, approximately \$8.5 million were obligated for export promotion activities in the region. These funds were used to support activities in the following 15 countries: Argentina, Belize, Bolivia, Brazil, Chile, Ecuador, Grenada, Guatemala, Mexico, Nicaragua, Panama, Peru, Trinidad and Tobago, Uruguay, and Venezuela.

Latin America has made significant economic progress during the past year as the region has become more politically stable, notably in Brazil, Peru and Venezuela. These changes bring greater prosperity to the marketplace and give U.S. businesses more incentive to pursue the export potential. The Administration's trade and investment policy toward the region has reinforced the current trend toward privatization, liberal trade and open investment opportunities.

As plans for modernization and expansion take place in most core infrastructural sectors, opportunities for U.S. businesses to become involved increase, primarily in the sectors of water treatment and environmental remediation, privately-produced power, and telecommunications. TDA has dispatched a team to South America to identify up to 125 potential projects in these sectors which would provide major export opportunities for U.S. companies.

The trend toward privatization in the developing world, and perhaps especially in Latin America, has required TDA to adjust its programs to accommodate the growing needs of the private or newly privatized economic sectors. TDA is currently funding five privatization studies in Bolivia for the telecommunications, electric power, and oil and gas sectors. TDA has

supported a number of other successful activities geared toward privatization in Latin America, including orientation visits, studies, and conferences.

Although the bulk of TDA's on-going program in Latin America continues to be in the larger economies of Argentina, Chile, Mexico and Venezuela, TDA has been successful in identifying viable projects in smaller countries such as Trinidad and Tobago, Bolivia, and Ecuador. While TDA's program in Brazil has been limited to orientation visits, we would hope to be able to offer a full program as early as this Fall.

TDA's sectoral focus in Latin America varies from country to country: In FY 1994, TDA signed a \$945,000 grant to study the requirement for the modernization of the public health system in Venezuela which has a U.S. export potential of \$120 million. TDA has funded a growing number of environmentally-related activities in Mexico, Argentina, and some of the other countries in the region.

The demand for TDA funding continues to grow rapidly. U.S. business interest in the region has increased significantly, but American companies often face heavily supported foreign competitors from Canada, Europe, and Asia, thus making increased TDA support crucial to their eventual commercial success.

#### **NEWLY INDEPENDENT STATES (NIS)**

FY 1994 investment:

*\$16 million*

*92 activities*

*29.6% of budget*

TDA has been actively involved in the NIS since being given authority to operate there nearly three years ago. In FY 1994, the bulk of TDA's activities in the NIS have been in Russia, the largest republic, but the agency also is actively involved in the republics of Armenia, Belarus, Georgia, Kazakhstan, Turkmenistan, and Ukraine.

Despite the tremendous long-term market opportunities in the NIS, the political and economic uncertainties have made American companies

unwilling or unable to assume the risks of underwriting the costs of feasibility studies. TDA has found that by funding a portion of the study, U.S. companies are willing to contribute the remainder. This has been the case in almost all of the more than 80 projects that TDA has been involved with in this region.

TDA's focus in the NIS is on projects involving potential U.S. investment on co-production deals which include the participation of local NIS entities. This approach of encouraging the development of the private sector in the NIS supports the Administration's efforts to change the focus of its NIS assistance program from direct aid to support for trade and investment.

In addition, TDA-supported private sector projects in the NIS represent an important source of investment candidates for OPIC, thus enhancing the cooperation between our two agencies.

TDA has also funded a large number of orientation visits in support of sectoral activities in the region.

While the largest potential market in the NIS is Russia, TDA will be focusing its efforts in the coming year on becoming involved in more projects in the non-Russian NIS, in line with Administration policy. Energy is expected to continue as a dominant sector here, although it is anticipated that projects involving minerals and mining and manufacturing will increase as NIS countries continue to modernize their industrial base.

#### **SPECIAL PROJECTS**

FY 1994 investment:

*\$0.5 million*

*4 activities*

*0.8% of budget*

TDA's first Multilateral Development Bank (MDB) grant was established at the African Development Bank in 1986. Since then, TDA has provided \$11,631,000 for a total of five grants at the World Bank, the International Finance Corporation (IFC), the European Bank for Reconstruction and Development

(EBRD), and the African Development Bank. These funds have been used to support a total of 205 separate activities and have proven to be very effective export generators. TDA's fund at the IFC, for example, has produced an export multiplier of 178 to 1.

Over the years, U.S. businesses have benefited by TDA's relationship and support of the MDBs, which are important sources of project implementation financing. These benefits are two-fold:

First, TDA gains valuable early information on viable projects. TDA's funds are used by the MDBs to hire U.S. consultants to compile information on a project's potential and recommend whether or not the bank should provide project financing. The consultants also report these findings to TDA. By assisting the MDBs at the earliest stages of project identification and development, TDA enhances the likelihood that U.S. firms will continue to be involved as the project moves toward implementation.

Information obtained through the MDBs is provided to the U.S. business community through two of the agency's publications, the *TDA Bi-Weekly* and the *TDA Early Bird*; through training that TDA provides on how to compete effectively for World Bank procurement awards; and through tracking and follow-up mechanisms that the agency provides after the conclusion of the MDB's work.

Second, TDA's involvement helps keep U.S. firms on an equal footing with their foreign competitors. Most firms from other developed countries receive concessional financing for their bids on major capital projects in developing countries, causing American firms to be at a distinct disadvantage. MDB-financed projects follow international competitive procedures, which allow U.S. firms to compete equally with their competitors. Through the information U.S. firms receive from TDA on MDB-financed projects, they are in a better position to determine which procurements to pursue -- and ultimately win.

During the past year, TDA improved its funds mechanism to strengthen its existing relationships with the EBRD and the IFC, so as to better serve the U.S.

business community. The new funds are called "Evergreen Funds" because they can be readily accessed from TDA program funds, and they provide a mechanism for TDA to support feasibility studies on specific projects at both the EBRD and the IFC on a more timely and consistent basis. The level of each fund is set at \$500,000. Since the funds are readily available, potential export opportunities for American companies arising from bank projects will not be lost due to the unavailability of the monies necessary to conduct feasibility and other technical studies.

With effective administration of funds, primarily through the new "Evergreen" mechanism, TDA will provide more opportunities for American companies to win MDB contracts, particularly at the World Bank, which oversees procurement of \$20 billion a year in goods and services.

## VI. CONCLUSION

TDA has developed a successful and respected program, and is eager to do more to assist in the promotion of U.S. exports and the creation of jobs for Americans. TDA's activities are an integral, unique part of our country's efforts to increase U.S. exports, which is critical to the fulfillment of the goal of creating 8 million new jobs. TDA is eager to continue to meet the needs of the U.S. business community and to ensure that overseas market opportunities are not lost to our foreign competitors.

The market opportunities in infrastructure and industrial projects of developing and middle-income countries continue to grow rapidly. For the American business community to fully participate in these opportunities, strong support for a range of export promotion functions is required. Given the necessary resources, TDA's experienced program staff is prepared to meet these challenges.

APPENDIX

**PARTIAL LIST OF COMPANIES  
THAT HAVE SOLD GOODS OR SERVICES  
TO TDA-ASSISTED PROJECTS,  
BY STATE**

March, 1995

State	City	U.S. Company

## DESCRIPTION OF ACCOUNTS IN DETAIL:

IBRD	International Bank for Reconstruction and Development
IDA	International Development Association
IFC	International Finance Corporation
MIGA	Multilateral Investment Guarantee Agency
GEF	Global Environment Facility
IDB	Inter-American Development Bank
FSO	Fund for Special Operations
IIC	Inter-American Investment Corporation
MIF	The Multilateral Investment Fund
ADB	Asian Development Bank
ADF	Asian Development Fund
AFDB	African Development Bank
AFDF	African Development Fund
EBRD	European Bank for Reconstruction and Development
NADBANK	North American Development Bank
IMF/ESAF	Enhanced Structural Adjustment Facility
DEBT/ POOREST	Debt Reduction For The Poorest Countries
DEBT/ BUYBACKS	Debt Buybacks

**EXECUTIVE SUMMARY**

The Administration requests \$2,303.9 million in appropriations for the multilateral development banks in FY 1996. These institutions clearly advance U.S. interests. We have consistently supported them because: they benefit our economy, are good value for the money, forward U.S. strategic interests, and are responsive to U.S. leadership.

**The Development Banks Benefit the U.S. Economy**

The multilateral development banks provide substantial direct and indirect economic benefits to the United States. The Banks work with their borrowers to create open, market-oriented, economies, encourage lower tariff barriers, liberalize investment regimes, and privatize state enterprises. As developing country markets become more accessible, enormous opportunities are created for U.S. firms to expand exports and direct investments to the developing world.

Development bank lending goes hand in hand with increases in U.S. exports. This lending strengthens the capabilities of the borrowers, makes them better customers for our goods and services and paves the way for follow-on business in the future.

Last year, U.S. companies earned \$2.7 billion directly from procurement contracts with the Banks. This created or sustained an estimated 54,000 high quality U.S. jobs. Additional U.S. exports on the order of \$5 billion annually are attributable to the market-opening policy reform programs advanced by the Banks. This means that total U.S. exports generated through the development banks last year was \$7.7 billion, which created or sustained at least 146,000 American jobs. The Administration is now engaged in a major outreach effort to further expand U.S. business awareness of the opportunities created by the Banks.

U.S. bilateral export promotion programs -- particularly lending by the Export-Import Bank -- benefits from the development banks. In the past four years, the banks have loaned roughly \$70 billion to the 10 developing countries where the Export-Import Bank has its largest exposure. Development bank lending in support of major policy reforms has been creating a fertile environment for the export successes we had in those 10 countries.

Developing countries are the fastest growing export market for U.S. goods and services and their importance to the U.S. economy is increasing. U.S. exports to developing countries surged from \$91 billion in 1987 to \$197 billion by 1993; they now account for over forty percent of our total exports and create or sustain about 3 million U.S. jobs a year.

Export jobs are, by and large, high-wage and high-productivity jobs. Productivity and incomes in export industries are as much as one-fifth higher than in the economy as a whole. In addition, increases in exports provide a revenue gain to the U.S. It is estimated that an extra \$1 in exports generates some 28 cents in revenues, which helps to reduce the U.S. budget deficit.

The positive results of development bank lending and policy reform work can be seen in Latin America, in India and in Poland. In Mexico, for example, World Bank supported trade reforms, in conjunction with Mexico's GATT commitments, reduced tariff levels from an average of 28 percent to 12 percent between 1986 and 1991. U.S. exports to Mexico rose from \$15 billion in 1987 to \$42 billion in 1993. In India, the World Bank successfully negotiated a reduction in tariffs from 400 percent to 65 percent in 1991; U.S. exports increased from \$1.9 billion in 1992 to \$2.8 billion in 1993. Finally, in Poland, the World Bank/IMF reform program in 1990 led to the replacement of a restrictive, quota-based system to an open trade regime. U.S. exports to Poland increased from \$438 million in 1991 to \$917 million in 1993.

#### The Development Banks are Good Value for the Money

The development banks are also the most cost effective method we have for providing foreign assistance. For every dollar that the U.S. contributes to the development banks, the banks lend more than twenty dollars. This leveraging is the highest in the "hard loan windows" of the banks. In the World Bank for example, for every dollar of paid-in capital, the Bank has lent \$131. It is simply not possible for U.S. bilateral programs to replicate this degree of leveraging or volume of financing.

The Administration has been working to strengthen the development impact of the banks over the past several years, in order to ensure that scarce resources are used most effectively. We have pressed successfully for specific actions by the banks to improve project performance that will maximize the development impact of operations, establish a more open public information policy and an independent inspection panel to address public concerns. We have also actively pressed for zero-real growth in administrative budgets and elimination of unnecessary expenditures. For example, changes in travel policy eliminating first class air travel will save more than \$12 million annually at the World Bank and \$4 million at the European Bank for Reconstruction and Development.

#### The Development Banks Advance U.S. Strategic Interests

Because the Banks are so cost-effective, advance market oriented economic policies, and respond to U.S. initiatives, we

rely heavily on them to advance both our strategic and humanitarian interests. For example, the World Bank is playing a key role in the transition from command to market economies in Central Europe and the former Soviet Union, providing over \$13 billion in support of policy reforms over the past five years. In Latin America, World Bank and Inter-American Development Bank lending totalling about \$11 billion annually has been directly associated with the market-oriented reforms that have restored economic growth and reinforced democracy. These amounts far exceed U.S. bilateral programs. The World Bank is also supporting the Middle East peace efforts, in the West Bank and Gaza, providing a central advisory role as well as a financing role. The Bank has provided rapid emergency financial assistance in Rwanda, Bangladesh and Armenia. And, the Bank is poised to provide major support for economic reform and renewal in South Africa.

In addition to support for basic policy reforms, the development banks also encourage transparency in government operations, greater accountability in public expenditures, and budget policies focussed more on real development priorities. This contributes directly to a supporting environment for democracy to grow and for more stable economies to take hold. To the extent that the development banks can help countries to avert economic chaos, they also potentially save us large and costly expenditures for emergency operations in the future.

#### The Development Banks Reflect U.S. Policy Leadership

The development banks are responding to United States leadership and to our initiatives. The U.S. has taken an active role in shaping the policies and operations of the banks in a wide range of areas and we have been successful in making real progress on our agenda. From cutting costs and streamlining operations, to placing increased emphasis on supporting private enterprise development, the banks are adopting and implementing U.S. policy initiatives. In addition, the banks are focusing their lending on countries seeking to adopt sensible economic policies that promote free markets and democracy -- from South Africa to the Middle East, from Latin America to Central Europe. This lending clearly advances our interests.

#### U.S. Interests are on the Line

Growing U.S. arrears to the development banks -- currently total \$825 million -- and an increasingly uncertain future for U.S. foreign assistance funding puts our leverage and influence in the development banks at risk. This directly undermines the ability of the banks to respond effectively to policy and regional challenges of immediate importance to the United States.

This is a key time for U.S. exporters seeking to expand goods and services to the developing world in an increasingly competitive marketplace. The development banks play an important role in supporting an economic environment in which U.S. exports and investments can continue to grow.

Finally, many developing countries in Central Europe, Latin America, and Asia are at a crossroad, seeking to develop policies that promote open markets and democracy. Strong support, primarily from the development banks, will be necessary to encourage these reforms to continue.

#### The Administration's Budget Request

The Administration has worked hard to contain the budgetary costs of U.S. participation in the development banks. During this Administration, all U.S. contributions to new replenishment agreements and capital increases for the Banks have been reduced. This means reduced costs for the U.S. taxpayer.

The Administration has also pledged to eliminate our arrears to the development banks over the next three years. The United States is the only major donor country with substantial arrears. Other countries have budgetary constraints but still manage to keep their commitments to these institutions.

The Administration's FY96 request for the development banks is \$2,303.9 million. This includes \$1,898.9 million for scheduled payments and \$415 million for payments of arrears. (See table at the end of this summary for a detailed account of the request). More than half of our request is for the International Development Association which promotes growth and economic reform in the world's poorest countries.

The following report outlines in detail and by institution, the Administration's justification for appropriations in fiscal year 1996.

## Note:

Arrears carry forward (with full funding)

469,562,691

188,168,000

0

\* GEF Arrears will not appear until FY 1996 or FY 1997. FY 1994 appropriations of \$30 million help cover early years of replenishment. ADFD arrears depend on conclusion of ADFD-7 negotiations. ADFD-7 replenishment was intended to cover 1994-96 operations. ESAF Arrears would not appear until FY 2000. FY 1995 appropriations of \$25 million cover scheduled FY 1997-99 encashments.

**EXAMPLES OF HOW DEVELOPMENT BANK LOANS AND PROGRAMS  
SERVE MAJOR U.S. INTERESTS**

The following are selected examples of loans extended by the MDBs which serve some of the U.S. interests discussed above: encouragement of market-oriented economic reforms, promotion of good governance, contribution to political stability, and assistance to countries in transition.

Market-Oriented Economic Reform

The World Bank, the Inter-American Development Bank, and other multilateral and bilateral lenders coordinated closely while working with Ecuador to develop a macroeconomic adjustment and a longer-term country assistance strategy. The strategy is the basis of these institutions' lending programs and project pipelines.

As a first step, Ecuador concluded a Stand-By arrangement with the International Monetary Fund in 1994 to address macroeconomic stabilization concerns. Ecuador's objectives are to reduce inflation and achieve a fiscal surplus in 1995, maintain sound monetary policies, complete liberalization of its exchange regime, conclude its commercial bank debt restructuring, and further reduce its trade barriers.

These reforms were complemented by related World Bank (IBRD) and Inter-American Development Bank (IDB) programs. In 1994, the two development banks together approved nearly \$500 million to support three related structural and sectoral adjustment programs. A \$200 million IBRD Structural Adjustment loan and two technical assistance loans will help Ecuador to develop capital market laws and regulations, implement tax and customs reforms; and develop its legal structure to govern and privatize state owned enterprises in three infrastructure sectors -- telecommunications, hydrocarbons, and electricity. The program will also assist the Government of Ecuador to streamline its operations and establish more efficient regulatory and operating practices.

Under the \$100 million Financial Sector Reform loan from the IDB, Ecuador will modernize its central banking operations; develop regulatory systems to ensure prudential oversight of its insurance and securities industries and its pension system; develop new financial instruments to attract medium- and long-term savings to banks; and develop new instruments to channel funds to the private sector, particularly small-scale and rural operators.

To support Ecuador's rescheduling agreement with its commercial bank creditors, the IBRD and IDB together provided \$160 million for Debt and Debt Service Reduction loans. These loans will enable Ecuador to conclude its bank agreement, thus lowering its debt payments to a manageable level and ensuring repayment over the longer term.

The reforms are in the interest of the people of Ecuador, who will benefit from stable prices, new economic opportunities, increased governmental efficiency, manageable debt service obligations, and an open trading regime as well as higher rates of economic growth. These reforms are also in the best interest of the United States: a Latin American country will develop economic stability, establish a growing market, and will have a regulatory framework under which both domestic and foreign firms can operate.

#### Good Governance

The MDBs have funded many operations to open markets, develop transparency in government operations, and to provide greater government accountability. Georgia borrowed \$10 million from IDA for its Institution Building Project, which will modernize operations in government-owned entities, revise tariff and tax structures, and begin a program of mass privatization.

Cambodia received a \$17 million credit from IDA for a Technical Assistance project in support of the Government's programs in: public expenditure control; public investment management; foreign debt management; public sector personnel management; and private sector development. This project will help the Cambodian Government improve its monitoring and control systems, and planning, programming and budgeting activities; develop its institutional and legal framework; manage its external debt; reform its personnel management and reduce public sector employment; develop its legal and institutional structure to oversee economic and financial institutions; and strengthen its system of codifying and publishing judicial decisions, which will serve as a foundation for the Government's system of jurisprudence.

#### Political Stability

The development banks can rapidly mobilize resources for countries which are located in regions troubled by political instability or emerging from conflict.

The IDA recently made a \$30 million Emergency Assistance loan to the Occupied Territories to finance investments in Gaza and the West Bank. The program will finance: (1) elimination of critical public infrastructure bottlenecks and generation of employment; and (2) creation of an enabling environment for the private sector through institutional reform of the financial system, and lines of credit targeted to key private sectors of the economy--tourism, agriculture, industry and housing. These emergency measures will jump start growth in this area.

Burundi has experienced some of the same ethnic conflict as Rwanda, but has thus far avoided the carnage that has devastated Rwanda. The IDA recently made a \$14.6 million Emergency

Assistance Project loan to Burundi which will fund critically needed health programs and medical supplies, reopen schools, supply tools and seeds to dislocated populations, and finance some public works. This is part of a \$53 million program coordinated by IDA and supported by bilateral donors to maintain stability in the region.

Haiti also benefitted from a \$40 million Emergency Recovery Credit from IDA. The credit is part of a preliminary \$402 million multilateral and bilateral effort to rehabilitate critical economic and social infrastructure of the country in agriculture, power, roads and bridges, water and sanitation, education, health and the environment. It will help sustain Haiti over the next 12-18 months.

### Countries in Transition

The IBRD recently made a \$500 million loan to the Ukraine to meet a broad spectrum of development objectives. To obtain the loan, the Government of Ukraine agreed to an extensive reform program, including closing a number of unprofitable parastatals and privatization of 200 state-owned enterprises, price reforms, introduction of competitive methods of government procurement, abolition of export quotas and licenses, and reduction of import tariffs, and modernization of its foreign exchange market. The program will promote the development of competitive financial markets; provide technical assistance to improve efficiency and financial discipline in enterprises, farms, and banks; and provide a framework for financial assistance from other donor agencies.

The European Bank for Reconstruction and Development made a \$100 million loan to Russia to strengthen and develop a core of up to 36 banks that will form the basis of the Russian commercial banking sector in the foreseeable future. The objective is to assist a group of banks to quickly achieve international standards, thus strengthening the financial sector and improving the quantity and quality of financial services. The project will finance institutional development, systems modernization, and technology development programs. It will be implemented through twinning arrangements with reputable private foreign banks.

## INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS

**Budget Authority Request:**       \$ 28,189,963 paid-in capital  
                                      \$ 911,475,013 callable capital

The request will complete U.S. payments for the general capital increased for the World Bank agreed in 1988.

**I. Institutional Mandate**

The International Bank for Reconstruction and Development (IBRD) was established with U.S. leadership in 1945 to make or guarantee loans for reconstruction and economic development projects. The IBRD, whose capital is subscribed by its 178 member countries, finances its lending operations primarily from its own borrowings in world capital markets. A substantial portion of the IBRD's loanable resources also comes from its retained earnings and the flow of repayments on its outstanding loans.

The IBRD makes loans at near market-based rates to middle and lower income developing country members. (The poorest countries have access to concessional resources through the International Development Association.) It has a global focus with 78 potential borrowing member countries; East Asia and the Pacific, Europe and Central Asia, and Latin American and the Caribbean each are each projected to account for 25-30 percent of lending over the next three years. (Twenty-six past IBRD borrowers have graduated, the latest being Korea.)

In addition to supporting investment lending, the Bank works closely with borrowing countries to design and implement fundamental policy reforms necessary for open and free-market oriented growth. Policy reform in a host of areas -- finance, public enterprise, industry, energy and agriculture -- is essential to generate adequate economic growth to reduce poverty and advance sustainable development. In addition, the IBRD directs a large and growing portion of its lending to social sector needs, such as for primary health and education programs and urban and rural development. The IBRD also provides a wide range of technical assistance, particularly in support of institution building; its non-lending activities are of major and growing importance.

**II. U.S. Interests**

The IBRD is a uniquely effective instrument to advance U.S. domestic and foreign policy objectives. Since 1945, \$1.9 billion in U.S. paid-in capital has supported IBRD loans of \$249 billion, a ratio of 131 to 1.

- 2 -

IBRD efforts to encourage and support developing country growth also help develop markets for U.S. exports and create U.S. jobs. More than 40 percent of U.S. exports now go to developing countries, and the share is rising. Every additional \$1 billion of exports creates 20,000 new jobs in the United States.

U.S. participation in the IBRD is good for U.S. business. As of June 30, 1994, cumulative U.S. procurement on IBRD contracts totaled \$19.4 billion, i.e., ten times the amount of U.S. paid-in capital.

The economic growth and policy reforms, including trade liberalization, promoted by IBRD programs provide an even more substantial boost to U.S. exports. The positive results of World Bank supported reform can be seen in the successful resurgence of growth in Latin America, a region where reform efforts have been strongly supported by over \$32 billion in IBRD lending over the last six years, and which is now the fastest growth market for U.S. exports. In Mexico, the IBRD's adjustment programs in conjunction with Mexico's GATT commitments, supported a reduction in Mexican tariff levels from an average of 28 percent to 12 percent between 1986 and 1991 (i.e., a larger change than NAFTA); with U.S. exports to Mexico rising from \$15 billion in 1987 to \$42 billion in 1993.

In addition, IBRD-supported policy reforms help create a friendly environment for U.S. industrial and financial investors. For example, the Export-Import Bank benefits from IBRD efforts to promote market-oriented growth necessary for its operations. In addition, U.S. consulting and engineering firms are receiving more than \$100 million annually in disbursements on consulting contracts awarded with World Bank funds.

The IBRD also addresses critical U.S. security interests, helping former foes to begin to make peaceful transitions to market-oriented economies. For example, the IBRD has committed over \$8 billion to Eastern Europe over the last five years with 36 additional IBRD projects totalling \$3.8 billion currently under preparation. There are also 63 IBRD projects totalling \$3.6 billion currently under preparation for members (excluding Russia) of the former Soviet Union. Total IBRD lending to "Europe and Central Asia" over the next three years is projected at almost \$14 billion. The Bank's central advisory, aid-coordination, and financing role in the West Bank and Gaza is also supportive of Middle East peace efforts.

Other examples of IBRD efforts which advance U.S. interests include a World Bank agreement to provide \$1.8 billion over three years for environmental projects in Mexico (a key component in environmental clean-up efforts along our shared border) and the Bank's support for India's program of economic reform and

liberalization. (U.S. exports to India increased from \$1.9 billion in 1992 to \$2.8 billion in 1993.)

### III. The U.S. Policy Agenda for the World Bank

The Administration, in close consultation with the Congress, has worked hard with World Bank management and other member countries to further strengthen the Bank's ability and effectiveness in promoting economic growth. Our goal has been to increase the developmental impact of World Bank lending, and to increase the emphasis the bank places on poverty reduction, the development of the private sector and environmental protection. We have pressed hard and successfully for better control of operating costs. Major progress has been achieved. Reform steps taken by the World Bank include:

- o adoption of a comprehensive action plan to strengthen the Bank's portfolio management practices, to improve the quality of projects at entry, restructure projects where necessary, and bolster project management.
- o a pro-active approach to private sector development; including the adoption of a policy to expand the use of guarantees to stimulate private capital flows.
- o increased focus on institution building to contribute to a more favorable climate for private sector growth and foreign investment.
- o adoption of stringent requirements for environmental impact assessments and the articulation of clear policies for Bank lending in forestry, energy, agriculture and water resources.
- o adoption of a more open information policy which expands the technical and other information, including environmental assessments, made available to the public.
- o establishment of an independent inspection panel to address public concerns on whether the Bank is observing its own policies, rules and procedures in the design, appraisal and/or implementation of its operations.
- o adoption of sound resettlement guidelines.
- o commitment to prepare poverty assessments, private sector assessments and environmental action plans for all borrowers.
- o preparation of country assistance strategies identifying sectoral lending priorities and discussing portfolio performance for individual borrowers. These strategies

- 4 -

provide the Board with an important oversight tool, including illustrative lending levels for all borrowers.

- o commitment to increase lending for **human resource development**, including **population and related activities**; also to strengthen the emphasis on women in development.
  - the percentage of lending for human resources (education, population, health and nutrition) is expected to rise from 15 percent in FY92-94 to 20 percent in FY95-97.
- o steps to begin expanding broad-based **beneficiary participation** in Bank projects, including pre-project consultations with affected people and experts from across the spectrum.

On the administrative side:

- o **internal budgeting and accounting procedures** have been totally revised, increasing the responsibility and accountability of individual managers.
- o the FY 1995 **Administrative Budget** reflected President Preston's commitment to a zero real growth framework; the goal is a real reduction of up to six percent in each of the next two years.
- o first class travel has been eliminated.
- o **redeployment of staff** has accelerated; selective reorganization is in process.

#### IV. Third General Capital Increase

On April 27, 1988, the IBRD's Board of Governors agreed to a General Capital Increase of \$74.8 billion, 3 percent paid-in capital and 97 percent callable capital. The U.S. subscription over a six-year period is 18.75 percent of total subscriptions. The annual appropriation request for the paid-in portion of the GCI would be \$70.1 million annually for six years, and the annual callable capital authorization request under program limitations would be \$2,267 million annually for six years.

During the 1988 General Capital Increase negotiations, the U.S. was successful in getting the following policy goals adopted: (1) the alleviation of poverty will receive even greater emphasis, (2) environmental protection will become a permanent priority in the institution, (3) private sector development will receive increased emphasis, (4) the production of primary commodities will be supported only where such production is efficient, and

(5) assisting heavily indebted countries to grow out of debt and recession will be a priority.

V. U.S. Financial Commitments

U.S. subscriptions to the World Bank were \$30.025 billion, of which \$1.94 billion was paid in as of June 30, 1994. The U.S. share was 17.66 percent of the total subscribed capital.

The initial authorized capital of the Bank was \$10 billion, divided into 100,000 shares having a par value of \$100,000 each. U.S. membership in the IBRD and an original capital subscription of \$3,175 million -- 34 percent of the total -- were authorized in 1945 (P.L. 79-171). A total of \$7,670 million of this authorized capital was subscribed by June 30, 1946. The first General Capital Increase (GCI) of the Bank was authorized in 1959 and the second GCI was authorized in 1980. The U.S. also participated in Selective Capital Increases (SCIs) in 1977 and 1984. Further additions to capital have been approved to cover new admissions and individual increases.

In 1988, the Board of Directors recommended a \$74.8 billion General Capital Increase (GCI). In September 1988, Congress authorized U.S. participation in this (the third) GCI. In FY 1989, Congress appropriated \$50 million of paid-in capital and \$2,293 million for subscription of callable capital was made available pursuant to program limitations (P.L. 100-461). This resulted in a shortfall of \$20.1 million on paid-in capital and an over-subscription of \$26 million on the callable capital.

In FY 1990, Congress appropriated \$49.8 million (post-sequestration) for paid-in capital and \$0 for callable capital (P.L. 101-167). This resulted in an additional shortfall of \$20.3 million for paid-in capital for a total shortfall of \$40.5 million for paid-in capital as well as a shortfall of \$2,241.9 million for callable capital.

In FY 1991, the Administration requested appropriation of \$110.6 million for paid-in capital and \$2,900 million under program limitations for callable capital subscriptions for the General Capital Increase. The request included \$40.5 million for arrears on paid-in capital from FY 1989. The total request was appropriated (P.L. 101-513).

In FY 1992, FY 1993 and FY 1994, the Administration requested an appropriation of \$70.1 million for paid-in capital and \$2,267 million under program limitations for callable capital subscriptions for the GCI. Congress appropriated \$69.1 million and \$62.2 million for paid-in capital in FY 1992 and FY 1993. In FY 1994, Congress appropriated \$ 27.9 million.

- 6 -

In FY 1995, the Administration requested an appropriation of \$23.3 million for paid-in capital and \$753 million under program limitations for callable capital subscriptions. Congress appropriated \$23 million.

The \$28.2 million requested in FY 1996 will be the final U.S. payment for its subscription to the GCI.

## INTERNATIONAL DEVELOPMENT ASSOCIATION

JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS

**Budget Authority Request:** \$ 1,368,168,000 contribution

The request will fund the \$1,250 million third and final installment to the tenth replenishment of the International Development Association (IDA 10) plus \$118.2 million of our \$324.5 million arrears on the first two installments.

**I. Institutional Mandate**

IDA was established in 1960 as an affiliate of the International Bank for Reconstruction and Development (IBRD) to make or guarantee economic development loans to the poorest and least creditworthy developing country members and to do so on concessional terms. (The IBRD lends on market-based terms.)

IDA eligibility is limited to countries with a per capita income below \$835 which have limited or no ability to borrow on market terms and are able to use IDA resources effectively. Seventy seven countries are now eligible for IDA, accounting for 57 percent of the world's population. IDA funds come largely from donor contributions negotiated in general replenishments and from repayments of past IDA credits.

A large share of IDA resources goes to the low income countries of Sub-Saharan Africa and Asia. However, other regions also benefit. As of November 15, 1994, IDA projects totalling \$525 million were under preparation for the poorest countries of Latin America and the Caribbean. IDA projects of \$600 million were also being prepared in the Former Soviet Union for Armenia, Azerbaijan, Georgia, Kyrgyzstan, and Tajikistan. Projects with \$125 million in IDA funding were under preparation for Albania and FYR Macedonia.

IDA's financial resources and technical skills enable it to play a central role in aid-coordination and in the mobilization of donor and borrower resources in support of priority development objectives. IDA chaired or provided substantial input to 38 donor meetings last year. Nineteen donors now participate in the IDA-led Special Program of Assistance which promotes economic reform and adjustment in Africa.

IDA's capabilities are also deployed to counter natural disasters, e.g., earthquake reconstruction in Armenia and India in FY 1994, and flood reconstruction in Pakistan and drought alleviation in Kenya in FY 1993. IDA is also active in current efforts to spur emergency economic recovery in Burundi and Haiti, and will play a lead role in supporting similar efforts in Rwanda when the situation permits.

## II. U.S. Interests

IDA is a highly effective aid instrument for promoting policy reform in poor countries; 25-30 percent of IDA lending supports the design and implementation of the basic policy reforms necessary for open and free-market oriented growth. Policy reform in such areas as finance, public enterprise, industry, energy and agriculture, is essential to generate the economic growth necessary to reduce poverty and overcome the serious development challenges which confront the poorest countries.

Human resource-related development (e.g., education and health) is also a major IDA priority, accounting for one-third of IDA's investment lending. In addition, almost thirty percent of IDA projects have components specifically focussed on private sector development.

IDA is a cost-effective way for the United States to assist the poorest countries. There are now over thirty IDA donors, and the U.S. share of donor country funding has decreased from 42 percent to 20.86 percent. Repayments on past credits now finance 18 percent of new lending. IDA lends \$6 for every dollar the U.S. contributes. The World Bank (including IDA) is also operating on a zero real growth administrative budget and has targeted budgetary reductions of six percent in real terms for each of the next two years.

The United States has retained the lead in shaping IDA policies and operations. Successive Administrations have worked closely with the Congress, IDA management, and other member countries to further increase the development impact of IDA resources and affirm the central role which economic performance and commitment to sound development policies play in the country allocation of IDA resources.

As a result, major progress has taken place in strengthening the emphasis IDA places on encouraging market forces, public sector reform and good governance, private sector development, protection of the environment, and on human resource development. A comprehensive action program to strengthen IDA's lending effectiveness is also underway. In addition, other recent reform steps taken by the World Bank -- e.g., adoption of a more open public information policy, the establishment of an independent inspection panel to address public concerns, and steps to increase beneficiary participation in projects -- will strengthen IDA operations.

IDA produces progress. Twenty countries have graduated from IDA, two of which (Korea and Turkey) are now IDA donors. Social indicators in current borrowers are improving and economic reform is taking root. The benefits of IDA-supported reform can be seen in such countries as Bolivia, Ghana, India and Uganda.

Elsewhere in Sub-Saharan Africa, the outlook for countries with IDA-supported programs is better today than it has been for a long time.

IDA's efforts to promote policy reform and human resource development foster stability. They also pay large dividends for U.S. interests. The 20 countries which have graduated from IDA purchased \$42 billion in U.S. exports in 1993. They have Export-Import Bank exposure of \$9.4 billion and OPIC exposure of \$1 billion. U.S. exports to current IDA borrowers rose from \$14.5 billion in 1988 to \$20.3 billion in 1993. They account for \$7.4 billion in Export Import Bank exposure and \$.7 billion in OPIC exposure.

### III. Tenth Replenishment of IDA Resources (IDA 10)

IDA 10 is funding operations for the three year period beginning July 1, 1993. The total size of the replenishment is SDR 13 billion (about \$18 billion). When combined with reflows on past IDA credits and transfers from IBRD net income, IDA 10 is projected to support new commitments of roughly SDR 16 billion (\$22 billion). The IDA 10 agreement also contains a comprehensive policy agenda to strengthen IDA's development impact.

The United States remains IDA's largest donor, providing 20.86 percent of IDA 10. Other key donors are Japan (20.00 percent), Germany (11.00 percent), France (7.30 percent), the United Kingdom (6.15 percent), Italy (5.30 percent), and Canada (4.00 percent).

The IDA 10 agreement specifically provides that in the event of a shortfall in U.S. contributions, other donors are allowed to make proportional reductions in the level of their payments. In effect, a \$1 reduction in the U.S. commitment to IDA translates into a potential \$5 decline in the resources available to IDA during a given replenishment period.

### IV. U.S. Financial Commitments

United States membership in the International Development Association and an original subscription of \$320 million were authorized in June 1960 (P.L. 86-565). The United States has subsequently participated in all ten replenishment negotiations of IDA resources. While the United States provided a 42 percent share in IDA's initial agreement (as well as in the first replenishment), the U.S. share has declined substantially over time to 23.2 percent in IDA 8, 21.61 percent in IDA 9, and 20.86 percent in IDA 10.

- 4 -

The Agreement on the Tenth Replenishment entails a total United States' contribution of \$3,750 million spread over three years.

In FY 1994, the Administration requested \$1,250 million for the first installment of its contribution to IDA-10. Congress appropriated \$1,024.5 million, leaving a shortfall of \$225.7 million. In addition, the United States still has \$83.8 million in arrears outstanding on the Ninth Replenishment. Thus total U.S. arrears to IDA at the end of calendar year 1993 were \$309.5 million.

In FY 1995, the Administration requested \$1,250 million for the second installment. Congress appropriated \$1,235 million. The \$15 million shortfall raised U.S. arrears to \$324.5 million.

**INTERNATIONAL FINANCE CORPORATION****JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:** \$ 67,556,000 contribution

In FY96, the Administration requests \$67.5 million paid-in capital for the IFC. Of this amount, \$47.5 million is for the final installment of the U.S. share of the 1991 general capital increase and \$20 million is to clear arrears.

**I. Institutional Structure and Mandate**

The International Finance Corporation (IFC) was established in 1956 in the World Bank Group to encourage economic growth in developing member countries by promoting private local and foreign investment.

The IFC's main role is making **medium and long-term loans and equity investments** at market-determined rates without government guarantees to support private sector projects. The IFC therefore fully shares project risks with its local and foreign investment partners.

Most of the Funds lent by the IFC are raised by borrowing on the international capital markets, while its equity investments are financed primarily by share capital. The Corporation is in excellent financial shape, and enjoys the highest possible credit rating on international capital markets.

The Corporation is playing an important role in the former communist nations, bringing expertise in the key areas of foreign investment, capital markets development, and privatization. Additionally, IFC is placing high priority on the private sector provision of basic infrastructure - especially electric power and telecommunications - in the developing nations, especially Latin America and Asia.

The IFC is making special efforts to increase its activities in Central Europe, the former Soviet Union, and Sub-Saharan Africa. The Corporation's activities in Africa include the Africa Enterprise Fund, the Africa Project Development Facility, and the African Management Services Company. Additionally, IFC has begun to develop two new initiatives for small and medium sized businesses, an Enterprise Support Service for Africa and a lending program for micro-enterprises.

The IFC cooperates closely with the rest of the World Bank Group, but is legally and financially independent. The U.S. is the largest shareholder, with relative voting strength of 22.67 percent as of June 30, 1994.

## II. IFC Operations in WBFY 1994

During WBFY 1994, the IFC extended financing for its own account of \$2,463 million to assist 231 projects having a total cost of \$15,839 million. This means that for every dollar provided by the IFC for its own account, other lenders and investors will provide around 5.43 dollars. All IFC projects must meet the same environmental standards as IBRD projects.

IFC's equity or quasi-equity investments in 1994 reached a record level of \$719 million, or about 29 percent of total IFC investments for its own account. The IFC thereby helped companies in developing countries achieve a proper balance between debt and equity financing.

## III. U.S. Interests and Policy Objectives

A \$1.0 billion general capital increase was approved by the Board of Governors in May, 1992, with U.S. support. The Corporation's authorized capital of \$2.45 billion is expected to enable new investment approvals in all regions to grow by 10-15 percent per year (in nominal terms) through the late 1990s.

The U.S. pressed the IFC and the World Bank successfully for specific commitments to strengthen key IFC policies, and to intensify the World Bank Group's private sector development initiative, and to strengthen Bank-IFC collaboration in projects, policies, sector work, and country strategies.

The IFC's Articles of Agreement were also subsequently amended to increase by five percent each the voting majorities required to approve further capital increases and charter amendments. This action, which the U.S. strongly supported, will help ensure that IFC's fundamental purposes and structure of governance will remain unchanged.

## IV. U.S. Financial Commitments

United States membership in the IFC was authorized in August 1955 (P.L. 84-350) with a U.S. capital subscription of \$35 million, out of the total original capital of \$100 million.

The U.S. participated in the IFC's first general capital increase (GCI) in 1977 and paid in \$175 million out of the total \$650 million increase in capital stock, a 27 percent U.S. share. The U.S. contributed \$175 million to the IFC's second general capital increase which was approved in 1985. We have fully completed our payments to the 1985 GCI, and to all previous capital subscriptions.

The U.S. subscription of 250,000 shares in the IFC's 1991 general capital increase (third) was authorized in the 1992 Continuing Resolution (P.L. 102-266). In FY92 and FY93, the Administration requested an appropriation of \$50 million (the first and second of five installments to the GCI). In FY92 Congress appropriated \$39.7 million (P.L. 102-145 and P.L. 102-266) and in FY93 \$35.7 million (P.L. 102-391). In FY94 Congress appropriated \$35.7 million (P.L. 103-87) and in FY95 \$68.7 million (P.L. 103-06).

In fiscal year 1996, the Administration is requesting \$67.5 million for the IFC. Of this amount, \$20 million is to clear arrears and \$47.5 million is for the final installment of the U.S. subscription to the 1991 general capital increase.

**MULTILATERAL INVESTMENT GUARANTEE AGENCY (MIGA)****JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS****Budget Authority Request:**

None

No funds for the MIGA are being sought in 1996.

**I. Institutional Structure and Mandate**

The Multilateral Investment Guarantee Agency (MIGA) began operations in 1988 as a component of the World Bank Group. MIGA's guarantee program protects eligible foreign investors against losses from currency transfer, expropriation, war and civil disturbance, and investment-related breach of contract by host governments.

MIGA also works closely with the IFC, Foreign Investment Advisory Service, other elements of the World Bank, and with borrowing country governments to promote foreign direct investment in developing countries, and to encourage developing countries to adopt sound policies regarding foreign investment. MIGA applies either the host country's environmental unit, with which MIGA has a long-term contractual relationship. Acting as MIGA's environmental advisor, the unit applies the same standards to MIGA projects as it does to IFC projects.

**II. MIGA Operations**

During FY 1994, total MIGA membership rose to 121 countries. MIGA assisted its first projects in Brazil, Bulgaria, Peru, Uzbekistan, and Trinidad and Tobago. As of December 31, 1994, membership has further increased to 128 nations, and MIGA assisted its first projects in Costa Rica, Honduras, the Philippines, and Morocco. During FY 1994, MIGA was admitted as the first multinational member of the International Union of Credit and Investment Insurers (the Berne Union).

MIGA issued a record 38 guarantee contracts in FY 1994. These contracts involved new contingent liabilities of \$372.6 million and facilitated \$1.3 billion of new direct investment in the host developing countries. This investment, in turn, is expected to generate an additional 7,800 host country jobs. During the first half of FY 1995, MIGA has issued 28 additional contracts totalling \$312.1 million of coverages.

MIGA has neither received nor paid any claims. There are no claims pending as of mid-January, 1995.

### III. U.S. Interests

MIGA was explicitly created to complement, and not to compete with, existing public and private investment insurers. MIGA has therefore worked closely with the U.S. Overseas Private Investment Corporation (OPIC) on a considerable number of projects in both coinsurance and reinsurance capacities.

American investors, who are the largest users of MIGA services, often turn to MIGA when adequate OPIC coverage is not available. This is often the case because of OPIC's country and project limits. As of December 31, 1994, 50 percent of MIGA's outstanding investment insurance coverage was with U.S. investors, whereas the relative size of U.S. capital contributions to MIGA is only 22 percent. Thus, it is clear that the United States has clearly benefitted from MIGA's guarantee program.

MIGA also has a modest program that assists developing countries to more effectively promote their own private investment opportunities. Prospective American investors have benefitted from these MIGA-sponsored investor conferences. A June, 1994, African Mining Conference in Denver, Colorado, brought more than 300 prospective investors together with mining officials from 18 African countries.

### IV. U.S. Financial Commitments

The FY 1988 Continuing Resolution (P.L. 100-202) authorized U.S. participation in MIGA and appropriated sufficient funds for purchase of the U.S. share of MIGA's capital. The U.S. share is \$222 million, which - as of June 30, 1994 - gave the U.S. relative voting power of 17.79 percent. It should be noted, however, that only ten percent of the total U.S. subscription was paid-in capital.

No additional requests for this agency are anticipated, at least for the next few years. The 1988 appropriation provided for the full U.S. subscription, which was required to meet the minimum level of capitalization needed for MIGA.

**GLOBAL ENVIRONMENT FACILITY****JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:** \$110 million contribution

In FY 96, the Administration is requesting \$110 million for the second installment of the U.S. contribution to the restructured Global Environment Facility (GEF).

**I. Institutional Structure and Mandate**

The Global Environment Facility was created to finance developing and transition countries' efforts to reduce the threat of climate change, reverse the depletion of the ozone layer, arrest the loss of biodiversity, and decrease the pollution of international waters. The GEF relies on the capacities of the World Bank, the United Nations Development Program, and the United Nations Environment Programme to implement projects. The GEF went through a trial phase from 1991 to 1993, and began full-scale permanent operations in March, 1994.

Global environmental problems are characterized by the fact that damage caused by one nation is spread over the globe. These environmental problems are also characterized by the fact that the cost of adapting to their impacts, i.e. sea level rise, increased solar radiation, and the collapse of fisheries, is much more expensive than taking preventative measures. It is also far less expensive to address global effects of environmental problems at their source in less developed countries than to attempt to counter the effects by enacting even stricter regulations in industrialized countries.

**II. Operations of the Global Environment Facility**

The Pilot Phase of the GEF committed \$713.35 million in projects. Funding allocations between regions break down as follows: Asia-34%, Latin American and the Caribbean-23%, Africa-18%, Economies in Transition-9%, Middle East-8%, and Global-8%. Funding allocations between focal areas went to: Biodiversity-43%, Global Warming-37%, International Waters-17%, and Ozone/Various-3%. It is expected that nearly 50% of the resources from the replenished GEF will be devoted to climate change, 30% to biodiversity, and 10% each to international waters and ozone depletion.

**III. U.S. Interests**

The GEF allows the U.S. to effectively address issues that impact directly on our environmental security, and indirectly on the ultimate financial burden of global environmental problems. The U.S. has confidence that the GEF can fulfill its mandate-- the GEF was restructured in early 1994 to gear up to full scale

operations. The U.S. achieved its objectives for this restructuring, including: strong U.S. influence through contribution-based voting; donor oversight of budget and policy; donor approval of projects; and good policies on transparency and consultation with project-affected groups.

The GEF provides important procurement opportunities for U.S. companies. U.S. firms dominate the market for substitutes for ozone depleting substitutes. U.S. firms are also strategically placed in the markets for efficient-energy technologies and renewable energy that will be relied upon to combat global warming. U.S. firms are also the major players in the biotechnology arena.

For U.S. firms in these fields, the GEF presents a three-fold opportunity. In addition to its own resources, the GEF is designed to leverage the much larger resources of the multilateral development banks. Finally, and most importantly, the GEF will catalyze recipient countries' efforts to combat global environmental problems, leading to dramatic increases in the markets which U.S. firms are well positioned to lead.

#### IV. U.S. Financial Commitments

USAID has programmed over \$150 million in "parallel financing" in collaboration with the GEF. Congress also appropriated \$30 million to the Pilot Phase in FY 1993. However, due to restrictions in the FY 1993 Appropriations Act, this payment was not made.

Following the successful restructuring of the GEF, donor governments agreed to a \$2,002 million replenishment, to be paid in over FY 1995-1998. The U.S. share is 21.26%, or \$430 million dollars. The U.S. share was derived from the formula used in the World Bank's International Development Association; it is substantially less than the U.S. United Nations share and other alternative formulas. Congress has granted the necessary authorization to contribute our full pledge, and the U.S. has already made the first installment on its pledge by contributing \$120 million through FY 95.

**INTER-AMERICAN DEVELOPMENT BANK:  
ORDINARY CAPITAL**

**JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

<b>Budget Authority Request:</b>	\$ 25,952,110	paid-in capital
	\$1,523,767,142	callable capital

**I. Institutional Structure and Mandate**

In FY 1996, the Administration is requesting \$25.6 million for paid-in capital for the second installment of the eighth replenishment of the Inter-American Development Bank (IDB), and to clear arrears of \$0.3 million.

The IDB is a multinational organization, corporate in form, whose capital stock is owned by member governments. Established in 1959 to promote economic development in the developing countries of the Western Hemisphere, the IDB does this by extending loans for specific investment projects and policy reform programs, as well as providing a wide range of technical assistance.

The IDB makes loans on market terms from its capital resources which consist of (1) paid-in capital subscriptions of members, and (2) members' callable capital subscriptions which are used to support IDB borrowings in capital markets. The IDB has 28 Western Hemisphere member countries, including the United States and Canada but excluding Cuba. In addition, sixteen European countries, Japan and Israel are also members of the Bank.

**II. Bank Operations**

Cumulative ordinary capital (OC) loan commitments were \$49.6 billion as of December 31, 1993. During 1993, 69 loans were authorized from the IDB's hard loan window for a total of \$5.9 billion: thirty percent of lending was directed to projects in the social sectors (including the environment and public health); \$2.4 billion went towards financing physical infrastructure projects in energy, transportation and communications.

Negotiation of the Bank's Eighth Capital Replenishment (IDB-8) was concluded in 1994. The replenishment increases the IDB's Ordinary Capital by \$40 billion, making it the largest regional development bank with over \$100 billion in subscribed capital. (Contributions for the Fund for Special Operations, the soft loan window of the Bank, were also increased by \$1 billion; see separate tab.) With this agreement, there should be at least a 50% increase in the Bank's lending to improve opportunities for the poorest elements of society, while the Bank promotes income equality, good governance, and basic health and education.

The United States took the lead in negotiating the capital increase which will provide the Bank with the capital to sustain

- 2 -

lending at or above current levels for 8-10 years. The U.S. share of paid-in capital will decrease from a scheduled \$57.2 million in IDB-7 to \$25.6 million per year in IDB-8.

### III. U.S. Interests

In addition to substantially increasing the IDB's capital at half the scheduled annual cost of the previous replenishment, the U.S. also achieved considerable policy success in the replenishment:

- \$1 billion in new concessional resources for the poorest countries in the region was tied to changes in the ownership of the Bank. In return for almost \$700 million in new money - and agreement to the U.S. policy agenda - the United States agreed to reduce its share of the Bank (from 34.6% to 30%). Despite this reduction, the U.S. will retain most all current rights and privileges.
- Increased lending to support economic opportunity, social sector development, the environment and governance objectives in all borrowing countries. Fifty percent of loan operations (40% of lending volume) will go to support these objectives. The environmental policies of the Bank have also been significantly strengthened.
- Policy-based lending for both smaller countries in the early stages of macroeconomic adjustment as well as social sector-oriented reforms in all countries has been reduced to 15% of lending, a 40% decrease from previous levels.
- Traditional lending for infrastructure projects will continue, particularly in the poorer countries, but there was agreement to explore new cofinancing techniques and to employ up to 5% of annual lending to promote the financing of private infrastructure. A Private Sector Department has been created to implement this initiative.
- The agreement incorporates an information disclosure policy similar to that of the World Bank, as well as creation of an independent inspection function to increase transparency and accountability. The agreement also ensures that the Bank will continue "to maintain an effective and efficient internal audit function to ensure full accountability on administrative, financial and operational matters."

In addition to these results, the U.S. led efforts to reduce the administrative costs of the Bank. First-class air travel was eliminated for all employees and Directors as part of the effort to hold the administrative budget to zero real growth in 1994. For 1995, the U.S. held the line for zero nominal growth.

The United States also benefits in other, more tangible ways from IDB membership. For example, in 1993, disbursements resulting in the procurement of U.S. goods and services totalled \$936 million (28.3 percent). Cumulative procurement (1961-93) of U.S. goods and services has totalled \$7.24 billion (23.6 percent of total).

#### IV. U.S. Financial Commitments

The United States was a charter member of the Inter-American Development Bank with an original capital subscription of \$350 million. This consisted of \$200 million in callable capital and \$150 million in paid-in capital authorized in August 1959 (P.L. 86-147). The callable portion was appropriated in FY 1960; the paid-in portion was provided in three installments - \$30 million in FY 1960, and \$60 million each in FY 1962 and FY 1963.

Six increases in the authorized capital of the Bank were approved by the Bank's membership during the 1960s, 1970s and 1980s. The United States participated in all of these increases, subscribing to a total of \$11.2 billion in paid-in and callable capital.

The U.S. share of the Seventh Replenishment of IDB resources (1989) was 34.5 percent of a \$26.5 billion replenishment, or a \$9,169 million subscription to Ordinary Capital. The paid-in portion was 2.5 percent, bringing the total U.S. paid-in subscription for FY 1991-94 to \$229 million; the subscription to callable capital over the same time period was \$8,940 million.

In FY 1991, \$57.3 million was appropriated for the first tranche of the Seventh Replenishment (P.L. 101-513). In FY 1992, \$56,465,367 for paid-in capital for the second tranche of IDB-7 was appropriated under continuing resolution. In FY 1993, \$56,466,000 was appropriated (P.L. 102-391) for the U.S. paid-in capital subscription and a program limitation of \$2,202,040,000 was provided for the callable capital subscription for the third tranche of IDB-7. For FY 1994, paid-in capital of \$56,166,000 was appropriated (P.L. 103-87), along with a program limitation of \$2,190,283,457 for callable capital, for the fourth and final tranche of IDB-7.

In FY 1995, arrears of \$2,286,970 were cleared and U.S. participation in IDB-8 (with a program limitation of \$76,832,000 for paid-in shares and \$4,511,156,729 for callable shares) was authorized (P.L. 103-306). The U.S. recently sent notice to the Bank that legislative requirements have been met for U.S. participation in the Eighth Replenishment, along with \$25,260,827 for the first installment for paid-in Ordinary Capital.

For FY 1996, the Administration is requesting \$25,952,110 for paid-in capital and a program limitation of \$1,523,767,142 for callable capital subscription for the second tranche of IDB-8 (and to clear arrears of \$341,443 and \$20,047,681, respectively).

**INTER-AMERICAN DEVELOPMENT BANK:  
FUND FOR SPECIAL OPERATIONS**

**JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:** \$ 20,835,000 contribution

The FY 1996 request for the Fund for Special Operations (FSO) is for \$20,835,000: \$20,576,000 for the second installment of the Eighth Replenishment of the FSO and \$259,000 to eliminate current U.S. arrears.

**I. Institutional Structure and Mandate**

In addition to its Ordinary Capital lending operations, the Inter-American Development Bank extends loans from the Fund for Special Operations to the poorest countries of Latin America and the Caribbean. FSO loans are made on concessional terms and are extended from contributions provided by members of the Bank.

During 1993, the FSO extended 23 loans, for a total of \$423 million. Sectors receiving substantial amounts of FSO resources included health and education, and physical infrastructure, including water supply/sewerage. As of year-end 1993, cumulative FSO loan commitments totalled \$11.8 billion.

IDB Governors completed negotiations for the Eighth Replenishment of the Bank's Ordinary Capital and concessional FSO resources in April 1994. The replenishment agreement will result in \$1 billion in new concessional resources. The FSO-8 replenishment will permit \$500 million in annual lending to the poorest countries of the region, while keeping the scheduled U.S. payment at the previous replenishment level (\$20.6 million per year).

**II. U.S. Interests**

In the replenishment negotiations, the U.S. placed high priority on augmenting the Bank's concessional resources and worked diligently towards that end. Given scarce resources for concessional lending, new approaches to allocating concessional resources were necessary. Previously, some countries with high per capita incomes had access to funds to subsidize borrowing costs. There was need to better target concessional resources - and to deliver these resources on a more cost-effective basis.

The U.S. insisted that concessional lending be allocated to only the neediest countries, though other countries with demonstrated exceptional needs could be included on a case-by-case basis. Measures of need include per capita income, ability to service debt from export earnings, and indices of human development.

The size of the FSO replenishment was ultimately tied to changes in the ownership of the Bank. In return for almost \$700 million in new contributions - and agreement to the U.S. policy agenda -

the United States agreed to reduce its share of the IDB (from 34.6% to 30%). Despite the reduction in ownership percentage, the U.S. retains most all existing rights and privileges, including the ability to veto FSO loans.

### III. U.S. Financial Commitments

United States membership in the IDB, authorized in August, 1959 (P.L. 86-147), provided for an initial \$100 million U.S. contribution to the FSO. This original contribution was appropriated in two installments, in FY 1960 and FY 1962.

Agreements were reached among the IDB member governments to increase the resources of the FSO on five occasions during the 1960s and 1970s. The U.S. participated in all of these replenishments and a total of \$3.3 billion was appropriated for the U.S. contribution to these increases. In FY 1980, the U.S. was authorized to participate in a replenishment totalling \$700 million over four years. The U.S. contributed \$290 million for a replenishment authorized in FY 1985.

Authorizing legislation for the Seventh Replenishment of FSO resources was contained in the International Development and Finance Act of 1989 (P.L. 101-240). The United States' share of FSO-7 was \$82.3 million. The Foreign Operations Appropriations Act of FY 1991 (P.L. 101-513) appropriated \$20.58 million for the first installment of the U.S. contribution.

In FY 1992 and FY 1993, the Administration requested \$20.58 million for the second and third installments of the United States' contribution toward the FSO replenishment, for which \$20.27 million was appropriated in each year. In FY 1994, \$20,164,000 was appropriated (P.L. 103-87) for the fourth and final installment of its contribution to the FSO replenishment pursuant to the Seventh Replenishment.

Arrears to the FSO of \$1,021,000 were cleared and U.S. participation in Eighth Replenishment (with a program limitation of \$82,304,000) was authorized in the FY 1995 Foreign Operations, Export Financing, and Related Programs Appropriation Act (P.L. 103-306). The U.S. recently sent notice to the Bank that legislative requirements have been met for U.S. participation in FSO-8, along with \$20,317,000 representing the first of four scheduled payments.

This fiscal year, the Administration is requesting a \$20,835,000 contribution to the FSO: \$20,576,000 for the second installment of the eighth replenishment, and \$259,000 to eliminate current arrears.

## INTER-AMERICAN INVESTMENT CORPORATION

JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS

Budget Authority Request: None

No funds for the Inter-American Investment Corporation are being sought in FY 1996.

**I. Institutional Structure and Mandate**

In 1986, the U.S. and other member countries of the Inter-American Development Bank (IDB) formally established the Inter-American Investment Corporation (IIC), a multilateral corporation that supports private sector activities in Latin America and the Caribbean. The IIC began operations in 1990, pursuing its mandate to promote small and medium-scale enterprises. It accomplished this primarily by making direct loans and equity investments. As of mid-1994, net loan and equity commitments totaled \$330.8 million, of which twelve percent represented equity investments.

The IIC quickly invested its usable capital and some member countries have sought a capital increase coincident with the Inter-American Development Bank's Eighth Capital Replenishment. However, private capital flows to the region - to private as well as public sector entities - were increasing at levels substantially above those which government institutions could possibly provide at this same time.

Fully cognizant of the critical importance of the private sector as the engine for economic growth, the United States has nevertheless resisted calls for an IIC capital increase. Consequently, the Corporation will reduce its direct investment operations. Instead, the IIC will increasingly leverage its resources through private intermediaries and generate fee income by providing financial advice and technical assistance.

**II. U.S. Interests**

During the IDB's recently completed capital replenishment negotiations (IDB-8), the U.S. proposed that the Inter-American Investment Corporation, the Multilateral Investment Fund (MIF) and the private sector operations of the Bank be more closely coordinated. The goal has been to improve efficiency while helping to ensure that IDB clients, from small and micro-entrepreneurs up through privatizing state-owned enterprises, have access to a comprehensive mix of expertise and funds.

At present, various options for reorganizing the Corporation continue to be explored. A group of consultants retained by the Corporation recently recommended operating the IIC on a reduced scale, shifting some staff into the Bank to assist in

implementing the Bank's new private infrastructure initiative, prepare projects for the MIF and manage global credit programs.

Assuming that changes in strategy are agreed upon, several changes in the IIC Charter will probably be necessary. IIC Governors will meet again early in 1995. For the present, the IIC is downsizing staff and operations in order to preserve its existing capital resources while maximizing development impact.

### III. U.S. Financial Commitments

Legislation authorizing U.S. participation in the IIC and a subscription of \$51 million was enacted in 1984 (P.L. 98-473). The FY 1985 Continuing Resolution (P.L. 98-473) provided funding of \$10.0 million, and a 1985 supplemental appropriation (P.L. 99-88) of \$3.0 million completed the first installment of the U.S. share of IIC capital.

Included in the FY 1986 Continuing Resolution (P.L. 99-190) was \$11.7 million toward the second installment; in FY 1988, \$1.3 million was appropriated in the Continuing Resolution to complete the second installment. The Administration did not make a request for the IIC in FY 1989 due to the bipartisan budget agreement to reduce the Federal deficit. In FY 1990, Congress did not appropriate the \$25.5 million requested by the Administration to purchase the last two installments of the United States' initial subscription to IIC capital.

In FY 1991, \$13.0 million was appropriated under the Foreign Operations Act (P.L. 101-508) for the third installment of the U.S. share of IIC capital. In FY 1992, \$12,315,000 was appropriated under continuing resolutions P.L. 102-145 and 102-266, of which \$5,000 was lost due to a rescission of June 4, 1992. No appropriation was requested in FY 1993 or FY 1994.

With the appropriation of \$190,000 in FY 1995 (P.L. 103-306), the United States' subscription to the IIC's initial capitalization was complete. No additional funds for the IIC are being sought in FY 1996.

## MULTILATERAL INVESTMENT FUND

JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS

**Budget Authority Request:** \$ 100,000,000 contribution

In FY 1996, the Administration is requesting \$100 million for the fourth of five scheduled U.S. payments to the Multilateral Investment Fund (MIF).

**I. Institutional Structure and Mandate**

The MIF was designed to assist Latin American and Caribbean countries in making the investment reforms necessary to stimulate both domestic investment and greater foreign private capital flows. It consists of a one-time capitalization by donors over a five year period.

The MIF is governed by two agreements. The first agreement establishes the MIF. It outlines the general purposes, methods of contribution and payment, operations and decision-making structure of the MIF. A second agreement addresses the administration of the MIF. It is an arrangement between the donor countries and the Inter-American Development Bank (IDB), the administrator of the MIF.

Negotiation of both agreements was successfully concluded in December 1991 and the agreements were signed in Washington in February 1992. The MIF entered into force on January 11, 1993 after the U.S., Japan, Honduras, Peru and Chile deposited Instruments of Acceptance with the IDB. Currently, seventeen countries are MIF Donors.

**II. U.S. Interests**

The MIF, a key element of the Enterprise for the Americas Initiative, enjoys wide multilateral support. The United States agreed to contribute \$500 million, as did Japan. Nineteen other European, Latin American and Caribbean nations agreed to contribute another \$257 million, for a total fund of nearly \$1.3 billion.

The MIF has three operating facilities or "windows":

- I. A **technical assistance facility** to identify and implement policy changes needed to transform the investment climate in recipient economies. Funds are made available for country diagnostic studies to identify investment constraints; development of national plans for the reform of economic policy and the legal environment to promote investment; advisory services on reforming laws affecting investment and tax systems; and advice on the design and implementation of privatization programs.

- II. **A human resources facility** to develop the human resource base needed for increased investment flows and expand the private sector. Funds are made available to strengthen vocational training, for example, including retraining former employees of state-owned enterprises and the training of individuals who can serve in the regulatory functions essential to the operation of a market-oriented system.
- III. **An enterprise development facility** to provide market-based financing and technical support for small and micro-enterprises to assist firms improve financial and business practices. This facility also makes loans and equity investments in small and micro-enterprises, helping to broaden the participation of lower-income groups in the region's economies and improving their access to the global marketplace.

The MIF began operations in 1993; in its first partial year of operations, the MIF Donors Committee approved three grants totalling \$7 million. The pace increased in 1994, with thirty operations totalling \$65 million having been approved by the MIF's Donors Committee. Twenty countries are eligible for MIF assistance, and there are some 57 projects, totalling \$140 million, currently in the MIF pipeline.

### **III. U.S. Financial Commitments**

The U.S. contribution to the MIF, \$500 million over five years, was authorized in P.L. 102-391. In FY 1993, \$90 million was appropriated for the first installment of the U.S. contribution to the MIF under P.L. 102-391. In FY 1994, \$75 million was appropriated (P.L. 103-87) for the second installment. For FY 1995, another \$75 million was appropriated (P.L. 103-306), making the U.S. share of contributions to the MIF approximately 36 percent as of year-end 1994. U.S. arrears total \$60 million.

**ASIAN DEVELOPMENT BANK  
JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:**       \$ 13,221,596 paid-in capital  
  \$ 647,858,204 callable capital

The Administration requests budget authority for the Asian Development Bank (ADB) totaling \$13.2 million for paid-in capital and program limitations of \$647.9 million for callable capital. This represents the first annual installment on the six-year capital subscription to the Fourth General Capital Increase (GCI-IV).

**I. Institutional Structure**

The Asian Development Bank (ADB) was established in 1966 and began ordinary capital lending operations in 1968. The Bank is corporate in form, with its capital stock owned by member governments. Authorized capital stock currently totals about \$48 billion. The Bank makes loans to developing member countries at market-based interest rates from its ordinary capital resources, which consist of (1) paid-in capital subscriptions of members, and (2) proceeds of borrowings in private capital markets that are based on members' callable capital subscriptions. Currently, the ADB has 55 member countries -- 39 regional countries, including developed countries such as Japan, Australia and New Zealand, and 16 developed non-regional countries, including the United States, Canada and 13 European countries.

Japan and the United States, at about 16 percent ownership each, are the two largest shareholders in the ADB. The U.S. and Japan traditionally have equal votes, but since Japan has already paid its first installment to the fourth General Capital Increase, the United States has lost parity with Japan. As of January 10, 1995, the United States has 10 percent of the voting power while Japan has 21 percent.

The Bank has its headquarters in Manila, Philippines, one regional office in Port Vila, Vanuatu, and five resident offices, one each in Dhaka, Bangladesh; New Delhi, India; Jakarta, Indonesia; Kathmandu, Nepal; and Islamabad, Pakistan. The Board of Directors is considering opening a representative office in Washington, D.C. during the second half of 1995.

**II. Bank Operations**

The ADB has become a major catalyst in promoting the development of the most populous and fastest-growing region in the world today.

The Bank loaned \$2,598 million in 1994 through its ordinary capital resources (OCR) window. At end-1994, cumulative ordinary capital loan commitments totaled \$35,200 million. The largest OCR borrowers over the past six years have been Indonesia, India,

- 2 -

China, Philippines, and Thailand. Lending operations cover the entire spectrum of economic development, with particular emphasis on agriculture, energy, capital market development, transport and communications and social infrastructure. The ADB also supports private sector development through catalytic, targeted direct lending and equity investments; \$1 billion has been allocated for this program.

Of growing importance are non-lending activities aimed at advancing the policy dialogue with borrowing members, providing technical assistance to upgrade institutional capacity and improve public sector management, improving donor coordination, and promoting private sector investment in economic development. Bank staff also respond to requests for assistance in coordinating development policies and plans of developing member countries. In its operations, the Bank is required to give special attention to the needs of the smaller or less developed countries and give priority to regional, sub-regional and national projects and programs which will contribute to the harmonious economic growth of the region as a whole.

To further magnify its developmental impact, the ADB actively pursues co-financing activities with official as well as commercial and export credit sources.

### III. U.S. Interests

The Asian Development Bank plays a key role in the economic and social progress of its developing member countries in Asia and the Pacific. Many of these countries are important to the foreign policy interests of the United States. U.S. participation in the Bank gives us an effective vehicle for economic development in Asia and thus helps to bring about conditions necessary for political stability in a part of the world that is of key importance to U.S. strategic and economic interests.

The United States has successfully used its leadership role to shape the ADB's policy agenda and open opportunities for U.S. business.

- o U.S. participation in the ADB makes U.S. firms eligible to bid on lucrative project contracts, giving U.S. firms the opportunity to gain market share. In 1993, the ADB financed \$144.1 million in U.S. goods and services.<sup>1</sup> This paves the way for larger volume, follow-on business.

---

<sup>1</sup> In 1993, U.S. firms bid on less than 5 percent of ADB business but, when they did bid, won 63 percent of the time. Performance by U.S. and Japan has been roughly equal over the last several years.

- 3 -

-- U.S. exports to developing Asia have more than doubled since 1987, supporting millions of jobs in the U.S. U.S. trade with Asia, excluding Japan, is as large as our trade with the entire European Union (EU). Counting Japan, it's nearly twice as large.

o The ADB has adopted a number of U.S.-led initiatives to encourage adoption of market-oriented policy/legal/regulatory framework, provide economic opportunities for the poor, protect the environment and foster good governance.

-- Country programming reflects country performance and policy priorities for long-term sustainable development.

-- The Board of Directors is considering expanding the ADB's private sector program. The \$1 billion previously allocated is almost fully utilized.

-- The ADB assesses the environmental impact of projects under preparation and, as appropriate, modifies project design. The Board has discussed or approved policies on forestry, energy, information, and an inspection function. This year, the Board will discuss policies on involuntary resettlement and indigenous people.

-- The Board plans to establish a policy on good governance this year.

o The U.S. has also pressed for institutional reforms that make the ADB more efficient, transparent and accountable, and improve project quality.

-- The ADB is implementing the action plan set out in the February 1994 Report of the Task Force on Improving Project Quality.

-- The ADB President authorized a major reorganization, similar to recent reorganizations at the World Bank and the Inter-American Development Bank, effective this year. It reorganizes the Bank along geographic lines to strengthen the country focus.

-- The information disclosure policy became effective this year.

-- The Board of Directors is establishing an inspection function to ensure the Bank follows its own policies.

-- The ADB also pursues tight budget policies. The Board approved zero real growth in the 1995 budget (except for one-time costs associated with an "early out" program for Bank staff). First-class travel was eliminated in 1993.

#### IV. U.S. Financial Commitments

U.S. membership in the ADB and an original capital subscription of \$200 million, consisting of \$100 million each of callable capital and paid-in capital, were authorized in March 1966 (P.L. 89-369). The U.S. joined the Bank in August 1966. The callable portion of the original capital subscription was appropriated in FY 1966 (P.L. 89-426). The paid-in portion of the original capital subscription was appropriated and provided in four installments: \$40 million in FY 1966 and \$20 million each in FY 1969, FY 1970, and FY 1971 (P.L. 89-426, P.L. 90-581, P.L. 91-194 and P.L. 92-18, respectively).

Three general capital increases to authorized capital totalling \$15.1 billion were approved by the ADB's members in 1971, 1976, and 1983. The U.S. participated in all of these increases with appropriation of an additional \$2,499 million in paid-in and callable capital.

The ADB Board of Governors approved a Special Capital Increase (SCI) in 1988. The SCI permitted Sweden to join the ADB, and Japan and the U.S. to adjust shareholdings back to the original 16.2 percent share held by each. The United States agreed to subscribe to Bank shares totaling \$425 million: \$51 million for paid-in capital and \$374 million for callable capital. FY 1992 Continuing Resolution (P.L. 102-266) authorized U.S. participation and appropriations were made in FY 1993 and FY 1994.

A fourth general capital increase was approved by the Board of Governors on May 22, 1994. The United States agreed to subscribe to Bank shares totaling \$3,330.8 million: \$66.6 million for paid-in capital and \$3,264.2 million for callable capital.

GCI-IV, approved by the Board of Governors May 22, 1994, doubles ADB capital from roughly \$24 billion to \$48 billion. This is the first general capital increase in 10 years and the fourth since the ADB's inception 28 years ago. The United States succeeded in negotiating the lowest annual cost ever for U.S. taxpayers (\$66.6 million for paid-in capital, payable over six years) while keeping parity with Japan as the Bank's two leading shareholders.

Deadline for entering a subscription to the capital increase is December 31, 1995. It is possible for the Board of Directors to extend that date. If the United States does not subscribe, shares presently set aside for the U.S. would go into the pool of unallocated shares available for subscription by other member countries. Such an event would mean that the U.S. would permanently lose parity with Japan as the leading shareholders.

**ASIAN DEVELOPMENT FUND  
JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:**       \$ 304,528,525 contribution

The Administration requests budget authority for the Asian Development Fund (ADF) totaling \$304.5 million, of which \$170 million constitutes the fourth and final installment to the Fifth Replenishment of the ADF (ADF-VI) and \$134.5 million constitutes arrears. This request implies a carryover of \$132.5 million in arrears to FY 1997.

The current replenishment (ADF-VI) of \$4.2 billion finances operations over the four year period 1992-1995. Of the \$4.2 billion total, \$140 million was allocated for project-related technical assistance to the poorer ADB member countries and for regional technical assistance. Negotiations for this replenishment, the ADF's fifth, concluded December 10, 1991.

**I. Institutional Structure and Mandate**

The soft loan window of the Asian Development Bank (ADB) is the Asian Development Fund (ADF). The ADF was created in 1974 to provide concessional funds to the poorest countries in Asia.

ADF loans, which must be fully repaid, are extended for longer terms and at concessional rates. The loans finance priority economic development projects in the poorest ADB member countries.

Member governments provide the resources for ADF lending. Japan is the largest donor and contributes 37.7 percent to the current replenishment (ADF-VI). The United States, the second largest donor, contributes 16.2 percent to ADF-VI.

**II. Fund Operations**

The ADF, as the concessional loan window of the Asian Development Bank, extended \$1,177 million in new loans during 1994. As of December 31, 1994, cumulative loan commitments from the Asian Development Fund (ADF) totaled \$16,037 million.

Major ADF borrowers include Pakistan, Bangladesh, Sri Lanka and Nepal. The Philippines and Indonesia, which had graduated from the ADF several years ago, were given renewed access to the soft loan funds because of their economic difficulties. Countries transitioning to market economies, notably the central Asian republics of Kazakhstan and the Kyrgyz Republic, are beginning to receive assistance as well.

### III. U.S. Interests

Two-thirds of the world's poorest people live in Asia. ADF borrowing countries have relatively low per capita GNPs, rapidly growing populations, and limited productive capacity, all of which combine to constrain their ability to generate and harness domestic savings. They then rely heavily on foreign capital inflows to finance domestic investments in economic development. For these countries, the ADF is an important source of foreign capital. U.S. participation in the ADF demonstrates our commitment to the economic development of countries in a region that is strategically and economically important to the United States.

Important policies negotiated under the current replenishment (ADF-VI) included: precluding access for India and China; allocating ADF resources based on performance (i.e., sound economic management, efforts to promote economic growth and sustainable long-term development); fostering the private sector and entrepreneurial opportunities; increasing donor coordination and cooperation; strengthening environmental activities (including Environmental Impact Assessments, country environment strategy reports, forestry, energy efficiency and conservation); precluding project approval when a recipient's sector policies would adversely affect the project; and changing procedural rules to allow the Board to veto future disbursement when a borrower does not meet loan conditions.

U.S. arrears to the multilateral development banks are proportionately the greatest with respect to the Asian Development Fund. So has been the reaction of other donors.

- o In the ADF, as in other soft loan windows of the multilateral development banks, contributors have the right to reduce their contributions in proportion to non-payment by another contributor. Contributors, including all G-7 countries except Japan, can and have cut back their ADF contributions by about \$387 million, because of U.S. arrears (totaling \$267 million in FY 1995). This has depressed ADF lending activity.

(On the other hand, FY 1995 payment by the United States of \$168 million, almost a full payment, forced those contributors to pay up over \$240 million.)

- o An unprecedented policy idea has been suggested by one member of the Board of Directors: that business from countries behind in their ADF payments be denied procurement bidding rights. This is the first time such a linkage has been raised in the multilateral development banks.

**IV. U.S. Financial Commitments**

Agreements were reached among the ADF's member governments to support four replenishments of the resources of the Fund in 1975, 1978, 1982, and 1986. The U.S. participated in all of the replenishments, contributing a total of \$1,729 million.

In December 1991, negotiations were completed on a \$4.2 billion Fifth ADF Replenishment (ADF-VI). The replenishment covers the 1992-1995 period. The U.S. share of the replenishment is 16.19 percent, or \$680 million. Four annual installments of \$170 million are scheduled for FY 1993-96. (The Japanese share is 37.7 percent or \$1,583.43 million.)

The Administration requested \$170 million in budget authority in FY 1993 for the first installment of ADF-VI. The FY 1993 appropriation of \$62.5 million cleared arrears of \$50 million to the previous replenishment (ADF-V) and provided \$13 million toward the first installment of ADF VI. In FY 1994, \$62.5 million was appropriated for ADF-VI. FY 1995 appropriations totaled \$168.0 million. Overdue payments as of end-FY 1995 amount to \$267.0 million.

**AFRICAN DEVELOPMENT BANK****JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:** No funds for the AFDB are requested in FY96.

**I. Institutional Structure and Mandate**

The African Development Bank (AFDB) is a regional development bank whose purpose is to contribute to the economic development and social progress of its regional members. The African Development Bank makes loans at near-market terms to its more creditworthy borrowing member countries. The African Development Fund assists the poorest African nations with funding at highly concessional terms.

The African Bank was established August 4, 1963, and - by charter amendment - was opened for membership by non-African countries on May 7, 1982. The AFDB's charter provides for two-thirds African ownership of the Bank. At the end of 1993, there were 76 members of nk. At the end of 1993, there were 76 members of the AFDB, including 51 African members, 15 European members, 4 North and South American members, 4 Asian members, and 2 Middle Eastern members.

The United States formally joined the Bank in February 1983 with an initial subscription of 5.8 percent of the Bank's shares. The U.S. is the largest non-regional shareholder, with an end-1993 relative percentage shareholding of 5.85 percent. The U.S. has its own Executive Director, and is the only single-country constituency in the Bank's Executive Board.

**II. Operations**

During 1994, the African Bank extended 24 loans totalling \$1.3 billion to 13 countries. At end 1993, the AFDB had extended 676 loans totalling about \$17.3 billion. Public utilities received the largest share of these loans (25.7%), followed by industry (22%), agriculture (21.6%) and transportation (14.6%).

**III. U. S. Interests**

The U.S. is working with the African Bank to strengthen its policies in such key areas as: (1) environmental assessment of proposed projects; (2) consultations with non-governmental organizations (NGOs); and (3) creation of an independent inspection function.

The United States secured important changes in Bank policies in the context of the Fourth General Capital Increase of ordinary capital resources. These include:

- 2 -

- more effective country programming and lending operations through development of country strategies;
- enhanced efforts to improve project quality and ensure consistency with borrower country strategies through intensified monitoring of project implementation, including post-evaluation activities;
- strengthened coordination with other donors to enhance absorptive capacity and the ability to service external debt; and
- policy-based lending in support of needed market-oriented reforms conducted in conjunction with the World Bank and other development institutions.

#### IV. U.S. Financial Commitments

The AFDB has a total authorized capital base of SDR 16.2 billion (approximately \$22.3 billion equivalent). About 94.25 percent of this total has been fully subscribed by the shareholders. The United States has participated in the last two capital increases, GCI-III (when non-regional members were admitted), and GCI-IV.

U.S. membership was authorized by Public Law 97-35 as was a U.S. subscription of \$359.7 million to AFDB capital. The first installment of the U.S. subscription (\$18.0 million for paid-in capital and \$54.0 million, under program limitation authority, for subscription to callable capital) was appropriated in FY 1981 (PL 97-12).

A second and third installment with identical amounts for paid-in and callable capital subscriptions were provided under PL 98-151 and PL 98-473. In FY 1986, \$16.2 million in budget authority for paid-in capital was appropriated, along with \$48.6 million in callable capital under program limitations (PL 99-190). Under authority of PL 99-177, \$696,000 of the FY 1986 appropriation for paid-in capital was sequestered.

The FY 1987 Continuing Resolution (PL 99-591) provided \$13.99 million for paid-in capital and \$41.99 million for callable capital were appropriated in a FY 1987 supplemental appropriation (PL 100-71).

In 1986, agreement was reached on a \$13 billion increase in the capital of the AFDB (the **Fourth General Capital Increase**). The U.S. share of the increase is \$719.6 million of which \$44.97 million is paid-in over five years. Under FY 1988 Continuing Resolution (PL 100-202), Congress appropriated \$9.0 million for paid-in capital and authorized \$134.9 million for callable capital subscriptions to make the first installment of that subscription.

- 3 -

In 1989 (under PL 100-461), Congress appropriated \$7.3 million for paid-in capital and authorized \$135.0 million for callable capital to go toward the second installment.

In FY 1990 (under PL 101-167), Congress appropriated \$9.6 million for paid-in capital and authorized \$134.2 million for callable capital to clear arrears on the second installment and to make payment on the third installment.

In FY 1991 (under PL 101-513), Congress appropriated \$10.1 million for paid-in capital and \$135.4 million for callable capital to clear arrears on the third installment and to pay the fourth installment.

In FY 1992 (under PL 102-145 and 102-266), Congress appropriated \$8.8 million for paid-in capital and \$132.8 million in callable capital. In FY 1993 and 1994 there were no appropriations for the African Development Bank.

In FY 1995, the Administration requested and received \$133,000 in paid-in capital and \$2,002,540 in callable capital for payment of arrears to the Bank. As of end-1994, Congress had appropriated a cumulative \$135 million for paid-in capital and enacted program limitations of \$944 million for callable capital in the AFDB. There are currently no U.S. arrears to the Bank.

**AFRICAN DEVELOPMENT FUND****JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:** \$127,247,025 contribución

**I. Institutional Structure and Mandate**

The African Development Fund (AFDF) was established in 1973 to complement the operations of the African Development Bank by providing concessional financing for high priority development projects in the poorest African countries. Its purpose is to contribute to economic and social development in the African region.

The African Development Fund consists of 26 non-regional contributors -- from Europe, the Americas, Asia, and the Middle East -- and the African Development Bank, which represents the African members. The non-regional members hold 50 percent of the voting power.

**II. Operations**

At the end of 1993, the Fund had extended a cumulative total of 1,164 loans and grants worth approximately \$10.2 billion. During 1993, the AFDF approved 42 new loan commitments totalling \$796 million to 27 member countries, and extended 62 grants totalling \$98 million. AFDF loan terms are highly concessional, with a 50-year maturity, 10-year grace period and 0.75 percent service charge. The bulk of lending supports infrastructure, health, education and agricultural projects.

The Fund made no new loan or grant commitments in 1994. Subscribed resources from the 6th replenishment were exhausted in late 1993 and US arrears were settled in November 1994, clearing the way for a few additional loans. Negotiations for the seventh replenishment of the Fund began in May 1993 but have not yet concluded and projects cannot be financed from this replenishment. Once AFDF-VI is fully subscribed, the African Development Fund will have a resource base of SDR 7.7 billion (approximately \$10 billion equivalent) in cumulative subscriptions.

**III. U.S. Interests**

The United States joined the Fund in 1976. We are currently the second largest contributor and held 6.7 percent of the total voting power as of December 31, 1994. The United States has participated in all replenishments of the AFDF and has contributed 13.2 percent of total resources. As of end-1994, Congress had appropriated a total of \$1.2 billion for U.S. contributions to the AFDF. The US has pledged a total of \$315 million to the 7th replenishment. The U.S. has its own Executive

Director and is the only single-country constituency on the Executive Board.

The United States has strong humanitarian and strategic interests in aiding the poorest countries of the world's least developed continent. Participation in the African Development Fund underscores the long-standing interest of the people of the United States in helping to reduce hunger and poverty in the poorest countries of the world. We have been pressing the Fund to focus its operations in areas where it performs best and where the needs of the poorest are greatest (e.g., lending to support infrastructure development, such as: roads and buildings, water supply and sanitation; lending in support of basic education, health and nutrition; providing women greater access to economic opportunities; and lending to encourage micro enterprise development, creating new opportunities for the poor).

Much needed policy reforms designed to liberalize markets and strengthen the free enterprise system are also leveraged with Fund resources. When these reforms take hold, Africa could follow in the footsteps of East Asia and Latin America as an important market for US exports. In order to foster the private sector, the African Development Bank, largely at the behest of the United States, established the Private Sector Development Unit (PSDU) in 1991. By end 1994, it had made 17 loans and equity investments in private enterprises without government guarantees totalling \$71 million. Many of these loans were to enterprises in Africa's poorest countries. The Bank also established the African Business Roundtable, consisting of the Continent's leading business personalities, to advise the Bank Group on private sector strategy.

Major U.S. objectives include

- Eligibility. We and other donors have been working to clarify guidelines specifying the linkage between eligibility for Fund resources, per capita income and country creditworthiness. In particular, we are seeking to ensure that the poorest uncreditworthy countries have access only to concessional resources. Negotiations on this issue are still underway.
- Performance-based Allocation. Those countries with strong economic performance and a good record in the utilization of Fund resources will be eligible for performance enhancements, such as increased allocations from AFDF-7 resources. Likewise, weak performers will have their allocations reduced.
- Loan Quality Improvements. With strong U.S. support, the Bank commissioned a Task Force to examine project quality. The "Knox Report" recommended that the work program have a

- 3 -

greater country focus, and that staff emphasize project supervision at the expense of project preparation. The Bank's management prepared an Action Plan to implement recommendations of this report. Some recommendations have been implemented on schedule while others are tied-in with a Bank wide reorganization which will emphasize country focused operations. The United States is seeking to have all major recommendations implemented.

- Transparency and Accountability. We are working to establish an inspection panel similar to the World Bank's: such a panel would investigate claims by people that they have been or will be adversely affected due to the Bank's non-compliance with its own policies.
- Environment. The United States is pressing for further strengthening of the Fund's environmental efforts, including: an information disclosure policy similar to the World Bank's, and policies on water resources management, resettlement and indigenous people.

#### IV. U.S. Financial Commitments

The United States joined the Fund in November, 1976, and made an initial contribution of \$15 million (\$5 million was appropriated in PL 94-303 and \$10 million was appropriated in PL 94-441). The United States contributed an additional \$10 million (PL 95-148) to a special increase in 1977.

United States participation in the **First Replenishment** of the Fund was authorized in 1977 (PL 95-118), and \$25 million for the U.S. contribution was appropriated in 1979 (PL 95-481).

In June 1980, PL 96-259 authorized a U.S. contribution of \$125 million to the **Second Replenishment** of the AFDF. Payments on this contribution were made in 1980 (\$25 million, PL 96-123), 1981 (41.7 million, PL 96-536), and 1982 (\$58.3 million, PL 97-121).

In 1983, PL 98-181 authorized a U.S. contribution of \$150 million to the **Third Replenishment**. Payments on this contribution were made in \$50 million installments in 1983 (PL 97-377), 1984 (PL 98-151) and 1985 (PL 98-473).

In 1986, PL 99-190 authorized U.S. participation in the **Fourth Replenishment** with a contribution of \$225 million. Payments were made in 1986 (\$62.3 million, PL 99-190, of which \$2.7 million was sequestered under PL 99-177), 1987 (\$53.8 million, PL 99-591, and a supplemental \$36.6 million, PL 100-71) and 1988 (\$75 million, PL 100-202).

- 4 -

In 1989, PL 100-461 authorized a U.S. contribution of \$315 million (11.8 percent) to the \$2.7 billion **Fifth Replenishment**. Payments were made in 1989 (\$105 million under PL 100-461 for the first installment), 1990 (\$104.5 million under PL 101-167) and 1991 (\$105.5 million under PL 101-513 to complete the \$0.5 million shortfall in the second installment and to make the third and final installment).

Congress authorized a U.S. contribution of \$405 million to the \$3.4 billion **Sixth Replenishment** in P.L. 102-266. Payments on the U.S. contribution have been made in 1992 (\$103.8 million, P.L. 102-266), 1993 (\$103.8 million, P.L. 102-391) and 1994 (\$135 million, P.L. 103-87). In November 1994, the US cleared its arrears of \$62.2 million to the 6th replenishment.

Congress authorized U.S. participation in the **Seventh Replenishment** in 1994 and appropriated \$124.2 million for U.S. contributions to the Fund (P.L. 103-306).

The Administration is requesting \$127.3 million for the African Development Fund in FY96.

**EUROPEAN BANK FOR RECONSTRUCTION AND DEVELOPMENT****JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:**       \$ 81,916,447 paid-in capital  
                                      \$191,138,376 callable capital

**I. Institutional Structure and Mandate**

The European Bank for Reconstruction and Development (EBRD) was established in 1991 to foster the transition toward market-oriented economies and to promote private and entrepreneurial initiatives in central Europe and the former Soviet Union.

Countries receiving EBRD assistance must be committed to and applying the principles of multiparty democracy, the rule of law, respect for human rights and market economics. The EBRD has 59 members, of which 25 are borrowing members. The United States has pledged to subscribe to a 10% share of capital and currently holds voting power of 8.3%.

The Bank's focus is private sector investment. The EBRD is giving particular emphasis to strengthening financial institutions, promoting privatization, developing the local private sector, and creating a modern infrastructure. Its role is catalytic in that it encourages co-financing with private and public financial institutions, mobilizes domestic capital resources, and provides technical cooperation in pursuit of these objectives and to help make reforms sustainable.

The Bank is required by its Charter to direct at least 60 percent of operations (both lending and equity) to the private sector or public enterprises shifting to private control. Remaining resources are to be lent for infrastructure projects that support private development, and for state-owned enterprises that operate competitively.

The Bank invests in commercially sound projects and on commercial terms. In other words, the EBRD does not make grants, nor does it lend at below market interest rates. The Bank also places great emphasis on projects that contribute to environmentally sound and sustainable development.

**II. Bank Operations**

From the EBRD's inauguration in the spring of 1991 through December 31, 1994, the Bank has approved 251 projects worth \$7.1 billion. The top beneficiaries of Board approved projects are: Russia (\$1.3 billion), Poland (\$1.1 billion), Hungary (\$910 million), Czech Republic (\$591 million),

- 2 -

Romania (\$577 million), Slovenia (\$373 million) and Slovakia (\$335 million). The Bank has concentrated its operations in the financial, telecommunications, transport services, roads and bridges, oil and gas and energy sectors.

The Bank has put growing emphasis on approving private sector projects and equity activities:

- o Private sector projects grew by 54% in 1994 to a total of \$4.5 billion.
- o For the year ending December 30, 1994, cumulative disbursements were up 118% over 1993. More than \$1.1 billion has been disbursed on private sector projects.
- o For 1994, approved equity projects nearly doubled to a total of over \$1.1 billion.

The Bank also has attempted to target its activities more evenly across countries of operations, with plans to have at least one operation in each country:

- o In the first half of the year, the thirteen countries with the least EBRD investment doubled.
- o In 1994, the Board approved the Bank's first projects in Kyrgyzstan, Macedonia, Croatia and Moldova.

Over the year, the Bank responded to calls for more creative support for economic transition in the region, increased focus and adoption of programmatic approaches. Highlights include:

- o Targeting local level and small business initiatives;
- o Leveraging EBRD funds with private investment and government technical assistance;
- o Developing local financial infrastructures so that domestic institutions begin to furnish lending and investment to local firms.

### III. U.S. Interests and Policy Objectives

There has been a great deal of change at the EBRD over the past year. Since the arrival of its new President, Jacques de Larosiere, the Bank has conducted a thorough review of operational priorities, adopted a new organizational structure, and has reduced administrative costs. The new policies have already led to a more streamlined, focused institution.

Recent management improvements include:

- o A 1994 hiring freeze and a 9% reduction in budgeted positions;
- o Zero-growth budget for 1994 and 1995;
- o Elimination of first-class travel.

**EBRD operations have had a positive impact on the U.S. economy.** U.S. firms have participated in nearly 25 percent of Board approved projects in the private sector, 12 percent of public sector contracts and earned fees on EBRD financial market activities. The Bank has invested over \$800 million in the U.S. sponsored private sector projects, thus increasing U.S. exports and enabling U.S. firms to reach important new markets.

The EBRD draws upon a pool of contributions from member countries to finance grant **technical cooperation activities** such as project feasibility studies and advisory services. Thus far, U.S. TDA has made over \$1 million available to the EBRD for these purposes. The EBRD administrative budget also finances some technical assistance.

**Eximbank, OPIC, USAID, and the Polish American Enterprise Fund have co-financed over 25 projects with the EBRD.** U.S. consultants have won contracts from both the untied EBRD administrative budget and from the untied Japanese, Taiwanese, Baltic, and United Nations Development Program technical cooperation funds as well as from the funds contributed by the U.S. Trade and Development Agency (TDA).

In addition to traditional debt and equity financing and technical assistance, the EBRD has developed special mechanisms for channeling funds to the enterprise sector through a programmatic approach recommended by the U.S.:

- o **The Polish Private Equity Fund** will provide venture capital and technical assistance to companies privatized in the mass privatization program. The EBRD is working with AID and the Polish American Enterprise Fund to manage the \$75 million fund which will funnel assistance to privatized firms.
- o **The Small and Medium Enterprise Fund (SME)**, initiated by the G-7, facilitates lending and equity placements to small- and micro-businesses. Launched with a \$10 million pilot project in two cities, it has been expanded to a \$55 million fund in five cities. The SME will eventually be increased to \$300 million, with financing available throughout Russia.

- 4 -

- o Similar projects to support small and medium enterprises have been developed for other FSU countries: Belarus, Ukraine, Kazakhstan, and Uzbekistan. For example, by October 1994, a U.S. sponsored investment fund in Ukraine had already disbursed on eight small and medium enterprise investments.
- o The EBRD is working with the G-7 to implement the \$3 billion Special Privatization and Restructuring Program (SPRP) for Russia. To date, the EBRD has approved four regional venture funds (with plans for seven more) which provide equity and technical assistance to newly privatized firms in reformist regions. G-7 donor TA funds leverage \$30 million in EBRD equity for each fund.
- o Local financial institutions are being utilized in many of these projects, such as the SME fund for Russia or to channel a \$120 million SME credit line in Ukraine.

The EBRD also administers the Nuclear Safety Account (NSA), an initiative of the Munich Summit. As of September 1994, donors had committed about \$150 million. The NSA provides grant funds for immediate safety improvements of high-risk reactors and develops plans for early closure of those reactors. The NSA is facilitating closure of reactors at the Kozloduy nuclear station in Bulgaria and at Ignalina in Lithuania. Projects are now being developed in Russia and Ukraine. In this vein, the Bank is playing a lead role in development and implementation of the G-7 Action Plan for Ukraine, which will help facilitate closure of the Chernobyl reactor.

#### IV. U.S. Financial Commitments

The Bank has a total capital base of ECU 10 billion (approximately U.S. \$12 billion). The United States has pledged to subscribe to the largest individual share of the capital of the Bank, a 10 percent shareholding. Japan, France, Germany, Italy and the United Kingdom each have an 8.5 percent share. The total U.S. subscription to be made over five years is \$1.2 billion, of which \$350 million will be paid-in and \$817 million callable capital.

The U.S. subscription requires annual appropriations of \$70 million for paid-in capital and a program limitation of \$163.4 million for callable capital. In FY 1991 (P.L. 101-513), this amount was appropriated. In FY 1992 (P.L. 102-266), slightly less than \$69 and \$161 million was appropriated for paid in and callable capital, respectively. In FY 1993 (P.L. 102-391), only \$60 million was allocated for paid-in capital, while \$140 million was provided for callable capital. Arrears to the EBRD totalled \$11 million at the end of FY 1993.

In FY 1994, the Administration requested \$70,020,600 for paid-in capital and \$163,381,400 in program limitation for callable capital for the fourth capital installment. Because Congress made no appropriation, U.S. arrears increased to \$81 million for paid-in capital and \$189 million for callable capital.

In FY 1995, the Congress appropriated \$69,180,353 for paid-in capital and \$161,420,824 in program limitation for callable capital (P.L. 103-306).

In FY 1996, the Administration is requesting \$81,916,447 for paid-in capital and \$191,138,376 in program limitation for callable capital.

## NORTH AMERICAN DEVELOPMENT BANK (NADBANK)

JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS

<b>Budget Authority:</b>	\$56,250,000 paid-in capital
	\$318,750,000 callable capital

The North American Development Bank is being created and governed by the United States and Mexico as part of the North American Free Trade Agreement (NAFTA) to provide \$2-3 billion in financing for high priority environmental infrastructure projects in the border region and, more broadly within the U.S., for NAFTA-related community adjustment and investment. The NADBank's capital shares (\$450 million in paid-in capital and \$2.55 billion in callable capital) will be contributed equally by the United States and Mexico over a four-year period. The FY 1996 tranche of U.S. capital contributions (\$56.25 million in paid-in capital and \$318.75 million in callable capital) is the second tranche of the Bank's initial capitalization. The first tranche of capital was funded in FY 1995 through an advance appropriation as part of the NAFTA Implementation Act.

The NADBank is unique among the international development banks, as it is specifically designed to fund projects that will have either a direct or indirect impact on the U.S. and its citizens. Reflecting this orientation, the NADBank will be located in San Antonio, Texas, with an office for the U.S. community adjustment and investment program in Los Angeles, California.

The primary purpose of the NADBank is to finance environmental infrastructure projects along the U.S.-Mexico border in order to address serious problems -- particularly in the areas of wastewater treatment, drinking water, and municipal solid waste -- that have plagued border communities for decades. The NADBank will only finance those environmental projects that have been certified by the U.S.-Mexican Border Environment Cooperation Commission (BECC), a new institution designed to assist border states and local communities in coordinating border clean-up. Based on its paid-in and callable capital, the NADBank will be able to provide partial guarantees of private sector financing and borrow in capital markets to provide loans to help finance the projects certified by the BECC.

In addition, 10 percent of the U.S. and Mexican shares of NADBank will be available for community adjustment and investment to further the purposes of NAFTA in both countries, which need not be in the border region. The U.S. Government will implement the community adjustment program through existing federal credit programs, such as the Small Business Administration and the Rural Development Administration. An Advisory Committee, which will include low income community representatives and non-governmental organizations, will help ensure broad public participation in the community adjustment window of the NADBank.

INTERNATIONAL MONETARY FUND  
ORIGINAL ENHANCED STRUCTURAL ADJUSTMENT FACILITY

JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS

**Budget Authority Request:**

None

The original Enhanced Structural Adjustment Facility (ESAF) was established on December 29, 1987, to enable the International Monetary Fund (IMF) to provide balance of payments assistance on concessional terms to low-income developing countries. Countries that are eligible to borrow from the ESAF Trust have protracted payments problems and are prepared to undertake multi-year economic reform programs. ESAF is an integral part of concerted international efforts to help the poorest countries, particularly those in Sub-Saharan Africa, to implement the structural and economic reforms necessary to create sustainable economic growth and to alleviate pervasive poverty and improve basic human needs. Eligibility was expanded in 1991 to eleven additional countries, making a total of seventy-two countries eligible for ESAF loans.

ESAF programs are developed in close collaboration with the World Bank through the Policy Framework Paper (PFP) process. Under the process, a member develops a medium-term PFP, in cooperation with the Fund and Bank staff, outlining a 3-year adjustment program, including structural measures and delineating in broad terms the expected path of macroeconomic policies. ESAF loans are subject to strict monitoring arrangements. Loans are disbursed over a 3-year period with repayments in 10 equal semiannual installments beginning 5-1/2 years and ending ten years after the date of disbursement. The rate of interest charged on loans from the ESAF is concessional (0.5 percent). Resources committed to the ESAF Loan Account total approximately SDR 5.3 billion (about \$7.4 billion). In addition, SDR 2.2 billion (about \$3.1 billion) have been committed to the ESAF Subsidy Account, which makes up the difference between the concessional interest rate and market interest rates. Major industrial countries and some developing countries provide the resources for the ESAF.

**U.S. Contribution to ESAF**

For FY-1990, the Administration sought budget authorization and appropriation for the full proposed U.S. contribution of \$150 million to ESAF. The appropriation of \$139,389,000 fell short of the request by \$10,602,000. In FY-1991, the Administration sought and Congress appropriated \$10,602,000 in budget authority to complete the U.S. contribution. The U.S. contribution is to be disbursed over a 12-year period, with small but gradually increasing annual outlays.

The Administration requests no budget authority for ESAF I in FY 1996.

**INTERNATIONAL MONETARY FUND  
SUCCESSOR TO THE ENHANCED STRUCTURAL ADJUSTMENT FACILITY**

**JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:**

**\$25 million**

The original Enhanced Structural Adjustment Facility (ESAF) was established on December 29, 1987, to enable the International Monetary Fund (IMF) to provide balance of payments assistance on concessional terms to low-income developing countries. Countries that are eligible to borrow from the ESAF Trust have protracted payments problems and are prepared to undertake multi-year economic reform programs. ESAF is an integral part of concerted international efforts to help the poorest countries, particularly those in Sub-Saharan Africa, to implement the structural and economic reforms necessary to create sustainable economic growth and to alleviate pervasive poverty and improve basic human needs. Eligibility was expanded in 1991 to eleven additional countries, making a total of seventy-two countries eligible for ESAF loans. Twenty of the 29 countries that have initiated ESAF supported reforms are from Africa.

The Interim Committee endorsed a successor to the original ESAF in April 1993. The Group of Seven (G-7) supported a successor facility at the Tokyo Summit in July 1993. A facility along the lines of the current ESAF was agreed at the September 1993 meeting of the Interim Committee. The Loan Account to the successor consists of about SDR 5.0 billion (about \$7.0 billion) with an additional SDR 1.5 billion (\$2.1 billion) required in bilateral contributions for the Interest Subsidy Account. The U.S. contribution to the facility represents less than 5 percent of the total bilateral contributions to the Interest Subsidy Account (substantially less than the U.S. share in the IMF). The U.S. decision became a catalyst prompting other countries to come forward and make commitments to the successor facility.

**U.S. Contribution to the Successor to ESAF**

In FY-1995, the Administration sought budget authority for the full \$100 million to the successor facility. Congress agreed to \$25 million, making authorization and appropriation of the remaining \$75 million contingent on the Fund's taking steps to provide for greater disclosure and transparency. Although the United States' commitment does not begin to outlay until FY-97, the Administration is requesting a modest appropriation of an additional \$25 million for FY-96 to demonstrate to other contributors our serious commitment to this highly successful facility.

The dollar amount of the U.S. contribution to the successor is one-third less than the U.S. commitment to the original ESAF. It is a payment to the Interest Subsidy Account of the ESAF for the

- 2 -

purpose of financing a concessional interest rate to borrowers. Relative to quotas or GDP, the U.S. contribution is significantly less than contributions from most of the other major industrial countries.

**DEBT REDUCTION FOR THE POOREST COUNTRIES****JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:** \$27,000,000 Debt Restructuring

The Administration is seeking \$27 million in appropriations in FY 1996 for reduction of debt owed to the United States Government by the poorest countries, particularly those in Sub-Saharan Africa. This action would be implemented as part of multilateral debt reduction efforts in the Paris Club, where agreement has now been reached on moving to deeper debt reduction.

The United States and other Paris Club creditors have just agreed on terms for providing, on a case-by-case basis, two-thirds debt reduction for heavily indebted poorest countries. The Paris Club has also agreed to reduce the stock of debt, rather than just payments coming due, for countries with a sustained record of economic reform. We anticipate that our request of \$27 million will permit us to join other Paris Club creditors in providing debt reduction to countries expected to come to the Paris Club in FY 1996.

Heavily indebted poorest countries have required repeated reschedulings of their bilateral debt, which they cannot afford to pay on a timely basis. For countries with a fundamental debt solvency (rather than liquidity) problem, such reschedulings merely serve to increase the debt burden over time, through the capitalization of substantial amounts of interest. While many of these countries have adopted significant economic reforms, there is little prospect that they can fully service their current debt obligations in the foreseeable future. Debt reduction will serve to maximize U.S. collections on this debt within their capacity to pay, while also easing a debt burden which serves as a major deterrent to investment and growth.

In FY 1994 the Administration sought, and Congress provided, the necessary legislative and budget authority to allow the United States Government to join other Paris Club creditors in providing debt/debt service reduction on payments coming due for eligible poorest countries. Congressional appropriations were also provided for this program in FY 1995.

**DEBT RELIEF FOR ENVIRONMENTAL AND SOCIAL PROGRAMS  
IN LATIN AMERICA****JUSTIFICATION FOR  
FY 1996 APPROPRIATIONS**

**Budget Authority Request:** \$15,000,000 Debt Restructuring

The Administration will propose a buyback and swap program of eligible concessional debt as a pilot program in Latin America and the Caribbean. In light of the Administration's strong interest in supporting environmental and social programs in Latin America and the Caribbean, all debt relief actions will be linked to specific commitments of local currency funding for environmental and social programs, consistent with the framework for local funds provided in existing legislation.

Congress has previously authorized the reduction of concessional debt for Latin America and the Caribbean and appropriated \$90 million in FY 1993 for this purpose. In recognition of current tight budget constraints, however, the Administration intends to modify this program into a buyback and swap program that can be effected at a budget cost of \$15 million in FY 1996, as defined in the Federal Credit Reform Act of 1990.

*INTRODUCTION***INTRODUCTION**

The imperative of American engagement and leadership in the world is a central lesson of this century. American engagement and leadership are just as important today because we confront an interdependent world in which the line between our concerns at home and our interests abroad is increasingly blurred. The prosperity of our entrepreneurs, workers and farmers relies on their ability to gain access and compete in the global marketplace. The security of every American will be directly affected by the success or failure of democratic reform in the former Soviet empire. The safety of future generations depends on keeping weapons of mass destruction from falling into the wrong hands.

The critical test of our leadership is our willingness to dedicate the resources necessary to protect the security and prosperity of our people. Our budget request demonstrates our determination to shape a world conducive to American interests and consistent with our core values – a world of open societies and open markets. The programs in this request represent only a tiny fraction of federal spending. Yet the benefits they provide in making the American people more secure and prosperous are enormous. The funding provided by this budget supports the additional jobs created by exports, the greater security guaranteed through our alliances and our nonproliferation efforts, cleaner air and water, and less crime in our streets. The investment of resources made through this budget will advance our nation's most fundamental interests now and in the future.

This Congressional Presentation sets forth the Administration's request for FY 1996 foreign operations programs which are administered by the Department of State or for which the State Department provides policy guidance. For those programs which are implemented by the U.S. Agency for International Development (USAID), additional programmatic detail can be found in the USAID Congressional Presentation. Program descriptions and supporting information for the following programs are included in this volume:

- International Organizations and Programs
- Economic Support Funds
- Assistance for Central Europe
- Assistance for the New Independent States
- International Narcotics Control
- Migration and Refugee Assistance
- Emergency Migration and Refugee Assistance
- Antiterrorism Assistance
- Nonproliferation and Disarmament Fund
- International Military Education and Training
- Foreign Military Financing
- Voluntary Peacekeeping

## INTRODUCTION

Anti-Terrorism Assistance	15,244	15,244	15,000
International Narcotics Control	101,000	105,000	213,000

While this volume is organized by appropriation accounts, the programs set forth herein were developed within the framework of our critical foreign policy objectives as described in the companion volume *International Affairs Budget Request Fiscal Year 1996*. That volume provides an overview of the entire International Affairs budget request and the foreign policy objectives which they serve.

## BUILDING DEMOCRACY

The Cold War, which brought security at a great price, has now been replaced by the struggle to create and strengthen democratic institutions of government and market economies in key regions of the world. We are dedicated to building a new international system with democracy as its foundation. The United States will clearly benefit from the consolidation of democracy as free societies, accountable governments and open markets emerge around the world. These benefits will include the diminished threat of war, dramatic expansion of economic opportunities and cooperation on a range of global and regional issues of direct concern to the American people.

The FY 1996 request for Foreign Operations includes funds to encourage continued democratic reform in the New Independent States (NIS) of the former Soviet Union, under the FREEDOM Support Act (\$788 million); in the nations of Central and Eastern Europe, under the Support for Eastern European Democracy (SEED) Act (\$480 million); and in other Countries in Transition through the use of Economic Support Funds (ESF) (\$210.5 million); as well as certain other small programs.

## INTRODUCTION

### New Independent States

The New Independent States are undergoing profound changes as they develop new institutions of statehood while concurrently transforming their economies and political systems. The U.S. objective in supporting democratic reform in the NIS is clear: to achieve enduring, normal, and productive bilateral relations with each state by strengthening democratic institutions, and to encourage their effective integration into the global economy.

In FY 1996 we must continue to support reform in the NIS countries that have already made strong commitments to and progress toward economic and political restructuring. Moreover, we must provide enhanced support and encouragement to those countries on the verge of substantial reform -- Ukraine, Armenia, Georgia and Belarus.

Each nation of the region is struggling to dismantle the principal legacy of Communism -- its system of political and economic centralization. The NIS lack many of the institutions essential for a market economy and democratic politics. However, previous levels of capital investment in people, durable goods for productive sectors, and physical infrastructure have created the basis for significant growth, especially as organizational, legal, and regulatory infrastructure become available to foster its efficient use. Funds in the amount of \$788 million are requested for the FY 1996 NIS program.

### Central Europe

Democratic reform in Central Europe (CE) is as important to U.S. interests now as when the SEED Act was passed in 1989. The process of political and economic transformation in the region is jeopardized today by conflict in the Balkans, crime, ethnic tensions, unemployment and other social dislocations. The fate of the region has in a sense become even more critical to the United States, as these countries become examples, particularly for reformers further east, that democracy and economic prosperity can be built from the ruins of Communism.

After severe economic contraction, most CE economies are now beginning to experience growth. However, only cautious optimism is in order. A great deal must still be done to further privatize and restructure the old State-owned industries and several countries that face renewed macroeconomic imbalances. High unemployment is a serious problem throughout the region and significant segments of the populations have grown weary of the transition process or have yet to experience its benefits.

Democratic institutions in Central Europe have been established, but they remain fragile. Credible and transparent elections have been held, but power is fragmented among so many parties in some countries that governing coalitions are unstable. CE countries continue to struggle with fundamental issues -- the proper role of the government vis-à-vis the private sector, freedom of the judiciary and the broadcast media, and minority rights. Participatory structures for local government are still rudimentary. Central European governments also face pressing social issues, such as those related to housing, health and humanitarian assistance. There is an urgent need for social sector restructuring throughout the region in order to solidify popular support for continued reform and reduce heavy burdens on weak budgets.

The SEED program remains transitional in nature, though its "sunset" will be ultimately determined by the progress achieved in each country of the region. The program is reducing

## *INTRODUCTION*

assistance in some countries of the Northern Tier. This will allow a gradual shift in U.S. assistance resources to those in the Southern Tier, which have further to go in their transitions. Still other countries, notably Albania and parts of the former Yugoslavia, whose state of development is quite different from those covered in the original SEED Act, will need assistance for many years to come. The shift of resources from north to south will be carefully monitored to assure that programs are not withdrawn from countries before democracy and market economies are firmly established.

For FY 1996, \$480 million is requested for SEED funds to advance these objectives. Approximately \$239 million will support the region's economic reform processes. The SEED program will continue to promote adoption of market-oriented policy frameworks. Continued emphasis will also be placed on small business development to spur job creation and broad-based economic growth. Additional assistance will be provided to restructure the financial sectors of the CE countries, and to establish the legal, regulatory and institutional frameworks conducive to private investment.

Included in the proposed SEED economic reform program request is \$30 million to facilitate economic reconstruction, encourage regional integration, and promote cooperation in the volatile Southern Balkan region. U.S. assistance will stimulate and support much larger international and International Financial Institution (IFI) funding for the upgrading or completion of weak transportation and trade links between Albania and the Former Yugoslav Republic of Macedonia (FYROM), and between the FYROM and Bulgaria. The resulting initiative will permit a much larger volume of trade to flow through alternative routes around Serbia-Montenegro, and boost intra-regional commerce, cooperation and stability. Most of the countries of south-central Europe would benefit from enhanced trade routes. U.S. assistance will be coordinated with other donors in implementing this new program.

In FY 1996, approximately \$73 million will support the region's continued democratic development. Programs will focus on building stronger political parties and institutions and provide training in coalition-building. The program will work through USIA to develop a strategic approach to strengthening key training institutions that support democracy and markets. In the field of public administration, the program will help build democratically-oriented public administration at the central and local levels. Approximately \$101 million will be devoted to programs in the areas of environment, health, housing and entitlement reform. Much greater attention will be given in the coming years to support CE countries through this critical phase of social sector reform.

Finally, if conditions permit, reconstruction will be required throughout Bosnia. The FY 1996 budget request therefore includes approximately \$60 million to support this effort, and this will leverage additional resources from other international donors. Activities will include major infrastructure repair, a microenterprise lending program, programs to stimulate economic activity combined with reform of financial structures and assistance to the Bosnian Federation government in public administration.

### **Other Countries in Transition**

The FY 1996 request of \$210.5 million will support programs which reflect the multifaceted nature of democratic development in a small number of Other Countries in Transition (CIT). Programs proposed under this category will help strengthen and consolidate democratic

## INTRODUCTION

processes and institutions in countries that have recently embarked on a democratic course, or where democracy is critically threatened. Assistance to Other Countries in Transition may take the form of direct support for the democratic process (e.g. institution building, electoral support, judicial training), but may also include fast disbursing financial support and programs to support privatization and the economic growth necessary to sustain democratic gains.

**Latin America and the Caribbean:** In FY 1996, U.S. CIT assistance to Latin America and the Caribbean will focus on those nations where it is critical to the consolidation of democracy, supportive of human rights, and promotes economic reform and broad-based, sustainable economic growth. In many nations of the region, endemic corruption severely undermines democratic institutions. Governance and Administration of Justice programs will provide technical assistance, training and basic equipment to help strengthen these critical pillars of a democratic society.

**Africa:** This new era provides a unique opportunity to re-orient U.S. policy objectives in Africa to meet a host of global challenges. This includes providing strong and visible encouragement for the movement to freedom and free markets in Africa. The continent's recent democratic gains must be reinforced by sustainable economic growth, and the peace and stability that democracy brings can lead to desperately needed private investment. Promoting government accountability, human rights and the rule of law, and building more skilled workforces will help empower Africans to play a greater role in the global economy. Given the pervasive poverty and tremendous challenges Africa faces, continued economic assistance will be necessary to achieve economic recovery. Africa is a region where our core values are at the forefront of the U.S. policy agenda. While the bulk of U.S. assistance to Africa is provided through use of "non-democracy" funds, CIT programs can have a tremendous multiplier effect in promoting democratic progress and growth in the region.

**East Asia and the Pacific:** The East Asian and Pacific region includes both new democracies, such as Cambodia, and countries under authoritarian rule, such as Burma and China. The process of consolidating democracy is complex, and in FY 1996 U.S. assistance in the region will help to strengthen institutions of representative government, enhance democratic civil-military relations, and promote vibrant civil societies.

As a Country in Transition, Cambodia merits the continued support of the international community. The proposed FY 1996 program of \$39.5 million will support implementation of transparent and credible legal, regulatory, and judicial reforms. Cambodia's fledgling National Assembly also needs administrative and technical assistance, and its civil society requires strengthening to ensure that democratic culture develops alongside democratic institutions. And the country's democracy cannot thrive without broad-based economic growth. FY 1996 programs will support the establishment of a market oriented policy framework, improvement in policy formulation and implementation in key economic ministries. U.S. programs will also seek to involve the country's rural communities in the national shift to market economics and democratic governance by rehabilitating important road links.

## INTRODUCTION

### Multilateral Democracy Programs

The FY 1996 request of \$4.6 million\* will enable the U.S. to maintain its leadership in encouraging the international community to address problems in democratic development and human rights protection. The FY 1996 program includes support for the UN Voluntary Fund for Advisory Services and Technical Cooperation, the UN Voluntary Fund for the Victims of Torture, and the OAS Fund for the Strengthening of Democracy.

### PROVIDING HUMANITARIAN ASSISTANCE

Assisting developing countries to meet urgent humanitarian needs created by disasters, food shortages, and refugee problems is a key objective of American foreign policy. Humanitarian crises threaten political stability and undermine progress toward sustainable development in impacted countries. These crises can likewise produce widespread disruptive regional effects. Responding to such crises with humanitarian assistance helps minimize attendant suffering and loss of life and mitigates their impact on affected populations.

Equally important, U.S. assistance acts as a catalyst to mobilize resources in the broader international donor community and to influence the responses of international donor organizations, including private and voluntary organizations, to acute humanitarian crises. Moreover, humanitarian assistance gives expression to the fundamental compassion and generosity of the American people and their interest in alleviating human suffering, wherever it occurs. There has been an unprecedented surge in the demands for humanitarian assistance to those fleeing civil unrest, political oppression, extreme physical hardship, and the horrors of genocide. Particularly when high-profile images of human suffering are brought into our homes through electronic journalism, it is the nature of the American public not to turn away from those in need.

### Migration and Refugee Assistance (MRA) and Emergency Refugee and Migration Assistance Fund (ERMA)

Refugee crises worldwide are of intense humanitarian concern. The U.S. national interest is best served by multilateral efforts aimed at mobilizing resources for humanitarian assistance and the political resolution of refugee crises in ways that lead to increased stability. Resolutions of such crises are necessary if sustainable development and democratic institutions are to prosper. There are currently nearly 20 million refugees worldwide—a 30 percent increase since 1989. In addition there are many more displaced persons who are of concern to the United Nations High Commissioner for Refugees (UNHCR) and the International Committee of the Red Cross (ICRC). Since the end of World War II, the United States has been a leader in refugee and migration affairs. The State Department's Bureau of Population, Refugees, and Migration (PRM), successor to the Bureau of Refugee Programs, manages the refugee and migration program. We have used this leadership position to leverage greater support from other donors and to assert our influence in international policymaking bodies and among private and voluntary organizations (PVO). Securing U.S. diplomatic and political

---

\* Funds requested under International Organizations and Programs (IO&P) budget request

## INTRODUCTION

objectives requires that we maintain the relative priority of international humanitarian assistance within the International Affairs Budget.

The international donor community is under increasing pressure to provide life sustaining aid to the growing number of refugees and conflict victims worldwide. The magnitude of requirements related to continuing crises in the former Yugoslavia and the Horn of Africa, coupled with new emergencies such as Rwanda, must be addressed while we continue to support the ongoing humanitarian assistance programs of the international relief agencies. Reductions in the level of U.S. contributions in support of these organizations could risk an increase in human suffering, greater regional instability, and an erosion of the stature of the United States as a leader in refugee and migration affairs.

In addition to refugees, an estimated 100 million people live outside their country of origin. Pressures including high population growth rates, rising unemployment, and income disparities have brought about increasing migration flows. The United States seeks to encourage the creation of legal migration channels and the rapid integration of legal immigrants into host countries' societies and to discourage uncontrolled immigration and alien smuggling.

The Migration and Refugee Assistance account includes four major elements: overseas assistance, primarily through international organizations; refugee admissions into the United States; support for refugee resettlement in Israel; and the PRM Bureau's administrative expenses. The fourth element reappears in FY 1996. For fiscal years 1994 and 1995, the Congress required the funding of the Bureau's administrative expenses under the State Department's Diplomatic and Consular Programs account.

The Emergency Refugee and Migration Assistance Fund (ERMA) is a no-year appropriation, drawn upon by the President to meet "unexpected urgent refugee and migration needs" whenever the President determines that it is "important to the national interest" to do so. The Migration and Refugee Assistance Act of 1962, as amended, provides permanent authorization for the account of up to \$100 million.

## PROMOTING PEACE

Although the Cold war is over, today's uncertain environment still presents a variety of threats to our security including:

- Efforts by rogue regimes to build or acquire weapons of mass destruction.
- Attempts by regional powers hostile to U.S. interests to dominate their respective regions through aggression intimidation or terror.
- Internal conflicts among ethnic, national; religious or tribal groups that undermine regional stability, impede democratic reform and stifle economic growth.
- Transnational criminal enterprises which thrive where national governments are either weak or complicit.

American military power serves as the principal means by which we protect our interests against these threats. At the same time, however, in order to avoid the costs of armed conflict

## INTRODUCTION

and preserve international peace and stability, we seek to prevent conflict through diplomacy, peacekeeping and the strengthening of our alliances and coalition partners.

The Administration's proposed budget for our programs designed for the pursuit of peace and stability totals \$6.6 billion. Our bilateral programs to promote regional peace and security, including economic support and military financing assistance and training, are \$5.7 billion of this total. Peacekeeping, assessed and voluntary, represents \$545 million. Nonproliferation and disarmament activities are \$90 million, and activities to combat narcotics, crime, and terrorism total \$240 million.

### **Regional Peace and Security**

The Administration requests a total of \$5.564 billion for programs designed to promote regional peace and stability, including economic and military assistance and defense training activities. The greater part of this budget proposal—\$5.2 billion—is intended to sustain and accelerate the Middle East peace process. It includes economic and military support for the Camp David countries, the Israeli-Palestinian accord, and modest support for other regional players and for regional programs. \$39.8 million is proposed for the International Military Education and Training program, which emphasizes professional military education and technical training, as well as affording present and future military and civilian leaders an appreciation of democratic values, respect for human rights, and a proper role for the military in a democratic society. Approximately \$310 million is proposed for Europe, including the Partnership for Peace and other security assistance for Central Europe, and assistance programs for Greece, Turkey, Cyprus and Ireland. \$14 million is intended to continue to ensure U.S. access to Pacific fisheries under the South Pacific Tuna Treaty, and \$10 million to continue our assistance to demining activities in a dozen countries.

### **Middle East Peace**

Advances toward a comprehensive peace in the Middle East demonstrate the value of prudent and steadfast efforts to resolve regional conflicts. The Arab-Israeli conflict has continued too long, and the toll in human and economic terms has been great. In the past year, we have witnessed a profound transformation in the landscape of the Arab-Israeli conflict that would have been unimaginable only a few years ago. Recent gains must be secured by continued United States commitment and support for the peace process. This budget therefore includes traditional amounts of economic and military support for Israel, Egypt, and other countries which are important to the peace process — notably Jordan — to meet the legitimate security needs of these countries and to promote continued economic reform and broad-based economic growth. The commitment of this Administration to Israel's security is strong and unshakable. Our assistance is intended to strengthen a free and democratic Israel as well as to facilitate a negotiated peace and stability in the region. Our assistance to Egypt reinforces its moderating influence in the region and helps it play a critical role in the negotiation process, while our assistance to Jordan is based on a recognition of Jordan's vital role in advancing regional peace since signing a peace treaty with Israel in October 1994.

Our \$75 million request for the West Bank and Gaza is intended to continue to promote Palestinian self-government through economic development and institution building. Our assistance for this process, along with that of the other donors, is essential for the formation of

## *INTRODUCTION*

the political, economic, and institutional infrastructure necessary for self-government and economic viability.

### **Europe and the NIS**

Regional security issues survive and in some respects have been heightened by the end of the Cold War. Regional and ethnic conflict in the former Soviet Union and Central Europe are serious threats to global security and stability. The United States must continue to exercise leadership in this area, to include modifying and developing cooperative mechanisms to address the threats we face in the post-Cold War era. In particular, we must take concrete steps to build a new European security architecture that preserves and builds on NATO's vital role. Deep political, military, economic and cultural links make Europe's security and prosperity vital to our own. We need to maintain strong relations with Western Europe, while helping to consolidate the new democracies of Central Europe and the New Independent States of the former Soviet Union.

NATO remains the anchor of American engagement in Europe and the linchpin of transatlantic security. NATO has always been more than a transitory response to a temporary threat. It has been a guarantor of European democracy and a force for European stability. That is why its mission has endured, and why its attraction is strong to Europe's new democracies. In earlier years, NATO welcomed new members who could contribute to its strength. Today, the alliance would welcome expansion to the East. Under American leadership the alliance agreed in December, 1994 to begin a steady and deliberate process that will lead to its further expansion.

The Administration therefore includes \$60 million in military assistance for partner countries under the Partnership for Peace program, designed to begin the process of integrating these nations into the western alliance. In addition to these funds, the Department of Defense budget request contains \$40 million for Partnership for Peace activities more appropriately conducted under DoD authorities. Collectively, this \$100 million comprises the President's Warsaw Initiative, designed to support the Partnership for Peace.

In addition to the Partnership for Peace program, \$25 million is proposed for Central European defense infrastructure, peacekeeping, and related programs. These funds will continue the process of equipping and training the Baltic Peacekeeping Battalion, and will support the reorientation of Central European militaries to defensive postures, regional cooperation based on uniform standards of equipment, and expanded military cooperation with U.S. and NATO forces both bilaterally and through the Partnership for Peace.

### **International Military Education and Training**

The International Military Education and Training (IMET) program, providing military education and training on a grant basis to students from allied and friendly nations, is an extremely cost effective component of U.S. foreign policy. It offers foreign military students an opportunity to establish and improve self-sufficiency in their military forces, enhances military professionalism, strengthens their own training capabilities, and provides for U.S. access and influence in a sector of society which often plays a critical role in the transition to democracy. Expanded in scope, IMET shares with foreign students defense management concepts and American values, i.e., democracy, respect for human rights, military justice, and

*INTRODUCTION*

an understanding of the principle of civilian control of the military. In addition to training Defense Ministry personnel, expanded IMET provides training for foreign officials from ministries other than Defense, members of national legislatures responsible for oversight and management of the military, and NGO personnel.

**Peacekeeping**

Well-planned peacekeeping operations are a useful and cost effective option for dealing with some conflicts and humanitarian crises. Peacekeeping clearly is not a substitute for a strong national defense and vigorous alliances; but it has a demonstrated capacity, under appropriate circumstances, to separate adversaries, maintain cease-fires, facilitate delivery of humanitarian relief, allow repatriation of refugees and displaced persons, demobilize combatants and create conditions under which political reconciliation may occur and democratic elections may be held. Thus it can reduce the likelihood of interventions by regional powers, prevent small conflicts from proliferating, facilitate the birth and growth of new market economies, contain the cost of humanitarian emergencies, and limit refugee flows.

The United States, as a global power, always has the option of acting unilaterally to pursue and protect its interests, and when the stakes warrant, we will do so independently or through a coalition or alliance. More often, however, we will wish to intervene without bearing all or most of the costs, or making a substantial deployment of our military forces. Multilateral peacekeeping provides such an alternative. It complements, without detracting from, unilateral and coalition options. In so doing, it provides a means of ensuring that the burden and cost of maintaining world order does not fall disproportionately on the United States.

**Voluntary Peacekeeping Activities**

While the bulk of funding for multilateral peacekeeping operations goes to the United Nations and falls outside the scope of this budget presentation, it is sometimes in the United States interest to support, on a voluntary basis, peacekeeping activities that are not UN mandated and/or are not funded by UN assessments. In such a way, we can help support regional peacekeeping operations for which neighboring countries take primary responsibility, as in Liberia, or peacekeeping operations or observer missions where we and a few other parties have a particular interest, as in the Sinai or the former Soviet Union. The FY 1996 budget requests \$100 million in funds for voluntary contributions to peacekeeping operations.

**Nonproliferation and Disarmament**

The United States is guided by the principle that arms control and prevention of the proliferation of weapons of mass destruction are critical to the national security. Following the demise of the Soviet Union, in fact, proliferation of such weapons poses the principal direct threat to the survival of the United States.

The objectives of our nonproliferation programs are to reduce the risk of war by limiting and reducing destabilizing forces, inhibiting the spread of weapons of mass destruction and delivery systems, and building confidence through measures which enhance transparency. In addition to enhancing our security directly, these measures also support other important American interests, including economic and political reform in Russia and the other newly independent

## *INTRODUCTION*

states, our economic interests in Asia and the Pacific, and our broader political efforts to resolve long-standing disputes in the Middle East and South Asia.

The most dramatic example of the importance of our nonproliferation efforts in recent times is that of the North Korean nuclear program, which in 1994 was poised to produce hundreds of kilograms of plutonium that could be used in nuclear weapons. The stage was set for a crisis that would imperil security throughout Northeast Asia, and undermine our global nonproliferation effort. Since then, we have concluded an Agreed Framework which freezes this program and provides for its dismantlement.

### **International Narcotics and Law Enforcement**

International narcotics trafficking and organized crime constitute one of the most persistent and serious challenges to our foreign and domestic interests in the post Cold War era. Global narcotics trafficking generates an enormously disruptive illicit economy of hundreds of billions of dollars annually, spawns widespread corruption and intimidation, and condemns countless drug users to a painful, sick, dangerous, and unproductive existence. It saps the strength of industrialized societies, and threatens the very survival of emerging democracies. Driven by both supply and demand forces, the threat must be fought through an integrated global response of enforcement, public awareness/demand reduction, and economic support initiatives.

The end of the Cold War also leaves American interests increasingly threatened by new as well as traditional organized crime forces. Rich, violent, and predatory international crime organizations are quick to exploit political, economic, and social vacuums in countries in transition. As we witness in the former Soviet Republics, old criminal networks are becoming more powerful and new groups emerge faster than authorities can keep pace. Such groups threaten the consolidation of democracy in Central Europe, the NIS, Africa and Asia.

The Administration's budget proposes \$213 million to fund international counternarcotics activities, and \$12 million for international criminal justice programs.

### **Anti-Terrorism Assistance**

Neither has the end of the Cold War brought a respite from terrorism. The social and economic disruptions following the wrenching changes of the past several years have in fact spawned new types of terrorist groups. While radical leftist terrorism has generally been discredited, the social, political, and economic dislocations they exploited remain or have increased. Terrorism based on religious or ethnic ideals has increased, while state support for terrorism, as in Iran, persists. The World Trade Center bombing is a vivid reminder that the United States is also vulnerable to terrorism.

The Administration's budget proposes \$15 million for anti-terrorism activities. This program provides training and equipment to foreign police and security officials to enhance cooperation and strengthen the local government's anti-terrorism capabilities. The ultimate objective of the program is to strengthen our ability to work closely with foreign governments as might be necessary to respond to specific terrorist threats and crisis management needs, to protect the lives and safety of Americans abroad, and to assist U.S. carriers operating internationally with airport and aircraft security. While training is the primary ATA activity, up to 25 percent of the budget may be programmed for equipment, primarily in the field of aviation security.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS (IO&P)

### PROGRAM SUMMARY

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	362.628	374.000	425.000

Investments in multilateral programs can be powerful and effective means to serve US foreign policy objectives, such as promoting and maintaining peace, strengthening democratic institutions, and fostering economic prosperity and sustainable development. Multilateral agencies tackle a host of problems, such as nuclear proliferation, famine, ethnic conflict, rapid population growth, and environmental degradation, that cannot be solved solely through unilateral and bilateral action. Voluntary contributions to multilateral agencies are a bargain for the United States in advancing our interests. For every dollar we contribute to agencies that advance US interests, such as the UN Children's Fund (UNICEF), the UN Development Program, and the International Atomic Energy Agency, our multilateral partners contribute \$8-\$10.

The benefits are enormous. Examples include:

- UNICEF has helped countries achieve the seemingly impossible goal of 80% coverage through its Universal Child Immunization Program. This is, in part, a testament to the leadership of US citizen James Grant, who died recently after fifteen years at UNICEF. During his tenure, UNICEF grew into a leading multilateral institution for development and emergency assistance.
- The World Food Program had sufficient resources and logistics capacity to feed the hundreds of thousands Rwandans that flooded refugee camps this past year. As a result, famine was not added to the list of horrors Rwandan refugees had to endure.
- UNDP has helped improve living conditions, promoted municipal works, and developed the private sector in the West Bank and Gaza, an important part of the peace process between Palestinians and Israelis.
- US industry is benefitting greatly from contributions to the Multilateral Fund for the Implementation of the Montreal Protocol, since American manufacturers are the world leaders in many ozone-depleting substances (ODS) substitution technologies.

The FY 1996 President's Budget requests \$425 million for the IO&P account. This includes \$355.4 million for programs that promote sustainable development, \$65 million for promoting peace through two non-proliferation programs, and \$4.6 million for programs that build democracy. Nearly four-fifths of the sustainable development funds are for three key United Nations agencies: UNDP, UNICEF, and UNFPA. The remaining funding is used to support a host of smaller agencies and programs that promote economic growth and protect the global environment in unique, specialized ways. (See chart.)

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

Of the \$51 million requested increase in this account, \$22 million is to establish the Korean Energy Development Organization. This international consortium was established to implement the agreed framework signed between the United States and the Democratic People's Republic of Korea (DPRK) on October 21, 1994. The Agreed Framework addresses US and international concerns about the DPRK's nuclear weapons program. If implemented, this vitally important agreement will ultimately lead to the complete dismantlement of North Korea's nuclear capability.

Other increases include:

+ \$11 million for global environmental programs, including a \$6.5 million increase for the Montreal Protocol Multilateral Fund to support reductions in emissions of ozone depleting substances, a \$2.75 million increase in our contribution to the UN Framework Convention on Climate Change to pick up the US share of its expanded work toward stabilizing concentrations of greenhouse gases, and a \$1 million increase in the US contribution to the UN Environment Fund to stimulate international action on key environmental issues.

+ \$5 million for the UN Population Fund, bringing the total US contribution to \$55 million. Increases in US and other donor contributions are needed in response to the increasing size of the population being served by UNFPA programs (expected to grow by 200 million people in the next five years). The UNFPA is also broadening the type of services it makes available in developing countries to include safe motherhood programs, prevention and treatment of sexually transmitted diseases and prevention of HIV/AIDs.

+ \$3 million for the voluntary programs of the International Atomic Energy Agency. A \$43 million voluntary contribution will assist the IAEA in pursuing a course of work that promotes international peace and security through its safeguards program.

+ \$3 million for UNICEF. The US contribution to UNICEF has remained constant at \$100 million for the past three years. This modest increase demonstrates US commitment to strong support of UNICEF.

+ \$2 million for the UN Development Program for a total contribution of \$118 million, or roughly what the US contributed in FY 1994. Led by a dynamic American Administrator, UNDP plays a key role in coordinating and reforming most of the UN's development assistance programs. UNDP's emphasis on sustainable development and support for programs that promote economic and market reform, privatization, job creation, and democracy and peace building are fully consistent with US foreign policy goals.

+ \$2 million for the OAS Fund for Strengthening Democracy. Voluntary contributions to this OAS fund will help meet the costs of several major election observations and will support additional political reconciliation tasks resulting from the Summit of the Americas.

<sup>2</sup> Of which \$2 million was transferred from the Economic Support Fund

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

**UN HUMAN RIGHTS CENTER VOLUNTARY FUND  
FOR ADVISORY SERVICES AND TECHNICAL COOPERATION**

**PROGRAM SUMMARY**

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.000	1.025	1.100

**Program Definition and Objectives:** The Advisory Services Program of the UN Human Rights Center provides human rights assistance to governments at their request and is one of the three main components of the UN Human Rights Center headquartered in Geneva. Consistent with U.S. democracy and human rights goals and priorities, the fund focuses on the following program areas:

- Building and strengthening national and regional institutions and infrastructures for human rights;
- Promoting democracy, development, and human rights;
- Strengthening the rule of law and democratic institutions;
- Providing assistance for the conduct of free and fair elections;
- Improving the administration of justice and independence of the judiciary.

The program of advisory services was established pursuant to a 1955 UNGA resolution which authorized the Secretary General to make provisions in relation to advisory services of experts, fellowships and seminars, at the request of governments and with the cooperation of specialized agencies. Lack of adequate resources prompted the UN Secretary General to formally establish the United Nations Voluntary Fund for Advisory Services and Technical Assistance in 1987.

A board of trustees was established in 1993 to oversee the fund and to develop long-term policy guidelines for its use. Priorities are also influenced by the UN Human Rights Commission (UNHRC), and the UN General Assembly. Moreover, at U.S. initiative, several UN Human Rights Commission special rapporteurs are now authorized to recommend programs for funding consideration.

The Secretary General shares the U.S. view that there is a strong relationship between the observance of human rights and the establishment of democracy. Building democratic institutions was formally endorsed as a UN goal at the 1993 World Conference on Human Rights, and as such, the Vienna Declaration and Program of Action recognized the importance of advisory services and called for greater enhancement of the program. Additionally, the establishment of a High Commissioner for Human Rights (HCHR) increased focus on the provision of advisory services under the fund. The HCHR has made the enhancement of the

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

advisory services program one of his priorities, and plans to carefully supervise the decisions made on provisions of advisory services and technical assistance.

The advisory services program's level of activity and requests for assistance have ballooned during the past several years as recognition of the relationship between human rights, democracy, and development grows. In 1993, the pace and scope of activities continued to expand. The program included 26 fellowships (96 candidates nominated by 67 governments); 120 interns; needs assessments in six countries; legislative reform assistance provided to five countries; electoral assistance provided to Malawi, South Africa and Lesotho; administration of justice programs conducted in Albania, Romania, Burundi, Malawi, and Mongolia; and programs designed at strengthening national institutions conducted in five countries. Under the rubric of regional support, assistance was provided to the African Commission on Human and Peoples' Rights, the Arab Institute of Human Rights, and the African Center for Democracy and Human Rights Studies.

A number of 1993 programs were part of ongoing projects begun and implemented over a number of years. In Africa, programs were ongoing or planned for 1994 in 16 countries; in Asia and the Pacific in four countries; in Europe in 12 countries; and for Latin America, projects were planned for seven countries. At the regional level, program support in 1994 was set to continue for the African Commission on Human and Peoples' Rights, the African Center for Democracy and Human Rights Studies, and the Arab Institute for Human Rights. At the beginning of 1994, there were at least 35 pending requests for advisory services, although additional requests have been submitted throughout the year for funding consideration.

The UN Voluntary Fund for Advisory Services and Technical Cooperation program compares favorably with and often complements other bilateral, regional and NGO programs. The sheer number of pending requests is evidence of the confidence governments have in the services provided, and is further evidence of the need to increase financing for the fund.

Funding Request: The Human Rights Center received approximately \$25 million from the UN regular budget in calendar years 1993-94. In 1993 approximately \$500,000 was allocated to the advisory services program, and the Center anticipates receiving a similar amount in 1994 and 1995 from the UN regular budget. Between 1987 and 1993, the program received approximately \$8.45 million in voluntary contributions. In 1993, a total of \$2.056 million was pledged, with Sweden being the largest single donor (\$0.488 million). Other major contributors were Norway (\$0.377 million), Belgium (\$0.265 million) and Denmark (\$0.219 million). A total of 19 countries and four NGOs contributed to the fund in 1993. For the first time, the United States will contribute \$1.025 million to the voluntary fund in 1995. Given that the goals and objectives of the Fund are in keeping with U.S. foreign policy objectives of building democracy, fostering greater respect for human rights, and promoting peace, it is clearly in the U.S. interest to provide an additional voluntary contribution of \$1.100 million in FY 1996. Continuing support would assist the newly appointed HCHR with his mandate. The U.S. contribution would additionally act as a catalyst to spur other donors to contribute in more significant ways, as well.

Demands have increased dramatically for advisory and technical services, but funding has not been available to evaluate or carry out potentially valuable projects from dozens of countries. For example, funding is still not available for a \$1.2 million package of democracy building programs in Russia in spite of appeals. Moreover, the fund has been asked to provide technical

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

services to Rwanda and Burundi. As the situation in Haiti unfolds in the months ahead, it is also likely that the UN will be asked to provide support for democracy and human rights through advisory services. Without adequate financing, the voluntary fund will not be in a position to respond to these pressing needs.

**Success Stories:** While it is difficult to quantify the success of the advisory services programs since transition to democracy is in most instances an on-going process, there are several recent examples where advisory services financing has been instrumental in democratic transitions. In Malawi, a comprehensive needs assessment for the process of a democratic transition took place in August - September 1993. The report served as a framework for the transition process for the Government, opposition parties, the donor community and the UN. Subsequent to the assessment, detailed legal analysis of the Malawi laws relevant to human rights in the administration of justice ensured. Recommendations were made to assist in the constitutional redrafting process. In Lesotho, a seminar on free and fair elections and human rights in a democratic society was one important component in a broad country program of electoral assistance. Assistance was also provided to the Community Legal Resource and Advice Center for a massive civic education campaign both during and after the elections. The government of Lesotho has expressed its interest in a post-electoral needs assessment as a first step towards a comprehensive human rights program.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UNITED NATIONS VOLUNTARY FUND FOR VICTIMS OF TORTURE (UNVFVT)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	1.500	1.500	0.500

**Program Definition and Objectives:** The elimination of torture is a major objective of U.S. human rights foreign policy. Assisting the victims of torture helps to establish a climate in which freedom is strengthened and democracy is reborn.

The United Nations Voluntary Fund for Victims of Torture, which was established by the UN General Assembly in 1981, provides worldwide humanitarian assistance to victims of torture. Its major goal is to provide medical and psychological assistance to victims and to their families. Its secondary goal is to provide legal, financial, and social assistance to victims and their families. Ninety percent of the Fund's expenditures are incurred in developing countries. Grants are awarded by the Fund's Board of Trustees which reports directly to the UN Secretary General. The Board's mandate requires it to distribute aid through "established channels of humanitarian assistance," such as hospitals, research and training centers and overseas doctors projects. In order to protect the victims of torture from retaliation and to give them the privacy necessary to heal their physical wounds and to speed their psychological recoveries, the Fund does not publicize names or cases.

The Fund provides support for local centers. In the Fall of 1993, the Finnish Center for Torture Survivors in Finland opened its doors to treat the estimated 1,500 to 2,500 torture survivors in Finland. There are also Centers for the Treatment of the Victims of Torture in Santiago, Prague, Minneapolis, and Tallinn. Since the Fund began operations in 1983, some 200 grants totalling over \$5.3 million have been authorized for over 110 projects from almost 50 countries on four continents.

**Funding Request:** The FY 1996 budget request for UNVFVT of \$500,000 is essential to maintain the Fund as an effective weapon against torture. Major donors to the Fund include: U.S., Sweden, Finland, Denmark, Germany and Japan.

**UNVFVT Success Stories:** In 1993, Secretary Christopher visited the Center for Victims of Torture in Minneapolis, which receives partial funding from the UNVFVT. Clients at the Center have benefitted enormously from treatment and are leading successful lives.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

**ORGANIZATION OF AMERICAN STATES  
FUND FOR STRENGTHENING DEMOCRACY**

**PROGRAM SUMMARY**

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	1.000	1.000	3.000

**Program Definition and Objectives:** The Organization of American States (OAS) has two major units dedicated entirely to building democracy and promoting human rights - the Unit for the Promotion of Democracy (UPD) and the Inter-American Commission on Human Rights (IACHR). The staff work of both is funded from the assessed general budget of the OAS. Both entities also receive special contributions to fund crucial programs. The United States provides special contributions to the UPD and the Commission to show the U.S. commitment to democracy and human rights, and to encourage other member and observer states to follow suit. Based on commitments, including ours, made in Miami at the Summit of the Americas, contributions from the United States as well as from other member and observer states are expected to grow. These funds will support programs which make maximum use of the multilateral legitimacy of the OAS to promote democracy and human rights, often in areas where U.S. unilateral action would be seen as interventionist.

The Unit for the Promotion of Democracy implements electoral assistance programs designed to strengthen electoral processes in member states to enhance the free and fair nature of elections. It also monitors elections in member states. The Unit carries out programs to strengthen democratic institutions in countries where emerging democratic structures are still weak, and played important roles in national reconciliation programs in Nicaragua and Suriname following their civil wars.

In addition to its current and anticipated workload (likely to include several major election observations), the Democracy Unit has been asked to take on enhanced tasks as a result of the Summit of the Americas. The Summit agreed that the OAS should assume the mission of 'fostering dialogue and political reconciliation' when asked by member countries. U.S. support is intended to increase the OAS' capacity (particularly via the UPD) to carry out these high-priority missions, aimed at heading off internal crises before they lead to a disruption of constitutional order. During FY-96, the OAS will share with the UN the task of monitoring the critical election in Haiti, and will likely be called on to monitor other elections in the hemisphere to enhance transparency/legitimacy.

The Inter-American Commission on Human Rights is the sole Inter-American body responsible for monitoring and reporting on the situation of human rights in OAS member states. Special U.S. contributions to the IACHR fund on-site investigative visits by the Commission to countries with serious human rights problems, and fund the publication of IACHR country reports. The IACHR has played an important role in maintaining the international spot light on the human rights situation in conflict areas, including Haiti.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

In FY-96, the OAS expects to invest resources, through the Unit for the Promotion of Democracy and the Inter-American Commission on Human Rights, in:

- Providing electoral support to the restored constitutional Government of Haiti, possibly to include activities to help rebuild the electoral mechanism of the state, conduct a voter education campaign and train local poll watchers.
- Monitoring national elections at the invitation of the affected states. Possibilities include Guatemala (November, 95), Haiti (December, 95), Dominican Republic (May, 96), Ecuador (May, 96) and Suriname (May, 96).
- Participating in the peace process in Guatemala by carrying out a conflict resolution program in the nine provinces affected by the civil war.
- Conducting programs in OAS member states to strengthen specific democratic institutions, to include legislative training, empowering municipal governments, civic education and strengthening judicial systems.
- Building the OAS' capacity to foster national reconciliation in OAS member states emerging from civil conflict or suffering from severe political crisis. This might include helping to support more actual reconciliation efforts 'in the field' of the countries that invite such assistance, plus Washington-based training and seminars that would bring together leading personalities with technical experts on mediation/reconciliation.
- Monitoring human rights in OAS member states, conducting on-site visits to Haiti and selected states where human rights visits have not been welcome in the past (i.e. Brazil), and publishing reports on their findings.

The OAS Unit for the Promotion of Democracy and Inter-American Commission on Human Rights compare favorably with other programs designed to promote democracy and human rights, in that the OAS brings with it extensive experience and the legitimacy of a multilateral effort. The OAS is the only regional organization whose charter principles have the defense of democracy as a central tenet and whose participating members are all democratically elected. This multilateral approach to democracy and human rights will receive increasing attention and resources, both within the OAS and from other member states and permanent observers, thereby ensuring that U.S. resources contributed to the effort have a beneficial impact.

**Funding Request:** The FY 1996 budget request of \$3.0 million for OAS democracy and human rights promotion is based on the expanded role the Administration has sought for multilateral involvement in addressing these critical issues, and the growing role the OAS is playing in defense of democracy in the hemisphere following the adoption of OAS Resolution 1080 (anti-coup mechanism) in 1991. With a new activist Secretary General having assumed office in late 1994, burgeoning requests by member states for OAS strengthening-democracy programs, and significant new taskings from the Summit of the Americas, the OAS role in support of democracy and human rights in the hemisphere will quickly overwhelm the current capacity of the programs.

**Success Stories:** The OAS Unit for the Promotion of Democracy, created in 1991, was instrumental in brokering a peace agreement between warring factions in Suriname's civil war

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

and was the primary implementor of the peace accords, carrying out programs to reincorporate former combatants into civilian life and into the national economy. A similar program carried out by the UPD in Nicaragua through the International Support and Verification Commission (CIAV) has been equally successful at defusing political tensions left over from the decade-long Central American conflict. The Unit's work in election monitoring in Nicaragua, Paraguay, Peru, Venezuela and most recently in the Dominican Republic has been an essential element of promoting free and fair elections in the hemisphere, particularly in countries emerging from civil war or military dictatorships.

The Inter-American Commission on Human Rights has parlayed its international credibility into opening doors for investigative on-site visits to countries where observing human rights can be dangerous. Recent visits to Peru and Haiti have helped draw the international spotlight to abuses in those nations and focussed pressure to correct them.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UNITED NATIONS DEVELOPMENT PROGRAM (UNDP)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	118.257	116.000	118.000

**Program Definition and Objectives:** The United Nations Development Program (UNDP) is the world's largest multilateral source of grant technical assistance for developing countries and is financed by voluntary contributions from member states. UNDP is the central coordinating and funding mechanism for technical assistance implemented by agencies of the UN system, with an emphasis on the poorest countries. In 1990, UNDP's Governing Council decided that approximately 85% of its core budget resources would be allocated to the least developed countries, i.e. - those whose per capita GNP is \$750 or less. The Program's central coordinating role is manifested in its world-wide network of some 130 field offices, each headed by a resident representative, who serves as the in-country coordinator of UN system development activities. Thus, an effective and fully funded UNDP enables each UN agency to make optimum use of its resources in the field.

UNDP is charting a bold, new course under the dynamic leadership of its Administrator, James Gustave "Gus" Speth, a renowned U.S. environmental leader. Under Speth, UNDP is working to unify a fragmented UN system behind the goal of "sustainable human development" (SHD), which he describes as resting upon four pillars: poverty alleviation, job creation, advancement of women, and protection and regeneration of the environment.

UNDP's program priority areas and emphasis on sustainable development are fully consistent with U.S. foreign policy goals in the economic, social and political fields and include programs emphasizing the promotion of economic and market reform, privatization, job creation, democracy and peace building. These programs also serve U.S. national security interests, including economic interests, insofar as they lead to the creation of dynamic growing economies and stable open civil societies, resistant to conflict and receptive to U.S. trade and investment. In recent years UNDP also helped deliver hundreds of millions of dollars in humanitarian disaster relief.

Furthermore, UNDP is a leader within the UN system for management and administrative reform. UNDP has taken dramatic steps to become more cost-effective and service oriented. To address the problem of dwindling resources, UNDP has tightened its belt by cutting the administrative budget by 12 percent in real terms, by cutting headquarters staff by 25 percent and field staff by 8 percent. UNDP has strengthened its accountability systems by making greater use of auditors, both external and internal, and has turned to private firms in Asia and Africa to examine accounts and perform audits. A new employee performance evaluation system, based on those successfully used in private firms, has been held as a model for the UN as a whole. UNDP's focus on sustainable human development fully complements USAID's core mission in ensuring that economic and social growth, *inter alia*, builds indigenous self-sustaining capacities at the human and institutional level.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

Implementation of UNDP programs, which cover all sectors of economic development and political transition to more open and democratic societies, is increasingly focusing on building recipient countries' national capacity to manage their own development, policy planning, human resources development, and environmental protection. Its focus on national capacity building includes: (a) economic and market reform and privatization initiatives; (b) job creation; (c) peace building and conflict avoidance, and rehabilitation after conflicts; (d) management development, policy implementation, and public sector reform; (e) aid coordination and effectiveness; (f) promotion of democratic governance through protection of human rights, elections and judicial reform; and (g) dialogue and cooperation with institutions of civil society, including non-governmental organizations (NGO's) and community-based organizations (CBO's).

UNDP compares favorably with other institutions promoting sustainable development efforts because of its ability, as a key multilateral instrument, to leverage scarce assistance resources. (The U.S. contribution is increased ninefold by other donor contributions to yield a core aid budget of about \$1 billion per year.) UNDP complements the aid programs of the United States, the World Bank and other important donors. Because of its multisectoral approach to development and its neutrality in the post cold war era, UNDP is particularly well placed and is recognized for broad based expertise to assess the social, economic and political needs of emerging nations, nations being rebuilt after crises, and nations trying to avoid social, political, and economic disintegration. It is actively working with the Bretton Woods institutions and the regional development banks to design programs to promote sustainable development. Furthermore, unlike other aid programs and because of UNDP's recognized expertise, UNDP manages \$376 million a year in programs funded through "cost sharing", arrangements pursuant to which countries use their own or third party funds for these programs without drawing on UNDP's core budget. Nonetheless, the benefits of these UNDP self-financing development programs redound to donor countries.

UNDP's central role in organizing and giving substance to UN development assistance in Third World countries was recently enhanced. In July 1994, the UN Secretary General announced that he had asked Administrator Speth to ensure policy coherence and enhance coordination among the UN's headquarters departments, the system's various Funds and Programs, and the regional economic commissions, in an effort to promote more effectively the UN's operational activities for development. The action reinforces UNDP's central coordination role, both in the field and now, for the first time explicitly, at the headquarters level.

**Funding Request:** The FY 1996 budget request for UNDP of \$118 million is essential to maintain our current level of influence in the UN development system and to sustain UNDP's--and Gus Speth's--central coordinating role in that system.

- Continued high levels of U.S. contributions to UNDP are a vital manifestation of our support for Speth personally, for his efforts to revitalize and rationalize UNDP activities, and for his newly enhanced leadership position in the UN system.
- Both the membership and the Secretary General are looking to UNDP and Speth to provide coherent policy direction for the broad spectrum of system activities spanning the continuum from disaster relief to rehabilitation to sustainable development.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

- funding levels for UNDP are used as the benchmark by which other major donors set their own contribution levels. The FY-94 U.S. contribution of \$116.257 million<sup>1</sup> represents nearly 13% of total contributions.
- Overall reduced levels of donor funding in the past year have jeopardized UNDP's field-level coordination responsibility and its capability to support in-country activities of other agencies of the UN system, many of which rely on UNDP for logistical and program support.

In sum, UNDP is a highly cost-effective tool in our development arsenal. Full funding of UNDP by the U.S. is the best way of stretching our development dollar to promote U.S. interests -- UNDP's and Gus Speth's objectives are fully supportive of our own.

**UNDP Success Stories:** Increasingly, UNDP is the voice for political change in repressive societies. Because it is seen as a neutral, objective party, UNDP has served as a mediator for the World Bank, a facilitator for access and assistance to refugees and political prisoners, and a financing vehicle for human rights monitors.

- UNDP initiatives in the areas of economic and market reform and privatization have contributed substantially to the growth and opening of the economies of Vietnam and China most recently, and before that to the growth of the economies of South Korea, Singapore, Indonesia, Thailand, and India.
- UNDP helped the postwar government in Rwanda to develop a reconciliation and rehabilitation plan and then convened a "round table" meeting in January which raised \$587 million in pledges from bilateral donors, including the U.S., from the European Union and the World Bank to put the plan into action. Before that, it had helped to set up a human rights monitoring mechanism in Rwanda and had proposed ways to roll back widespread ecological and health threats among refugees in neighboring Zaire.
- UNDP, which has been working in the Occupied Territories for 13 years through its Program of Assistance to the Palestinian People, has gained a lead development role in the West Bank and Gaza. UNDP spent more than \$30 million in 1994, channelling donor funds into improving living conditions of the Palestinian population, promoting municipal works and developing the private sector. A \$12 million citrus juice processing plant opened in 1994, financed by the government of Italy and UNDP. It is the largest industrial investment recently made in the Gaza Strip. UNDP recently proposed creation of an industrial park in Gaza, which could provide an important source of jobs.
- In Haiti, where UNDP had actively promoted and helped to conduct the election that brought a democratically-elected government, UNDP followed up since President Aristide's return by helping to work out a plan to meet immediate humanitarian needs and to facilitate the transition to reconstruction, and to help raise funds for that program. Priority activities have been identified in the fields of governance -- including a viable judiciary -- agriculture, environment, education and health as well as support to local communities and the private sector.

---

<sup>1</sup> Excludes \$2 million transferred from the Economic Support Fund.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

- UNDP helped the new, democratic government of South Africa to draft a Reconstruction and Development Program, and then co-sponsored a donor conference last October to stimulate funding of the program's implementation. The conference in Cape Town represented the first substantive exchange between South Africa and the international community -- more than 45 governments and 25 NGO's -- on the development needs of the country. The central theme was human resource development, and the aim was to build strong local institutions and to involve civil society to make the program work.
- In Chad, UNDP extended a USAID program of Volunteers in Technical Assistance from the capital to another city, Moundou, granting 900 loans totalling \$700,000 to create 73 new small and medium enterprises, creating 1,315 new jobs. More than half of the loans went to women. The UN Capital Development Fund, associated with UNDP, will provide follow-up investment of up to \$1 million.
- India and UNDP are co-financing a \$46 million program to find new uses for jute fibers. Already, new applications in home furnishings, apparel, building materials and consumer products such as interior panels for Mercedes and Cadillac automobiles, have begun to affect the lives of the estimated 20 million persons whose livelihoods depend mainly on jute production or processing.
- A program in Poland which involves Rotary International, U.S. airlines, businesses and UNDP brings Polish students to Western businesses to learn market-oriented business techniques. The students cited as benefits: performance-improving employee-manager relationships, customer relations and systematic business approaches. In 1994, ten students worked in Minnesota and Florida with host businesses.
- UNDP's annual Human Development Report has not only changed the development debate in donor countries, but has changed lives in developing countries, as more than 25 of them apply the lessons of the report. Bangladesh is writing its third national human development report, this time on "empowerment of women." Already, changes in policy have resulted from earlier reports.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UNITED NATIONS CAPITAL DEVELOPMENT FUND (UNCDF)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	3.000	1.100	1.000

**Program Definition and Objectives:** The United Nations Capital Development Fund (UNCDF) provides grant capital assistance to least developed countries (LDCs) for small-scale investment in order to provide early, direct and high-impact social and economic benefits to lower income groups. It is unique among the UN system development agencies in that its target group comprises the most vulnerable and disadvantaged elements in LDC societies. UNCDF's core mandate is to fund small-scale social and economic infrastructure projects to improve living conditions and create economic opportunities for the poor in ways that help them achieve self-reliance.

The UN General Assembly established UNCDF in 1966 and, in 1967, placed it under the administration of the United Nations Development Program (UNDP), making the Fund subject to policy guidance from the UNDP Executive Board. UNCDF is headed by an Executive Secretary and is supported by a small secretariat staff. UNCDF's structural link with UNDP allows it to draw upon UNDP's central services and to utilize its global field network of resident representatives in developing countries, thereby keeping overhead costs to a minimum.

A combination of special features makes UNCDF's role in the multilateral development system unique. UNCDF's mandate and operational policies enable it to (a) focus on the poorest of the poor by working at the grassroots level with laborers, small farmers, micro-entrepreneurs, the unemployed, low-income urban dwellers and other vulnerable groups; (b) help meet basic needs for food, safe drinking water and sanitation as well as develop agriculture and small-scale enterprises; and (c) invest in small-scale projects (\$200,000 to \$5 million) that are not large enough to be considered by other multilateral financing institutions. A variety of UN agencies, working with host governments, multilateral development banks and private entities, execute UNCDF projects.

UNCDF's mandate, programmatic focus and target on the most disadvantaged elements of society fully complement U.S. objectives of sustainable development, participatory development and poverty alleviation. In keeping with UNDP's new focus on sustainable human development, UNCDF's Deputy Executive Secretary told the UNDP Executive Board in May 1994 that the Fund's new emphasis is on "partnerships with local governments and organizations." UNCDF believes that the most intractable problems in developing countries today, such as job creation, entrepreneurship development and environmental protection, are only solvable at the local grassroots level. Thus, UNCDF seeks to place its capital development packages with local authorities so as to (a) give local authorities credibility vis-a-vis the local population, and (b) encourage community participation in public sector investment decisions. UNDP Administrator Speth echoed these sentiments in his remarks to the Board, referring to the Fund as UNDP's "community development arm" and pointing to the failure of

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

the large institutions to deliver participatory assistance to local communities. The Executive Board endorsed UNCDF's new focus and encouraged the Fund to continue to pursue new sources of funding from non-traditional donors.

**Funding Request:** The FY 1996 budget request of \$1 million for UNCDF is essential to maintain the viability of an organization which fills a much-needed niche in the UN development system. UNCDF is an extremely well managed organization which has effectively reached the grassroots levels of least developed countries with small, high-impact capital projects. The Fund plays a vital role in addressing the needs of poor populations, by funding such projects as the development of improved agricultural methods and infrastructure, providing credit facilities to artisans and small entrepreneurs, and promoting the principle that people must be responsible for their eco-systems.

**UNCDF Success Stories:**

- A UNCDF program in the Dai Loc district of Vietnam comprises five interrelated projects concentrated in a single geographic location. Four of the projects are expected to be completed in 1994. Three infrastructure projects have already boosted the economic potential of the area by completing a 2,600 hectare gravity irrigation scheme, by improving power supply distribution, and by improving the transportation network. As a result, farmers can now grow double crops for the first time and get them to the markets more easily.
- A UNCDF grant in Nicaragua helped construct the "Bridge of Peace and Reconciliation," a 72 meter bridge in the north of Nicaragua connecting the remote market town of Quilali with agricultural producers in the valley of La Vigia. Both Sandinistas and ex-Contras cooperated on the construction of the bridge which could improve living standards for all. In the end the project spawned a type of economic "boom." Small ventures such as shops and hotels are springing up and bicycle sales are climbing steeply.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UNITED NATIONS DEVELOPMENT FUND FOR WOMEN (UNIFEM)

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	1.000	1.000	1.000

**Program Definition and Objectives:** UNIFEM's mission is to support efforts of women in the developing world to achieve their objectives for economic and social development and for equality, and by so doing improve the quality of life for all. The Fund works in three key program areas of strategic importance to women: agriculture, trade and industry, and macro policy and national planning. Initiatives here are complemented by technical support for credit, technology transfer, small business development, and training. The approach stresses capacity-building, empowerment, and collaboration with appropriate partners. The Fund also addresses issues which are on the international agenda, and which critically affect women as beneficiaries and contributors to the development process.

Much of UNIFEM's work focuses on ways of linking women at the grassroots level with macro-policy formulation that shapes their future. The Fund directly supports small but creative women's initiatives demonstrating effective development alternatives that can be linked to larger programs designed to stimulate a more enabling policy environment.

UNIFEM was established in 1976 as the Voluntary Fund for the UN Decade for Women, 1976-1985. The Fund's name changed to UNIFEM in 1985. It provides direct financial and technical support to low-income women in developing countries, who are striving to raise their living standards. It also funds activities that bring women into mainstream development decision making. Based in New York, UNIFEM works in association with UNDP.

In 1973, the United States Foreign Assistance Act was amended to require that U.S. bilateral development assistance programs be administered so as to give particular attention to those programs, projects, and activities, which tend to integrate women into the national economies of their countries, thus improving their status and assisting the total development effort. This requirement, which is known as the "Percy Amendment", gives Congressional endorsement to the increasing concern that women participate fully in the tasks and benefits of economic growth.

UNIFEM is the only UN voluntary fund whose primary concern is the integration of women into the national economies of their countries. Thus, it achieves for multilateral assistance programs what the Percy Amendment achieves for U.S. bilateral assistance programs. UNIFEM plays a unique role in showing how increased access by women to sources of business finance, technology, and related services can be a powerful and effective tool for private sector development.

**Funding Request:** Voluntary contributions and pledges for 1994 are expected to amount to about \$10.9 million, of which the U.S. pledge of \$1 million represents 9.17%. Major pledges

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

to UNIFEM in 1994 include: Netherlands (\$2.6 million), Norway (\$1.2 million), and Canada (\$1.1 million).

The U.S. contribution will be used to support the following types of activities: ensuring that refugee, displaced, and returnee women are active participants in efforts to find solutions to their problems; working with NGOs to strengthen their effectiveness; helping industrial women workers acquire new skills, decentralize production, and improve occupational health and safety; working with organizations that provide credit and training for micro-enterprises; supporting programs that facilitate women's entry into non-traditional occupations; and working with women to protect and improve the environment.

Current/Recent Programs: UNIFEM's efforts to advance the status of women include the following initiatives:

Women and the Environment

– UNIFEM funded a "Special Advisor on Women in Environment and Development" (WED) to work within the UNCED Secretariat. Her role was to provide those directly involved in the drafting process with a conceptual understanding of the need for gender analysis and the important linkages to be made with environment and development issues. This effort also helped position the Fund more effectively with its multilateral partners for sustainable development, build a consensus for action by women's groups, raise public and political awareness of the roles women play in environmental management, and influence policy decisions affecting women.

Violence Against Women

- In India, UNIFEM is funding the first sexual assault intervention center for victims of violence;
- In Venezuela, UNIFEM is supporting a program that provides counselling to victims of abuse, and teaches police officers and other community leaders how to be more sensitive to victims of sexual violence;
- At the international level, UNIFEM is collaborating with the Governments of Netherlands and Canada to develop international strategies to end violence against women;

Women as Refugees

- In Ghana and Cote d'Ivoire, UNIFEM is working to promote food security, improve shelter, generate income-earning, and provide trauma counselling for Liberian women refugees displaced by war;
- At the international level, UNIFEM is collaborating with UN agencies such as the Department of Humanitarian Affairs and UNHCR to help ensure a more appropriate response to women's needs in all areas of refugee assistance and development;

Women in Political Life

- In Cambodia, UNIFEM is assisting women to participate in free elections through a voter registration program and public awareness campaign;
- At the International level, UNIFEM and UN partner agencies are supporting an updated edition of "The World's Women: Trends and Statistics," which provides statistics on how the situation for women in political life is or is not changing.

Women Organizing for Change

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

-- UNIFEM world with women's networks, NGOs and research institutes both in the North and South to mobilize women around the issues of human rights and to help women to participate effectively in the international arena. At the June 1993 World Conference on Human Rights, UNIFEM helped give women voice and visibility by: supporting women from Africa, Asia and the Pacific, and Latin America and the Caribbean to attend the World Conference as well as the regional and preparatory meetings; helping to organize a women's caucus to link women delegates and NGOs in common cause; and raising awareness among policy-makers, donors, and development practitioners through publications such as "Battered Dreams: Violence as an obstacle to Development" and "Freedom from Violence: Women's Strategies from Around the World."

Fourth World Conference on Women

-- UNIFEM is giving special attention to the role of gender, science and technology in development. In 1994, UNIFEM pulled together a worldwide network of agencies working in this area and organized an expert group meeting in order to ensure that women's role in science and technology is properly featured in the Platform for Action, the final document that will be adopted at the Fourth World Conference on Women.

-- UNIFEM has also focused on women and communications and has supported activities that are expected to lead to global dissemination via satellite of discussions at the Fourth World Conference on Women and the parallel NGO forum. UNIFEM is also working with other groups to promote a worldwide media focus on programming by and about women.

-- UNIFEM has supported an initiative by the UN Division for the Advancement of Women to bring young people together to articulate their priorities and concerns for the future to be included in the Platform for Action and in the planning of the parallel NGO forum.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UN CHILDREN'S FUND (UNICEF)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	100.000	100.000	103.000

**Program Definition and Objectives:** The United Nations General Assembly created the United Nations Children's Fund (UNICEF) in 1946 as an emergency program to aid impoverished children left in the wake of World War II. Since then, UNICEF has evolved into a long-term, voluntary development fund aimed at improving the conditions and welfare of children and mothers. UNICEF also provides goods and services to help meet basic needs in maternal and child health, sanitation, clean water, nutrition, primary education and social services. In coordination with the UN Department of Humanitarian Affairs, the agency continues to provide extensive emergency assistance to countries seriously destabilized by civil strife or natural disasters. Through a highly effective and decentralized field network, UNICEF operates programs in 138 countries.

In decision 94/A/7, the 1994 UNICEF Executive Board stressed three program strategies for UNICEF operations, within the overall goal of sustainable child survival and development and its advocacy role: a) strengthening national programs for children through national capacity-building; b) support for the delivery of social services; and c) empowerment of children and women through development of knowledge and skills, the promotion of target group organization and participation in decision-making and the strengthening of cooperation within civil society.

UNICEF has a small emergency unit that continues to play a key role in many international relief efforts, including complex emergencies in Bosnia and Rwanda. Because it is careful to maintain an apolitical approach to its work, UNICEF frequently finds acceptance in countries seriously destabilized by civil strife. It is now working in close coordination with the UN Department of Humanitarian Affairs on humanitarian assistance in new emergencies, and traditionally holds sectoral responsibility in major emergencies for essential medical supplies, child needs and water/sanitation work. UNICEF reports expenditures of \$200 million on emergency efforts during 1994, a slight decline compared to \$223 million in 1993. Given post-Cold War realities, emergency program expenditures are expected to continue at high levels in the next few years.

All UNICEF programs are directly related to the welfare of children and mothers and have a widespread, positive impact on the well-being of the world's neediest, most vulnerable population groups. Official U.S. support for UNICEF conforms with the humanitarian ideals of the American people, who have supported UNICEF generously through private donations over the years. Moreover, UNICEF's development work complements U.S. bilateral assistance efforts through USAID's Child Survival Program. U.S. contributions to UNICEF also enable the U.S. to serve humanitarian aims in some nations where direct bilateral assistance is not politically feasible or desirable. UNICEF's approaches are fully consistent

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

with U.S. humanitarian development assistance priorities and programs. There is a close and continuous dialogue between the United States and UNICEF on technical matters of common interest, and strong cooperation in field activities. The position of UNICEF Executive Director, which was held by the late James P. Grant (U.S.) for fifteen years, until he resigned on January 25, 1995 due to ill health, is currently vacant. The U.S. has nominated an American candidate, Dr. William Foege, to succeed Mr. Grant. The Secretary General is expected to announce an appointment shortly.

Programs are designed to involve local communities as much as possible and to use equipment and materials which can be locally obtained and maintained. Such projects are frequently linked to resources from other bilateral and multilateral aid agencies, e.g., the UN Capital Development Fund and the bilateral U.S. Agency for International Development (USAID) program, including child survival activities.

UNICEF collaborates closely with WHO in several areas of mutual interest, including the development of the Children's Vaccine Initiative and the promotion of breast-feeding and nutrition. Similarly, it collaborates with UNESCO on education issues. Along with five other international organizations, UNICEF will participate in the new UN Joint Co-Sponsored Program on HIV/AIDS.

**Funding Request:** The United States has always been a strong supporter of UNICEF and one of its largest contributors. In FY-94 and FY-95, the United States provided \$100 million to UNICEF's general resources budget, making it the largest governmental donor. Other major contributions in 1994 included: \$48.0 million from Sweden, \$34.7 million from Norway, \$28.4 million from Japan, \$34.7 million from Italy, \$26.6 million from Denmark, and \$23.2 million from the Netherlands.

**UNICEF Success Stories:** UNICEF inspired and provided the secretariat for the September 1990 World Summit for Children. The Declaration issued at the Summit endorsed a Plan of Action to guide national efforts to address children's needs and a set of goals to be met by the year 2000. UNICEF is working to sustain the momentum generated by the Summit and to ensure achievement of a set of mid-term goals by 1995. UNICEF supports developing countries in the preparation and implementation of national programs of action in pursuit of Summit goals, cosponsors or helps plan regional conferences on Summit follow-up issues, and reports regularly to the UN Secretary General on Summit follow-up activities. UNICEF's annual Progress of Nations publication reports on progress achieved each year, based on a set of core indicators.

As the acknowledged leader in the field of child survival and development, UNICEF has made major contributions to reducing infant and child mortality rates in developing nations. Perhaps best-known are UNICEF's emphases on childhood immunization and oral rehydration therapy (ORT). Through its Universal Child Immunization program, UNICEF helped countries achieve the seemingly impossible goal of 80% coverage (by WHO and UNICEF estimates) in December 1990. UNICEF hopes this success will be replicated and improved by attainment of the mid-decade and year 2000 goals.

UNICEF has played a key role in emergencies. In 1989, UNICEF coordinated Phase I of "Operation Lifeline Sudan," the UN's emergency relief effort in southern Sudan. It was also among the first of UN agencies to assist victims of the Gulf conflict, by providing emergency

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

and basic health services for women and children. Such assistance served to meet the urgent needs of vulnerable populations in Iraq and Kuwait at a time when bilateral aid was not possible. UNICEF has assumed primary responsibility for assistance projects in the particularly vulnerable Kurdish area of northern Iraq. Likewise, UNICEF is working to alleviate conflict-induced conditions in the Horn of Africa and in the former Yugoslavia. Under the coordination of DHA, UNICEF has assumed responsibility in the current Rwanda emergency for water and sanitation, health, unaccompanied children and orphans, non-food relief items, and education and psycho-social needs.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UN/FAO WORLD FOOD PROGRAM (WFP)

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	3.000	3.000	2.500

**Program Definition and Objectives:** As the principal vehicle for multilateral food aid within the UN system, the World Food Program (WFP) uses commodities and cash donated by member countries for social, economic, and environmental development and humanitarian relief. WFP was established in 1963 under the joint sponsorship of the UN Economic and Social Council and the Food and Agriculture Organization. It operates exclusively from voluntary contributions by member states. Commodities are distributed: (1) to support development projects designed to help developing countries produce or purchase their national food requirements, (2) for protracted refugee and displaced persons projects, and (3) as emergency food assistance in situations of natural and man-made disasters. WFP is also one of the largest sources of funding for activities in developing countries aimed at the environment and spends approximately US\$ 1 million per day in food aid on forestation and soil conservation projects, and activities to promote environmentally-sustainable agricultural production.

Development projects have traditionally constituted two-thirds of WFP's overall program. That proportion has rapidly declined to less than one-half as emergency and protracted refugee situations have mushroomed. WFP now faces unprecedented demands for emergency humanitarian food aid in various conflict zones, and in the African continent, in response to civil strife and severe drought. The dramatic growth in WFP's responsibilities for emergency feeding programs has increased WFP's administrative costs.

WFP development projects include nutrition programs, such as school feeding and programs for pregnant and nursing mothers, as well as food-for-work projects. Food-for-work projects mobilize the unemployed for such tasks as clearing land, soil protection, planting forests, and building roads, schools, and hospitals. Laborers are paid, at least in part, with foodstuffs. WFP has also targeted food aid to those most adversely affected by reductions in food subsidies as a result of structural adjustment programs.

WFP is a prime instrument through which the U.S. Government provides multilateral food aid to afflicted populations around the world. Through P.L. 480 and Section 416(b), the U.S. donates its agricultural commodities, specifically labeled "a donation from the people of the United States," to the WFP for use in development projects and relief operations. As a highly respected international food aid agency, WFP often helps to achieve humanitarian objectives, such as the distribution of food relief in conditions of civil war, which would not have been possible through U.S. bilateral channels. With WFP now under the leadership of an American Executive Director, Catherine Bertini, U.S. reliance on the agency to respond to humanitarian emergencies is increasing.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

**Funding Request:** For the 16th Biennium (CY 1994-1995), WFP set an overall target for the Regular Program of \$1.6 billion, one-half in commodities and one-half in cash. Some of that cash is going to buy more food (\$260 million) or necessary non-food items (\$40 million). The rest covers transportation (\$410 million) and program support (\$100 million). Of the just over \$500 million pledged by the U.S., one-fifth is earmarked for development projects and four-fifths for emergencies and protracted refugee operations.

The U.S. contribution is drawn from the Agency for International Development and the Departments of Agriculture and State. For FY 1994, the U.S. contributed \$393.2 million in cash, commodities and transport through PL 480, Title II, and \$52.2 million in Section 416(b) cash, commodities and transport. U.S. contributions include \$185.2 million in commodities and \$215.6 million in cash for emergency operations, protracted refugee operations, and the International Emergency Food Reserve. U.S. contributions include \$64.8 million in commodities and \$33.8 million in cash to promote development via food-for-work. Included in the U.S. regular pledge was \$3 million in cash for administrative expenses funded from IO&P. The total U.S. contribution for FY 1994 was \$503.3 million, which is about one-third of WFP's operating budget.

WFP Success Stories:

- WFP's overhead (well under 10%) compares favorably with the most efficient domestic charities and stands as a model for other UN agencies.
- WFP has and continues to negotiate access rights for food aid deliveries in the Sudan with both Government and rebel groups.
- Through a memorandum of agreement with UNHCR, WFP has assumed responsibility for provision of food to refugees in areas of conflict, such as Somalia, Iraq, Ethiopia, and the former Yugoslavia.
- WFP alone had the resources and logistics to feed the millions pouring into the refugee camps surrounding Rwanda. In consequence, famine was not added to the list of horrors occurring within the country.
- In all, WFP fed some 47 million people in 1994.
- On the development side, we are beginning to see long-term receivers of WFP food aid in the 1960's and 1970's now graduating to self-sustainability (e.g. NAFTA-partner Mexico and new food exporter India).

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UN AFGHANISTAN EMERGENCY TRUST FUND (AETF)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	2.000	0.500	0.500

**Program Definition and Objectives:** The AETF is the operating budget of the UN Office for the Coordination of Humanitarian Assistance to Afghanistan (UNOCHA). UNOCHA was created in 1988 to coordinate the work of UN agencies involved in Afghan relief and reconstruction, and thereby ensure adequate, cost-effective, and non-duplicative UN programs in war-ravaged Afghanistan.

Afghanistan has been wracked by continuous warfare from 1978 to the present, including nine years of resistance against Soviet occupation and on-going civil war. An estimated one million Afghans were killed during the Soviet occupation, and an additional 20,000 have been killed since the fall of the communist regime in 1992, most of them innocent civilians. In addition, over 2.5 million Afghan refugees have yet to repatriate from Pakistan and Iran, and an estimated 600,000 are presently displaced within Afghanistan. Repatriation and reconstruction are hampered by the estimated 10 million landmines laid by combatants during the war against Soviet occupation. The country's physical and social infrastructure has been shattered by fighting and neglect. Health care and education systems are non-existent in most of the country, and the economy, which was already one of the world's least developed even before the onset of war in 1978, is moribund.

UNOCHA's work is therefore as vital as ever. The coordinated programs of the UNHCR, the UNDP, the World Food Program, UNICEF, and other UN agencies and NGOs are critical to the political stability and economic reconstruction needed to achieve key U.S. objectives in Afghanistan. These goals include keeping the country from becoming a haven and training ground for drug traffickers, radical extremists, and destabilizing regional insurgency movements. Afghanistan is already the world's second largest producer of opium.

UNOCHA compares favorably with other efforts to promote sustainable development because, as an umbrella organization, it focuses and maximizes the efficiency of separate U.S. contributions to several other sustainable development accounts, such as UNDP, UNICEF, and the World Food Program. The U.S. has always been a leading contributor to UNOCHA, and we have consistently used this fact to leverage contributions from other donors.

In 1994, the U.S. ended all direct bilateral assistance programs in Afghanistan, largely because of the difficulty and high operating costs of running an aid program on a cross-border basis (i.e. from Pakistan). The closure of our aid program, which provided \$22 million in assistance in FYs 1993-94, magnifies the importance of our multilateral contributions to advancing our interlinked interests in safe refugee repatriation, political stability, and economic reconstruction.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

**Funding Request:** The FY 1995 request of \$500,000 will help fund UNOCHA's small administrative budget (\$2.9 million per year) and also count towards the much larger consolidated UN appeal for Afghanistan, which is now rolled over annually. The current appeal (which runs from October to September) calls for \$106 million in donor contributions, including \$37.3 million for repatriation and relief programs for displaced persons, \$31.6 million for food aid, and \$18.0 million for demining.

The UNOCHA-led consolidated appeals are chronically underfunded. During the last appeal, for example, UNOCHA received only 60% of the \$59.8 million requested. Leading contributors in terms of direct cash contributions to the AETF follow below. This accounting does not include other (often substantial) contributions to UN agencies or NGOs operating under the UN consolidated appeal.

	<u>CY 1988-93</u>	<u>CY 1994</u>
	(\$ in millions)	
Japan:	\$110.7	-
U.S.:	\$38.0	\$5.2
Sweden:	\$20.4	\$2.2
Canada:	\$9.7	\$0.9
Norway:	\$9.4	\$0.7
Finland:	\$8.5	\$1.1

**A UNOCHA Success Story:** Afghanistan is the most heavily mined country in the world, with an estimated 10 million landmines planted in its fields, arounds its villages, and along its roads and riverbanks. Landmines continue to kill and maim thousands of Afghans every year, and constitute a serious obstacle to safe refugee repatriation and economic recovery. In response to this daunting challenge, the UN Mine Clearance Program for Afghanistan (MCPA) was established by UNOCHA in 1988. It now employs 2,800 people, nearly all Afghans, and provides mine surveying and mapping services, conducts mine awareness training, and oversees forty 32-man mine clearance teams which operate throughout Afghanistan despite the ongoing civil war. The MCPA has identified 113 square kilometers of land requiring priority mine clearance, of which 80 square kilometers remain to be cleared. In 1993, available funding permitted the clearance of 10 square kilometers. The MCPA is widely acknowledged by donors as perhaps the most successful and cost-effective demining program in the world. UNOCHA estimates that it clears mines at an average cost of \$1 per mine, whereas contractors elsewhere are known to charge as much as \$1,000 per mine.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## INTERNATIONAL FUND FOR AGRICULTURAL DEVELOPMENT (IFAD)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.271	0.000	5.000

**Program Definition and Objectives:** The International Fund Agricultural Development (IFAD) is the UN specialized agency and multilateral lending institution focussed on alleviating rural poverty in developing countries. More than one third of IFAD's \$300 million annual lending program goes to Sub-Saharan Africa, while another third benefits the poorest farmers of Asia. IFAD's own resources are matched by the support of other donors (both bilateral and multilateral) and of recipient governments; total value of projects supported by IFAD averages \$800 million annually.

IFAD is a leading exponent of the participatory approaches to development. Its beneficiaries are those most geographically, socially, and economically vulnerable in poor rural areas. They include ethnic minorities, women (who often cannot own land in their own right) and recently resettled refugees. IFAD works through traditional local groups or encourages the creation of new small groups of beneficiaries. Encouraging participation through small groups not only increases the odds for project sustainability, but also contributes to the strengthening of civil society at its most basic level.

**Collaboration.** Partnership is at the heart of IFAD's institutional character. The partnership between developed and developing countries and the willingness of developing countries to provide substantial financial support make IFAD stand out among other international institutions. IFAD was also designed to be a catalyst within the international donor community for mobilizing resources to benefit the rural poor. Maintaining strong relationships with other multilateral institutions and nongovernmental organizations is an essential part of IFAD's work.

IFAD works to maintain close, synergistic ties with other multilateral lending institutions. While IFAD has consistently focused on poverty and people-centered development throughout its history, other multilateral lending institutions have only recently returned to a poverty focus following their emphasis on other priorities in the 1980s. IFAD'S expertise in designing innovative investment projects for the rural poor is becoming an even more important source of knowledge for these institutions.

In 1994, IFAD negotiated agreements with the Inter-American Development Bank, the Asian Development Bank, and the World Bank's Global Environment Facility which will give the Fund increased opportunities to mobilize resources from these institutions in support of IFAD projects. Similar agreements with other multilateral financial institutions are under discussion.

IFAD shares with the Non-Governmental Organizations (NGOs) a common philosophy of working directly with the poor: like the activities of NGO's, IFAD projects are community-based and people-centered. IFAD works mainly with locally-based NGOs and relies on them

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

as partners particularly when initiating activities in a new country or area. In a recent instance, IFAD's first involvement in the new state of Eritrea was through a small project grant to an NGO.

**Management.** During 1994, IFAD management continued implementing major revisions to the project development cycle. Based on ideas from IFAD staff, these changes are resulting in increased responsiveness to beneficiaries as well as significant cost savings. Due largely to this effort, IFAD was able to reduce its administrative budget for 1994 by 13 percent and plans an additional 3.6 percent reduction in 1995. This is a model for other UN organizations.

In July 1994, a team of five independent experts (including the former head of evaluation at the World Bank) completed an assessment of IFAD's work. They concluded that, "In our judgement, the need for IFAD is more pronounced now than at the time it was created." The team agreed that IFAD's mission of targeted lending to the rural poor in developing countries remains a much-needed part of the international development assistance effort. They explained that IFAD's "hybrid mandate (development and funding) resulted in a novel institution and this uniqueness, coupled with the Fund's standing in the international community, remains an extraordinarily powerful tool for development".

**Replenishment Status.** On January 26, 1995, IFAD members approved the terms of the Fund's Fourth Replenishment on a conditional basis. The overall replenishment goal of \$600 million is based on group targets; individual pledges will be confirmed at a later stage.

OECD countries agreed to a target level of \$420 million, based on OPEC members and other developing countries contributing a joint amount of \$150 million. A number of OECD donors informally expressed their willingness to contribute to the remaining \$30 million "gap." The replenishment is linked to a restructuring which will change the way decisions are made in IFAD. When implemented, the new structure will reduce OPEC's role in the Fund and will enhance the role of OECD members, IFAD's major contributors. It will also tie individual members' voting rights more closely to their contributions.

Implementation of the restructuring changes will not begin until the replenishment is "complete." This will occur if individual pledges totalling 90 percent of the OECD target and 85 percent of the OPEC/other developing country target are received by IFAD and certified by the IFAD Executive Board by September 12, 1995. The United States has not yet agreed to maintain our share (based on the previous replenishment), nor have we made a specific pledge.

**Funding Request:** The \$5 million requested for FY 1996 confirms our stated intention to participate in the Fourth Replenishment. The request does not prejudice the level or share of the replenishment that the United States may eventually decide to take, but it will enable the United States to make a first payment in FY 1996 once that decision is made.

To participate in the Fourth Replenishment in a manner consistent with our support for the previous replenishment, the United States would need to provide a total of \$92 million over the replenishment period (three years.) This would maintain our share in the OECD contribution (22 percent) as well as our share in the overall replenishment (15 percent).

IFAD merits the continuation of strong U.S. support. It remains on the cutting edge of sustainable rural poverty alleviation, and it gained unqualified endorsement from a noted group

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

of independent experts in 1994. It has not only worked hard to keep administrative budgets low, but has actually achieved real budget reductions in two consecutive years. IFAD uses donor resources efficiently, and all its projects directly address the needs of the poorest. IFAD compares favorably with other institutions promoting sustainable development in these and other respects.

**Success Stories:** Flexibility in adjusting programs to match the changing needs of its target group is a hallmark of IFAD's work. Recent events in Southern Africa bear this out. In June, 1994, IFAD was the first international agency to respond to the concerns raised by the Presidential Mission to the Greater Horn of Africa. Within days of meeting with the delegation, IFAD assembled a team including experts from its sister Rome-based organizations (the UN Food and Agriculture Organization and the World Food Program) and dispatched them to Tanzania. The result is a phased program to link relief and rehabilitation with long-term development. In the initial phase, a \$5 million grant project will help Western Tanzania manage fuelwood use in the face of sudden increase in demand caused by an influx of refugees from Rwanda. IFAD will link this to institutional strengthening for Tanzanian authorities as a basis for a future longer term lending project in the region.

IFAD is also well equipped to deal with regions which have suffered from prolonged conflict, even where the lack of a government prevents IFAD from using its ordinary lending resources. In 1993, IFAD moved quickly to formulate a grant project that would bring the benefits of a very new peace to the poor farmers of Gaza and Jericho. Using a nongovernmental organization (NGO) which was already knowledgeable about and active in the area, and working in close coordination with USAID, IFAD devised a \$12.5 million program to channel credit and inputs to these poor farmers.

By encouraging developing country governments to invest in the rural poor and by demonstrating cost effective strategies to accomplish this goal, IFAD fosters a mutually beneficial relationship between central governments and poor isolated rural communities. In Zimbabwe, for example, IFAD both encouraged the Government to invest in marginal lands ("Communal Areas") and established a project of its own to show how performance of small farmers on these lands could be improved at minimal cost to the central government. The government of Zimbabwe is using IFAD's project as a pilot on which to base a comprehensive national program of marginal area development.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UNITED NATIONS FELLOWSHIP PROGRAM (UNFP)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.250	0.100	0.100

**Program Definition and Objectives:** The UN Fellowship Program (UNFP) places trainees from developing countries in appropriate training programs. It is intended to give nationals employed by their governments the opportunity to broaden their professional knowledge in areas which are of primary importance to the development of their countries.

Funds for this program reimburse U.S. Government agencies for administrative costs incurred in arranging and monitoring the U.S. training of foreign nationals organized through the UN system. The UN agencies that sponsor the Fellows handle tuition and other costs.

The United Nations Development Program (UNDP), the Food and Agriculture Organization (FAO), the International Labor Organization (ILO), the International Civil Aviation Organization (ICAO), and other organizations of the UN system provide from their resources technical assistance in the form of training of individuals in various countries where pertinent expertise is available. When training is provided in developed countries, it has been the practice of the host governments to cover the administrative costs associated with such training. Until the early 1980's, the U.S. Agency for International Development covered these costs, consolidating this activity with its bilateral training efforts. Since 1982, funds have been provided through U.S. voluntary contributions and have been administered through the IO&P account of the Department of State.

Currently, training for selected nationals from developing countries is provided in the U.S. through the U.S. Department of Agriculture (USDA), the Federal Aviation Administration (FAA), the Federal Communications Commission (FCC), the National Marine Fisheries Service (NMFS), and the Bureau of the Census. In 1994, these agencies trained nearly 500 Fellows, with the administrative support costs provided through the IO&P account and supplemented by the five federal agencies involved.

**Funding Request:** The size of the fellowship programs will be determined by the funds available to implement UN programs and by the ability of the United States as the receiving country to cover attendant administrative costs.

- US participation in the UNFP fully complements U.S. bilateral and multilateral development interests.
- Because the program contributes to human resources development in developing countries, it enhances the capacity of recipient countries to assist in their own development.
- The program is the very essence of sustainable human development.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

- The Fellows learn U.S. techniques and become familiar with U.S. equipment and supplies, which promotes the purchase of U.S. equipment for their own countries.
- The Fellows are exposed to U.S. values and to the U.S. way of life.
- UN funds, to which the United States is a major contributor, are expended in our own institutions.

UNEP Success Stories:

In 1994:

- The Department of Agriculture conducted training programs for 274 FAO-assisted trainees from 24 countries.
- ICAO assisted 97 government and industry officials from 16 countries to receive training in the United States under the supervision and direction of the Federal Aviation Administration. Courses included pilot training, radar systems, instructor training, aviation law, aircraft maintenance, and aircraft certification instruction. The training takes place at the FAA academy, colleges, universities, private schools and industry programs.
- ITU-assisted fellows representing 15 countries underwent training sponsored by the Federal Communications Commission. In addition to taking FCC training courses, students participated in private sector training programs.
- The Bureau of the Census provided training to 44 participants under funding from the United Nations and other international organizations in the areas of computer technology, geographic information systems and cartography, data dissemination, census and survey methods, sampling and statistical methods, population statistics, and the management of statistical organizations.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

INTERNATIONAL CIVIL AVIATION ORGANIZATION (ICAO)  
AVIATION SECURITY (AVSEC) TRUST FUND

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.100	0.100	0.100

**Program Definition and Objectives:** The AVSEC Trust Fund supports ICAO efforts to strengthen aviation security, and prevent terrorism and unlawful interference with civil aviation and its facilities. Upon request the program provides assessments, advice, and specialized training of security personnel. The AVSEC fund was established following the destruction in December 1988 of Pan Am flight 103 over Scotland. At that time, the United States took the lead among those calling on ICAO to strengthen its aviation security role and in establishing the AVSEC fund. The destruction of UTA flight 771 over Niger later that same year further emphasized the urgency of the situation.

As the world's leading aviation power, the United States has played a prominent role in strengthening the fund's aviation security activities. The improvement of security for international air travel is of great importance to the United States. As the operator of nearly half of the world's air traffic, the United States is especially vulnerable to illegal acts directed against civil aviation. The AVSEC fund provides assistance to countries to meet basic ICAO standards in the area of aviation security. Enhancement of aviation security benefits all countries, but is particularly important to nations with poorly developed security systems, due to a higher vulnerability to interference with civil aviation and its facilities.

In FY 1996, evaluation visits to countries that have requested assistance, instructional seminars, and follow-up missions are planned. ICAO also will provide model training courses for aviation security personnel to enable states to achieve self-sufficiency in basic aviation security implementation and training.

**AVSEC Fund Success Stories:** The AVSEC has been highly successful in rendering assistance to states in the implementation of ICAO Standards and Recommended Practices (SARPS) on aviation security. Workshops and training activities have also been targeted and undertaken in order to meet deficiencies in programs and procedures. Visits have been made to 67 of the 109 countries that have requested assistance. By the end of 1995, some 90 requesting states will have received the initial visit.

**Funding Request:** The FY 1996 budget request for AVSEC is \$100,000. In 1994, contributions were received from the U.S., Australia, Belgium, and the United Kingdom. France and Canada also provided professional staff for the program. Pledges to AVSEC of more than \$5 million have been made from 17 countries since its inception in 1990.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UNITED NATIONS POPULATION FUND (UNFPA)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	40.000	50.000	55.000

Program Definition and Objectives: The United Nations Population Fund (UNFPA) has lead responsibility within the UN system for providing population assistance to governments in developing countries and countries with economies in transition. UNFPA is the largest multilateral donor organization in the population sector.

In FY-85, Congress enacted the Kemp-Kasten amendment to the Foreign Operations Appropriations Act which prohibits the U.S. Government from providing assistance to any organization or program which, as determined by the President, supports or participates in the management of a program of coercive abortion or involuntary sterilization. This amendment has been reenacted in every Foreign Operations Appropriations Act since 1985. In FY-85, the USAID Administrator reviewed the UNFPA-funded program in China and made a determination that UNFPA was ineligible for funding based on this restriction. As a result, the United States withheld \$10 million of the \$46 million that was allocated to UNFPA in 1985. Each year between FY-86 and FY-92 a similar determination was made with regard to the ineligibility of UNFPA for U.S. funding because of the Kemp-Kasten amendment, and no funding was provided.

In FY-93 and FY-94, the USAID Administrator again reviewed UNFPA's program in China under the terms of the Kemp-Kasten amendment and determined that U.S. funding would not be in violation of U.S. law.

The Clinton Administration acted to restore U.S. participation in the multilateral donor community by providing a contribution of \$14.5 million in FY- 93. In FY 1994, the U.S. contribution was increased to \$40 million, and in FY-95 Congress appropriated up to \$50 million.

UNFPA assistance directly complements bilateral assistance provided by the U.S. and other governments through support of much-needed programs where the U.S., for streamlining purposes, does not have bilateral programs. Nearly half of UNFPA's program expenditures are devoted to family planning and maternal child and health care services. UNFPA also assists governments in the development and implementation of population and family planning information, education, and communication programs. UNFPA supports projects to create awareness and understanding among policy makers and the public at large about the effects of rapid population growth on economic development. UNFPA, the World Bank and USAID maintain regular contact to coordinate their assistance efforts, and have cooperated in providing census assistance in sub-Saharan Africa, co-funding of country costs for specific demographic and health surveys, and discussion of strategies for meeting escalating contraceptive commodity requirements.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

Recent developments in UNFPA's approach to population assistance mirror similar changes in U.S. international population policy, which are intended to encompass a more comprehensive approach to population programs.

**Funding Request:** UNFPA is at the center of a major international effort to mobilize additional resources for family planning and reproductive health programs urgently. At present, the world is spending approximately \$5 billion annually on family planning programs, of which donors contribute approximately \$1 billion. By the year 2000, according to the Program of Action of the International Conference on Population and Development (ICPD), total global resource requirements for family planning and reproductive health will need to increase to \$17 billion annually, of which donors are expected to cover \$5.7 billion. This rapid increase in estimated global resource requirements is due to two factors:

1. a significant increase in the population being served by these programs, from 450 million currently to around 650 million people in the year 2000.
2. a commitment to broaden the reproductive health services being made available in developing countries. The international community, as reflected in the ICPD Program of Action, is adopting a more comprehensive approach to reproductive health. This new approach emphasizes safe motherhood programs, prevention and treatment of sexually transmitted diseases and prevention of HIV/AIDs -- in addition to the ongoing core support for voluntary family planning programs.

UNFPA Success Stories:

- UNFPA's efforts over the past 25 years have contributed significantly to a major decline in fertility that is unfolding in much of the world. The overall total fertility rate in the developing world has declined from around six children per woman to less than four in only 25 years -- the most rapid fertility change in history.
- UNFPA was the principal organizer of the 1994 United Nations International Conference on Population and Development, in Cairo. The Conference focused the world's attention on critical population issues, and outlined a Program of Action to address them effectively in the context of poverty alleviation, environmental protection and women's rights. Developed and developing nations alike agreed that resources to support this program are urgently needed -- and that inaction would be far more costly.
- UNFPA's impact is felt at the global, national and community levels. Internationally, for example, it has been a key facilitator in "Partners in Population and Development: A South-South Initiative", launched last year by 10 nations. This will enable developing countries to become more self-reliant by sharing experiences, training programs, technical know-how and locally manufactured contraceptive supplies.
- UNFPA has made a major difference in communities throughout the developing world through its support for particular projects like the Jamaica Women's Center. Through education and counselling, the center aims to free young women from the cycle of marginalization and repeated pregnancy.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UNITED NATIONS ENVIRONMENT PROGRAM (UNEP)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	22.000	16.000	17.000

**Program Definition and Objectives:** As the UN's principal organ on the environment, UNEP plays a catalytic and coordinating role on international environmental issues. Although UNEP conducts some specific project activities, especially in developing countries, its principal focus is to support the collection, assessment and dissemination of environmentally related information. UNEP also facilitates the use of and response to this information by providing advice and training in environmental assessment, regulation and management.

UNEP was established in January of 1973 as a result of UN General Assembly Resolution 2997 (XXVII), which implemented the institutional recommendations of the UN Conference on the Human Environment, held in Stockholm in 1972. UNEP stemmed from a U.S. initiative, and the United States has been the leading contributor -- both financially and technically -- to the Program since its inception.

The UN Conference on Environment and Development (UNCED), held in Rio de Janeiro in June of 1992, reaffirmed UNEP's role as the principal UN body dealing with the environment. UNCED also reiterated the importance of UNEP's long-standing programmatic efforts in environmental assessment, coordination, management and legal matters. In response to UNCED, UNEP's secretariat is making a detailed estimate of the costs of implementing all the UNCED recommendations in which UNEP would play a major role.

Environmental problems are often transboundary or international in character, and multilateral action is therefore required to address them adequately. UNEP is uniquely well placed to stimulate, facilitate and coordinate actions at all levels -- national, regional, and international -- in response to ever more pressing environmental issues. In the aftermath of UNCED, UNEP's role is particularly important in encouraging and supporting the implementation of UNCED's environmentally centered recommendations, as embodied in Agenda 21.

While the United Nations Development Program and its UNCED "seed" fund (Capacity 21) provide a primary source of leverage to promote the pursuit of UNCED's results, only UNEP -- working closely with UNDP -- is currently capable of serving as the environmental "conscience" at the international level to ensure that the environmental dimension is thoroughly incorporated into developmental efforts.

UNEP continues to concentrate its activities in five specific environmental areas of broad concern to the U.S. and the international community: land resource degradation (including desertification and deforestation) and loss of biodiversity; oceans and coastal areas, especially regional seas; fresh water supply and quality; toxic chemicals and hazardous wastes; and atmospheric issues, especially ozone depletion, climate change and acid rain. UNEP also

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

continues to provide critical administrative and managerial support for the implementation of important international agreements on the environment.

**Funding Request:** Of the \$17 million requested, \$16 million will be contributed to UNEP's Environment Fund, and \$1 million will go to a variety of other related multilateral environmental activities. These include support for the Vienna Convention and Montreal Protocol to combat stratospheric ozone depletion, the South Pacific Regional Environment Program (SPREP), the Cartagena Convention and its Protocol on Specially Protected Areas and Wildlife (SPAW), the Caribbean Environment Program, and specific conferences or meetings that may be held on subjects closely related to UNEP's activities.

Total contributions to the Environment Fund in 1994 amounted to \$65.20 million. In addition to the U.S. contribution of \$21 million (32%), other significant contributions were provided by: Japan - \$9 million; the United Kingdom - \$6.25 million; Germany - \$5.7 million; Finland - \$3.2 million; Sweden - \$2.7 million; Switzerland - \$3.0 million; Norway - \$2.1 million; France - \$2.0 million; Netherlands - \$1.9 million; Italy - \$1.3 million.

**UNEP Success Stories:** UNEP was the first to focus international attention on the pressing global environmental problems of stratospheric ozone depletion, transboundary movements of hazardous waste, and the loss of biological diversity – especially the extinction of wild species of plants and animals. UNEP organized and sustained intergovernmental negotiations on these issues and brought them to a successful conclusion. Of the resulting agreements, the Vienna Convention and its associated Montreal Protocol address stratospheric ozone depletion, the Basel Convention regulates transboundary movements of hazardous waste, and the new Biodiversity Convention provides an international framework for efforts to reduce and halt the irreparable loss of species diversity. UNEP continues to support the implementation of these agreements, as well as a wide range of others, including the Convention on International Trade in Endangered Species (CITES). UNEP also helps implement conventions that address climate change and combat desertification.

Important and unique UNEP programs include those dealing with environmental information and reduction of toxic exposure. The EARTHWATCH program organizes the collection, processing and dissemination of environmental data through its component activities: the International Register of Potentially Toxic Chemicals (IRPTC), the Global Environmental Monitoring System (GEMS), Global Resource Information Database (GRID), and the environmental information retrieval system (INFOTERRA). The cleaner production program and its associated International Cleaner Production Information Clearinghouse (ICPIC) provide a critical source of information on less polluting industrial processes, encouraging their dissemination and facilitating their use. The program of Awareness and Preparedness for Emergencies at Local Level (APELL) helps countries set up the crucial capability to minimize the risk of major chemical accidents and to respond effectively to those that do occur.

UNEP is one of the three founding organizations of the International Program on Chemical Safety, and organized the Stockholm Conference on Chemical Safety in 1994 which established the Intergovernmental Forum on Chemical Safety. UNEP developed critical Guidelines for the Exchange of Information on Chemicals in International Trade, and further refined them with provisions for Prior Informed Consent to govern exports of toxic chemicals. UNEP continues to update and strengthen these guidelines, and would provide the support needed for any negotiations that may take place on converting them into a convention.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

UNEP's regional seas program has led to conventions on pollution prevention in the Mediterranean as well as environmental programs in the Caribbean and South Pacific regions. UNEP has also forged guidelines on the reduction of pollution of coastal marine environments from land-based sources, and will sponsor a major international conference in the U.S. in November to address this issue.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

MULTILATERAL FUND FOR THE IMPLEMENTATION  
OF THE MONTREAL PROTOCOL

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	15.000	20.750	27.250

**Program Definition and Objectives:** Depletion of the stratospheric ozone layer caused by human emissions of ozone depleting substances (ODS) has weakened the Earth's shield against ultraviolet radiation, damaging ecosystems and threatening increased skin rates of skin cancer and immune suppression.

The world has met the threat of ozone depletion head-on through two international agreements - the 1985 Vienna Convention for the Protection of the Ozone Layer and its 1987 Montreal Protocol on Substances that Deplete the Ozone Layer. The Protocol, which controls the use of ozone depleting substances and promotes the use of safer substitutes, is already having a beneficial effect on the stratosphere. In February 1993, ozone levels over North America and most of Europe were 20% below normal. During the 1993 Austral Spring the ozone values in the "ozone hole" over Antarctica were the lowest ever recorded. However, the International Ozone Assessment, released in August 1994, confirmed that the Protocol is reducing the impact of human-caused emissions of ozone depleting chemicals. Scientists predict that stratospheric concentrations of these ozone depleting chemicals will peak in 1998, then slowly decline, allowing the ozone layer to recover during the first half of the next century.

The United States was the principal force pushing for international action to protect the ozone layer. Our success in galvanizing international action in this effort has been remarkable. The Vienna Convention and Montreal Protocol have been ratified by about 140 countries, comprising more than 90% of the world's population and nearly 99% of its production of ozone-depleting substances. The seven-member Ozone Secretariat, based in Nairobi, administers both the Convention and the Protocol. The Montreal Protocol is also a key supplement to the considerable efforts the United States has taken domestically to phase out ODS use, since these efforts would be useless if other countries did not take similar measures.

Ozone depletion is a global threat; actions taken anywhere in the world to reduce that threat affect us all. Therefore, the Montreal Protocol parties established a Multilateral Fund to support developing countries' conversion to alternative substances, and ensure these countries' commitment to a reduction in their use of ODS. The Fund finances developing country phaseout by paying the incremental (extra) costs of conversion over a 10-year grace period. After an interim phase, the Fund was set up on a permanent basis at the Fourth Conference of the Parties (COP) at Copenhagen in 1992. It is financed by voluntary contributions from largely developed country Parties based upon the United Nations scale of assessments.

The Multilateral Fund enjoys near-universal support internationally. It is administered by a lean staff of nine professionals. The projects the Fund helps finance have a direct effect on one

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

of our most pressing global environmental problems. The approximately \$285 million approved so far already is bringing tangible results in reduced emissions of ODS.

Budget planning for the Fund is made on the basis of three-year periods. For the second triennium (1994-1996), the parties agreed to a \$510 million budget. The Fund Secretariat considered (1) the needs of the eligible developing country Parties; (2) the capacity and performance of the implementing agencies (World Bank, UNDP, and UNEP, later joined by UNIDO); and (3) the strategies and projects to be implemented by eligible developing countries.

In response to an Executive Committee request, the implementing agencies assessed their own capacity and that of their clients to undertake projects within the 1994-1996 time frame. Based upon their response, the Secretariat recommended a \$510 million budget for 1994-96; it was approved by the Executive Committee and by the Fifth Meeting of the Parties in Bangkok in November 1993. The budget took into account and rolled over \$55 million unspent from the first triennium, meaning that assessments were to be based on an actual replenishment of \$455 million.

There is reason to question whether the budget adopted was adequate. It was significantly less than the amount recommended by EPA in a study done by EPA on the needs of 39 developed countries then eligible. Nearly 100 countries are now eligible for Fund assistance. Moreover, recently the countries with economies in transition (CEITs -- the former East Bloc) have been unable to contribute their 15% share of the Fund budget and could conceivably need financial assistance themselves to meet their Protocol obligations. However, it was generally assumed that \$510 million was the maximum figure that the principal donors would be willing to support for the triennium. Indeed, the United States considered the approval of this figure a victory, which our delegation worked hard to achieve.

Funding Request: At one-quarter of the total, during the 1994-96 triennium the annual U.S. share of the Fund budget was agreed to be \$38 million, with (by interagency agreement) half each to come from State and EPA.

As the United States was the principal advocate of a higher end budget and a vigorous program of ozone reduction, failure to uphold our financial obligations under the Montreal Protocol would undermine U.S. credibility in future Protocol financial negotiations, as well as jeopardize our ability to elicit cooperation on other environmental issues. Moreover, shortfalls in promised assistance might lead developing countries to abrogate their Protocol commitments. It is extremely important for the United States to ensure that these phaseout commitments are not called into question. Failure to initiate ODS reduction projects at the earliest possible moment will increase peak chlorine loading levels and stretch out the time over which degradation of the zone layer will occur. Analysis demonstrates that early project implementation in developing countries will mean less eventual demand on fund resources.

Multilateral Fund Success Stories:

The Multilateral Fund has brought about successful conversions of foam blowing, refrigerator manufacturing, and solvent-using facilities in many countries. The Fund has underwritten projects which have achieved reductions through recycling of halons and chlorofluorocarbons (CFCs). When fully implemented over the next three years, currently approved Fund projects

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

are expected to reduce the use of ODS in developing countries by about 47,000 tons -- one-quarter to one-third of those countries' use of these substances.

U.S. industry has also benefitted from the Protocol. American companies are among the world leaders in ODS substitutes in a wide range of applications. It has been estimated that, for every dollar spent by the United States in multilateral assistance institutions, \$1.40 is earned by U.S. firms and organizations. Given U.S. leadership in ODS reduction technology, our rate of return on Montreal Protocol contributions should be even higher.

Finally, the Protocol broke new ground by implementing the incremental cost concept. This tool limits funding to that level necessary to ensure that the beneficiary faces no extra cost for converting to non-ozone-depleting substances, while ensuring that the Fund does not underwrite a benefit derived from the conversion. Thus the limited resources available can be used to achieve the greatest possible level of ODS reduction.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## UNITED NATIONS CENTER FOR HUMAN SETTLEMENTS

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.400	0.300	0.300

**Program Definition and Objectives:** The United Nations Center for Human Settlements (Habitat) is the U.N. body which coordinates and implements all U.N. human settlements activities. Habitat is responsible for coordinating the Global Strategy for Shelter (GSS) – the major global program for shelter adopted by the UN General Assembly in 1988. The GSS calls for the establishment of an "enabling" legislative and regulatory environment which can facilitate accelerated improvement and construction of housing in general, particularly for the urban and rural poor. The GSS forms the basis of the Centre's work, outlined in the Medium-Term Plan for 1992-1997.

The U.N.'s Committee on Sustainable Development designated Habitat as the task manager for the implementation of the human settlements components of Agenda 21, which was adopted by the U.N. Conference on Environment and Development (UNCED) in 1992. At its 14th Session in April/May 1993, the Commission on Human Settlements, the governing body of UNCHS, made important revisions to the Medium-Term Plan for 1992-1997, more comprehensively integrating Agenda 21 components into its work plan.

In keeping with the recognition of the critical role of human settlements in environment/development discussions, the 47th Session of the U.N. General Assembly (resolution 47/180) called for the convening of the U.N. Conference on Human Settlements (Habitat II), which will be held in Istanbul, Turkey in June 1996.

The focus of Habitat II will be the provision of adequate shelter for all and sustainable development in an urbanizing world. Habitat II, which was dubbed "The City Summit" by the UN Secretary General in his opening address at the First Preparatory Committee meeting, will seek to:

- place urbanization at the top of international and national development agendas;
- promote new policies and strategies for urban management;
- promote new methods for implementing the Global Strategy for Shelter and assuring adequate housing for the poor;
- help solve the fast-growing range of urban environmental problems;
- highlight needs and opportunities for investment in infrastructure and services.

Habitat's work in promoting sustainable human settlements complements and supports USAID's core mission of sustainable development. USAID has also focused on the critical nature of urban development, which is a major emphasis of the new Environment Center within the Agency's Global Bureau. In addition to its work with the Housing Indicators Program, USAID has actively participated in Habitat's multi-agency Urban Management Program and has

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

collaborated with Habitat on implementing numerous national and regional development activities.

Within the category "Protection of Global Environment" in the 1996 International Organizations and Programs (IO&P) budget, Habitat provides the expertise and technical capacity for monitoring and coordinating U.N. efforts on the environmental and developmental impacts of urbanization. Habitat provides an important perspective on dealing with urbanization as a critical element of Agenda 21 implementation. Habitat has successfully developed multi-agency initiatives that facilitate cross-sectoral approaches to settlements management, i.e. the UNDP/World Bank/Habitat Urban Management Program (UMP) and its operational arm in the environmental field, the Sustainable Cities Program. These programs provide local authorities and their partners in the public, private and community sectors with improved planning and management capacity.

**Funding Request:** Although the level of USG funding requested for Habitat remains the same as in FY-95, this request level does not diminish in any way the increasing importance of urbanization to development and the opportunities offered by the Habitat II Conference. Over 50% of the families in the developing world live in urban areas. Thus, for U.S. and other donors, national development is increasingly and inextricably linked to the challenges and opportunities presented by urbanization and urban environmental needs. The growing understanding of the positive and negative implications of such urbanization has been highlighted by the inclusion of the Office of Urban Programs in the newly formed USAID Environment Center.

One of the five strategic objectives of USAID's new Environment Center is to "promote the process of sustainable urbanization and reductions in environmental pollution from urban and industrial sources." Thus, Habitat II will be an opportunity for senior USG officials to deliberate and exchange views with their counterparts on a subject increasingly important in USAID strategy. Habitat II will also play a critical role in not only finding solutions to urban environmental degradation, but also in forging the critical political commitment to deal with the issues.

USG participation in Habitat II will allow us to present and explain our current and proposed urban programs in a large, publicized, and visible forum. The U.S. Delegation will also have an excellent opportunity (1) to influence the nature and composition of developing country efforts to deal with their urban and related environmental problems and (2) to ensure the highest possible degree of synergy and coordination between the U.S. bilateral, MDB and other donor programs aimed at these same problems.

In the broader context, UNCHS (Habitat) will necessarily have a continually increasing role in the implementation and monitoring of human settlements programs. The focus of many of the various sectoral programs flowing from UNCED's Agenda 21 will be on human settlements, and especially on cities and towns, where these sectoral programs will have to be coordinated, managed and implemented.

**UNCHS Success Stories:** An important initiative of UNCHS is a joint effort with the World Bank to identify and develop housing and urban indicators. The Housing Indicators Program has been designed to identify key measures that are policy-sensitive, easy to collect and that can be updated on a regular basis. These indicators provide an important diagnostic tool to

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

measure housing sector performance. As well, they provide a management tool for stakeholders in the public and private sectors to enable them to identify policy imperatives to address the pressing problems of housing.

Countries have been called upon to use these indicators as the basis for their preparation of national reports for the Habitat II Conference. The baseline data made available by such a national preparatory process will prove invaluable for national governments to better monitor and review the performance of the housing sector and to gauge progress in attainment of national goals. USAID has assisted in the development of the indicators and is utilizing them to measure the performance and impact of its shelter and urban development programs.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## THE INTERNATIONAL UNION FOR THE CONSERVATION OF NATURE (IUCN)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	1.000	1.000	1.000

**Program Definition and Objectives:** The International Union for the Conservation of Nature (IUCN) Program has three basic goals: (a) the development of understanding of the nature of the Earth's living systems, their responses to human impact, and their capacities to withstand human use; (b) the definition of the nature and causes of human impact on the environment and on ecosystems, and of the social context for sustainability; and (c) the provision of information, advice, methods, demonstrations and services that will help communities achieve sustainable living.

The focus of IUCN's work is in the broad field of applied ecology. The organization, both through its network of expert volunteers working within the Commission system and through its Secretariat, brings together a unique assemblage of knowledge about the world's ecosystems and species, their dynamics, status and potential to support human needs. No other organization in the world brings together expertise on species conservation and on the management of protected areas as IUCN does. The maintenance of this core of specialist knowledge is an important part of its overall program strategy.

The United States has a vital interest in helping the developing nations stabilize their economies and become full and effective trading partners in the international marketplace. To achieve this goal, the developing nations must implement land and water management practices based on sustainable use principles. The United States also has a vital interest in conserving the integrity and diversity of the natural world and to ensure that human use of natural resources does not threaten the long term viability of the human community. In many areas of the world, local and even national economies are in severe stress as a result of the unsustainable exploitation of natural resources.

Desertification and mass migration have resulted from overgrazing and excessive groundwater exploitation. Flooding and the associated destruction of agricultural production has resulted from deforestation. Inappropriate surface water development has increased flooding losses, increased human health problems, destroyed commercial fisheries, and reduced agricultural production. Wetland drainage directed to increasing agricultural production has often produced short term gains and long term losses as a result of decreased groundwater recharge, increased soil erosion, and decreased soil fertility. In addition, because wetlands often are nurseries for commercial fisheries as well as the source of other commodities, economic activity is often further reduced. IUCN's program, aimed at securing the conservation of nature, particularly its biodiversity, and helping communities achieve stable, productive, and sustainable economies, is also a primary goal of the United States. IUCN's recent work has contributed to this goal by helping developing countries design their National Conservation Strategies and devise and demonstrate methods for the sustainable use of national environmental resources.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

This has included programs to improve environmental impact assessment, development of environmental law, environmental education, and site specific and country specific land and water use management planning.

IUCN has identified three major issues which will be addressed:

- Planning for conservation and sustainable development.
  - a) Conservation Strategies.
  - b) Promoting understanding of gender roles in natural resources management.
  - c) Promoting and enhancing the integration of population and natural resources issues.
  - d) Evaluating the impact of global change.
- Conserving biological diversity.
  - a) Preparing and implementing strategies for conservation of biological diversity.
  - b) Conserving species.
  - c) Conserving and managing wetlands, forests and coastal and marine habitats.
  - d) Establishing and managing protected areas.
  - e) Translating ecological processes into practical tools for conservation, sustainable management and restoration.
- Providing conservation services.
  - a) Environmental Impact Assessment.
  - b) Developing Environmental Law.
  - c) Biodiversity Information and Monitoring.

IUCN has site specific and country specific programs and projects which address the above objectives. The programs and projects are located throughout the developing world.

Success Stories:

The Okavango Delta in Botswana contains the world's largest inland body of fresh water and is the home of one of the world's greatest nature reserves. This huge game reserve, rising out of the vastness of the Kalihari Desert, teems with wildlife including lions, cheetahs, buffalo, wildebeests and many other species. This unique natural treasure was threatened with ecological disaster by the Government of Botswana's plan to dredge the main river and build a mammoth reservoir. An IUCN team conducted a technical review of the project which documented the potential environmental hazards of the project and also concluded that the Government's needs could be met by a much smaller reservoir. The revised project plan, which was accepted by the Government, achieved a balance between the economic development needs of Botswana while at the same time preserving the natural heritage of the Okavango.

Two IUCN teams helped advance Sustainable Forestry Management in Sri Lanka. Critics of the Sri Lankan Government's forestry master plan claimed that it would lead to the degradation of ecologically and economically important "wet zone" forests. The IUCN teams conducted an independent assessment of the plan and proposed alternatives. These missions resulted in the

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

establishment of an Environmental Management Component of the forestry plan and a more effective approach to the sustainable use and conservation of the forest resource.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

INTERNATIONAL TROPICAL TIMBER ORGANIZATION (ITTO)  
PROJECT ACCOUNT

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	1.000	1.000	1.000

**Program Definition and Objectives:** The International Tropical Timber Organization (ITTO) is the only international forum for engaging both producing and consuming countries in efforts to address all aspects of the tropical timber economy, including sustainable management of production forests.

The International Tropical Timber Agreement (ITTA), 1983 was established by the 1983 United Nations Conference on Tropical Timber to provide a forum in which producing and consuming countries could cooperate in finding solutions to problems facing the tropical timber economy. The 1983 agreement entered into force in April 1985 and became operational in 1987. Negotiations on a successor agreement to the ITTA, 1983, which was to expire in March 1994, were successfully concluded in January 1994. The 1983 agreement will continue in effect until the ITTA 1994 is brought into force. The US signed the ITTA, 1994 on July 1, 1994 at the UN Treaty Office in New York.

The Agreement currently has 52 parties (including the EU) representing 90 percent of world trade in tropical timber and 80 percent of the earth's tropical rainforests. The ITTA is administered through the International Tropical Timber Organization (ITTO), which seeks to promote improved forest management, better market transparency, and efficient forest industry. U.S. priorities include increasing transparency of the tropical timber market; promoting research, development and implementation of practices for sustainable management of sources for internationally traded tropical timber; and encouraging national policies aimed at sustainable forest management.

ITTO pursues its objectives through a Council comprised of all parties and three permanent committees open to all parties. The committees correspond to ITTO's priority interest areas of reforestation and forest management, forest industry, and economic information and market intelligence.

ITTO administration is funded by annual assessments on member governments. ITTO carries out its primary operational programs through a special project account supported by voluntary contributions from member countries. Donor countries may determine which projects they will support. To date, the majority of ITTO-funded projects have related to sustainable forest management. U.S. contributions have supported several pilot projects in this area, as well as projects related to training, institution building, inventory of forest resources, and development of forest management plans.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

The ITTO also undertakes policy and other non-project activities. The organization is the first to have adopted a definition and criteria for sustainable management of production forests. ITTO also has adopted guidelines for the sustainable management of natural tropical forests, and plantations, as well as guidelines for the conservation of biological diversity in production forests.

ITTO uniquely serves U.S. interests as the only international forum for engaging both producer and consumer countries of tropical timber, as well as forest industry and environmental nongovernment observers, in efforts to improve the management of tropical production forests. ITTO's recognition of the timber market's dependency on sustainable harvesting links U.S. trade interests with U.S. priorities for forest conservation. This is epitomized by ITTO's commitment to "Objective 2000" — the goal of having internationally traded tropical timber come from sustainable sources by the year 2000.

President Clinton identified renegotiation of the ITTA and commitment to the ITTO Year 2000 Objective in his Presidential Decision Directive of November 5, 1993, in which he committed the U.S. to the "national goal of achieving sustainable management of U.S. forests by the year 2000." As part of the successful negotiation of a new ITTA in January 1994, consuming countries of the ITTO participating in the negotiations released a separate statement committing themselves to the objective of maintaining, or achieving by the year 2000, the sustainable management of their respective forests.

In FY 1996, the ITTO should begin operations under the better focused and strengthened ITTA, 1994. The organization is expected to continue its innovative work toward achieving the objective of having traded tropical timber come from sustainably managed forests by the year 2000. A key exercise during this period will be the Fall 1995 benchmark review of progress toward "Objective 2000." In this regard, we expect the controversial issue of country reporting to be clarified and regularized. We also expect the ITTO's work to continue in three other important areas: the further definition of "sustainable management" and its practical application in the tropics; increased transparency in the international timber market; and the examination of how market-oriented approaches can be used to obtain ecologically sound and sustainable timber production.

**Funding Request:** As of the end of 1994, estimated cumulative pledges by consumer countries to ITTO's voluntary project account totaled over \$98 million. Of the major donors, Japan's estimated pledges exceed \$66 million; United Kingdom - \$6 million; Switzerland - \$5 million; United States - \$4 million; France - \$2 million; and the Netherlands, Denmark and Italy - \$1 million each.

**Success Stories:** The ITTO has played a pioneering role in developing and adopting guidelines on the sustainable management of tropical forests and tropical forest plantations, and biodiversity conservation in tropical production forests. U.S. project funding has aided in the worldwide dissemination of these guidelines as well as the training of state and private forestry organizations in their implementation. In 1989, at the invitation of the Government of Malaysia, the ITTO sent an independent Mission to Sarawak to assist in strengthening its forest management practices to attain sustainable development. Mission recommendations are being implemented by Sarawak authorities including the reduction of timber production to a sustainable level. The ITTO has also promoted and funded the establishment of a transboundary nature reserve totalling about 1 million hectares of forests straddling the

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

Indonesian/Malaysia border on the island of Borneo. This transfrontier nature reserve is perhaps the biggest of its kind in the tropics.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

CONVENTION ON INTERNATIONAL TRADE IN ENDANGERED SPECIES  
OF WILD FAUNA AND FLORA (CITES)

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	1.000	1.000	1.000

**Program Definition and Objectives:** The Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) provides the only global mechanism for protecting endangered species of wildlife and plants from over-exploitation in international trade, as well as promoting their conservation. The Convention was concluded after Congress, in response to strong public support, directed the Administration (in the Endangered Species Act) to negotiate an international agreement to prevent over-exploitation of wildlife. The founding conference was held in Washington, D.C. in 1973.

CITES is now the key instrument for international wildlife conservation, with 127 countries party to the convention, including most major producers and consumers.

CITES' primary objectives are the identification of over-exploited species and the implementation of trade controls to protect those species. Other notable accomplishments include: (1) designation of wildlife authorities for the first time in many countries; (2) development of guidelines for the safe shipment of live specimens of plants and animals; (3) preparation of a species identification manual for use by customs officials at ports of entry; (4) improved standardization of documentation, annual reporting on worldwide wildlife trade and information on requirements to amend listings of endangered and threatened species; (5) more effective trade controls for specimens such as elephant ivory, rhinoceros horn, whale products, reptilian leather, exotic plants and rare birds; (6) improved acquisition and exchange of wildlife trade data and statistics; and (7) improved cooperation among Party members in conservation of endangered species.

U.S. contributions to the CITES trust fund support meetings of parties and certain operations of the Secretariat such as enforcement of the Convention's trade regulations and identification of appropriate levels of trade control. The trust fund is administered by the United Nations Environment Program (UNEP), which provides the staff and administrative support for the Secretariat.

The U.S. contribution will support Secretariat efforts in several important areas. Most important will be continuing studies of elephants and other animals, such as the South American caiman, and plants, such as some species of cacti which may warrant trade protection under CITES. These studies will clarify the status of subject species and determine levels of trade control, if any, needed. In addition, the Secretariat will pursue its work with producer governments to develop domestic implementing legislation for improved enforcement of trade controls, and will continue to assist member parties with general implementation of convention provisions as necessary. Both the American public and other countries look to the United

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

States to remain in the vanguard of international conservation and preservation of endangered plants and animals.

All countries, including the United States, benefit from CITES protection of the endangered and potentially threatened species of wild plants and animals which represent the world's irreplaceable living resources. The Convention was concluded after Congress, in response to strong public support directed the Administration (in the Endangered Species Act) to negotiate an international agreement to prevent over-exploitation of wildlife.

The United States has been actively involved in CITES since its inception. Such participation provides the primary vehicle for U.S. leadership in an area of wildlife protection having unusually broad international acceptance of common policy goals and complements U.S. implementation of the Convention domestically through the Endangered Species Act. U.S. participation is also a principal means by which U.S.-based conservation and trade organizations exert influence internationally on wildlife issues directly through the U.S. Government. The U.S. hosted the Ninth Conference of the Parties to the Convention in November 1994.

Funding Request: U.S. contributions to the CITES trust fund support meetings of parties and certain operations of the Secretariat such as enforcement of the Convention's trade regulations and identification of appropriate levels of trade control. The trust fund is administered by the United Nations Environment Program (UNEP), which provides staffing and administrative support for the Secretariat. Major donors include: U.S., Japan, Germany, France and the United Kingdom.

CITES Success Stories: CITES facilitates private American commercial ventures in wildlife. Farming and ranching of some endangered species have resulted in successful breeding of certain animals, such as the American alligator, and their subsequent removal from endangered status. Such actions substantially benefit U.S. producers and traders.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## CONVENTION ON WETLANDS OF INTERNATIONAL IMPORTANCE (RAMSAR)

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.750	0.750	0.750

**Program Definition and Objectives:** The RAMSAR Convention is the only international treaty which addresses the conservation of a specific type of ecosystem. Wetlands have often been considered as wastelands to be avoided or converted to other uses. Recognition of the direct economic importance of wetlands in the production of fish, timber, and other products as well as their importance in such areas as controlling floods, recharging groundwater, and in bio-remediation of pollutants has emerged only recently.

The international recognition of the importance of wetlands is reflected in the growing number of nations that have acceded to the RAMSAR Convention. Over seventy nations are now Contracting Parties to the Convention.

During the last few years, the Contracting Parties have recognized that wetlands of international importance are subject to increasing development pressures. This has led the Parties to develop as part of the RAMSAR Bureau efforts new programs to assist the Parties in protecting wetlands. These programs include (1) the Monitoring Procedures, which is a structured survey method which helps identify the problems related to specific designated wetlands and develop measures to solve such problems; (2) the development of sustainable use management plans for wetlands, and (3) the Wetlands Convention Fund, which provides funds for planning, training, surveying, and other costs associated with the planning and management of wetlands. The Wetlands Conservation Fund is financed by voluntary contributions from the Parties and other interested individuals and organizations.

Wetlands have values that benefit the international community. These benefits include fish and wildlife habitat, flood control, groundwater recharge, and water quality maintenance. It is estimated that 80 percent of the world recreational and commercial fisheries are dependent on wetlands for spawning, nursery areas, and food sources. They also serve as natural reservoirs and are important in protection of the quantity and quality of surface and ground water, including those used as a source of drinking water and as a buffer to flooding. As a leader in promoting sustainable development of natural resources, the United States can promote the acceptance of its policies and land use ethnics by supporting the RAMSAR Convention. In addition, most of the U.S. migratory birds are, for some portion of their life cycle, dependent on wetlands located in other countries. Also, many of the U.S. commercial fisheries are partially dependent on coastal wetlands in other nations. The RAMSAR Bureau's efforts to promote the conservation and wise use of such wetlands will also promote U.S. interests.

The RAMSAR Bureau programs are well defined and no new programs are anticipated at this time. However, the Bureau is strengthening its existing efforts in the areas of monitoring designated wetlands and assistance to those parties which request help in sustainable use

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

planning. The Bureau also is focusing efforts in training assistance and in acting as a facilitator for planning the conservation of wetlands that straddle national borders.

**Funding Request:** The FY 1996 budget request is based on the triennial RAMSAR 1994-96 budget approved at the Conference of Parties held in June 1993. The U.S. insisted on limiting the size of the Secretariat and focusing its efforts on defined objectives, particularly capacity building and management planning. To meet the U.S. objectives related to the RAMSAR programs, an annual voluntary contribution of \$750,000 is warranted. Other major contributors include France, Switzerland, the Netherlands and the EEC. In addition to the core budget, the U.S. contributes to special projects such as the Wetlands Fund.

**RAMSAR Success Stories:** Responding to a request for assistance from Costa Rica, the RAMSAR Secretariat assisted in the development of a wise-use management plan for its Cano Negro wetland. The successful implementation of a management plan for this wetland was dependent on maintaining the functional values of this wetland and meeting the economic needs of the local population. Through early involvement of the local leaders and an active public participation program, a plan that provides for commercial harvest of certain wetland species and growing tourism businesses has been developed and is being implemented. These economic uses of the wetland can be sustained without jeopardizing the wetland's unique ecosystem.

## UN FRAMEWORK CONVENTION ON CLIMATE CHANGE (UNFCCC)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.250	0.250	3.000

**Program Definition and Objectives:** Global climate change is thought to be the single, most serious environmental threat to our planet. The issue has been high on the agenda of two administrations. In early 1993, President Clinton committed the United States to returning our emissions of greenhouse gases to their 1990 levels by the year 2000. Later that year the President announced a comprehensive Climate Change Action Plan to achieve that objective. The White House is now embarked on a major effort involving a broad range of federal agencies to develop recommendations for dealing with climate change after the year 2000. Domestic actions alone, however, cannot solve the problem. Progress here at home can easily be undone if other nations do not join in a global response.

The United States is engaged in two major international initiatives designed to promote a global response to the threat of climate change: the Intergovernmental Panel (IPCC) on Climate Change and the United Nations Framework Convention on Climate Change (UNFCCC). The UNFCCC builds on the work of the IPCC, providing a global forum in which nations decide what actions to take in response to evolving scientific knowledge.

The IPCC and the UNFCCC represent the front line of the global defense against the threat of climate change. They are vital to our national interests because the United States alone or even together with its partners in the industrialized world cannot eliminate this threat. Success depends on long-term commitment by all nations, including developing countries and the so-called "economies in transition" -- countries of Eastern Europe and the former Soviet Union. The UNFCCC unites them in global action.

More than 150 nations adopted the UNFCCC at a final negotiating session in May 1992 immediately prior to the Earth Summit in Rio de Janeiro. The United States became the fourth nation and the first industrialized nation to ratify the Convention, which entered into force on March 21, 1994. It has been signed by over 190 countries and ratified by over 115. The first meeting of the Conference of the Parties to the Convention will take place in Berlin in March 1995. At that meeting, the parties will consider next steps to deal with the threat of climate change in the post-2000 era. Since established by the UN General Assembly in late 1990, the negotiating process that led to the UNFCCC and the continuing process to prepare for entry into force of the Convention were largely supported through contributions from the regular UN budget, supplemented by voluntary contributions to two trust funds set up by the General Assembly.

Under the UNFCCC, industrialized countries agreed to adopt specific national policies and measures to mitigate climate change by limiting human emissions of greenhouse gases (e.g., carbon dioxide, methane, nitrous oxide) and by protecting and enhancing sinks and reservoirs

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

(e.g., forests) of these gases. Developing countries also undertook a series of commitments to deal with this problem. Efforts to date, however, are but a first step toward reaching the Convention's ultimate objective: Stabilization of greenhouse gas concentrations in the atmosphere at a level that would prevent dangerous human interference with the climate system. Thus, parties to the UNFCCC are considering next steps, even as they work intensively to meet existing Convention commitments. The challenge is to take actions that are appropriate in light of the science and uncertainties about climate change. In these discussions, continuing scientific assessments of climate change are vital to sound policy-making.

**Funding Request:** The FY budget request for the UNFCCC rises from \$0.25 million in FY 1995 to \$3 million in FY 1996 because the UNFCCC has entered into force and the contracting parties must now directly bear expenses previously borne by the United Nations regular budget. In addition, the work of the UNFCCC Secretariat has expanded significantly following adoption of the Convention and its entry into force as the contracting parties have begun specific activities under the Convention.

**UNFCCC Success Story:**

The UNFCCC, negotiated in a mere 15 months, has united over 160 countries in a global effort to respond to the threat of climate change and in the ultimate objective of stabilizing concentrations of greenhouse gases in the atmosphere at a level that would prevent dangerous human interference with the climate system.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE (IPCC)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.300	0.400	0.600

**Program Definition and Objectives:** Global climate change is thought to be the single most serious environmental threat to our planet. The United States is engaged in two major international initiatives designed to promote a global response to this threat: the Intergovernmental Panel on Climate Change (IPCC) and the United Nations Framework Convention on Climate Change (UNFCCC). The IPCC, begun in 1988 as a joint effort of the World Meteorological Organization and the United Nations Environment Program, is the most authoritative international assessment body with respect to climate change. The Panel's assessment efforts are crucial to establishing the scientific underpinnings of domestic and international policy decisions on combatting the threat of global climate change, and its findings strongly influence policy debates within and between nations.

The IPCC periodically assesses the science and the impacts of climate change, options for adapting to climate change and for mitigating it by reducing emissions of greenhouse gases, and the costs and benefits of response options. The United States spends about \$1.8 billion a year on its own global change research effort through the U.S. Global Change Research Program (USGCRP). The IPCC periodically reviews the findings of U.S. research under this program, as well as of the scientific research of other nations and international organizations, in an effort to establish a global consensus on the science and uncertainties of climate change. Such continuing scientific assessments are vital to sound policy-making under the Climate Change Convention. The Panel's First Assessment Report (FAR) in 1990 in fact led the U.N. General Assembly to set up a process for negotiating the UNFCCC. The IPCC's 1992 Interim Assessment largely confirmed and supplemented its earlier findings and served as an important input into the negotiations.

The IPCC was restructured in 1992 to involve scientists and experts from developing countries and economies in transition in all phases of its work. This restructuring proved vital to greater understanding of climate change throughout the world and increased acceptance of the Panel's findings among nations which often saw climate change as a remote problem with little direct effect on themselves. The restructuring won praise and strong support for the IPCC from those countries, but it also contributed to a doubling of the Panel's annual budget, which currently stands at about \$5 million.

With more than 200 scientists already involved, the IPCC is working to complete its second scientific assessment cycle. The resulting Second Assessment Report (SAR) will cover three broad areas: the science of climate change; impacts and response options (which alone will account for more than half of the approximate total of fifty chapters); and a cross-cutting analysis of economics and other issues. The SAR is scheduled for completion in late 1995. In 1996 the Panel will start work on its Third Assessment Report (TAR), which is expected to

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

provide additional updates on climate change issues, and offer a basis for analyzing how the world's nations contribute to the increasing concentrations of greenhouse gases in the atmosphere.

**Funding Request:** The increase in the FY 1996 budget request for the IPCC will enable it to bring scientists and experts from developing countries and economies in transition into its work and ensure wider acceptance of its findings.

**IPCC Success Story:** The IPCC's First Assessment Report on the science and impacts of, and response options for dealing with, climate change -- released in 1990 -- led the U.N. General Assembly to establish a process for negotiating a Framework Convention on Climate Change by 1992 -- which occurred.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

INTERNATIONAL CONTRIBUTIONS FOR SCIENTIFIC,  
EDUCATIONAL & CULTURAL ACTIVITIES (ICSECA)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	2.000	2.050	2.050

**Program Definition and Objectives:** To support U.S. participation in UNESCO-related international scientific, educational, and cultural organizations engaged in work considered essential and important to U.S. interests.

The United States withdrew from the United Nations Educational, Scientific and Cultural Organization (UNESCO) in December 1984. Since 1986, the U.S. Government has supported selected UNESCO-related activities, considered to be in the national interest, through the ICSECA program, formerly known as International Conventions and Scientific Organizations Contributions (ICSOC). This has enabled the United States to participate in selected key activities within UNESCO's multilateral programs and to take initiatives that served the interests of the American educational, scientific, cultural and communications communities.

The programs proposed for funding promote sustainable development, including the protection of the global environment, support the free press, and develop electronic networks of data storage and retrieval. Most were U.S. creations within UNESCO that continue to play an important role internationally but need continuing U.S. support to work effectively: The Intergovernmental Oceanographic Commission (IOC), the Man and the Biosphere Program (MAB), the International Hydrological Program (IHP), the International Geological Correlation Program (IGCP), the Physics Action Council (PAC), and the Intergovernmental Program for the Development of Communications (IPDC).

**The Intergovernmental Oceanographic Commission (IOC):**

The IOC, a functionally autonomous unit within UNESCO, is responsible for promoting and coordinating international marine science activities of its member states on a global scale. It is supported by UNESCO and contributions from IOC member states.

The Global Ocean Observing System (GOOS) is a U.S. priority activity carried out through the IOC. It collects ocean data relevant to climate change and environmental monitoring. The GOOS is expected to provide the oceanographic component of a Global Climate Observing System as proposed by the Second World Climate Conference and endorsed by the UN Conference on Environment and Development (UNCED).

Several IOC programs contribute to the U.S. Global Change Research Program (GCRP). This program was designed to provide the scientific basis for national and international policy decisions on natural and human-induced changes in the global earth system.

## *INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

There are a number of other IOC activities of high priority to the United States: the IOC Panel on Harmful Algal Blooms; the IOC Global Investigation of Pollution in the Marine Environment (GIPME); The IOC International Coordination Group for the Tsunami Warning System in the Pacific (ITSU); the IOC Technical Committee for International Oceanographic Data and Information Exchange; the ICSU/IOC World Data Center System for Oceanography; the IOC/WMO Integrated Global Ocean Services System; and the IOC Global Sea Level Observing System (GLOSS).

A contribution of \$520,000 is necessary to maintain effective U.S. participation in the IOC and to benefit from IOC's role in support of climate and global change research and the Global Ocean Observing System.

### The Man and the Biosphere Program (MAB)

The MAB program plays a significant leadership role in the protection of the global environment and the development of international scientific activities, especially in the creation of an ecological information system to monitor global change. ICSECA funds have been used as seed money to form the core of the U.S. MAB committee's capability to provide this scientific leadership. U.S. participation in the MAB program enables U.S. Government agencies and American scientists to acquire data not available elsewhere and to cooperate in the development of new resource management techniques for ecosystems of particular interest to the United States. Support in the amount of \$385,000 is necessary to maintain U.S. influence within the MAB Secretariat and to direct MAB research toward programs of interest to the United States.

### International Hydrological Program (IHP)

Since their inception in 1965, UNESCO-sponsored international scientific cooperative programs in water resources have advanced the protection of the global environment by substantially improving the scientific and technological basis for the development of methodology and human capacity for the rational development and management of water resources. Building on the accomplishments of the past 25 years, the IHP emphasizes the role of water-resources management and applied hydrological science in sustaining development and coping with anticipated changes in climatic and environmental conditions. These are areas of critical concern to U.S. water resource interests domestically and internationally.

The IHP program undertakes studies and promotes standards and cooperation among UN specialized agencies and nongovernmental organizations that provide the United States with information on water resources worldwide, including in such politically sensitive places as Israel, Jordan, the West Bank and Gaza. A contribution of \$100,000 per year is necessary for the United States to remain active and effective in key IHP projects.

### Physics Action Council (PAC)

Established by UNESCO in 1993 at the strong urging of the American Physical Society, the Physics Action Council promotes the widest possible participation of the world's physicists in the international physics enterprise. It is organized into working groups on Large Physics Facilities, Communications Networks for Science, and University Physics Education and is currently engaged in encouraging the access of all of the world's foremost high-energy

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

physicists in the work and operations of the European Center for Nuclear Research (CERN). A contribution of \$15,000 is necessary for the Physics Action Council to continue its work effectively.

National Academy of Sciences

A grant to the National Academy of Sciences (NAS) in the amount of \$775,000 would support the following programs:

- A. International Council of Scientific Unions (ICSU) and ICSU Bodies. Through the NAS grant, special contributions will provide support to several ICSU activities vital to the protection of the global environment:
- 1) The ICSU Grants Program. This program provides support for workshops, training courses, information exchanges, international conferences, and research activities sponsored by the scientific unions of the ICSU and other ICSU bodies. The program supports scientific projects in these areas: The International Lithosphere Program, the ICSU/SCOR Committee on Climate Changes and the Oceans, the ICSU/WMO World Climate Research Program, the ICSU Committee on the Teaching of Science and capacity building activities, the Federation of Astronomical and Geophysical Services, and biodiversity projects (workshops and studies) via IUBS and SCOPE. A contribution of \$235,000 is necessary.
  - 2) International Geosphere-Biosphere Program: Implementation and Coordination. Initiated by ICSU in 1986, this comprehensive, long-term program aims to describe and explain the interactive physical, chemical and biological processes that regulate the total earth system, the unique environment that this system provides for life, the changes that are occurring in the system, and the manner in which these changes are influenced by human actions. The operational phase of the program is being initiated through implementation of a half-dozen multi-disciplinary core projects. There are increasing linkages to the World Climate Research Program (WMO and UNESCO/IOC) and the Human Dimensions of Global Environmental Change Program. Partial support of the international coordination of this program, now budgeted by ICSU at over \$1.0 million per year, would be provided by an award of \$145,000 to the U.S. member of ICSU, the National Academy of Sciences.
  - 3) Natural Hazards Program (NHP). This UNESCO program is of major importance to U.S. scientists and has received increased support following the UN establishment of the International Decade for Natural Disaster Reduction (IDNDR). In collaboration with other international governmental and nongovernmental organizations, NHP promotes cooperative efforts on the assessment, prediction, and mitigation of natural hazards such as earthquakes, volcanic eruptions, tsunamis, floods and landslides. Support in the amount of \$90,000 is necessary to continue geological/geophysical projects through the appropriate international scientific unions and the ICSU Special Committee for the IDNDR.
  - 4) International Geological Correlation Program (IGCP). This program directs the attention of geologists to projects on mineral and petroleum deposits and correlates data on geological strata, sedimentary and quaternary research projects, and standards for geological maps and earth science projects. This program provides important contributions to the IGBP (recovery of environmental records) and the International Space Year (remote

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

sensing activities), both of which are of high interest to the U.S. The IGCP, which is managed jointly by the International Union of Geological Societies and UNESCO, oversees some 60 active projects. There are close links to activities of the International Lithosphere Program. A contribution of \$90,000 is necessary for continued participation.

B. Other Non-Governmental Scientific Bodies and the International Nongovernmental Cooperative Research and Training Programs. This continues project support to a number of U.S. professional organizations that advance the protection of the global environment through activities linked to various UNESCO science programs. In certain cases, support goes directly to the international non-governmental organizations to support a variety of activities of benefit to the U.S., including those sponsored by the International Social Science Council, the Microbiological Resources Centers, the Pacific Science Association, the Union of International Technical Associations, the World Federation of Engineering Organizations, the American Chemical Society, the International Clearinghouse on Science and Math Instruction, the International Center for Theoretical Physics, the International Clearinghouse for the Advancement of Science Teaching, the International Organization for Chemical Sciences in Development, the American Association of Museums, the U.S. Committee of the International Commission on Monuments and Sites, the American Council of Learned Societies, and other international scientific, educational, and engineering organizations. A contribution of \$215,000 to support the work of international nongovernmental organizations via U.S. affiliates is necessary.

International Libraries, Archives and Science Documentation Program:

This activity sets standard for and provides data on international library, information and archival activities. The U.S. contribution strengthens U.S. participation and leadership in key research areas and in the development of international information policies and standards favorable to U.S. interests. These include trans-border data flow, security of data transmitted internationally, and exchange of scientific and technical information. Access to effective data storage and retrieval systems is a key element of sustainable development. Continued U.S. participation is of particular benefit to the American information storage and retrieval industry. A contribution of \$175,000 per year is necessary.

UNESCO Private Sector Communications Programs

UNESCO vigorously promotes an independent, pluralistic, and free press as an essential element in the development and maintenance of democracy. Among the programs being supported by UNESCO is the Central-Eastern European Media Center in Warsaw. The Center was founded to support the transformation of the information systems of the countries of Central and Eastern Europe in accordance with the principles of free and democratic societies and to foster the development of an independent, pluralistic mass media. A contribution of \$10,000 is necessary to continue support for the Center.

UNESCO's Intergovernmental Program for the Development of Communication (IPDC) also sponsors projects to promote an independent press. Recent social and political changes in Africa have encouraged the emergence of privately-owned newspapers and magazines committed to independence and freedom of expression. This independent press is contributing to greater openness and management of public affairs. The IPDC project on development of

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

the independent press in Africa is of key importance. A contribution of \$35,000 is necessary to support this program and other UNESCO private-sector programs promoting an independent, pluralistic and free press.

UNESCO Copyright

The Book and Copyright division of UNESCO has developed a unique database on copyright legislation of particular interest to the USG. A contribution in the amount of \$35,000 is necessary to maintain and update the data base and to produce an English language version of it.

**Funding Request:** The FY 1996 budget request for UNESCO-related projects of \$2.050 million should be considered within the context of advancing U.S. policy goals by promoting sustainable development, including the protection of the global environment, and the free flow of information. UNESCO's programs funded on an assessed basis in these areas are effective but underfunded and warrant a U.S. voluntary contribution of \$2,050,000.

UNESCO Success Stories:

The United States withdrew from UNESCO in December 1984 because of the Organization's excessive politicization, poor management and long-term lack of budgetary restraint. Since the election of Federico Mayor as Director General in 1987, UNESCO has made major progress in solving these problems.

- Perceived at one time a proponent of a controlled media, UNESCO now vigorously promotes a free, independent, and pluralistic press.
- The Interagency Committee on Sustainable Development appointed UNESCO "Task Manager" to implement two chapters of Agenda 21: Chapter 35, "Science for Sustainable Development," and Chapter 36, "Promoting Education, Public Awareness and Training." UNESCO has provided leadership in mobilizing projects in these areas; for example:
  - UNESCO has programs in place for training thousands of scientists and engineers annually, for promoting environmental and population education and for organizing intergovernmental cooperation in support of research and data sharing on the oceans, biological diversity, freshwater and the earth sciences.
- Education programs for girls and women, organized by UNESCO, are an effective element in overall strategies to address global population problems.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## WORLD HERITAGE FUND

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.450	0.450	0.450

**Program Definition and Objectives:** The World Heritage Fund (WHF) was established under the Convention Concerning the Protection of the World Cultural and Natural Heritage (Convention) of 1972. The Convention's purpose is to recognize the world's most important and unique heritage sites, from the standpoint of biological diversity and sensitivity, and irreplaceable cultural significance, to influence the actions of governments to assure the protection of these sites, and to provide, through WHF, the financial assistance necessary to assist in this purpose.

The Convention was adopted in 1972, as a result of U.S. initiative and leadership. The Convention, whose adoption corresponded to the centennial of Yellowstone National Park, has been called an extension to the international level of the national park idea; a uniquely American contribution to world culture.

By recognizing a shared international interest in unique natural and cultural heritage sites, the Convention brings significant public attention to bear on the status of these properties. The Convention creates obligations for Member States with respect to their own actions toward designated sites in their territories, and with respect to their own actions that may affect designated sites on the territory of other Member States.

In its U.S. implementing legislation (P.L. 96-515), specific additional legal responsibilities are created for the Secretary of the Interior to assure the protection of World Heritage sites in the U.S., and their environment. The law obliges the heads of all agencies of the Executive Branch to consider the impact of their actions on World Heritage sites located in other countries. This is the only specific legislative requirement for environmental impact assessment of USG actions in other countries.

The Convention actively monitors the condition and integrity of World Heritage sites, and reports threats to those sites to the Convention's Committee, which the U.S. currently chairs.

Seriously threatened sites are entered on the List of World Heritage in Danger, which is becoming an internationally recognized barometer of the condition of the world's most important ecological and cultural zones.

The World Heritage Fund has provided support to States Parties who have expressed an interest in conserving their sites. Grants are made for technical cooperation projects, emergency assistance, training of staff, and preparing nominations.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

In 1992, the 20th anniversary of the Convention, the U.S. led and actively participated in a substantive review of the Convention's work, and produced a strategic plan to improve its operations in areas of perceived weakness. The Committee is currently incorporating this strategy into its operating procedures.

WHF continues to play a vital international role in environmental conservation, advances U.S. interests in these global values, and has been called a keystone of our international environmental conservation program. It is currently the largest membership international conservation Treaty, with 146 member countries. This growth of membership, in just 16 years of operational existence, is unprecedented among conservation instruments.

WHF has rescued from serious threat, and is addressing serious threats at, numerous biologically sensitive sites in all regions of the world. The Convention's combined "carrot and stick" approach, i.e., international recognition of sites and assistance grants with legal obligations of signatories, has proven to be an effective one to date.

Funding Request: The U.S. contribution of \$450,000 represents 18.5% of 1994 contributions. Other major contributors include Japan (\$381,040); United Kingdom (\$153,590); Germany (\$273,187); and France (\$183,567).

WHF Success Stories: IUCN, which serves as natural heritage advisor to the Convention has documented 20 examples of protected natural areas in which serious threats have been successfully addressed, and resolved as a result of the Convention's actions.

The WHF played a major role in resolving a threat to the World Heritage site of Glacier Bay National Park and Preserve, a unit of the U.S. National Park System. By raising the international visibility of the site, and by recalling obligations of the Canadian Government as a State Party, the Convention influenced decisions in Canada not to proceed with an open pit mine, whose drainage would have threatened the Park.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

**WORLD METEOROLOGICAL ORGANIZATION (WMO)  
VOLUNTARY COOPERATION PROGRAM (WMO/VCP)**

**PROGRAM SUMMARY**

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	2.250	2.250	3.000

**Program Definition and Objectives:** Since its inception at U.S. behest in 1967, the World Meteorological Organization's Voluntary Cooperation Program (WMO/VCP) has provided training and equipment to help developing countries improve their meteorological and hydrologic services and enable them to enhance their capability to collect, use, and exchange weather data. The WMO/VCP helps developing countries participate in WMO programs, particularly the World Weather Watch (WWW), which provides continuous, real-time, two-way communication of vital atmospheric and oceanic data and products. This gives all nations (including the U.S.) the basic information needed to forecast severe weather events and assist with critical information on natural and man-made disasters that affect life, safety, water use, or crop yields around the globe. The WWW program supports civil aviation, marine navigation, and other related programs of WMO, such as the World Climate Program (WCP). The WCP monitors global climate conditions, promotes the understanding of climatic trends, and in conjunction with WWW, provides vital data and information for international agreements, such as the Framework Convention on Climate Change and the Desertification Convention.

In particular, starting in 1996, WMO/VCP programming will support a major project for the Americas and the Pacific Rim, in connection with the U.S. responsibilities with regard to the ICAO/WMO World Area Forecast System, to convert the existing antiquated meteorological telecommunications systems to a much more reliable satellite-based system. An increase in VCP funds is requested for this effort in order to leap-frog the existing technology and provide improved two-way communications with other meteorological services, especially in increasing the flow of data and products between the U.S. and other countries. The upgrading of the communications networks will improve our early warning capabilities in the Americas, which will help save lives and lessen the damage to property.

Over \$25 billion worth of damage and 24 lives were lost during Hurricane Andrew (1993) in the U.S. alone, which might have been reduced with earlier warnings to give more time for pre-storm civil preparedness. In addition to assisting the U.S. in tracking and forecasting tropical cyclones, the new linkages will make other meteorological services aware of the need to continue the free and unrestricted exchange of meteorological and related data and products, which is a key U.S. foreign policy goal.

In the execution of the WMO/VCP, close coordination is maintained with other international, regional, and bilateral partners, such as the United Nations Development Program (UNDP), the Food and Agriculture Organization (FAO), the United Nations Environment Program (UNEP),

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

the World Bank, and the European Economic Community, to ensure the WMO/VCP is complementing, not competing with, their efforts.

**Funding Request:** In 1994, the pledges to the WMO/VCP amounted to approximately \$8 million, of which \$2.25 million was contributed by the U.S. The total WMO/VCP program is expected to be about \$9 million in 1996. In 1994, the top five donors were: U.S. (\$2,250,000); United Kingdom (\$1,507,776), France (\$647,000), Finland (\$450,000), and the Russian Federation (\$387,300). Overall, 24 countries made contributions to the WMO/VCP.

As part of a 5-year project, an increase in VCP funding is requested to replace antiquated telecommunication networks for environmental data, as described above. The total cost is projected to be \$12.8 million, with contributions expected from other sources, including Finland. The timing of the project is critical in that it seeks to take advantage of an improvement in data and product dissemination under an ICAO and WMO program as well as to demonstrate the practical advantages of a critical U.S. policy supporting free and unrestricted international data exchange. The bulk of the U.S. contribution will be spent in the U.S. for equipment and experts.

In addition to the major project to upgrade meteorological telecommunications, WMO/VCP funds will continue to be used for:

- sponsored graduate education (meteorology and hydrology) and specialized and advanced training courses (in hydrology, aviation meteorology, and satellites).
- Contributions of U.S. manufactured meteorological and hydrological equipment for enhancing the capacity and role of developing countries in environmental issues, such as ozone monitoring and climate change detection, which creates a natural market in the recipient countries for the purchase of U.S. spare parts and supplies.

**WMO/VCP Success Stories:** In support of improved climate predictions, detection of climate change, and the negotiations that have taken place on the Framework Conventions on Climate Change and the Desertification Convention, the WMO/VCP has made concerted efforts to obtain and preserve climatological data from the atmosphere, ocean, and land surface through the CLICOM program and through the Data Rescue (DARE) program for researchers. Both these programs received support from the United States. They have succeeded in producing and distributing climate data that have been applied to water resources, agricultural, and other socio-economic sectors affected by climate variations and climate change -- all of which has improved our understanding of the climate system and our ability to predict its behavior.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

**WORLD METEOROLOGICAL ORGANIZATION (WMO)  
SPECIAL TRUST FUND FOR CLIMATE AND ATMOSPHERIC  
ENVIRONMENT ACTIVITIES  
(CAEA TRUST FUND)**

**PROGRAM SUMMARY**

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.800	0.800	0.800

**Program Definition and Objectives:** This Fund was established in 1989 to support the demand for short-term scientific studies and activities in climatology and environmental sciences which respond to the needs of the Intergovernmental Panel on Climate Change (IPCC), the environmental conventions, and other calls for environmental data and information that could not be included in the normal WMO four-year budgeting process.

The Fund has been instrumental in initiating and coordinating short-term studies and analyses to respond to policy questions related to international environmental conventions on ozone, climate change, and desertification; in establishing new basic systems for global assessments of climate change as input to the assessments of the IPCC; and in developing sustainable developing indices related to the implementation of Agenda 21. Activities are closely coordinated with the UN and other agencies to avoid duplication .

In 1996, the CAEA Special Trust Fund will be used to:

- Set international standards and calibration criteria for, and increase the quantity and quality of observations of, greenhouse gases and atmospheric radiation, especially ultraviolet (UV) levels related to the amounts of stratospheric ozone. All global information on greenhouse gases and atmospheric radiation come from observations coordinated through WMO. UV amounts, which are now being forecasted, are directly related to human health issues in all countries.
- Enhance efforts to quantify and predict the future availability of fresh water. WMO has the lead responsibility within the UN system for predictions in this area. This includes operational activities, since the sooner drought or fresh water shortages are known, the quicker policy makers can develop solutions.
- Support development of internationally agreed global and regional environmental indicators for both climate change and sustainable development. These indicators will be based upon integrated, global observation systems, such as the WMO's World Weather Watch and its Global Climate Observing System.

**Funding Request:** For 1996, the United States proposes to contribute \$800,000. The United States has strongly supported the CAEA Special Trust Fund since its inception because U.S. policy makers recognize the benefits obtained from long-term monitoring, research, and training of professionals, which contribute to the health of the economic and social structure of

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

societies. The strengthening of national capabilities in these areas not only helps countries understand the issues better, but also makes previously unavailable data available to U.S. policy makers. Pledges to the Trust Fund in 1994 amounted to \$1.9 million, of which the U.S. contributed \$800,000. Other major contributors include Canada and The Netherlands. We understand that Finland, Japan, Germany, and the United Kingdom are considering donations to the fund. Several small nations have also contributed nominal amounts.

Success Stories: The Fund has been instrumental in supporting workshops on atmospheric radiation and greenhouse gases, as well as specialized activities to enhance global observation networks such as the Global Climate Observation system, the Global Atmospheric Watch, and the World Weather Watch. The data and information gathered through these activities has been used by the IPCC and negotiators of the environmental conventions in their assessments and deliberations.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

ORGANIZATION OF AMERICAN STATES (OAS)  
DEVELOPMENT ASSISTANCE PROGRAMS

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	11.000	11.000	11.000

**Program Definition and Objectives:** OAS development assistance programs further U.S. interests in strengthening democracy, free trade, market-oriented economic policies, and sustainable development in the Western Hemisphere. Contributions fund intra-regional cooperation to strengthen local institutions and accelerate economic development; support needed technical training and other educational opportunities in the Americas; and foster scientific and cultural cooperation. In FYs 1995 and 1996, OAS programs are being refocused to more directly further the objectives set forth at the Miami Summit.

The 20th Special General Assembly in Mexico City in February 1994 reoriented OAS development assistance to promote partnership among member states. This new orientation gives special emphasis to complementing members' own development policies and initiatives, by concentrating on the following priority areas:

- Trade liberalization, increased market access, and economic integration;
- Support for education;
- Rational use of natural resources and preservation of the environment;
- Scientific development and access to technology;
- Strengthened public and judicial administration;
- Generation of productive employment; and
- Preservation of cultural and linguistic identity.

Former Colombian President Cesar Gaviria, a dynamic and energetic new Secretary General, assumed office in September, 1994 and is pressing implementation of this new approach along with a restructuring of the OAS Councils which oversee assistance programs. The U.S. is playing an active role in the restructuring process. By early 1996, the Secretariats for technical cooperation -- Economic and Social Affairs (CIES) and Education, Science and Culture (CIECC) -- will merge into the Council on Integral Development (CIDI). The change aims at increasing efficiency, eliminating duplication, and substituting an emphasis on cooperation and shared responsibility for the traditional focus on North-to-South aid flows. This new method of technical cooperation has been named the Partnership for Development. The following

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

multinational projects are examples of what will be considered for execution by the new development structure:

Regional Cooperation in Trade and Sustainable Development:

This program will continue support for feasibility studies on integral development and environmental protection in specific regions, including Central America, the Amazon Basin, and the Caribbean. These studies provide the groundwork for large-scale projects which seek funding from the international financial institutions and the private sector. OAS development assistance funds will also support the Foreign Trade Information System (SICE), a computerized trade information system which continues to expand and support development of the hemispheric free trade area envisioned by the Summit. Tourism development, an industry especially vital to economic development in the Caribbean, will also be funded.

Regional Educational Development Program:

The OAS annual meeting of Ministers of Education adopts educational policies as well as projects which stress improving the quality of education. This high level ministerial involvement and commitment gives the OAS a comparative advantage in the field of educational policy and innovation. At the 1994 meeting, Ministers chose to concentrate on Basic Education and Education for Work. In basic education, the OAS programs will focus on identification, testing, consolidation and generalization of educational innovations. The Education for Work program will focus on designing programs to retrain workers from the public sector, parastatal enterprises and private companies who are out of work as a consequence of privatization and/or technological advance.

Regional Scientific and Technological Development Program:

The program plans to concentrate on addressing the following areas: new technologies for development, technological management and services, scientific and technological integration, and support for innovation. Several activities have already been proposed including: (1) a multinational project on the environment to reduce chemical and bacteriological pollution of food and water for domestic consumption, and promote sustainable industrial application of biotechnology; (2) expansion of previous successful efforts at increasing inter-regional communication through Internet by expanding interactive services to libraries and data bases containing specialized information and participating in experiments and simulations that can be conducted jointly and by remote control; and (3) a program directed at small and medium industry to build on the experience of the quality networks already existing in food and textiles by expanding these to other industries, linking businesses and technical and standards institutes to promote quality assurance and certification of laboratories.

**Funding Request:** The FY 1996 budget request of \$11.0 million represents a refocusing of resources to deal more directly with priorities agreed upon at the Summit of the Americas and those of the reform-minded Secretary General. The priorities of trade, democracy and the environment parallel U.S. priorities and support USG efforts in the Hemisphere.

Success Stories:

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

The OAS has been extraordinarily successful in leveraging its technical assistance with funding from external sources, both national and multinational. In 1994, projects administered by the OAS Department of Regional Development and Environment in the amount of \$9.7 million were supplemented with external financing of \$7.6 million.

SICE, the OAS Foreign Trade Information System, has steadily expanded its base of information and added subscribers, and, in 1995, will add information on tariff schedules and export/import data from all countries in the hemisphere. Work is underway on compiling a compendium of regional trade agreements, which will be available to subscribers. SICE is rapidly becoming an important point of focus in supporting implementation of the Summit commitment to create a hemispheric free trade area.

The Inter-University Hemispheric Information Network on Science and Technology (RedHUCyT) has already been able to link most countries in the Hemisphere to Internet through a university node. The success of this effort to date was cited at the Summit of the Americas as an activity countries would like to see expanded. Such expansion will take the form of increasing the scope and access of OAS member states to various information sources as well as to each other.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## INTERNATIONAL ATOMIC ENERGY AGENCY (IAEA)

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
IO&P	30.000	40.000	43.000

**Program Definition and Objectives:** The IAEA was created in 1957 largely at U.S. initiative. It is entrusted with the dual responsibility to promote the peaceful uses of atomic energy and to ensure that assistance provided by it -- or at its request or under its supervision or control -- is not used to further any military purpose.

In carrying out these objectives, the IAEA administers a unique system of international safeguards and provides a broad range of technical assistance in diverse technical areas, such as health, agriculture, and industrial applications of nuclear energy, including nuclear safety, radiation protection, and waste management. Such activities provide a conduit for delivery of research and technical developments form the main programs of the Agency. In addition to direct benefits, technical assistance is important to member states' acceptance of IAEA safeguards.

For the United States, the most critical function of the IAEA is the application of safeguards to nuclear activities to deter, through risk of timely detection, the diversion of material and equipment for nuclear weapons purposes. Actual application of safeguards is conducted on the basis of agreements concluded between the Agency and a member state and approved by the Board of Governors. Safeguards established a critical arms control precedent in that they represent voluntary acceptance by a sovereign state of verification (including on-site inspection within their territory by international officials) of compliance with their international non-proliferation undertakings made in accordance with treaty and/or other obligations. Such on-site inspections have since become a routine part of the verification of arms control agreements.

The Treaty on the Non-Proliferation of Nuclear Weapons (NPT) is the principal international instrument of the nonproliferation regime. Since 1970, when the NPT came into force, the IAEA has been responsible for administering the safeguards required by it. Most IAEA member states have become parties to the NPT, but a few have not adhered to the treaty. Article III of the NPT requires all non-nuclear weapon states party to the Treaty to submit all peaceful nuclear activities under their jurisdiction to IAEA safeguards in order to permit verification of their treaty obligations. All parties to the NPT are committed to require IAEA safeguards on their nuclear exports, a requirement that does not exist under the IAEA statute.

Safeguards are our principal but not exclusive concern with the IAEA. Another fundamental premise of U.S. nuclear non-proliferation policy, which is embodied in Article IV of the NPT, is the commitment to facilitate the exchange of equipment, materials and scientific and technological information for the peaceful uses of nuclear energy. A significant portion of the U.S. voluntary contribution to the IAEA is used to fulfill this obligation. As this IAEA objective is of paramount importance to the vast majority of IAEA member states, continued

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

U.S. support for technical cooperation is crucial to maintaining support for a strong safeguards system, in addition to the benefits that accrue to U.S. business and interests.

**FY 1996 Funding Request:** Disbursement of the FY 1996 U.S. voluntary request for the IAEA (\$43 million) is projected as follows, subject to necessary adjustments reflecting changing IAEA needs:

-- **IAEA Technical Assistance and Cooperation Fund (TACF) (\$16 million):** The IAEA TACF program's primary objective is to promote the transfer of skills and knowledge relating to the peaceful, safe and efficient application of nuclear technology to member states. Assistance from the TACF is provided to over 80 developing member states in the form of experts, training and equipment across a broad range of activities involving the use of nuclear energy. (In 1994, such technical assistance was resumed for Israel, ending a 12-year hiatus imposed by the General Conference following the Israeli bombing.) Unlike safeguards, which are funded through the regular assessed budget, the TACF is funded by annual voluntary contributions from donor states. In reaction to developing members states' concern about the reliability of funding for technical assistance, the agency has, on an informal basis since the early 1980s, adopted the use of indicative planning figures (IPFs) as a basis of determining the annual TACF budget. IPFs are annual targets agreed on by the major donors for three-year periods. The last agreement was approved in 1992 for the period 1993-1995. In 1995, donor states are expected to set the targets for the next period. Similar to the UN system, the IPF total is then apportioned among member states. Member states then endeavor to pledge their apportioned share. The U.S. endeavors to pledge approximately 25% (its apportioned share) of the IPF for any given year. As the IPF target for 1996 will not be determined until after submission of this request, the \$16 million requested represents 25% of an estimated \$64 million TACF total for FY 1996. The U.S. contribution to the TACF is paid in cash and represents the largest single part of the U.S. voluntary contribution to the Agency (37% in FY 1996).

In addition to its cash contribution to the TACF, the United States also provides "in-kind" assistance to IAEA in the form of services. Examples include:

-- **U.S. Program of Technical Assistance to IAEA Safeguards (POTAS) (\$9.6 million):** POTAS and similar programs in about 13 other countries are key components of the Agency's efforts to develop and apply effective safeguards to increasingly complex nuclear facilities. The proposed budget for POTAS represents a modest \$500,000 increase over the FY 1995 allotment. The externally-imposed policy of zero-real growth (ZRG) coupled with the Agency's increased safeguards responsibilities makes it more difficult than ever for the Agency to develop and procure needed equipment. Each year the number of requests for technical assistance that POTAS receives from the IAEA increases. The modest increase to the POTAS budget will help meet those requests. POTAS, implemented primarily through the International Safeguards Project Office at Brookhaven National Laboratory, began in 1977 as a means to support vital research aimed at the development and transfer of new technology for international safeguards. POTAS draws expertise in safeguards technology from the U.S. public and private sectors. POTAS will continue to address a number of essential safeguards activities, in particular those arising from the need to implement the recommendations from the Agency's program to enhance the effectiveness and improve the efficiency of safeguards ("Program 93+2"). These include technologies needed to implement special inspections, new technology for facilities in states of particular regional security concern, unattended monitoring

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

systems, and a number of projects to develop and implement advanced safeguards systems for large automated facilities producing and fabricating plutonium. This latter effort is important both to maintain effective international safeguards and to minimize the resource requirements needed to implement them at these new facilities. POTAS supports necessary training for safeguards inspectors and other safeguards staff. In addition, POTAS supports between 20 and 30 (the number varying according to specific Agency needs) U.S. experts who supplement the staff of the IAEA Safeguards Department.

-- Other Safeguards and Non-Proliferation Activities (OS&NP) (\$1.2 million): Funds provided under this account are used to support initiatives which fall outside the purview of POTAS but are related to the development of IAEA safeguards approaches for sophisticated technologies and facilities of specific concern and interest to the U.S. Funds are also used to provide training to developing country personnel directly involved with nuclear policy development in the application of IAEA safeguards and physical protection standards. Implementation of full-scope safeguards in South Africa, Argentina, and Brazil, all of which have substantial nuclear programs, create the need for the U.S. to provide various forms of support for consultations between those countries and the IAEA and for development of safeguards in these countries.

The U.S. Government generally uses these monies to fund directly U.S. programs that have not specifically been requested by the IAEA but which have been recognized as contributing to the Agency's programs, as well as bilateral cooperation activities with selected IAEA member states where such activities will further non-proliferation objectives shared with the IAEA. A small percentage will be reserved to address critical short-term non-proliferation issues that may arise.

-- Footnote A and Model Project Support (\$2.2 million): Footnote A projects are those projects within the technical cooperation program which have been approved by the Board, but for which no funding from the TACF is available. The U.S. contributions are directed to projects that meet U.S. priorities in agriculture, industry, and sustainable development. Model projects are new projects approved by the Board that represent an initiative by the Agency to improve its delivery of technical assistance by improving pre-project planning and project management once implementation has begun. The U.S. will contribute support for the implementation of approximately 20 projects.

-- Training Courses and Technical Support (\$2.2 million): Under direction of the Department of State pursuant to agreement between the Departments of State and Energy, Argonne National Laboratory (ANL) will carry out a number of support activities with the IAEA including the following: hosting of five to six IAEA interregional training courses that focus on peaceful nuclear technologies, including nuclear safety, radiation protection and energy planning; providing technical advice in the selection and implementation of U.S.-supported IAEA technical cooperation projects; maintaining a U.S. experts database; coordinating nomination of U.S. experts attending the numerous IAEA meetings, symposia, and conferences; and maintaining a database which provides U.S. government with accurate information regarding the nature and extent of current and previous U.S. multilateral support (through the IAEA) for individual IAEA member states.

-- IAEA Fellowships (\$1.5 million): After receiving fellowship awards from the agency, IAEA fellows are placed at various member state host institutions. The U.S. approves selection

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

of all fellows proposed for placement in the U.S., approximately 175-200 per year, and funds the administrative expenses for placing them. Training is sought at a variety of public and private U.S. institutions including universities and industry. A portion of the fellows placed in the U.S. will also receive U.S. funding for a stipend, housing, and board. The duration of fellowships range from a number of days, to one week, to a few months, or one year. The National Academy of Sciences National Research Council places fellows on behalf of USG once they have been approved by an interagency committee.

-- Cost-Free Experts (CFEs) (\$800 thousand): At IAEA request, the U.S. provides experts on a "cost-free" basis in an effort to assist the agency with key program initiatives on a short-term basis where the U.S. has special interests. Historically, U.S. experts have served the agency in a broad range of non-safeguards related program areas including: nuclear safety, waste management, safe transport of radioactive materials, application of isotopes in human health and nutrition, implementation of the Department of Technical Cooperation's model project initiative, the Department of Administration, and software development for information systems.

-- 1996 Entomology Course (\$100 thousand): Every other year the U.S. hosts an IAEA training course on entomology at the University of Florida at Gainesville. The course serves major U.S. interest in controlling devastating insect pests (including those that threaten the U.S. itself).

-- Safeguards Equipment (\$3.2 million): On March 11, 1994, the IAEA issued a formal request for U.S. extrabudgetary support for safeguards equipment totalling \$11,806,700, of which \$8,263,500 worth was eligible for U.S. procurement within the U.S. In FY 1994, the U.S. was able to contribute \$1.673 million. In FY 1995, the U.S. pledged \$4.579 million to contribute to this effort and to environmental sample analysis. IN FY 1996, funds will be used to address remaining unfunded requirements. Additionally, the IAEA has indicated that replacement of the current problem-ridden surveillance equipment with a new, more reliable system and the introduction of additional unattended monitoring equipment to improve safeguards effectiveness and efficiency will require extrabudgetary contributions. The FY 1996 funds will be used to address these needs.

-- Support to Safeguards Planning and Operations (\$1 million): Funding for Safeguards Planning will be used to provide resources for support of long-term planning in the IAEA Department of Safeguards. The changing climate of world events, the anticipated inspections of weapons states, and the potential role in other arms control treaties will require careful planning by the IAEA in order to keep in step. Furthermore, we anticipate the implementation of safeguards strengthening measures from Program 93+2 to require as yet unbudgeted operations funds. We note, for example, that large-scale environmental monitoring will require substantial new equipment that has not been included in the IAEA needs lists. Even operational requirements of a limited program remain unfunded for 1996.

-- Safeguards on Excess Weapons Material (\$2 million): Funding for safeguards on excess weapons material will continue to be used to support IAEA inspections and other safeguards activities related to U.S. storage vaults. In 1994, the U.S. opened two vaults for IAEA safeguards -- at Hanford and Oak Ridge National Laboratory. IAEA inspections of these U.S. facilities began in September 1994. In 1995, the U.S. expects to open a third vault, at Rocky Flats, to inspection. Plans for 1996 are not clear yet, but the Nuclear Weapons Council

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

has identified XXX tonnes of highly-enriched uranium and XX tonnes of plutonium excess to U.S. defense needs. Once technical, operational, and weapons data security issues are resolved, the administration expects to make all of this subject to IAEA inspections.

-- **Nuclear Safety (\$1 million):** These funds would be used to support IAEA initiatives that complement our bilateral programs in Eastern Europe and the NIS. The IAEA's unique capabilities and longstanding relationship with these governments enable it to report technical information useful to donor countries as well as the recipients. The U.S. will continue support for the joint IAEA-UN Development Program project to improve radiation protection infrastructures in former Soviet Union countries. U.S. funds would support Agency assistance to countries with the most serious problems. These funds would also support projects that address urgent technical issues, such as: interim, on-site spent fuel storage; seismic analyses to help identify upgrades needed to compensate for poor siting of existing plants; and improved radiation protection measures for countries that need to control radiation sources used in industry, agriculture, and medicine.

-- **Radioactive Waste Management (\$500 thousand):** The IAEA conducts an extensive program in waste management, aimed primarily at the needs of developing member states. It sponsors research and, upon request, provides advisory missions to members to assess needs, review programs, and evaluate available expertise and resources. A special initiative has been undertaken jointly with the UN Development Program to improve waste management infrastructures in the former Soviet Union. A Model Project on improving infrastructures in developing member states is underway. Further, the IAEA is in the process of developing an update, comprehensive body of documents to guide national waste management practices. It also is sponsoring development of an international convention on radioactive waste management, a process launched in 1995. The IAEA has responsibilities to provide technical advice under an international convention to control ocean dumping of radioactive materials. It is participating in an evaluation of past Soviet practices. In this regard, a special initiative was launched in 1994 (to be completed in 1996) to assess the impacts of Soviet dumping in the Arctic Sea. The agency is also participating in assessments of Russian practices that pose major concerns for neighboring states. The U.S. contribution will be used to support the efforts to improve waste management infrastructures, support advisory missions and the Arctic Seas assessment effort, and to develop quality technical advice. This will complement bilateral efforts, for example, with Russia.

-- **Physical Protection of Nuclear Material and Facilities (\$1.2 million):** Reported losses of special nuclear material, and the surprise discovery of quantities of highly enriched uranium and plutonium in countries of the New Independent States heighten concerns that nuclear material may be poorly protected and raises the specter that nuclear material could be obtained or traded by criminal elements and terrorist groups. Nuclear physical security is not a part of the established safeguards regime and is not included in the current advisory missions of the Agency. The international recommendations on physical security (INFCIRC/225/Rev. 3) authorizes the IAEA to provide advice on this topic at the request of Member States. The initial focus should be those New Independent and Baltic states which are not covered by the IAEA/SSD donor support programs for physical protection and nuclear material control and accounting. Other member states also would benefit from this type of advice. At present, however, the IAEA does not have the requisite resources to carry out this task. The U.S. proposes the following:

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

– Establish IAEA-led advisory teams of three to four persons to survey operating nuclear facilities, research and academic facilities, and provide advice to central governments on physical security measures which should be taken to ensure that nuclear material is protected at levels comparable to the international recommendations contained in INFCIRC/225/Rev. 3.

– Conduct training in-country and on a regional basis using distinct learning techniques on physical protection of nuclear materials at fixed sites and in transport, including threat assessment, intrusion detection, and advances in physical security equipment.

– Provide specific assistance to upgrade existing security and protection measures on-site and develop joint research projects applying security technology to member states with limited resources.

-- **Environmental Sample Analysis (\$500 thousand):** Environmental sampling is perhaps the single most important tool for increasing the ability of the IAEA to detect clandestine activities. While the IAEA is proposing to begin a minimal effort in 1996, funding for operations and sample analysis have not been approved by the member states. U.S. support for operations (considered above) and sample analysis will ensure introduction of this powerful technique and, as appropriate, expansion to utilize more fully its potential.

The IAEA boasts a membership roster of 121 states, many of which provide resources beyond their assessed contributions for technical cooperation and safeguards enhancements. In 1993, the latest year for which audited data are available, the U.S. and 9 other countries provided over 76% of funding for the Technical Assistance and Cooperation Fund (TACF). Total contributions to the TACF totalled \$43.8 million. The U.S. contribution to technical cooperation was \$2.029 million. Other principal donors were: UK (\$741,050), France (\$618,715), Japan (\$407,319), Spain (\$374,584), Australia (\$354,610), Germany (\$342,749), and Canada (\$189,394).

Other technical assistance funds were provided by Japan (\$2,603,092), Germany (\$1,097,678), France (\$1,083,897), and others, while the U.S. provided \$8,827,340. (These figures do not include in-kind contributions.)

**IAEA Success Stories:** In 1994, the IAEA continued to lead international efforts to monitor and respond to the nuclear program in North Korea (DPRK). In March 1994, the IAEA reported to the UN Security Council that the DPRK was in further non-compliance with its safeguards agreement, and in June, the IAEA terminated technical cooperation with that country. Following conclusion of the U.S.-DPRK Framework Agreement, the IAEA successfully undertook inspection activities to monitor the freeze on North Korea's nuclear activities. Despite continued budget constraints due to zero real growth and late payment of assessments, based on preliminary data, the Agency was able to increase inspection days of effort by almost 15% from 1993. Finally, the IAEA completed the bulk of the work on an extensive program to evaluate options to enhance effectiveness and efficiency of safeguards. New proposals resulting from that program will be presented at the March 1995 Board of Governors meeting.

Through its varied activities in nuclear reactor safety for Soviet-designed VVER and RBMK reactors, the IAEA has unlocked a virtual black box of information the West previously lacked. Working closely with recipient countries, the Agency has assisted the NIS and Eastern Europe

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

to identify design and operational deficiencies and review completeness and adequacy of proposed improvements; provided a forum for international exchange of information and to reach consensus on safety issues; provided safety services and national and regional technical cooperation programs; assisted the G-24 to consolidate results of national, bilateral, and international safety programs to eliminate gaps and duplication of effort; and served as a consultant for technical and financial decisions in bilateral and multilateral programs to focus assistance.

On the political front, four countries joined the IAEA, and nine signed safeguards agreements under the Nuclear Non-Proliferation Treaty. South Africa was permitted to resume its seat in the General Conference and in the Board of Governors, and Israel succeeded in its long-term efforts to re-affirm its right to receive technical assistance. Over 50 member states have now signed the Convention on Nuclear Safety (at civil nuclear power plants), which was drafted by experts from member states at the IAEA. The IAEA will provide secretariat services for the meetings of the Parties, which will implement the Convention. Discussions began regarding apportionment of safeguards financing, as the present formula (under which the United States pays 28%) expires in 1996.

Functional improvements in the Technical Cooperation Division, including automation and streamlined management practices, have resulted in a greater than 25% increase in the number of fellowships processed for placement over the last two years. The first Model Projects, designed to focus resources for technical cooperation projects in line with overall national or regional development strategies, were begun in 1994. Two that are receiving U.S. funding are: Interregional Infrastructure for Radiation Protection -- identified as a high priority by Radiation Protection Advisory Teams in 1993 and 1994; and a tsetse fly eradication program on Zanzibar Island (Tanzania), which since August of 1994 has already shown a significant reduction in tsetse fly ability to reproduce.

## INTERNATIONAL ORGANIZATIONS AND PROGRAMS

## KOREAN ENERGY DEVELOPMENT ORGANIZATION (KEDO)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IO&P	0.000	0.000	22.000

**Program Definition and Objectives:** The Korean Energy Development Organization (KEDO) is the international consortium established to implement aspects of the Agreed Framework signed between the United States and the Democratic People's Republic of Korea (DPRK) on October 21, 1994. The Agreed Framework addresses United States and international concerns about the DPRK's nuclear weapons program and, if fully implemented, will ultimately lead to the complete dismantlement of North Korea's current nuclear program. KEDO's central task is to manage the financing and construction of the light-water reactor (LWR) project in North Korea and to provide heavy oil to the DPRK if North Korea fulfills its obligations under the Agreed Framework. The U.S. will organize and lead KEDO, while South Korea (ROK), and Japan also play central roles.

KEDO is envisioned to coordinate cooperation among interested parties in the international community and to facilitate the financing and execution of projects needed to implement the Agreed Framework. The key countries have decided to cooperate in taking the steps necessary to implement the Agreed Framework consistent with the Charter of the United Nations, the Treaty on the Nonproliferation of Nuclear Weapons, the North-South Declaration on the Denuclearization of the Korean Peninsula, and the Statute of the International Atomic Energy Agency. Moreover, KEDO will obtain assurances that nuclear materials, equipment, or technology transferred to the DPRK in connection with projects undertaken by KEDO will be used exclusively for such projects, only for peaceful purposes, and in a manner that ensures the safe use of nuclear energy. The establishment of KEDO is critical to the success of the specific objectives of the Agreed Framework, the general goals of international nuclear nonproliferation norms, and the aim of maintaining peace and security on the Korean Peninsula.

Under the U.S.-DPRK Agreed Framework, the U.S. agreed to "organize under its leadership an international consortium to finance and supply the LWR [light-water reactor] project to be provided to the DPRK." In order to meet this pledge, the U.S. has agreed with the ROK and Japan on the creation of an international organization (KEDO) to carry out the reactor project and other projects called for in the Agreed Framework, such as the supply of alternative energy, the transfer of spent fuel out of the DPRK for ultimate disposition, and the dismantlement of the DPRK's graphite-moderated reactor program.

KEDO will be located in New York and will be directed by an Executive Board consisting of representatives of the original member countries -- the U.S., Japan, and the ROK. Other countries could become involved in KEDO activities as members serving on advisory committees for the projects in which they have an interest.

*INTERNATIONAL ORGANIZATIONS AND PROGRAMS*

The day-to-day operations of KEDO would be directed by an Executive Director, who will be an American citizen, assisted by two Deputy Directors (one from Japan and one from the ROK.) KEDO would seek to contract with private firms for the bulk of the legal, technical, and financial expertise required to oversee the LWR project and other projects. It would have a secretariat of approximately twenty to thirty people to administer projects being performed by contractors.

**Funding Request:** The FY 1996 budget request for KEDO of \$22 million is essential to finance KEDO's administrative expenses and support KEDO's projects, including the LWR project and provision of heavy oil to the DPRK. Although the majority of support for these projects will come from cash and in-kind contributions from other KEDO members, especially the ROK and Japan, the U.S. contribution is necessary to demonstrate U.S. leadership and to supplement and stimulate contributions from other countries. Without the funding, KEDO might not be able to operate or carry out its objectives, which would weaken the credibility of U.S. leadership, jeopardize the implementation of the Agreed Framework, and contribute to rising security tensions on the Korean Peninsula. Full funding of this request is the best way to promote both U.S. peace and security as well as nuclear nonproliferation interests in Northeast Asia.

## ECONOMIC SUPPORT FUNDS

## ECONOMIC SUPPORT FUND

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
ESF	2,107.403	2,368.600	2,494.300

The Economic Support Fund (ESF) addresses economic and political foreign policy interests of the United States by providing economic assistance to allies and countries in transition to democracy, supporting the Middle East peace process, financing economic stabilization programs, frequently in a multi-donor context, and supporting efforts to promote international cooperation in combating organized crime. The U.S. Agency for International Development (USAID) implements most ESF-funded programs under the direction of the Administrator of USAID with overall foreign policy guidance from the Secretary of State.

ESF provides balance of payments support directly through cash transfers, or through financing of commodity imports for acquisition of critical raw materials and capital goods when foreign exchange is not readily available. Where building democracy and economic stability is the primary concern, ESF finances infrastructure or other capital projects, and developmental projects that benefit the disenfranchised and encourage free market and democratic initiatives. ESF also finances programs designed to enhance the administration of justice as well as police training through the International Criminal Investigative Training Assistance Program administered by the Department of Justice.

Economic dislocation and political strife continue to place great strains on many countries. Depending on the recipient country's economic situation, ESF's fast-disbursing balance of payments or budgetary support may create leverage to bring about the adoption of more rational economic and fiscal policies required to sustain economic growth. In the short term, however, measures to create more rational and efficient economic structures and practices often exacerbate social and political tensions unless buffered by external assistance. In these circumstances, ESF can help to prevent or diminish economic and political dislocation that may threaten the security and independence of key allies and friends. The largest share of the ESF request — \$2.113 billion — remains focused on supporting Middle East peace by providing assistance to foster economic stability and development in Israel, Egypt and other Arab countries pledged to support the peace process.

## LAW ENFORCEMENT AFFAIRS

In FY 1996 ESF financing will support a major new initiative designed to promote international cooperation in combating organized crime. The International Criminal Justice (ICJ) program addresses the growing threat to our national security interests posed by international criminal activity, by building greater cooperation among nations to eliminate organized criminal groups, strengthening national law enforcement institutions in newly emerging democracies, and creating organizations which will aid in combating organized crime. Key benefits of the ICJ program will include deterring alien smuggling at its source, increasing international

*ECONOMIC SUPPORT FUNDS*

cooperation to combat money laundering, supporting the United Nations program to reestablish the Somali national police and judicial system, and improving coordination of U.S. positions and programs in the field. For FY 1996, we are seeking \$12,000,000 in Economic Support Funds (ESF) and will likely continue the strategy adopted in FY 1995 of supplementing these funds with allocations from other appropriations for Central Europe and the New Independent States (NIS).

The following table shows the ESF proposal for FY 1996. Detailed justification for the proposed programs are found in the Country and Program Papers section.

## ASSISTANCE FOR CENTRAL EUROPE

## ASSISTANCE FOR CENTRAL EUROPE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
SEED	383.000	359.000	480.000

## OBJECTIVES:

The Support for East European Democracy (SEED) Act of 1989 was designed to demonstrate rapid, concrete U.S. support for the democratic forces of Central Europe (CE) as communism began to crumble. The act called for the President to name a Coordinator within the Department of State to oversee an interagency effort to assist the transformation taking place in the region.

The region remains as important to U.S. interests today as when the original 1989 SEED Act was passed. The process of political and economic transformation is jeopardized by conflict in the Balkans, ethnic tensions, unemployment and other social dislocations. The fate of the region has in a sense become more critical to the United States, as the successful transformations of these countries become examples -- particularly for reformers further east -- that democracy and economic prosperity can be built on the ruins of failed communist systems.

A democratic and prospering Central and Eastern Europe is also, potentially, an important market for U.S. goods and services -- and a gateway to the vast potential markets farther east. The region's success is also a key to building a peaceful, democratic European order that assures security at lower cost to the USG.

The broad objectives of SEED-funded programs in Central and Eastern Europe are to consolidate democracy, build market economies, and attenuate the social effects of the transition through:

- The development of a market economy and strong private sector through support for privatization, development of small and medium-sized business, policy and legal reforms, and key sector restructuring;
- The development and strengthening of institutions necessary for sustainable democracy through support for the transformation of the public sector to better support democratic development, including assistance and training to improve public administration, promote decentralization, strengthen local governments, parliaments, independent media and non-governmental organizations;
- The improvement of the basic quality of life in selected areas through assistance to build cost-efficient health care and housing system, labor retraining and unemployment services and environmental policy reform and enforcement measures, as well as assistance to individual firms on environmental control and management.

*ASSISTANCE FOR CENTRAL EUROPE*

The overwhelming need in the region is the transfer of knowledge and expertise. This, combined with fiscal realities that limit U.S. ability to provide large capital investments, results in a focus on providing technical assistance where it is needed in CE -- often directly to the nascent private sector. By using U.S. private sector grantees, USG funds have leveraged large amounts of additional assistance.

The U.S. combines its efforts with those of other G-24 donors and the international financial institutions to enhance the impact of programs. Some areas of need cannot be adequately addressed by the SEED program; areas such as the development of export licensing regimes, the conversion of nuclear power plants, large-scale environmental remediation, as well as direct financing of major infrastructure projects. These areas entail costs that far exceed SEED resources.

The U.S. assistance program is based on the provision of grant assistance as opposed to credits or loan guarantees. According to G-24 figures, the U.S. is the largest donor of grant assistance to the region -- ahead of all other bilateral donors and even the EU. However, increasingly the U.S. is teaming with the IFI's, providing technical assistance to augment major loan financing in strategic sectors.

The SEED program was originally developed as a regional program, without specific country allocations. This permitted the flexibility to shift resources quickly to address the fast changing situation in the region. Now in its fifth year, the SEED program reflects the evolution of the region. There are USAID offices throughout the region and country budgets reflect specific strategies for each country.

The SEED program is a temporary assistance program, designed to see CE countries through their difficult transitions to democracy and a market economy. The program remains transitional in nature, though its "sunset" will vary according to the progress in each country of the region. The program has already begun to wind down in some countries of the Northern Tier. This will allow a gradual shift in U.S. assistance resources from these countries to those in the Southern Tier, such as Romania and Bulgaria, which have further to go in their transitions. Still other countries, notably Albania and parts of the former Yugoslavia -- whose state of development is quite different from those covered in the original SEED Act -- will need assistance programs for many years to come.

The shift of resources from north to south will be carefully monitored to assure that programs are not withdrawn from countries before democracy and a market economy are assured. The U.S. must remain prepared to continue the important task of helping these emerging democracies until the political and economic objectives of the program are attained.

**CRITERIA:**

The countries currently eligible for inclusion in the Support for East European Democracy Act (SEED Program) are Albania, Bosnia-Herzegovina, Bulgaria, Croatia, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, Slovakia, Slovenia, and the Former Yugoslav Republic of Macedonia. Serbia and Montenegro have previously received SEED assistance, primarily to promote democracy, but are currently subject to sanctions.

*ASSISTANCE FOR CENTRAL EUROPE*

Inclusion in the program is essentially predicated upon geographic location in Central and Eastern Europe, and political history - the countries included are emerging from the communist bloc. The U.S. never recognized the incorporation of the Baltic states (Estonia, Latvia, Lithuania) into the former Soviet Union. Upon regaining their freedom, the Baltic States were considered to have rejoined Eastern Europe, and were thus eligible for the SEED program.

Initially, the SEED Act of 1989 included Hungary and Poland. In October, 1992, the FREEDOM Support Act amended the SEED Act to authorize activities for East European countries that were authorized for Poland and Hungary, if such activities would effectively promote a transition to market-oriented democracies. Even before that amendment, however, Congress had made funds available for all East European countries in annual foreign operations appropriations acts.

Throughout the history of the program, assistance has been conditioned upon the willingness of countries to move toward four objectives:

- Political pluralism, including credible and transparent elections.
- Economic reform through development of a market economy with a substantial private sector.
- Respect for internationally recognized human rights.
- Friendly relations with the United States.

The SEED program is transitional in nature, providing assistance to countries as they develop market economies and democratic systems of governance. SEED provides assistance only to assist the transition. As countries complete the transition, they are "graduated," and SEED funding and programs are phased out.

**METHODOLOGY:**

The countries of Central and Eastern Europe have made rapid progress toward viable market economies and pluralistic democracy. Throughout the region credible elections have been held followed by the orderly transfer of power.

Yet progress is uneven, in part due to the diversity of the countries. Poland, Hungary, the Czech Republic, and the Slovak Republic (the Visegrad countries) had achieved a relatively high degree of economic development prior to the fall of communism. Limited privatization was already underway, and was well advanced in some sectors of the economy. The Visegrad countries in particular started the post-communist transition with a relatively advantageous economic base. They were politically sophisticated as well. By contrast Albania entered the transition late and from a strict Stalinist framework: A rigorously controlled economy, and monolithic political system which allowed little room for diverse thought in education, the arts, or other areas of individual expression. Albania's economic growth rate is the highest in Europe, though admittedly starting from a very low base.

*ASSISTANCE FOR CENTRAL EUROPE*

There is economic progress in the entire region. Economic decline is less steep and in some countries, there were even signs of a bottoming out. In Poland, the Czech Republic and Albania, there is positive growth, and in other countries in the region there were clear signs of increases in agricultural and industrial production. Inflation continues to be a concern, and unemployment (which has averaged 11 percent in the region) remains the most troublesome side effect of economic reform.

CE countries continue to struggle with fundamental issues, such as the proper role of the government vis-à-vis the private sector, freedom of the electronic media and minority rights. In some countries the first wave of democratic governments has been replaced by former communists, but indications suggest that these will continue the reform process in most countries.

The fundamental approach of the SEED program is to provide technical assistance, the transfer of skills to assure the continued development of democracy and market economies. The program is carefully targeted to meet specific needs of the countries of the region. Funding limits (less than \$3 per capita) preclude undertaking large infrastructure projects alone or development assistance.

Financial sector restructuring, privatization, and small scale financing are essential for the development of the economies of the region. In addition, to promote trade and investment, countries are revising laws and regulations to make the climate more hospitable for Western investors. The Enterprise Funds were created as an innovative mechanism to stimulate economic development and the entrepreneurial spirit through small and medium sized businesses. Among the most innovative activities is the Polish-American Enterprise Fund's small loan program. Through FY 1994, it provided loans worth over \$65 million to 2,800 small-scale private businesses employing 8,500 people.

The social dimension of the transition raises concern for both the course of political and economic reform. The closing, privatization, or restructuring of massive state enterprises; rapidly changing trade patterns; and the fundamental shift away from central planning all serve to create unemployment. Health care and housing are inadequate. Crime is growing. These factors generate suspicion of- and resistance to- the reform process. While SEED resources are inadequate to remedy these imbalances, technical assistance can be used both to assist the region to find its own solutions and to leverage IFI resources.

**CE PROGRAMS AND BENCHMARKS:****Market Reform**Status:

In partnership with reformers in the region, U.S.-funded technical assistance and training are helping to restructure the economies and improve the prosperity of CE.

U.S. assistance in privatization has empowered a wide range of employees, tenants, and citizens to participate in and benefit from the privatization process. In Poland, American advisors have helped to structure the \$4 billion Polish Mass Privatization Program of 450

*ASSISTANCE FOR CENTRAL EUROPE*

former state-owned enterprises. This effort will enable 25 million Poles to purchase shares in newly private businesses. In Hungary, SEED assistance helped develop employee stock ownership, an innovative tool for privatization. Since then, over 30 percent of privatizations completed by the State Property Agency have used this mechanism. SEED assistance to Estonia's Ministry of Economy helped create a system allowing residents to participate in public housing sales.

One of the program's greatest successes has been its assistance to the Czech Ministry of Privatization. SEED-funded advisors have helped to establish a fair and transparent process that has gained foreign investors' confidence. The team of accountants and investment bankers has helped complete 84 deals to date, representing \$1.9 billion in foreign investment, with \$500 million in additional investment still pending. American investments are 40 percent of this total. Efforts to strengthen the financial sectors of these countries are also producing results. Czech cities and towns are now financing municipal infrastructure on market-based principles, by obtaining loans from Czech banks on commercial terms under an approved Housing Guaranty program. In Poland the first market-based mortgages have been made available to private citizens through another Housing Guaranty program that immediately affects 1,500 households. SEED is also playing a key role in the regulatory development and expansion of Eastern European capital markets.

In Albania, which shows the highest rate of GDP growth in CE, SEED assistance helped private agricultural input dealers get their businesses started and replace the former state monopoly. Treasury advisors financed under the SEED program have contributed much to the success of Albania's structural economic reform, development of its national budget, and design of its tax system. Together, these efforts are helping to establish a business environment in Central and Eastern Europe that will lay conditions for expansion of American trade and investment, thus creating American jobs, and ensuring stable economic linkages with the global economy.

FY 96 Programs

After several years of negative GDP growth rates in Eastern Europe, signs of regeneration are now in evidence. In Poland, for instance, real GDP growth in 1993 was estimated at four percent. Similarly, the Czech Republic is showing positive growth projected at one to three percent for 1994, and Albania ended 1993 with a surprising 11 percent. However, only cautious optimism is in order. High unemployment, a phenomenon that did not exist before 1989, is now a problem in virtually all Eastern European countries, except for the Czech Republic, which has kept unemployment under four percent.

Slowing down the pace of reform will not solve these problems. In FY 1996, the SEED program will continue to promote the adoption of market-oriented policy frameworks. Continued emphasis will also be placed on small business development to spur job creation and broad-based economic growth. Additional assistance will be provided to restructure the financial sectors of the CE countries, and to establish a legal, regulatory and institutional framework conducive to private investment. In the southern tier, we will also emphasize transport infrastructure improvements.

Emphasis on countries receiving assistance in their movement toward market reforms will shift over the next few years. As the Enterprise Funds for the Northern Tier countries become fully

*ASSISTANCE FOR CENTRAL EUROPE*

funded, new Enterprise Fund Resources in FY 96 will be dedicated to the Southern Tier and the Baltic countries. Assistance for privatization is shifting from countries that are more advanced in the process, such as the Czech Republic, to other countries that are more in need of such assistance.

Funding for market reform will approximate \$246 million in FY 96.

**Benchmarks:**

Indicators of progress include the following:

- Macroeconomic policies providing a stable monetary and fiscal environment. Indicators include:
  - \* Rate of inflation.
  - \* Real interest rates.
  - \* Deficit as percentage of GDP.
  - \* Prices set by markets.
  - \* Currency convertibility.
- The extent to which the economy is privately owned and operating free of arbitrary interference by government and/or politicians. Indicators include the portion of the population employed in the private or non-governmental sector the portion of economic output from the private or non-governmental sector-the extent of government subsidization of the productive sector the extent of monopoly production of goods and services.
- Progress in establishing clear laws and regulations regulating economic activity, so that individuals have a realistic opportunity to start new ventures, and so that existing ventures can operate efficiently. Indicators include:
  - \* Levels of private investment, both domestic and foreign.
  - \* Climate for foreign investment, regulation of ownership, transfer of profits.
  - \* Improved efficiency, reflected in reduced waste discharged into the environment and improved profitability of enterprises.
  - \* Measures of adequacy of banking system such as efficiency and cost of transactions, and availability of private credit.
  - \* Qualitative measure of commercial, bankruptcy, tax, tangible and intellectual property, communications, banking, contracts, and other laws regulating economic activity.
  - \* The rate of new enterprise creation.

**Democracy:****Status:**

The results achieved in programs that promote credible and transparent elections, government accountability and civil society are also quite impressive. As a result of U.S. efforts, newly elected mayors in the Czech Republic, Slovakia, and Poland have created self-sustaining

*ASSISTANCE FOR CENTRAL EUROPE*

professional organizations that represent local governments' common interests as their countries decentralize power from the central governments to regions.

Assistance in support of elections in Albania contributed significantly to the successful political transition to democracy. Bulgaria's new non-partisan organization, Bulgarian Association for Free Elections, helped ensure credible and transparent national parliamentary elections in 1991 and presidential elections in 1992.

Rule of law programs are also having an impact. With American assistance, the Croatian Judges' Association has become increasingly active in implementing judicial restructuring legislation. Additional human rights protections have been added into the draft criminal code now under consideration in Hungary, strengthening the roles of the defense counsel and the judge as an independent check on risk of arbitrary prosecution. Illegally obtained evidence would also be excluded from trials.

**FY 96 Programs:**

The next few years are critical to the transition to democratic governance. Democratic institutions have been established, but they are still fragile. Credible and transparent elections have been held, but power is fragmented among so many parties in some countries that governing coalitions are unstable. CE countries continue to struggle with fundamental issues - the proper role of government vis-à-vis the private sector, freedom of the judiciary and the broadcast media, and minority rights. Participatory structures for local government are still rudimentary. Decentralization of responsibilities, especially for social services and privatization, has vastly outstripped local government capacities.

In response to these circumstances, the democracy-building portion of the program is undergoing significant modification. Election assistance is no longer needed; future efforts will focus on building stronger parties and institutions and providing training in coalition-building. This is in response to the evident fractionalization and weakness of political parties throughout most of the region. In the area of educational reform, the program engages USIA to develop a strategic approach to strengthen key training institutions that support democracy and markets. In the field of public administration, the principal aim is to build democratically-oriented public administration at the central and local levels.

Complementing this effort in the public sector will be an initiative to strengthen civic society through the development and strengthening of non-governmental organizations. The Democracy Network project, announced by President Clinton in Prague in January, will develop advocacy groups such as those that promote human rights or environmental protection. Through selected U.S. non-governmental organizations, technical and financial support will be provided to nascent non-governmental organizations in the region.

In FY 96, current plans allocate approximately \$73 million for activities associated with this objective.

**Benchmarks:**

- Credible and transparent elections taking place at local and national levels.
- Some form of separation of powers at the national level.

*ASSISTANCE FOR CENTRAL EUROPE*

- News media free of censorship, with diversified ownership, and individuals able to establish new outlets.
- An independent judiciary ensuring impartial arbitration of disputes within society.
- Institutional or legal protection of civil rights and liberties.
- Effective state institutions capable of performing limited but essential functions of regulation, rule-enforcement, and social support.

**Social Sector Restructuring:****Status:**

To help Eastern European governments face pressing social issues, the SEED program has financed the design of new policies and pilot demonstrations in housing, humanitarian assistance, and health. The USG provided policy assistance to Hungary that has resulted in the implementation of the first realistically targeted low income housing and utility allowance program, and it is working with many other countries on the design of similar programs.

American private voluntary organizations (PVOs) and other donors helped reduce the number of institutionalized children in Romania from 150,000 in 1989 to 90,000 in 1993. This assistance helped slow down the alarming trend of child abandonment and helped establish new foster parenting programs. The USG created model day care centers, increased community involvement in the care of children who remained institutionalized, and improved the motor and tactile functions of over half of those children. American PVOs succeeded in persuading parents to keep their AIDS-infected children at home in half of the cases (850) that they assisted, improved conditions for the cases that remained institutionalized, and reduced death rates from malnutrition and inadequate sanitation for both groups.

In the area of environment, policy changes generated as a direct result of American advice include passage of an environmental impact assessment law in the Czech and Slovak Republics, adoption of an auto fuel tax in Budapest, and limitations on traffic flow and power and industrial plant production in Prague during air pollution alerts. Efforts to promote use of waste minimization technologies saved \$17 million in unnecessary capital investments at one plant and generated over \$5 million in annual cost savings in other participating plants. Adoption of least cost approaches to municipal wastewater treatment plants, in the first year of the program, saved Polish cities over \$2 million.

**FY 96 Programs:**

Much greater attention will be given in the coming years to support CE countries through this critical phase of social sector reform. One challenge is to help government understand what it can no longer afford and to find ways for the private sector to deliver some of these services. The second is to help government find the means to finance that which is its legitimate role. Assistance will be provided to help the CE countries target their funds for these services most effectively.

These efforts will have both national and local dimensions. At a national level, the USG will work with reform-oriented governments to develop and implement policies that help rationalize the state's role. Depending on the needs of the country, the focus may be on re-

*ASSISTANCE FOR CENTRAL EUROPE*

conceptualizing expenditure policies to concentrate services and allowances on the needy. In some cases, policy advice will emphasize specific sectors such as housing or health care that offer prospects for immediate implementation of reforms. At a local level, the USG will offer officials and non-governmental organizations technical support to test and implement evolving national policies.

The USG will also continue to fund selective programs that promote improved environmental policies and stimulate environmentally sound capital investments.

In FY 96, current plans allocate approximately \$101 million for activities associated with achievement of this objective.

Benchmarks:

- Establishment of social support mechanisms appropriate to market-based democracies in the areas of health, labor markets, and housing
- Stable or declining levels of absolute economic and social distress
- Activities to promote energy efficiency
- Activities to promote the improvement of the environment

Economic Factors

The SEED program was envisaged as a temporary assistance program, designed to see CE countries through their difficult transitions to democracy and a market economy. The program remains transitional, though its phase-out and termination will vary according to the progress and needs in each country. By FY 1996, U.S. assistance resources should begin to shift from countries that have made excellent progress in carrying out economic and democratic reforms, e.g. Estonia and the Czech Republic, to countries such as Romania and Bulgaria which have further to go in their transitions. Still other countries, notably Albania, and parts of the former Yugoslavia, will need assistance for many years to come. The USG will carefully monitor this shift in resources from the Northern Tier to the Southern Tier states of CE to ensure that the gains in the former are lasting and sustainable.

The USG is finding that additional resources are required to complete critical elements of reform. In Poland, for example, a mass privatization program was recently initiated to contribute to the final phase of privatization - the privatization of major enterprises.

Democratic Factors

Public administration is an essential element of U.S. assistance in creating sustainable democratic institutions. The demand for additional assistance is growing, and there is a clear need for more program resources in this area.

In addition, educational reform will play a major role in developing the culture of democracy throughout the region. This program should also be expanded to additional countries and to conduct the full range of activities originally envisaged.

*ASSISTANCE FOR CENTRAL EUROPE*Social Factors

There is urgent need for social sector restructuring throughout the region in order to solidify popular support for a continuation of reform. The SEED program is addressing the issue, but requires additional resources to have a broad impact on national policy and social sector programs in many of the countries of the region.

Beginning in FY 1995, funding of technical assistance programs in Bosnia and Croatia will rise significantly. Approximately \$40 million is allocated for these countries in each of the next two fiscal years. While this represents a significant increase, these levels in no way meet the external assistance needs of these war-torn countries.

South Balkan Development Initiative

Through this initiative, we aim to facilitate the improvement of East-West transportation links between Bulgaria, the FYROM and Albania. The funding requested would enable us to leverage other donor resources for projects critical to the region's economic development and integration.

Bosnia Reconstruction Fund

If conditions permit, reconstruction will be required throughout Bosnia. While the SEED program was not designed for this type of activity, it should be expanded for this specific purpose. The FY 96 budget should include a special category for the reconstruction of Bosnia. The funding requested will leverage additional resources from other donors, depending on the structure and management of the coordination mechanism. Activities might include major infrastructure repair, a micro-loan window, programs to stimulate economic activity combined with reform of financial structures, assistance to the Federation government in public administration and legal reform, a repatriation program, etc. Funding for reconstruction should be distinct from other SEED programs, and resources should not be transferred between SEED's other programs and the Reconstruction Fund.

## NEW INDEPENDENT STATES

## ASSISTANCE FOR THE NEW INDEPENDENT STATES OF THE FORMER SOVIET UNION

### PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
NIS	1,153.885	719.400	788.000

#### OBJECTIVES:

The twelve New Independent States of the former Soviet Union are undergoing profound changes as they develop new institutions of statehood while concurrently transforming their economies and political systems. Each state is defining the nature of its structures by what it sees as appropriate for its needs, and the pace of change varies greatly. This is inevitable, given the significant differences among the peoples and countries involved.

Our overall goal is clear: We wish to achieve enduring, normal, and productive bilateral relations with each New Independent State, and to encourage such relations among them, and between them and their partners in the world community. We believe that this kind of partnership will ultimately require stability and prosperity, and international relationships based on mutual recognition of reasonable security interests, normal economic relations, and free movement of people, goods, and ideas.

History shows that broad-based prosperity is best achieved through a market economy, that stability is best achieved through democracy, and that over the long run each is essential to the success of the other. These are internally self-correcting systems which adjust to changing circumstances and needs. That said, however, it is equally true that each country has to develop the details to reflect local history and conditions. There is no perfect model.

The U.S. assistance program is intended to be limited in duration. It is designed to assist with the transformation of misdeveloped economies which were crippled by seven decades of Soviet ideological management of economic and government institutions, and a lack of economic and political freedom for individuals. Where necessary the program provides limited humanitarian assistance until there is sufficient stability for reform to proceed, moving as quickly as possible to technical assistance for reformers seeking to put in place the essential elements of market economies and democratic political systems. Such help is particularly important during the critical early stages of transformation, both for the knowledge transferred and for the encouragement and support it provides to reformers. However, it is essential that such transitional technical assistance be short-term, so that we can move beyond the donor-recipient relationship to trade and investment and ultimately to bilateral relations based on the full range of normal commercial and other ties.

*NEW INDEPENDENT STATES*

Hence, we seek the following three objectives:

1. The development of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
2. The transition to transparent and accountable governance and the empowerment of citizens, working through their civic and economic organizations and democratic political processes that ensure broad-based participation in political and economic life, and respect for human rights and fundamental freedoms.
3. Strengthened capacity to manage the human dimension of the transition to democracy and a market economy, and to help sustain the neediest sectors of the population during the transition period.

**JUSTIFICATION:**

The twelve New Independent States are best characterized by their diversity. They span half the globe – eleven time zones – and represent scores of distinct ethnic groups. Religions, cultures, economic traditions, and languages reflect histories which are as much competitive as cooperative, or even downright hostile. These factors were masked by the monolithic domination of the Soviet Union, but now are clearly visible.

A legacy of Communism is that all twelve countries do have a recent shared history: the single system of political and economic centralization shaped many of the structures and attitudes which now require change. In worldwide terms, they all are developed countries, albeit misdeveloped in respect of many institutions essential for a market economy and democratic politics. Each has a relatively healthy, educated, and productive populace, a considerable scientific establishment, a significant industrial base, and a potentially strong agricultural base. Much of the existing infrastructure was developed for purposes other than what is needed for democracy and a market economy. The legacy of pervasive control of all aspects of people's lives remains in the hold-over bureaucracies as well as in the attitudes of people conditioned to accept bureaucratic control. Even so, previous levels of capital investment in people, durable goods for productive sectors, and physical infrastructure have created the basis for significant real growth, especially as organizational, legal, and regulatory infrastructure become available to foster its efficient use.

Based on experience to date, adoption of economic and political reforms is likely to be highly uneven, and may include situations where some elements move ahead rapidly while other elements see no progress. Significant support to governments should be directed at states which embrace fundamental economic and political reforms. Resources will be concentrated in areas which are essential, i.e., without which the objectives cannot be achieved. Those include democracy-building, privatization of the economy, including productive enterprises and land; establishment of basic laws and regulations permitting the private sector to operate without need for subjective governmental action; establishment of clear market signals (primarily world-market pricing) which permit rational decisions, and therefore reward reduction in waste of energy and other resources; and de-monopolization of the economy. In some cases, comprehensive economic reform will be dependent on assistance from international financial institutions, the IMF and World Bank in particular. U.S. assistance to facilitate agreements

*NEW INDEPENDENT STATES*

between reforming NIS nations and the IMF and World Bank can leverage both economic reform in the NIS and financial assistance from the IFIs. Where commitment to reform is limited, assistance will be primarily for programs operating outside governmental channels.

The appropriation level for FY 1995 represents roughly \$3 per capita in the NIS. Given the reality that the results of assistance expenditures are vastly greater in countries which proceed faster with reform, the principle that aid follows reform must result in relatively higher levels for those doing the most to help themselves. Indeed, the benefits of economic assistance programs will be minimal unless accompanied by courageous steps to establish and maintain sound macroeconomic -- both monetary and fiscal -- policies.

Further, because assistance funds are limited, in the Russian Federation we have adopted a regional concentration strategy whereby assistance programs are concentrated in regions and cities where reform has taken hold. Where several different assistance programs can be bundled together, the overall effect can be greater than the sum of the parts.

Beyond measures setting clear rules for domestic and foreign investors, adequate funds must be available to encourage and facilitate investments in the NIS by U.S. firms, particularly while the investment climate is not capable of attracting foreign investment on its own. Further, action is required to remove trade barriers both within the states themselves and also by all of their foreign trading partners. Priority must be given to putting in place all of the normal treaties, agreements and facilities necessary for American firms to trade with and invest in those countries.

Throughout the region, non-governmental organizations will receive funds for initiatives to support the efforts of reformers to establish independent media, democratic politics, an independent judiciary, and transparent government. There will be constant support for programs which increase the capacity of reformers in these states to understand, design, approve, and implement needed economic reforms. These will include exchange and participant training programs, people-to-people types of assistance, and in limited situations, long term advisors, in order to overcome the effects of near total isolation, and to increase the exposure of present and future opinion leaders to Western democratic and free market traditions.

The problems facing the New Independent States (or any other country) will never be totally "solved", therefore there will be inevitable pressure to continue assistance. Nonetheless, the overall goal of normal bilateral relations based on mutual respect requires that we move as quickly as possible through the three phases of assistance -- from humanitarian to technical to trade and investment -- and beyond to cooperation based on normal commercial relations. For the Russian Federation, we are entering the final assistance phase: the major technical assistance programs underway and already funded are being implemented and will see a high level of activity during the next two years. Additional funding for technical assistance will gradually decline; direct support for trade and investment is now increasing but will itself gradually phase out.

As economic rules and macroeconomic stabilization become clearly established, the pace of domestic and foreign investment should generate significant rates of growth which enable these nations to finance their own problem solving. A fraction of one percent of incremental growth each year can generate sums vastly larger than the levels of our assistance.

*NEW INDEPENDENT STATES*

Because this is an integrated strategy, it is important to realize that the nature of the United States assistance program will be very different in states which are lagging in the pace of economic and/or political reform. In the extreme, for example, a program in a particular country may consist entirely of exchange programs, people-to-people initiatives, and activities with non-governmental organizations. In such a case, the effort would be directed at achieving objectives over the medium and long term by focusing on the country and its people. The non-reforming government would not receive assistance, but the country would, depending on what opportunities there are to provide effective assistance through non-governmental channels, and how pervasively government anti-reform policies inhibit the ability of such assistance to succeed.

**NIS PROGRAMS:****Market Reform****Status**

Market reform is taking place, despite an often inhospitable context. The planned Soviet economy created a system where central planners kept track of inventories of tens of thousands of goods, setting literally millions of prices and issuing thousands of allocation orders a day. There was no competition in the system. Single factories were dedicated to producing virtually all of the goods for the entire Soviet empire. The state owned almost everything--every house, apartment, office and business.

Against this background, the progress, particularly in Russia, has been remarkable. Two thirds of all Russian small shops -- some 100,000 businesses -- have been privatized; more than 50 percent of all medium and large scale enterprises -- some 14,000 -- have been auctioned, and more than 40 percent of Russia's industrial labor force is now working in the private sector. Some 40 million Russians have become shareholders in private companies. Most importantly, there is increasing evidence that privately owned companies are beginning to restructure, changing their production profiles and methods, revising employee incentives and planning long-term investments. Essential business infrastructure is also becoming available, as evidenced by such things as the emergence of private banks, the development of capital markets, and better telecommunications.

Similar changes have taken place in the housing market where millions of apartments have been privatized, management and maintenance are being turned over to private firms, and private construction companies have begun to launch new projects. To an increasing extent, Russia's success has been contagious. The Government of Ukraine has agreed to move forward with a mass privatization program; Kazakhstan's privatization program is beginning, and both Kyrgyzstan and Moldova have asked for USAID help with their ambitious efforts to privatize their economies.

Even though the reform process is far from complete, it is already changing people's lives. Entrepreneurs are setting up new businesses in many sectors previously monopolized by the state. Individuals have the opportunity to buy shares of stock, to buy an apartment, to change jobs. Foreign investment is growing, totaling more in the past year than in the previous seven years combined. Though still small in world terms, the trend toward increasing foreign

*NEW INDEPENDENT STATES*

investment, as well as of international commercial trade, provides evidence that normal economic growth patterns are developing.

## FY96 programs

In FY96 the emphasis on trade and investment -- begun in FY94 and reinforced in FY95 -- will assume a larger role in the economic reform support provided by the United States, especially in Russia. (Appropriations for OPIC, TDA and Ex-Im Bank to support trade and investment in the NIS are included in the Administration's budget requests for these agencies.) Privatization and private sector development will continue to be a core element of the U.S. effort to promote the transition to market economies in FY 96. Land privatization in Russia and support to privatization programs in other republics will be important elements of the program in the coming years. Development of strong private sector economies coupled with the significantly increased support for trade and investment, especially in Russia, should result in self-sustaining economic growth, provided that NIS governments remain committed to and implement sound policies.

Post-privatization initiatives to enhance the commercial viability of recently privatized and new enterprises is another major theme in FY 96. This includes development of commercial law and other legal and regulatory frameworks, capital markets, demonopolization programs, and assistance for restructuring traditional enterprises.

Macro-economic stability is key to generating and attracting both domestic and foreign investments. The United States--through U.S. participation in the efforts of international financial institutions coordinated by the Department of the Treasury, financial assistance from trade and development agencies, humanitarian commodities, and technical assistance through USAID--will seek to promote such stability. Emphasis will also be placed on the development of new tax and expenditure systems for local governments, and improved central bank intermediation with the financial system.

We will also support efforts by governments to restructure their energy sectors and develop market incentives for energy efficiency including technical assistance for regulatory, tax and investment policies to support a competitive environment, promote efficiency and reduce environmental risk.

Attention to environmentally sound, sustainable growth is an important theme. A market economy will remain viable only if it operates on a sustained basis in a way that protects its environment, uses resources wisely, and respects popular concerns for issues of public policy. Environmental improvements will also help address the health needs of people throughout the NIS. Programs include:

- Programs to enhance nuclear power plant safety and expansion of alternatives to nuclear power.
- Support to address specific environmental issues.
- Public education and NGO development to enhance public awareness and participation in decision making on key environmental issues.

*NEW INDEPENDENT STATES*

- Technical assistance to build institutional capacity within government, at all levels, to integrate environmental considerations into key policy decisions.

In Fiscal Year 1996 current plans allocate approximately \$504 million for activities associated with achievement of the economic reform objective (not including the \$92 million requested for trade and development agencies in the form of direct appropriations).

**Democratic Reform****Status**

Changes leading to democratic political systems and institutions have been equally remarkable. It is easy to forget that five years ago, no one imagined an election in the Soviet Union with more than one candidate. In the past few months alone, elections have taken place in the three most populous countries in the former Soviet Union, and there has been no lack of candidates. In Ukraine, there were more than 5000 candidates for 450 places in the Rada. Local elections were held across Russia, and Belarus held presidential elections in June. Both Ukraine and Belarus faced the ultimate test of democracy, as opposition candidates defeated incumbent presidents, and assumed office, without unrest or serious election disputes. New processes of governing are being established, and the principle of popular participation in a civic society is taking hold.

At the individual level, the change means that citizens gain not only the right to register dissent or approval, but access to information and a chance to participate in public life as never before. Nowhere is this clearer than in the independent print media, as well as the emerging non-governmental sector. In Russia, despite fears to the contrary, the independent print and television organizations presented the news from Chechnya without significant interference. More than 12,000 NGOs have registered in Russia alone, involved in a wide variety of activities from associations of small businesses to environmental groups and health and welfare associations. As in our own country, NGOs provide avenues for ordinary citizens to express their concerns, petition government, and check government excesses and inactions.

These fundamental changes, affecting the individual's right and opportunity to participate in politics, are dramatic and permanent. They have not been substantially affected by debates between parliamentarians and the executive, or between individual politicians on the nature and pace of reform. They provide the foundation for lasting reform.

The United States has been active and effective in supporting these changes. Support for the development of an independent media has been particularly effective: USAID and USIA have helped link independent Russian, Ukrainian and Kazakh stations develop news broadcasts that have reached more than 70 million people. We have helped electoral and constitutional reforms, through assistance in drafting new legislation, training of political parties, and technical expertise working with electoral commissions. USAID has provided grants to over 300 indigenous non-governmental organizations and provided technical assistance to encourage formation of additional NGOs. Moving beyond initial grants to NGOs, a new program is aimed specifically at increasing the reach and strength of Russian NGOs. USAID and USIA have supported development of an independent judiciary, including funds for the American Bar Association to help Russia reintroduce trial by jury in nine regions for the first time since 1917.

*NEW INDEPENDENT STATES*

By 1996, nearly 30,000 individuals from throughout the NIS will have come to the United States in various exchanges and training programs, and thousands more will have been directly affected by partnerships and linkages between U.S. and NIS private citizens and non-governmental organizations. These programs have exposed NIS citizens to new ways of facing the challenges they confront by exposing them to democracy in action, in the context of individual initiative free from government control.

**FY96 programs**

The development of participatory political systems, including political parties, civic organizations, and independent labor unions will continue as a top priority of U.S. assistance to the NIS. U.S. nongovernmental organizations will provide training and technical assistance to strengthen local and regional institutions and election monitoring and support. Newly elected leaders in national and local legislatures will receive training in parliamentary processes; and civic and political organizations will be strengthened. These exchange programs will be supplemented by USIA, for which the Administration is requesting \$40 million for NIS programs in the USIA budget request.

Promotion of independent media, as part of a more general effort to institutionalize increased governmental accountability, will also continue in FY 96. Activities will include assistance in building sustainable financial and management capacities within the media, and address constraints to production and distribution of unbiased information, and encourage professional standards and responsibility.

Efforts to create stable legal environments, and permit the operation of market-based democracies will continue to receive support. Activities will include technical assistance and training in the drafting and analysis of constitutions, laws and regulations; strengthening legislative, administrative and judicial institutions; and providing support for the administration of justice, commercial and criminal law. U.S. law enforcement agencies will continue to assist NIS counterparts in coping with the sharp rise in organized crime and narcotics trafficking.

Future assistance also will help strengthen both administrative and institutional capacities of indigenous NGOs as well as their direct service delivery capabilities. Partnerships with U.S. organizations will be the principal vehicle for providing this assistance. Exchanges and training programs in a wide range of fields will continue. These efforts support the democratic transition by exposing NIS leaders, business people and private citizens to democratic market systems, Western values, and management principles, and by providing specific skills training.

In Fiscal Year 1996 current plans allocate approximately \$148 million for activities associated with achievement of this democratic reform objective (this excludes the \$40 million request for direct appropriations to USIA).

**Social Sector Reform****Status**

Well into FY 94 the bulk of U.S. resources for the social sector went into humanitarian assistance: millions of people in all of the NIS benefitted from food, fuel, medicine and medical

*NEW INDEPENDENT STATES*

equipment funded by the U.S. program. Selective targeted humanitarian assistance will continue as needed in certain countries, but henceforth the primary focus of social sector programs will be to help redefine the roles and responsibilities of government and the private sector for delivery of fundamental social services. Old social support systems are dying and new systems are evolving. The best use of our limited resources is to help the people of the NIS address basic underlying issues at the root of this disruption.

The first of these issues is inflation which has eliminated savings, eroded confidence, and devastated the standard of living. The cure for inflation is economic reform—our first strategic objective.

The second issue is the collapse of the system responsible for delivering social services—health, education, old age pensions and welfare. This is due in part to privatized companies having to shed their responsibilities for social services; it also reflects the fiscal crisis at the center and in local and regional governments as well.

The third issue, only just beginning, is rising unemployment as subsidies to public enterprises are removed, and privately owned enterprises restructure.

In this context, our strategy cannot be limited to humanitarian assistance. Humanitarian aid can be important, if directed appropriately, but is only a stop-gap measure. Rather, our concentration has to be on helping governments in the NIS to sort out the responsibilities between public and private sectors, establish roles for local and federal government, and develop appropriate institutions for diagnosing problems, setting priorities and addressing social concerns.

We are helping governments review their role in two other key social sectors -- health care and housing -- and develop new systems that rely less on government and more on the private sector to provide social services. In health, we will provide technical assistance to regional governments to identify health care services to be provided by the state, design health care financing options, help privatize health services, and introduce policy and pricing reforms to encourage a greater role for the private sector. The twenty-two hospital partnerships provide linkages with American institutions, and continue to be a vibrant part of the effort to help NIS medical institutions learn how to restructure to meet changing times. Specialists in housing are already helping municipal governments privatize existing housing stock and land, phase out rent subsidies and target aid to vulnerable groups, and shift responsibility for management and construction to private groups.

We are also providing technical assistance to the finance ministries and to local and regional governments to help them delineate the responsibilities, services, and functions, including revenue, expenditure and management, which should remain within the state domain. One aspect of the challenge is to help governments in the NIS identify and implement fiscal reforms that replace general subsidies that are often wasteful with targeted subsidies that focus on unemployed and vulnerable groups.

**FY96 programs**

Sustained public support is essential for successful transition to free markets and democratic governance. People must believe that reform will produce improvements in their social and

*NEW INDEPENDENT STATES*

economic circumstances. This will require redefining the role of the public and private sectors at various levels of government, to let the private sector provide social services where market incentives are weak, and replace old, communist-era mechanisms for social support with those more suited to a market economy. The United States will support a number of activities linked to this objective in FY 96.

Technical assistance will assist in rationalizing government, private and NGO roles in social sectors, and in delineating responsibilities among federal, regional and local governments. Revenue and expenditure frameworks and management and accounting systems are needed at each level. Fiscal reforms to shift general price subsidies to targeted subsidies focused on the unemployed will stretch the financial capacity of national and local governments to meet legitimate social service needs.

We will continue hospital partnerships, and resources will be provided for technical assistance supporting health financing and service delivery reform to help move toward efficient, market-driven health delivery systems. Efforts to support indigenous production capacity and rationalized use and distribution of pharmaceuticals, vaccines and medical supplies will also be funded, and partnerships with U.S. health institutions will be supported to improve technical and management capacities. Attention will be given to women's health needs, including family planning services.

Assistance in housing, privatization of housing stock, development of private housing finance and construction capacity and privatization of housing maintenance services will allow governments to reduce subsidies which now drain local budgets, and to target allowances to the most vulnerable groups.

Emergency humanitarian assistance, as needed, will continue to be provided for strife-torn areas such as Armenia, Georgia, Azerbaijan, and Tajikistan to assure that food, fuel and medical emergency needs are addressed and to develop improved local capacities to plan for and deliver humanitarian services.

In Fiscal Year 1996 current plans allocate approximately \$136 million for activities associated with achievement of this objective.

**Nonproliferation**

In FY 1996 funding provided under the FREEDOM Support Act will support international science centers in Russia and Ukraine which were formerly funded by the Department of Defense under the Nunn-Lugar program. The International Science and Technology Center (ISTC) Moscow and the Science and Technology Center in Ukraine (STCU) will fund projects to provide non-military employment opportunities to scientists and engineers formerly engaged in Soviet programs of design, development and production of weapons of mass destruction. To date the ISTC has funded 94 projects employing over 5,000 scientists and engineers. The STCU has just been established and will begin to fund projects in the next few months. Membership in both centers is open to all CIS countries. The U.S. contribution to the science centers effort joins funding for the ISTC from the European Union, Japan, Finland and Sweden, and for the STCU from Sweden and Canada. While the science centers initiative has nonproliferation as its primary objective -- funding projects including long-term storage of fissile material and material control and accounting -- it has also been extremely successful at involving Western

*NEW INDEPENDENT STATES*

and Japanese businesses, universities and national laboratories and institutes as unpaid project collaborators.

- \* Includes \$300 million appropriated directly to Ex-Im Bank for NIS programs
- \*\* Includes neither the \$92 million requested in direct appropriations to OPIC, TDA and Ex-Im Bank for trade and investment programs in the NIS nor the \$40 million requested in direct appropriations to USIA for exchange programs in the NIS
- \*\*\* Includes transfers to OPIC, TDA, USIA and Peace Corps.

## INTERNATIONAL NARCOTICS CONTROL

## INTERNATIONAL NARCOTICS CONTROL

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
INC	101.000	105.000	213.000

The spread of international narcotics trafficking and organized crime constitutes some of the most persistent and serious challenges to America's foreign and domestic interests in the post-Cold War era. The effects of these challenges tear at the very fabric of society, jeopardize emerging and established democracies, slow economic development, and threaten the environment. While narcotics and organized crime are distinctly different threats, requiring individually tailored programs, they share the need for a coordinated international response and the development of strong democratic judicial institutions to combat them.

The international narcotics trade is one of the most pervasive and insidious problems we face. From drug producer to user, tens of millions of people on virtually every continent are directly involved. Global narcotics trafficking generates an enormously disruptive illicit economy of hundreds of billions of dollars annually, spawns widespread corruption and intimidation, and condemns countless drug abusers to painful, sick, and unproductive lives. From Panama, where traffickers once held influence at the highest levels of government, to Italy, where traffickers tried unsuccessfully to cow the judiciary by systematically assassinating senior prosecutors, no country is immune. Driven by both supply and demand forces, the threat must be fought through an integrated global response of enforcement, public awareness/demand reduction, and economic support initiatives.

The end of the Cold War is also leaving American interests increasingly threatened by new and traditional international organized crime powers. Rich, violent, and predatory international crime syndicates are quick to exploit political, economic, and social vacuums created by countries in transition. As we are witnessing in the former Soviet republics, old criminal networks are growing more powerful and new groups are emerging faster than authorities can keep pace. Such groups threaten the consolidation of democracy from Eastern Europe and Russia, to Africa and Asia. There is a direct cost to the United States as well. Organized crime threatens the operations and personal safety of U.S. businessmen abroad, contributes to an escalation in serious crime, and reduces the effectiveness of U.S. assistance programs. They decay the very institutions upon which we depend to do fair and honest business.

The Department of State has formed the Bureau of International Narcotics and Law Enforcement Affairs (INL) to meet the challenges posed by narcotics trafficking and international organized crime. INL responsibilities include: developing, implementing and monitoring U.S. international counternarcotics strategies and programs in support of the President's National Drug Control Strategy; building greater cooperation among nations to enhance law enforcement institutions in newly emerging democracies; and improving international efforts to combat organized crime. INL functions also include foreign policy formulation and coordination, and diplomatic initiatives. In future years, the Department

*INTERNATIONAL NARCOTICS CONTROL*

intends to seek a single appropriation, implemented by INL in which the narcotics control and law enforcement programs would be administratively segregated to avoid commingling, but would be available for coordination by a single office with clear authorities to avoid duplication and waste.

**INTERNATIONAL NARCOTICS CONTROL**

On November 3, 1993, the President signed a directive that identified international narcotics control as a major U.S. foreign policy objective. Internationally, drug production and trafficking activities endanger democracy, economic development, and the global environment. The Department of State and other agencies responded with a new national drug control strategy that shifted the focus to source countries where the drug trade and trafficking organizations are more confined and vulnerable.

The FY 1996 program is designed to continue implementation of the strategy, including greater stress on multilateral efforts to strengthen democratic institutions, making them more effective in fighting international trafficking organizations. The program reflects our most extensive effort yet to integrate counternarcotics police and military law enforcement activities, drug awareness and demand reduction programs and training, and sustainable economic growth into comprehensive regional and country counternarcotics programs.

The proposed FY 1996 funding seeks to get key drug countries to shoulder more of the drug control burden and resist the destructive forces of narco-corruption and intimidation. It is directed at strengthening the rule of law, economic and social development, and anti-drug institutions in countries that are committed to narcotics control. We expect our material, training, and other assistance to lead to more professional and competent judicial and enforcement agencies, greater drug crop eradication and reduced production, and more vigorous law enforcement operations against major drug trafficking organizations. Our work with multilateral organizations, such as the UN and various international financial institutions, as well as enhanced coordination with U.S. bilateral economic assistance agencies, will increase because they can complement our efforts and operate where our access is limited.

The international narcotics control program represents a long-term commitment to reduce the level of illicit drug production, trafficking, and abuse on a global basis. By addressing all elements of the international grower-to-user chain, the program seeks not only to reduce the supply of narcotics entering the United States, but also to provide critical assistance and technical expertise to other nations committed to controlling their own drug problems. This program complements the efforts of individual countries.

1 FY 1994 and FY 1915 include INC, Military and Economic Counternarcotics programs not appropriated to INL.

2 Budget estimates for administrative and operating expenses for International Criminal Justice (ICJ) programs are not included in this budget request.

3 In FY 1995, a total of \$23.665 mil was transferred to INL for implementation of ICJ programs, \$13.665 FSA, \$5 mil SEED and \$5 mil ESF. \$1.5 mil was held by USAID for foreign participant support costs.

4 In FY 1996, \$12 mil reflected for ICJ in the INL budget will be included in the FY 1996 ESF budget request. Additional FSA and SEED funding for ICJ programs will be included in the appropriate budget requests.

## INTERNATIONAL NARCOTICS CONTROL

## ASIA/AFRICA/EUROPE REGIONAL COOPERATION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: The program is designed to help governments begin establishing counternarcotics law enforcement units, obtain training or equipment, and conduct demand reduction/public awareness campaigns. The intent is not to establish permanent programs, but to provide seed money for countries to help themselves and to complement United Nations International Drug Control Program (UNDCP) and other donor programs.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
INC	0.900	1.450	1.500

## OBJECTIVE:

- The Asia/Africa/Europe Regional Program helps cooperating countries in the region address international narcotics control issues and reduce narcotics production and trafficking.

## JUSTIFICATION:

Illicit drug production in Southeast and Southwest Asia has soared as Burma and Afghanistan have increased opium poppy cultivation. Trafficking patterns continue to expand exponentially through South and East Asia and into the Middle East and Africa as local drug trafficking organizations prosper and develop into worldwide networks. Weak governments with poorly developed and financed law enforcement infrastructures provide fertile environments in which trafficking organizations have flourished. The transnational character of illicit narcotics trafficking requires a regional approach to multilateral and bilateral programs.

**FY 1996 Program**

Further evidence of growing heroin shipments to, and addiction in, the United States demands augmented resources applied with maximum flexibility over half the globe. This regional account complements U.S. drug control funding through international organizations such as UNDCP.

**Afghanistan.** Narcotics control is one of our highest national interests with Afghanistan. FY 1996 funds will build upon small cross-border crop control and agricultural outreach projects designed to encourage farmers to substitute food and cash crops for opium poppy. At the same time, law enforcement assistance will be provided when national law enforcement forces are established and devoted to narcotics control. All assistance will continue to be coordinated with the United Nations and other donors.

*INTERNATIONAL NARCOTICS CONTROL*

**Other Countries.** FY 1996 funds will provide equipment to law enforcement organizations in the region, demand reduction materials and other counternarcotics programs in African, Asian and European countries.

**U.S. Personnel.** This account supports an European Liaison Office in Brussels, which works with governments of the developed countries in Europe, as well as Japan and Australia, to increase their financial support for counternarcotics efforts and involvement in multilateral drug control programs. In FY 1995, the Department of State will open a new Narcotics Affairs Section (NAS) in Moscow.

**EFFECTIVENESS MEASUREMENT:**

- Increased institutional capacities in key counternarcotics countries in the region.
- Increased public drug awareness and decreased market demand for drugs in host countries.

## INTERNATIONAL NARCOTICS CONTROL

## INTERREGIONAL AVIATION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: The interregional aviation program supports governments in South and Central America and the Caribbean to eradicate drug crops, interdict drug trafficking activities, and to develop their own institutional counternarcotics aviation capabilities.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
INC	19.000	24.000	21.000

## OBJECTIVES:

- Aerially eradicate drug crops with pesticides and/or transport workers for manual destruction of drug crops.
- Support institution building of cooperating host governments' aviation programs.
- Destroy cocaine and heroin processing laboratories and interdict drug trafficking activities by aerial transport of host government law enforcement agencies.
- Conduct aerial reconnaissance to locate drug drops and production facilities and verify eradication program results.

## JUSTIFICATION:

The Administration's strategy shifts counterdrug program emphasis from transit trafficking countries to crop control efforts and source countries. Since nearly all drugs are produced in remote, underdeveloped, inaccessible regions where both infrastructure and law enforcement are minimal, aircraft are required to eradicate drug crops and to move personnel and equipment. In response to host government requests for assistance, the interregional aviation program provides eradication aircraft and aviation support services.

**Accomplishments.** Aerial eradication programs are underway now in most South American drug producing countries. U.S.-funded institution-building assistance is making important progress throughout Latin America, leading to enhanced local capabilities and reduced American contractor staffing. In Bolivia, all missions are flown by Bolivian Air Force (BAF) pilots, including those requiring night vision goggles, and an increasing share of maintenance and logistics support is performed by the BAF. In Peru, all missions are flown by Peruvian National Police (PNP) pilots and the PNP is pursuing an aggressive maintenance training program. The Colombian National Police (CNP) is utilizing U.S. assistance in pursuing aggressive two-pronged efforts against opium and coca cultivation and cocaine smuggling.

*INTERNATIONAL NARCOTICS CONTROL*

Interregional aviation activities play a vital role in implementing the President's decision to shift the emphasis of U.S.-funded international counternarcotics interdiction activities from the drug transit zone to drug producing countries. Under a new mobile basing strategy in Peru, U.S.-owned helicopters transport PNP personnel and U.S. law enforcement advisors on counternarcotics operations throughout eastern Peru. In Bolivia, U.S.-owned helicopters enable the Bolivian government to project authority over vast areas where drug traffickers previously operated with impunity. While some support for interdiction projects in Central American drug transit countries is being reduced; we are retaining the capability to intercept drug smuggling aircraft, day or night.

In FY 1995, the interregional aviation program will continue to: respond to aerial eradication requests from Latin American countries; assist eradication programs in Guatemala, Belize, Panama, Colombia, and Venezuela; and support helicopter operations in Colombia, Peru, and Bolivia.

**FY 1996 Program**

Interregional aviation activities will continue to focus on key programs in Colombia, Bolivia, Peru, and Guatemala, with temporary deployments of aircraft and personnel elsewhere in the Andean region and Central America. Progress will continue in reaching self-sufficiency status for our aircraft maintenance and training programs in Bolivia and Peru. Further emphasis will be made on aerial eradication of drug crops in South American countries.

**Operations Support** includes funding for the administrative costs associated with our Inter-Service Support Agreement (ISSA) with Patrick Air Force Base which provides hangar space, utilities, refuse collection, etc. and funding support for DOD officers assigned as interregional aviation staff and other direct-hire personnel.

**EFFECTIVENESS MEASUREMENT:**

- Eradication of drug crops with aerially-applied pesticides.
- Enhanced host government institutional capabilities to undertake counternarcotics air operations safely and effectively.
- Continued transport of personnel, resupply activities, and other logistics support for field activities.
- Aerial reconnaissance missions to pinpoint drug production areas and facilities and verification of eradication.

## INTERNATIONAL NARCOTICS CONTROL

## INTERNATIONAL NARCOTICS CONTROL

## INTERNATIONAL ORGANIZATIONS

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: This program provides the U.S. contributions to counternarcotics programs of international organizations, including the United Nations International Drug Control Program (UNDCP), the Organization of American States (OAS) Inter-American Drug Abuse Control Commission (CICAD), the Colombo Plan, and the World Health Organization Program on Substance Abuse (WHO/PSA).

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
INC	5.000	6.500	11.500

## OBJECTIVES:

- Maintain strategic leadership in guiding the international drug control effort.
- Involve UNDCP and other international organizations to plan and execute programs which expand multilateral cooperation.

## JUSTIFICATION:

U.S. contributions to UNDCP have had significant impact on the operations and expansion of UN counternarcotics programs and policy. Furthermore, the level of U.S. contributions has also led to increased commitment from European donors, whose primary vehicle for international drug control efforts continues to be the UN. Recent U.S. contributions to UNDCP have led to:

- Establishing the first sub-regional projects between Thailand-Burma and China-Burma to eliminate opium poppy and increase interdiction efforts.
- Reducing opium poppy in the UNDCP project area of Dir, Pakistan, and developing a project to reach more remote and larger growing areas in the region.
- Expanding UNDCP activities to provide chemical control and money laundering investigative training.
- A regional training project in the Caribbean for prosecutors and judges working on narcotics-related cases.
- Coordinating bilateral and multilateral assistance to Eastern Europe and the Newly Independent States (NIS), and providing advice and legal expertise to the NIS to implement the 1988 UN Convention.

*INTERNATIONAL NARCOTICS CONTROL*

- Supporting the implementation of the SWAP by convening an international meeting in Islamabad, Pakistan, that included multilateral and bilateral donors. This meeting resulted in agreement on integrating a drug dimension in the work of the UN agencies involved in the rehabilitation of Afghanistan.

**OAS/CICAD.** U.S. pledges to OAS/CICAD have produced concrete results as well as stimulating increased anti-drug aid from other donors. Results include:

- Model regulations on the control of precursor and essential chemicals and control of money laundering.
- Assisting governments and non-governmental organizations to develop public awareness/drug abuse prevention campaigns and provide demand reduction training and community mobilization.
- A legal development program in Central America to assist countries to improve their legal infrastructures and to promote harmonization of drug laws within that region.
- Networking of organizations dedicated to assisting street children in the Andean countries and introducing drug abuse prevention activities to their programs. Models will be developed and shared with other regions.

**FY 1996 Program.** Funds will support expanded multilateral drug control objectives:

**UNDCP.** U.S. financial contributions will enhance UNDCP ability to:

- Develop a demand reduction strategy and expand demand reduction activity.
- Implement projects in key heroin-producing areas where the U.S. has limited access.
  - Subregional projects in Southeast Asia in Burma, China, Thailand, and Laos, and possibly in new areas including Cambodia and Vietnam.
  - \* The political changes in Afghanistan have prompted projects that target poppy growing and demand reduction.
  - \* In the NIS, UNDCP is designing projects to strengthen institutions that can target the drug trade. A UNDCP regional office based in Tashkent, Uzbekistan, will support these efforts.
  - UNDCP has begun to establish contacts in Lebanon and has planned a project that targets poppy growing and heroin production.
  - \* In Pakistan, UNDCP will need additional funds to continue projects that target the largest and most remote poppy growing areas of the Dir region.
  - \* Provide assistance to support strengthening host government institutions involved in the investigation, prosecution, and confinement of major drug traffickers.

*INTERNATIONAL NARCOTICS CONTROL*

- \* Support implementation of the UN drug conventions, such as providing legal advice, training for money laundering investigations, assistance for implementing chemical control regimes, and establishing a maritime working group to help increase maritime interdiction activities.

OAS/CICAD is working on a broad range of projects, including:

- Further action on control of precursor chemicals and money laundering.
- A drug abuse prevention program for Street Children in the Andes.
- Expanding the Central American Legal Development project and initiating a Judicial Development project for the Andean region.
- Developing a communications strategy, demand reduction and public awareness programs, and expanding treatment training.
- Coordinating international law enforcement training.
- Establishing demand reduction projects in the Caribbean and establishing a regional training center with UNDCP in Argentina.
- Holding arms trafficking workshops to enhance international cooperation in stopping the illegal movements of weapons in the hemisphere.
- An initiative to enhance the central drug coordinating bodies in the region. and
- Establishing an Experts Group on Alternative Development.

**COLOMBO PLAN.** The U.S. has traditionally provided funding to the Colombo Plan, the only regional organization responsible for both SAARC and ASEAN countries.

- As a result of the Colombo Plan-sponsored regional drug treatment training sessions in Southwest and Southeast Asia, Pakistan, India, Nepal, and Bangladesh have developed treatment programs in community and prison settings. Similar training sessions in Southeast Asia are the foundation for treatment programs in China, Malaysia, and Thailand.
- The Colombo Plan recently organized a coalition of drug prevention NGOs in Southeast Asia.
- FY 1996 funds will be used to continue regional treatment seminars in Southeast and Southwest Asia and to organize coalitions of NGOs in SAARC countries.

**EFFECTIVENESS MEASUREMENT:**

- Increase institutional infrastructure of cooperating countries to reduce the production and trafficking of drugs.

*INTERNATIONAL NARCOTICS CONTROL*

- Ratification of the 1988 UN Convention.
- Provision of law enforcement and demand reduction training, encourage maritime interdiction cooperation, and pursue control of precursor chemicals and money laundering.
- Expansion of UNDCP (and OAS) chemical control assistance activities.
- Progress on implementation of the Global Program of Action and the System Wide Action Plan (SWAP) to make drug control an integral part of UN programs.

## INTERNATIONAL NARCOTICS CONTROL

LAW ENFORCEMENT TRAINING,  
DRUG AWARENESS AND DEMAND REDUCTION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: This program category includes two discrete functional activities. Law Enforcement Training is designed to assist cooperating countries in creating effective national organizations for investigating drug trafficking and interdicting illegal narcotics. Drug Awareness and Demand Reduction seeks to reduce the worldwide demand for illicit drugs through stimulating foreign governments and institutions to give increased attention to the negative effects of drug abuse upon societies.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
INC	8.000	7.000	11.500

## OBJECTIVES:

## Law Enforcement Training:

- Contribute to the basic infrastructure for carrying out counternarcotics law enforcement activities in cooperating countries.
- Improve technical skills of drug law enforcement personnel in cooperating countries. and
- Increase cooperation between U.S. and foreign law enforcement officials.

## Drug Awareness and Demand Reduction:

- Strengthen the ability of host nations to conduct more effective demand reduction efforts on their own.
- Encourage drug producing and transit countries to invest resources in drug awareness, demand reduction, and training to build public support and political will for implementing counternarcotics programs. and
- Improve coordination of and cooperation in international drug awareness and demand reduction issues involving the U.S., donor countries, and international organizations.

*INTERNATIONAL NARCOTICS CONTROL***JUSTIFICATION:****Law Enforcement Training:**

International counternarcotics law enforcement training is managed and funded by the Department of State, and implemented by DEA, the U.S. Customs Service, and the U.S. Coast Guard.

Since 1971, USG agencies have trained more than 55,700 foreign narcotics law enforcement officers with approximately \$99.5 million. Training offered in the U.S. is tailored to senior policy and management-level officials and programs offered overseas are designed for operational personnel.

**Accomplishments.** FY 1994 narcotics law enforcement training promoted counternarcotics institutional development in cooperating nations. Training, recognized as a key element in developing political will to take action on narcotics problems, has contributed to successful interdiction campaigns, investigations, and development of infrastructure for self-training of enforcement officers. Basic instruction programs are being provided only in countries having limited experience with anti-narcotics activities. Most of the training scheduled is in such areas as executive and management development, asset forfeiture and financial investigations, use of special enforcement teams, counternarcotics security measures, and instruction techniques. Institution-building activities are key elements of the programs offered in FY 1994:

- DEA created a new one-week course designed to bring together top career drug law enforcement officials in different geographic regions, to discuss the latest trends in management of drug enforcement programs. DEA initiated several projects to provide intensive assistance to national drug enforcement units, most notably in Mexico, where program costs are being underwritten entirely by the Government of Mexico.
- Customs developed and started a course on internal controls and anti-corruption issues. The Customs training is heavily oriented toward developing local institutions.
- The U.S. Coast Guard broadened its involvement in providing assistance on port security, and scheduled a number of programs dealing with instruction techniques and management of interdiction programs.

**FY 1996 Program.** U.S.-funded training will continue to support host governments' ability to eliminate drug production and trafficking, particularly in areas being used as production and transit points for drugs reaching the U.S.

Law enforcement training will focus on the emerging problem of heroin abuse and trafficking. Programming has already taken place for countries involved in opium production and trafficking where USG access has improved recently (e.g., Central Asia, Cambodia and Vietnam), and efforts will continue to expand programs which target the heroin problem. Another area of focus will be countries of the former Soviet Union. During the last two fiscal years, a limited amount of such counternarcotics law enforcement training has been made available, but the region still has pressing needs for assistance which have not been met.

*INTERNATIONAL NARCOTICS CONTROL*

The increase in law enforcement training for FY 1996 goes beyond the traditional areas of basic investigations and interdiction to create integrated systems for narcotics law enforcement in such areas as money laundering, chemical controls, and judicial programs.

**Drug Awareness and Demand Reduction:**

**Accomplishments.** Because of U.S.-funded training and technical assistance, host governments have been able to engage their own national institutions, communities and resources to reduce the demand for illicit drugs. The U.S. has encouraged donor countries and international organizations to provide support to international demand reduction programs.

Significant demand reduction accomplishments include the following:

- Countries in Latin America and South Asia developed and staffed their own drug treatment/prevention programs.
- Countries implemented their own national level drug awareness campaigns in the Caribbean and Central America, and conducted their own national level epidemiological surveys in South America.
- Countries in South America and Asia developed regional training centers for demand reduction.
- The European Community, UNDCP, OAS, PAHO, Colombo Plan, and host governments co-sponsored with the U.S. regional training events in Latin America and South Asia, and the development of specialized drug prevention projects for high-risk youth in Latin America.

**FY 1996 Program.** U.S.-funded training will continue to strengthen host nation counternarcotics institutions so they can conduct more effective demand reduction and public awareness programs on their own. The program will give particular attention to cocaine producing and transit countries in Latin America and address the emerging heroin threat from South Asia. Another area of focus will be in countries of Eastern Europe and the former Soviet Union. The program will also increase collaborative multilateral projects with other donor countries and international organizations as reflected in the Administration's new National Drug Control Strategy.

The increase in training and technical assistance in FY 1996 goes beyond the traditional emphasis on treatment, prevention, education, and public awareness. While training will be increased in these four areas, the program will expand its focus to include the development of national, regional, and international coalitions of public/private sector organizations to strengthen international cooperation and actions against the drug trade.

The public awareness program will enhance the ability of host countries to build public support and strengthen the political will for implementing counternarcotics programs. Training will focus on the development of national-level drug awareness campaigns that demonstrate connections between the drug trade and other concerns such as economic growth, democracy, and the environment. Technical assistance will focus on helping host governments conduct sustained drug awareness campaigns by developing linkages between the corporate sector and

*INTERNATIONAL NARCOTICS CONTROL*

the mass media. The public awareness program will also help develop regional and international coalitions of non-government organizations (NGOs) to mobilize international opinion against the drug trade and encourage governments to develop and implement strong counternarcotics policies and programs.

The demand reduction program will work at the policy and grassroots levels to build a public/private base to sustain pressure against the drug trade. At the policy level, the program will focus assistance on building national-level counternarcotics institutions with the capacity to develop comprehensive demand reduction policies, programs, and strategies. At the grassroots level, the program will help establish and sustain community partnerships among businesses, schools, religious groups, law enforcement, and the media. A goal of strong community-based partnerships is to establish demand reduction programs which address drug-related crime and violence and support national policies.

**EFFECTIVENESS MEASUREMENT:****Law Enforcement Training:**

- Appropriate foreign personnel receive professional training and are subsequently utilized to carry out counternarcotics activities.
- Over time, host nations become less dependent on U.S. assistance, and are able to deliver a wide range of anti-narcotics training on their own. and
- Training results in closer cooperation with U.S. enforcement agencies, leading to enforcement actions which are disruptive to the illicit drug trade.

**Drug Awareness and Demand Reduction:**

- Number of community partnerships and coalitions established.
- Number of treatment and prevention programs established:
- Number of public awareness campaigns initiated.
- Number of epidemiology/drug consumption surveys initiated. and
- Collaborative projects with other donor countries and international organizations.

## INTERNATIONAL NARCOTICS CONTROL

## PROGRAM DEVELOPMENT AND SUPPORT

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Program development and support (PD&S) funds provide program-wide policy, technical, and administrative support for the Department of State, international narcotics control program of the Bureau of International Narcotics and Law Enforcement Affairs (INL). PD&S funds are managed by Washington-based personnel for program planning, design and evaluation, special studies, and short-term technical assistance.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
INC	6.000	6.300	6.500

## OBJECTIVES:

- Develop and manage narcotics control activities of the Department of State, coordinates with other U.S. Government agencies, and provides program, financial, procurement, administrative guidance and assistance for the programs world-wide.

## JUSTIFICATION:

The PD&S budget for FY 1996 will provide salaries and expenses for 69 full-time employees, reimbursable administrative services from other State Department bureaus, and reimbursable support from other agencies. Seven other direct-hire employees and two reimbursable are assigned to support the interregional aviation program.

The Assistant Secretary for INL is responsible for an increasingly complex counternarcotics program. Washington headquarters staff activities include: guiding, evaluating, and backstopping programs overseas; conducting periodic visits to embassy narcotics affairs sections to review, analyze, and make recommendations on programs; developing or sponsoring management control seminars for overseas staff; developing training programs for new personnel; coordinating liaison functions with other agencies and governments; and other program management functions. PD&S funds also support short-term evaluations, special public affairs materials, and administrative support for the INL bureau.

Headquarters staff provide administrative support to personnel working in international criminal justice functions of the INL Bureau. Salaries and expenses for the office of International Criminal Justice (ICJ) is supported by the Department's Salary and Expense (S&E) account.

The increase in the FY 1996 PD&S budget corresponds to funding 121 positions, the annual government-wide cost of living adjustment approved by Congress, justified promotions and in-grade step increases, employee transfer costs, and inflation.

**FY 1996  
INTERNATIONAL NARCOTICS CONTROL  
DIRECT HIRE STAFFING**

**FY 1996 Staffing.** The programs of the Bureau of International Narcotics and Law Enforcement Affairs (INL) will be administered from Washington by the Assistant Secretary, whose salary is paid by the Department of State's Salaries and Expenses appropriation, and a staff of 78 domestic employees, six reimbursable support personnel assigned to other bureaus, and three reimbursable support positions from other agencies.

A total of 26 direct-hire American field positions and 18 direct-hire foreign national positions are financed from INL country program funds to implement the Bureau's narcotics efforts overseas.

Excluding the Assistant Secretary position and 6 International Criminal Justice positions funded by the Department of State Salary and Expenses account, INL funds 103 full-time American direct-hire positions and 18 foreign national positions to manage its narcotics programs, distributed as follows:

<b>TOTAL</b>	<b>749,949</b>	<b>721,000</b>	<b>721,000</b>	--

Providing humanitarian assistance is a fundamental policy objective of the President's FY 1996 International Affairs budget; refugee and migration assistance is a major component of the humanitarian assistance policy objective. The Migration and Refugee Assistance (MRA) appropriation and the Emergency Refugee and Migration Assistance Fund (ERMA) are administered by the Department of State. These programs span the range of international refugee assistance needs encompassing emergency assistance, long-term care and maintenance requirements, and repatriation or resettlement.

The Department requests \$721,000,000 for refugee and migration assistance funding in FY 1996. This request includes \$671,000,000 for Migration and Refugee Assistance and \$50,000,000 for the Emergency Refugee and Migration Assistance Fund.

The MRA is an annual appropriation used to fund (1) overseas assistance activities, (2) the admission of refugees to the United States, (3) a grant to support resettlement in Israel, and (4) the administrative expenses of the Bureau of Population, Refugees, and Migration (PRM).

ERMA is a no-year appropriation, drawn upon by the President to meet "unexpected urgent refugee and migration needs" when he determines that it is "important to the national interest" to do so. In FY 1994, ERMA was used to respond to urgent and unexpected assistance needs of Rwandans, Burundi, Haitians, and Cubans.

110	\$670,688	109	\$671,000	108	\$671,000	(1)	--

### I. Summary

The programs funded by the Department of State's Migration and Refugee Assistance (MRA) appropriation uphold humanitarian principles that the United States shares with others in the international community by providing assistance to victims of persecution and civil strife. These programs support the protection of refugees and conflict victims, the provision of basic needs to sustain life and health, and the resolution of refugee problems through repatriation, local integration, or permanent resettlement in a third country -- including the United States. These objectives are achieved largely by providing assistance through international organizations and by providing resettlement opportunities for refugees in the United States. In carrying out these objectives, the Department sustains a U.S. leadership role in the world community in responding to the needs of refugees and conflict victims.

#### ♦ Overseas Assistance

There are approximately 24 million refugees and person of concern to the United Nations High Commissioner for Refugees (UNHCR). An additional 3.1 million Palestinian refugees are registered with the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA). Many of the world's refugees and victims of conflict have little hope for more than mere survival without adequate international assistance, and their protection and care are shared international responsibilities.

The *Migration and Refugee Assistance Act of 1962, as amended*, provides for U.S. support of UNHCR, the International Committee of the Red Cross (ICRC), the International Organization for Migration (IOM), and other relevant international organizations. Accordingly, the Department contributes the majority of its Overseas Assistance funds to programs administered by international organizations. When the President determines it will contribute to the foreign policy interest of the United States and if required to address specific assistance needs, the Department may also support the programs of non-governmental organizations that carry out relief services overseas -- many in conjunction with the programs of international organizations. In addition, the Department may provide bilateral assistance directly to governments and governmental agencies.

Both the humanitarian traditions of the United States and domestic interest in many international issues support generous responses to the needs of refugees and conflict victims. The levels of U.S. contributions depend on the nature and urgency of the needs, the prospects for successful project

## MIGRATION AND REFUGEE ASSISTANCE

implementation, the responses of other donors, the availability of funds, and U.S. foreign policy interests. No standard formula or uniform U.S. percentage share is appropriate for all contributions.

In recent years, multilateral and non-governmental organizations, faced with multiple new humanitarian emergencies and expanding repatriation opportunities, have increased their appeals for funding. Ethnic and nationalist tensions have created new areas of conflict and new populations of displaced persons and refugees. The numbers of refugees and displaced persons in Europe, for example, is higher than at any time since World War II as a result of conflicts in the former Yugoslavia, the Caucasus, and other areas of the Newly Independent States (NIS) of the former Soviet Union. This increase and new sources of asylum seekers are challenging the viability of the international protection system and putting new demands on the United States and the international community to respond to humanitarian needs around the world.

#### ◆ *Refugee Admissions*

For the vast majority of the world's refugees, the safe return to their home countries or the establishment of new lives in first asylum countries is the preferred solution, rather than resettlement in the United States or another third country. While third country resettlement is not appropriate or an option for most refugees, it remains the only viable solution for some.

The U.S. refugee admissions program aims to provide resettlement opportunities to individuals for whom other options are not possible and/or who have special ties to the United States. The program is consistent with the long-standing U.S. commitment to humanitarian principles; it assists individuals who are victims of persecution and who have no recourse other than to search for new homes and new lives in foreign lands. For those refugees resettled in the United States, the admissions program offers a chance to rebuild their lives. The United States also encourages other countries to participate in resettlement efforts.

Of the 110,000 projected refugee admissions in FY 1995, approximately 80,000 are expected to be admitted directly from their countries of origin. Direct departure programs from Vietnam, Cuba, Haiti, and the former Soviet Union were established to obviate the need for applicants to seek temporary asylum in a transit country. U.S. refugee admissions programs for persons in first asylum countries offer a durable solution for certain refugees of special humanitarian concern to the United States.

#### ◆ *Refugees to Israel*

This program supports resettlement in Israel from certain other countries. Most of these funds provide transportation, en route care and maintenance, and temporary accommodation upon arrival in Israel. Funds also are used to provide direct assistance for the elderly, the handicapped, and children requiring institutional care.

#### ◆ *Administrative Expenses*

In FY 1994 and FY 1995, funds for the administrative expenses of the Bureau in the amounts of \$11,500,000 and \$11,900,000, respectively, were included in the Diplomatic and Consular Programs appropriation, in accordance with the *Foreign Relations Authorization Act, Fiscal Years 1994 and*

*MIGRATION AND REFUGEE ASSISTANCE*

1995. In FY 1995, funds for the administrative expenses of the Bureau of Population, Refugees, and Migration finance the salaries and operating costs associated with a staff of 109 employees located in Washington and at 13 overseas posts. Since FY 1994, the Bureau has had responsibility for population policy and coordination.

## **II. FY 1996 Plans**

Progress will continue to be made in reaching durable solutions for refugee populations in FY 1996. Significant progress has been made in addressing one of the world's long standing refugee problems with the repatriation of over 1.5 million Mozambicans, as well as smaller numbers of Burmese, Afghans, Guatemalans, and Ethiopians. Durable solutions relieve the burden on the international assistance budgets that provide for the care and maintenance of refugees in asylum countries. Assistance funds, therefore, may be used to support communities in their initial reintegration of refugees who have repatriated. A small portion of MRA program funds will be used to finance studies and Bureau oversight necessary to evaluate programs carried out by recipients of U.S. funds.

### **◆ Overseas Assistance**

Although the composition of the current refugee and conflict victim population may change somewhat in FY 1996, the concluding phase of Mozambican repatriation, along with continued progress in the repatriation of Burmese, Afghans, and Guatemalans would reduce certain refugee populations in first asylum. However, it is unlikely that no new outflows will occur. Since 1989, the numbers of refugees and persons of concern to UNHCR has increased from less than 15 million to approximately 24 million in 1994. In all regions, international attention will continue to be focused on the need to incorporate the abilities and needs of refugee women and the special needs of refugee children into protection and assistance program design, implementation, and evaluation.

The majority of funds in Overseas Assistance is expected to be used for UNHCR General and Special Programs, the emergency appeals of ICRC, and programs of the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA). In addition, funds are contributed to the World Food Program (WFP) for the costs of its programs on behalf of populations of concern to UNHCR. Funds are used to support activities of relevant international or non-governmental organizations that address multiregional problems or aspects of international migration.

The FY 1996 request also includes funds for a voluntary contribution in support of ICRC headquarters operations at 10 percent of the estimated budget, as well as funds for the U.S. assessment for the IOM administrative budget at 30 percent. U.S. contributions, which provide institutional funding for ICRC and IOM, underscore our strong support for the work carried out by these organizations worldwide.

### **◆ Refugee Admissions**

The FY 1996 budget request includes funds to finance the resettlement of up to 90,000 refugees in the United States. Although a specific admissions number is necessary to calculate estimated costs, the final number and regional allocations will be determined during the annual consultations process with Congress later in the fiscal year. These funds cover the costs of processing refugee applicants, training and transporting refugees accepted for resettlement to the United States, and their initial reception and placement in the United States. The program for refugees from the former Soviet Union will continue

*MIGRATION AND REFUGEE ASSISTANCE*

to be implemented through the Washington Processing Center (WPC) and enhanced processing services in Moscow.

The FY 1996 request for refugee admissions is \$126,300,000, a decrease of \$43,700,000 from the FY 1995 estimate. This reduction reflects an estimated decrease of 20,000 admissions (from 110,000 to 90,000), reduced transportation costs, and the closure of certain English language training programs.

◆ *Refugees to Israel*

The FY 1996 request includes \$80,000,000 to support resettlement in Israel through a grant to the United Israel Appeal. This request maintains the FY 1995 grant level of \$80,000,000.

◆ *Administrative Expenses*

The FY 1996 request covers the salaries and administrative support costs of 108 positions in the Bureau of Population, Refugees, and Migration. In FY 1994 and FY 1995, funds for the administrative expenses of the Bureau in the amounts of \$11,500,000 and \$11,900,000, respectively, were included in the Diplomatic and Consular Programs appropriation, in accordance with the *Foreign Relations Authorization Act, Fiscal Years 1994 and 1995*.

## FY 1996 JUSTIFICATION OF PROGRAM ACTIVITIES

### Overseas Assistance *(dollars in thousands)*

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$435,913	\$421,000	\$452,700	\$31,700

The FY 1996 overseas assistance request is \$452,700,000, an increase of \$31,700,000 over the FY 1995 estimate.

The primary focus of international protection and assistance funds is on meeting short-term, life-sustaining needs of refugees and conflict victims overseas. Many nations hosting large groups of refugees and victims of conflict are among the world's least developed. Their presence often strains limited resources and may result in serious problems that affect U.S. foreign policy interests. In an effort to reduce the need for people to cross international boundaries, the United Nations High Commissioner for Refugees (UNHCR) has undertaken cross border and internal assistance programs (e.g. Somalia, Bosnia, and Tajikistan) which attempt to address the root causes of refugee flows. It is expected that this approach will continue. These factors have been taken into consideration in determining specific regional assistance request levels.

U.S. refugee policy is based on the premise that the care of refugees and conflict victims and the pursuit of permanent solutions for refugee crises are shared international responsibilities. Accordingly, most overseas assistance funds will be contributed to programs administered by international organizations. Although the United States is just one of many donors, in most cases the U.S. Government is the largest individual donor. While some of these programs are discussed in the regional presentations that follow, the use of U.S. funds is not limited to these organizations. U.S. support may be provided to other organizations as required to meet specific program needs and objectives.

Chief among the international organizations receiving refugee assistance funds is the **United Nations High Commissioner for Refugees (UNHCR)**, which has a worldwide mandate to assist host governments to protect and care for refugees as well as to promote lasting solutions to refugee situations. In 1996, it is anticipated that UNHCR will make additional progress in orienting protection and assistance activities toward refugee women and children who comprise about 80 percent of the entire refugee population. It is also anticipated that UNHCR will continue efforts to increase the self-sufficiency of all refugees, with particular emphasis on increasing the self-sufficiency of refugee women.

**The International Committee of the Red Cross (ICRC)** is an independent, internationally funded, humanitarian institution mandated under the terms of the Geneva Conventions to act as a neutral

*MIGRATION AND REFUGEE ASSISTANCE*

intermediary in armed conflict. The United States is party to the Geneva Conventions, under which ICRC is called upon to provide assistance and protection to prisoners of war and political detainees, assist and protect civilian victims of armed conflict, provide needed medical assistance to conflict victims, trace missing persons and separated family members, and disseminate information on the principles of humanitarian law.

**The United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA)** has a continuing mandate from the United Nations to provide educational, medical, relief, and social assistance to the 3.1 million Palestinian refugees located in Jordan, Syria, Lebanon, the Gaza Strip, and the West Bank.

**The International Organization for Migration (IOM)** provides vital services to migrants and refugees worldwide at the request of interested nations. IOM seeks to ensure the orderly migration of persons who are in need of international migration assistance. This objective includes providing technical assistance to governments in the development of migration policy and national institutions.

**The World Food Program (WFP)** is the principal vehicle for multilateral food aid within the UN system. WFP distributes commodities supplied by donor countries for development projects, protracted refugee and displaced person projects, and emergency food assistance. The U.S. Government provides food commodities to WFP under other appropriations. Funds will be contributed to WFP toward the expenses of refugee feeding programs undertaken in cooperation with UNHCR.

In general, this request will be used to respond to the calendar year budget appeals issued by international organizations. As new or changing assistance needs arise, however, some organizations find it necessary to issue new or increased appeals for funds during the course of the year. Therefore, this request may be used during the first quarter of the fiscal year to respond to urgent appeals that may be issued late in the calendar year.

A continuing element of the assistance effort will be support for lasting solutions to refugee problems. The FY 1996 request will be used to respond to programs as they evolve from care and maintenance in first asylum countries to repatriation. Funds also may be used to assist in the initial reintegration of refugees who have repatriated.

The Department may reallocate funds between regions or organizations within the overseas assistance request level of \$452,700,000 in response to changing requirements.

**REFUGEES AND PERSONS OF  
CONCERN TO UNHCR \***  
1989 - 1994

\* Does not include Palestinian refugees. They come under the mandate of the United Nation Relief and Works Agency for Palestine Refugees in the Near East (UNRWA). See page 17 for UNRWA statistics.

### Assistance Programs in Africa

(dollars in thousands)

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$150,500	\$157,500	\$169,100	\$11,600

The Department requests \$169,100,000 to respond to the basic needs of refugees and conflict victims in sub-Saharan Africa, an increase of \$11,600,000 over the FY 1995 estimate.

The requested increase reflects both a growth in African refugee numbers and anticipated opportunities for conflict resolution and repatriation. With over 6 million refugees, sub-Saharan Africa continues to host about one-third of the world's refugees and a much greater share of the world's internally displaced persons. These are not static populations. A successful peace agreement in Mozambique should allow for the repatriation of all 1.6 million Mozambican refugees by the end of 1995. That change was more than offset by the unparalleled refugee outflow that followed genocide in Rwanda in 1994. At the beginning of 1995, over 2 million refugees from Rwanda and the related crisis in Burundi were still in uncertain asylum. The number of Liberian refugees grew in 1994 as the interior of Liberia moved back into open warfare. At the beginning of 1995, the war in Sierra Leone started pushing Sierra Leonian refugee numbers above the 300,000 mark. In contrast to years past, the Horn of Africa in early 1995, with the significant exception of Sudan, demonstrated prospects for repatriation to Ethiopia, Eritrea, and even Somalia. Periodic ethnic clashes in Chad, Kenya, and Zaire caused added displacement throughout 1994 while moves to crack down on illegal immigration in West and Central Africa gave rise to fears of future mass displacements.

Continuing ethnic tension, human rights abuses, competition for resources, political change, religious persecution, and armed conflict can be expected to generate substantial numbers of additional refugees in the short term. Where conflicts can be brought to a negotiated settlement, it should be possible for refugee repatriation to be part of the overall solution -- for example, in Mozambique. Disarmament, demining, and demobilization present inter-related challenges to resolving refugee problems.

#### ♦ *United Nations High Commissioner for Refugees*

As in years past, the U.S. contribution to UNHCR programs in Africa in 1996 will fund protection and the most basic material assistance to save and maintain lives of refugees and other conflict victims of concern to UNHCR. UNHCR activities must address the fundamental protection and assistance needs while pursuing opportunities for permanent solutions for some refugee populations. It is expected that UNHCR will meet the minimum international standards in such areas as public health, nutrition, and sanitation, provide basic educational programs, and implement efforts to promote self-sufficiency so that refugees can integrate with local populations where possible. Self-sufficiency lowers the care and maintenance costs to the international community while creating conditions conducive to the continued provision of first asylum. In cases where refugees have little to no access to arable land (for example, in Kenya and Zaire), self-sufficiency will be unattainable.

*MIGRATION AND REFUGEE ASSISTANCE*

In 1996, UNHCR is expected to continue implementing repatriation programs for some of the largest and most enduring of Africa's refugee populations -- including the Ethiopians and Eritreans. Should peace talks prove fruitful, Angolans and Liberians, or even substantial numbers of Rwandans and Burundi, could be added to that list. Repatriation assistance for returning refugees includes transportation home, a small package of household and agricultural items to facilitate the returnees' re-establishment, and limited rehabilitation of social infrastructure, such as clinics and water projects. U.S. support for ongoing repatriations will be provided from MRA funds to the extent possible, once basic care and maintenance requirements for existing refugee populations have been met.

◆ *International Committee of the Red Cross*

ICRC, often in partnership with other elements of the international Red Cross movement, is called upon to provide a first relief response in new humanitarian crises resulting from armed conflict. The ICRC program in Africa provides relief and medical assistance to conflict victims and displaced persons, and assistance to political prisoners and prisoners of war. Sometimes in cooperation with UN agencies, ICRC provides relief in areas of heavy conflict and depends largely on the cooperation of the warring parties. ICRC also undertakes tracing services (for detainees as well as family members separated by conflict), individual refugee repatriation, and in some cases refugee protection and assistance.

◆ *World Food Program*

In past years, contributions to WFP have supported feeding programs for refugees and displaced persons from Liberia and Sierra Leone, for Ethiopian and Eritrean refugees in Sudan, and for Somali and Sudanese refugees in Kenya. In FY 1996, funds may be contributed to WFP for the expenses of programs undertaken in conjunction with UNHCR.

◆ *Other International Organizations/Non-Governmental Organizations*

Funds may be used for assistance needs not covered by UNHCR and ICRC that are addressed by governmental or non-governmental organizations, some specialized UN agencies such as the United Nations International Children's Educational Fund (UNICEF), and the International Federation of Red Cross and Red Crescent Societies, among others.

## Assistance Programs in East Asia

*(dollars in thousands)*

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$36,900	\$32,500	\$27,700	(\$4,800)

The Department requests \$27,700,000 in FY 1996 for assistance programs in East Asia, a decrease of \$4,800,000 from the FY 1995 estimate.

This request is dedicated in part to UNHCR for the Comprehensive Plan of Action for Indochinese Refugees (CPA) which has been successful in addressing the problems of refugees and asylum seekers in Southeast Asia. It is anticipated that CPA-funded activities in first asylum camps will be completed by the end of 1995, but will continue inside Vietnam through 1996. Since 1989, this plan has provided for the care and maintenance of Vietnamese and Lao asylum seekers; a fair screening process to determine who are refugees; and increased voluntary repatriation of non-refugees to both Vietnam and Laos, with subsequent monitoring of their welfare. The CPA has succeeded in effectively ending the flow of refugees into first asylum countries. This, together with a continuing high level of direct, safe departures from Vietnam under the Orderly Departure Program and resettlement from first asylum countries, has significantly reduced the pressures on first asylum countries in the region.

The Burmese Muslim (Rohingya) refugees in Bangladesh are the largest group of refugees in the region. Of the 250,000 Rohingya refugees who fled to Bangladesh from late 1991 to mid-1992, some 150,000 had voluntarily repatriated to Burma by the beginning of 1995, leaving some 100,000 still in camps. In addition to the Rohingyas, some 80,000 Burmese remained in ethnic minority camps in Thailand at the beginning of 1995.

### ◆ *United Nations High Commissioner for Refugees*

UNHCR's role in implementing the CPA and bringing it to a successful conclusion will require continuing U.S. financial support in FY 1996. UNHCR programs in East Asia are primarily concerned with providing care and maintenance assistance to Indochinese who have been provided first asylum in the region. Almost all of the approximately 45,000 Vietnamese in first asylum camps at the beginning of 1995 have been determined not to be refugees. Under the CPA, these people have no alternative but to return to Vietnam. UNHCR will continue its voluntary repatriation programs and will monitor conditions for returnees inside Vietnam.

At the beginning of 1995, there were also nearly 12,000 Lao in Thai camps. The FY 1996 request includes funds to continue supporting Lao repatriation. Repatriates receive direct assistance in the form of food, domestic items, and agricultural tools. U.S. assistance in the repatriation effort through contributions to UNHCR, IOM, and other organizations will continue to be critical to its success. The United States has been the largest resettlement country for Lao/Hmong refugees.

The U.S. contribution to UNHCR also will include funds for assistance to Burmese asylum seekers in Thailand and Rohingyas in Bangladesh. UNHCR concluded agreements with the Bangladesh

*MIGRATION AND REFUGEE ASSISTANCE*

Government in May 1993 and with the Burmese authorities in November 1993 that covered the voluntary repatriation and reintegration of the Rohingyas in safety and dignity with a UNHCR presence on both sides of the border. Return movements are expected to be completed by the end of 1995.

◆ *International Committee of the Red Cross*

U.S. contributions to ICRC support ongoing programs such as regional delegations throughout the region as well as visits to detainees and emergency relief and medical care for conflict victims. ICRC has had the largest presence of any humanitarian organization inside Cambodia, and it is expected to continue playing not only a civilian protection role, but also a major role in the rehabilitation process through its medical and tracing services.

◆ *World Food Program*

Funds may be contributed to WFP toward expenses of programs undertaken in cooperation with UNHCR. In past years, contributions have supported the feeding program for Rohingya refugees in Bangladesh as well as programs for voluntary repatriates to Burma.

◆ *Other International Organizations/Non-Governmental Organizations*

Funds may be used to provide direct U.S. support for international, governmental, or non-governmental organization programs that deliver services to refugees, asylum seekers, and repatriates to address needs not covered by programs outlined above. Such services include, but are not limited to, medical and public health programs, mental health counseling, food, special programs for vulnerable groups (for example, women and children, survivors of violence, the disabled), and assistance for Vietnamese returnees. In addition, Lao reintegration has been enhanced by aid to returnees and the communities to which they return; this assistance includes construction of additional school facilities, water sources, and irrigation systems for agriculture.

## Assistance Programs in the Western Hemisphere

(dollars in thousands)

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$8,100	\$9,000	\$10,000	\$1,000

The Department requests \$10,000,000 for the Western Hemisphere assistance program, an increase of \$1,000,000 from the FY 1995 estimate.

While the region now has more returnees than refugees -- a trend that is expected to continue -- underlying tensions, such as those that flared in Chiapas, Mexico during 1994, support a continuing need for UNHCR and ICRC activities. The region's largest remaining refugee population is the 40,000 Guatemalan refugees in Mexico who are progressively repatriating to Guatemala. Economic and social pressures threaten the planned local integration of some Guatemalans in Mexico as well as the integration of other Central American refugees in Belize. As necessary, support for other refugee and migration requirements in the region would be provided.

### ◆ *United Nations High Commissioner for Refugees*

UNHCR levels of assistance for care, maintenance, repatriation, and local settlement of refugees in the Western Hemisphere have been declining slowly, commensurate with the restoration of peace in most parts of the hemisphere. UNHCR's involvement in the reintegration phase should be largely completed by the end of 1995 with other United Nations and development agencies assuming responsibility for the continued cementing of peace and recovery. If peace talks are successful in 1995, repatriation and reintegration of Guatemalan refugees should be completed in 1996.

### ◆ *International Committee of the Red Cross*

Funds will be contributed to ICRC assistance programs in Central and South America, primarily Colombia and Peru, and the Caribbean, and its network of three regional offices and delegations. The peaceful settlement of most of the conflicts in Central America and the continued democratization in the region (with the notable exception of Cuba) has lessened the need for ICRC's exercise of its mandate in emergency relief to conflict victims, aid to prisoners of war, and tracing, enabling ICRC to focus on prison visits and promotion of international humanitarian law. The outbreak of hostilities in Chiapas, Mexico in 1994 demonstrated, however, the need for ICRC's critical work with victims of conflict.

### ◆ *Other International Organizations/Non-Governmental Organizations*

The Department may fund activities of the International Federation of Red Cross and Red Crescent Societies, WFP, and other governmental and non-governmental agencies as required to complement the assistance efforts of the international organizations outlined above or to meet special requirements for assistance to refugees and migrants in the region.

## Assistance Programs in the Near East and North Africa

*(dollars in thousands)*

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$93,149	\$87,000	\$87,800	\$800

The Department requests \$87,800,000 for Near East and North Africa assistance programs, an increase of \$800,000 from the FY 1995 estimate.

The focus in the region continues to be on the longstanding Palestinian refugee population and on the almost 2 million Afghan refugees in Iran.

### ◆ *United Nations High Commissioner for Refugees*

These funds will support UNHCR offices and operations throughout the Near East and North Africa with the largest programs in Algeria, Egypt, and Iran. The presence of UNHCR offices in Kuwait, Saudi Arabia, and Syria is also a reminder that refugees in these and other countries continue to require protection and monitoring. Somali refugees in Yemen continue to receive UNHCR support, as do the Western Saharan refugees in Algeria who are awaiting a political settlement before returning to the Western Sahara.

### ◆ *International Committee of the Red Cross*

Throughout the Middle East, ICRC is often the only international humanitarian organization able to access areas of civil strife to provide needed medical and other assistance to conflict victims and displaced persons. ICRC assists conflict victims in Lebanon, Israel, and the Occupied Territories, with particular emphasis on tracing and protection of detainees. It also addresses unresolved humanitarian problems – particularly POWs and MIAs – related to conflicts where hostilities have ceased. ICRC's emergency programs will continue to provide emergency shelter, food and water, medical care, and protection to civilians displaced by conflict in the region.

### ◆ *Other International Organizations/Non-Governmental Organizations*

Funds may be contributed for special projects of governmental, non-governmental, and other international organizations designed to complement ongoing assistance efforts or to meet special needs. In recent years, the Department has funded specific projects for Palestinian refugees, primarily through UNRWA's Peace Implementation Programme, in support of the Middle East Peace Process. These projects included upgrading education, health, and social service activities.

◆ *United Nations Relief and Works Agency for Palestine Refugees in the Near East*

UNRWA is mandated by the United Nations to assist Palestinian refugees in Jordan, Syria, Lebanon, the Gaza Strip, and the West Bank. Approximately 3.1 million refugees are registered with UNRWA, which provides education, vocational training, relief and social services, and medical care. UNRWA schools and training centers are leading factors in helping Palestinian refugees become economically self-reliant. Since UNRWA began operations in 1950, the United States has been a major contributor toward its programs. U.S. Government funding helps provide some stability in the lives of the Palestinian refugee population in the region, and contributes to a climate conducive to a peaceful resolution of regional problems.

## Persons Registered with UNRWA 1950 - 1994

(Source: UNRWA)

## Assistance Programs in South Asia

*(dollars in thousands)*

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$27,851	\$22,000	\$22,000	--

The Department requests \$22,000,000 for assistance programs in South Asia, the same level as the FY 1995 estimate.

The FY 1996 budget request for assistance requirements in South Asia is based on several assumptions regarding current refugee populations in the region. If security in Afghanistan allows, repatriation of the approximately 3 million Afghan refugees in Pakistan and Iran will continue in FY 1996. While this will lead to a concomitant decrease in UNHCR's care and maintenance programs, UNHCR is expected to become more involved in protection and initial reintegration activities in Afghanistan, one of the world's least developed countries.

The Bhutanese refugee population in eastern Nepal reached over 86,000 registered refugees at the end of 1994 and continues to increase, although at a slower pace than in previous years. Of the original 120,000 Tamil refugees who fled Sri Lanka in June 1990 as a result of ethnic violence, approximately 76,000 refugees remain in India in addition to 552,000 internally displaced persons in Sri Lanka.

### ◆ *United Nations High Commissioner for Refugees*

This request includes funds to support UNHCR assistance programs for Afghan refugees in Pakistan in support of their repatriation to Afghanistan and, as necessary, continued care and maintenance support, as well as support for UNHCR programs on behalf of other refugee groups on the Subcontinent.

The primary concern of the U.S. with regard to UNHCR programs in South Asia will focus on the continued repatriation and initial reintegration of Afghan refugees. In 1992, record numbers of Afghans repatriated, but 1994 was a disappointing year for repatriation due to intense and sustained fighting in Kabul throughout the year. During 1994, an estimated 100,000 refugees returned to Afghanistan from Pakistan. Repatriations will continue during 1995 and into 1996, although the actual volume depends on the level of security in Afghanistan. The rate of repatriation is anticipated to vary considerably throughout the period. UNHCR's program for repatriation is designed so that it can expand quickly and easily if repatriation rates increase. While it is anticipated that in the long run most refugees will return to Afghanistan, some will opt to remain in Pakistan indefinitely. In FY 1996, UNHCR is expected to continue to provide care and maintenance assistance as required to vulnerable refugee groups remaining in Pakistan. At the same time, UNHCR will increase activities inside Afghanistan aimed at establishing stability and a return to normal conditions.

UNHCR also is concerned with the status of Tibetan refugees in Nepal and India, the internally displaced and repatriates in Sri Lanka, and with refugees from Sri Lanka in India. In Nepal, UNHCR's presence supports Tibetan refugees in transit to India as well as a growing Bhutanese refugee population and other smaller groups.

## MIGRATION AND REFUGEE ASSISTANCE

◆ *International Committee of the Red Cross*

ICRC will maintain programs for victims of the Afghan conflict in both Pakistan and Afghanistan, with increased emphasis on its programs inside Afghanistan as the refugees return home. It presently provides emergency medical assistance, runs a number of surgical and field hospitals for war-wounded Afghans, and operates orthopedic centers that provide complete rehabilitative services to the disabled. Protection and tracing activities are important aspects of ICRC's Afghan Conflict Victims program.

ICRC is also involved in protection, tracing, medical assistance, and human rights training in Sri Lanka. ICRC will continue its frequent visits and increase efforts to re-establish civilian population access to food supplies, health facilities, and work places. With no resolution to the conflict in sight, support for ICRC's critical humanitarian efforts through contributions to its regional appeal will continue.

◆ *World Food Program*

Funds may be contributed to WFP for the expenses of programs undertaken in cooperation with UNHCR. In past years, contributions have supported feeding programs for Afghan refugees in Pakistan and for repatriates to Afghanistan.

◆ *Other International Organizations/Non-Governmental Organizations*

Funds are for special projects, through governmental or non-governmental organizations, designed to support specific components of the international assistance program. In recent years, the Department has funded programs that provide Afghan refugees in Pakistan needed medical services, educational opportunities, and basic skills training to prepare for their return to Afghanistan, as well as income-generating activities to help the refugees achieve a degree of self-sufficiency. Many of these projects have and will continue to focus on the special needs of women, children, and other vulnerable groups among the refugee/returnee population. Additionally, funds may support the demining program of the United Nations Office for the Coordination of Humanitarian Assistance to Afghanistan (UNOCHA). Other refugee groups on the Subcontinent also may receive support.

## Assistance Programs in Europe

*(dollars in thousands)*

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$93,000	\$75,000	\$85,000	\$10,000

The Department requests \$85,000,000 to respond to assistance programs in Europe, including the Newly Independent States (NIS) of the former Soviet Union. This request is an increase of \$10,000,000 from the FY 1995 estimate.

UNHCR estimated that by the end of 1994, approximately 2.2 million people throughout the former Yugoslavia were in need of relief assistance, nearly two-thirds in Bosnia. Since FY 1991, the U.S. Government has contributed over \$780 million to the UNHCR-led international assistance program and other programs that support vulnerable groups in the former Yugoslavia. Cash contributions provided through the MRA appropriation are a particularly valued portion of the overall U.S. effort, as it permits implementing agencies to respond quickly and effectively to changing needs. Continued funding throughout FY 1996 is required.

The crisis in Chechnya demonstrates the volatility of the Russian transformation. Estimates of refugees, displaced persons, and forced migrants in the NIS are up to 5.3 million. The conflict in Russian Chechnya has resulted in an additional 460,000 displaced persons. None of the older conflicts in the region - Tajikistan, Georgia, Armenia, and Azerbaijan - made progress toward resolution in 1994, and continued funding for these areas will be required in FY 1996.

### ◆ *United Nations High Commissioner for Refugees*

Refugee and asylum issues, as well as migration in general, will continue to be a major concern for European states. In 1996, UNHCR's presence will be required to address the needs of refugees, displaced persons, and others affected by the war in the former Yugoslavia. There will be massive requirements for humanitarian assistance regardless of whether a settlement is reached or fighting continues. UNHCR is now deeply involved in the NIS. Ethnic and regional tensions, combined with the deteriorating economic situation in most of the NIS, may lead to new conflicts. UNHCR's presence is necessary, both in terms of protection and respect for human rights. Its program also addresses needed training on emergency response and refugee law throughout the NIS.

### ◆ *International Committee of the Red Cross*

In the former Yugoslavia, ICRC plays a unique role among international agencies in facilitating the exchange of prisoners, visiting families of detainees, and reuniting families. ICRC also distributes family parcels and medical supplies, often in areas inaccessible to the UN or other agencies. Looking to 1996, the need for ICRC's presence will remain. Should there be peace, ICRC would have the lead role in exchanging prisoners and reuniting families separated by war. Should the fighting go on, ICRC would continue its operations in areas of conflict to bring medical and relief supplies.

*MIGRATION AND REFUGEE ASSISTANCE*

In FY 1996, funds will continue to support ICRC's programs in the NIS to provide emergency assistance and promote the basic principles of international humanitarian law and the law of war. In addition, ICRC has included in its 1995 program for the NIS a variety of conflict preventive activities that will be continued in 1996.

◆ *World Food Program*

Funds may be contributed to WFP for expenses of programs undertaken in cooperation with UNHCR. In past years, contributions have been made for WFP programs in the former Yugoslavia and toward WFP components of consolidated appeals for Tajikistan and the Caucasus.

◆ *Other International Organizations/Non-Governmental Organizations*

As in the last few years, funds will be required to support other international, governmental, or non-governmental organizations providing assistance in the republics of the former Yugoslavia. Some non-governmental organizations serve as implementing partners to the UN effort and others work independently to meet special needs.

In the NIS, these funds are primarily to support aspects of UN consolidated appeals other than UNHCR and WFP (e.g., UN Department of Humanitarian Affairs, the International Organization for Migration). Funding provided to non-governmental organizations is designed to support specific components of international assistance or migration programs not being addressed by other organizations. For instance, in FY 1995 funds were provided to the American Red Cross for sanitation and health care in camps for internally displaced people in southern Azerbaijan.

### Multiregional Activities

(dollars in thousands)

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$26,413	\$38,000	\$51,100	\$13,100

For FY 1996, the Department requests \$51,100,000 for Multiregional Activities, an increase of \$13,100,000 from the FY 1995 estimate.

These funds support the assessed U.S. contribution to the International Organization for Migration (IOM), the headquarters budget of the International Committee of the Red Cross (ICRC), the multiregional refugee activities of international or non-governmental organizations, and international migration activities. (The IOM assessment and the ICRC contribution are paid in Swiss francs, and the dollar amounts will vary according to the exchange rate at the time of payment.) The increase over FY 1995 will support enhanced multiregional refugee and migration activities of international and non-governmental organizations, particularly UNHCR, including programs for refugee women and children. The increase also will be used to continue and strengthen support for emergency response and capacity building of UNHCR, WFP, the IFRC, and other organizations.

#### ◆ *International Committee of the Red Cross*

The request of funds for the ICRC headquarters budget covers the permanent activities carried out by ICRC staff at the Geneva headquarters only; field-related costs are normally attributed to the regional appeals. The contribution will be calculated at 10 percent of the 1996 ICRC headquarters budget in accordance with the *Foreign Relations Authorization Act, 1988 and 1989*. The ICRC headquarters budget is funded through voluntary contributions by governments and national societies of the Red Cross. U.S. contributions to ICRC's regional appeals are described under the previous regional sections of this document.

#### ◆ *International Organization for Migration*

Based on U.S. membership in IOM, as provided in the *Migration and Refugee Assistance Act of 1962*, the United States pays a 30 percent assessment to its administrative budget. IOM's services and expertise contribute significantly to the success of international migration and refugee resettlement programs worldwide, including the U.S. refugee admissions program.

#### ◆ *Multiregional Activities*

These funds will support activities of international and non-governmental organizations that do not appear in any specific regional program (e.g. centrally-funded multiregional activities) or that support other aspects of international migration including strengthening the ability of organizations to respond to new requirements -- many of them humanitarian emergencies.

*MIGRATION AND REFUGEE ASSISTANCE*

Multiregional program activities include emergency response teams of international organizations, health assessment survey missions, and special information/study/evaluation efforts. These funds also will be used to support efforts to integrate the special needs of refugee women and refugee children in the program and budget planning process of the international organizations and non-governmental agencies engaged in providing refugee assistance overseas. Beginning in 1993, the United States provided unearmarked funding to the UNHCR General Program (from which many of the above activities are funded) under this program, in addition to the funds provided to UNHCR through region-specific allocations discussed previously in this request.

◆ *Migration Activities*

International migration activities include developing multilateral approaches to managing migration, supporting efforts that analyze and address the root causes of irregular migration flows, and promoting the establishment of migration institutions in Central and Eastern Europe, the NIS, and the Western Hemisphere. Funds will be used for IOM and other migration programs that depend for support on voluntary contributions. These include technical cooperation and training for migration policy and national institutions (such as in the republics of the former Soviet Union). These programs assume greater importance as the international community addresses increasingly complex issues of East-West and South-North migration.

**FY 1996**  
**Refugee Admissions**  
*(dollars in thousands)*

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$154,775	\$170,000	\$126,300	(\$43,700)

The Department requests \$126,300,000 to support the Refugee Admissions program in FY 1996, a reduction of \$43,700,000 from the FY 1995 estimate.

The FY 1996 request is based on a planning level of 90,000 refugee admissions compared to 110,000 in FY 1995. The reduction of 20,000 from the FY 1995 ceiling is primarily due to declining caseloads of eligible refugees from the former Soviet Union and Vietnam. The final number and regional allocations will be determined by the President following the annual consultations process with Congress later in the fiscal year. The specific regional ceilings established in the consultations process will be based on an assessment of worldwide refugee needs at that time. The request also funds all related admissions activities and the processing and transportation of Amerasian immigrants.

FY 1994 actual U.S. refugee admissions and the established FY 1995 ceilings are shown below:

**U.S. Refugee Admissions Levels**

Geographic Region	FY 1994 Actual	FY 1995 Ceiling
East Asia	43,581	40,000
Eastern Europe/FSU	50,947	48,000
Near East/South Asia	5,861	5,000
Latin America/Caribbean	6,437	8,000
Africa	5,856	7,000
Unallocated Reserve	=	2,000
<b>Total /1</b>	<b>112,682</b>	<b>110,000</b>

/1 In FY 1995, an additional 2,000 numbers are authorized for private sector initiatives, with no funding provided from this appropriation.

◆ **East Asia**

**First Asylum.** U.S. policy on admissions of refugees from first-asylum countries in the region is based on the June 1989 Comprehensive Plan of Action for Indochinese Refugees (CPA). The CPA (1) reaffirms the principle of first-asylum; (2) provides for a status determination process for asylum seekers; (3) calls for expanding the Orderly Departure Program (ODP) as an alternative to clandestine departures from Vietnam; (4) provides for the resettlement of bona

## MIGRATION AND REFUGEE ASSISTANCE

fide refugees; (5) provides for a UNHCR program for the voluntary repatriation of non-refugees to Vietnam; and (6) accepts the necessity for the eventual repatriation to Vietnam of those persons "screened out" through the status determination process.

Under the terms of the CPA, only those persons "screened in" as refugees are eligible for third-country resettlement. By the end of 1995, all pre-CPA arrivals and "screened in" Vietnamese populations in first-asylum camps in Southeast Asia and Hong Kong will have been resettled or accepted for third-country resettlement. A small residual population of Lao Highlanders (Hmong) in Thailand may still be eligible for resettlement. Outside of the CPA context, a small number of Burmese in Thailand also are being considered for admission to the U.S. as refugees.

**ODP and Amerasians.** Under the Orderly Departure Program (ODP) from Vietnam, the United States processes refugee cases with close ties to the United States, with particular emphasis on former re-education center detainees and Amerasians. Resettlement interviews of former re-education center detainees will be completed during FY 1995, with actual admissions extending through FY 1996. Large-scale admissions of Amerasian cases have been completed, although limited numbers of admissions are likely to continue in future years

◆ *Europe (previously entitled Eastern Europe and the Former Soviet Union)*

The FY 1996 program will primarily include persons from the NIS, persons from the former Yugoslavia, and a small residual population of qualifying family member (Visas 93) beneficiaries.

Admissions from the NIS will consist almost entirely of persons in the categories specified in the Lautenberg-Morrison Amendment to the *Foreign Relations Authorization Act, Fiscal Years 1994 and 1995*, P.L. 103-236, as of special interest to the United States. These include Jews, Evangelical Christians, and Ukrainian religious activists. In FY 1996, all refugee interviews of former Soviet nationals will continue to be done in Moscow with the support of the Washington Processing Center. Bosnian admissions will continue to emphasize cases with family ties to the United States and referrals by UNHCR because of vulnerability. Most Bosnian processing will continue to be done in Zagreb.

◆ *Near East and South Asia*

In FY 1996 there will be a steady level of admissions of Iranians, mostly religious minorities, from processing posts in Europe and of Iraqis from Saudi Arabia, Turkey, and other countries in Europe.

◆ *Western Hemisphere (previously entitled Latin America and the Caribbean)*

Program efforts in this region primarily support the admission of Cubans. The in-country Cuban refugee processing program is designed to allow those individuals most likely to qualify as refugees the opportunity to have their claims heard without resorting to dangerous boat departures. The in-country program for Haitians will conclude in 1995.

*MIGRATION AND REFUGEE ASSISTANCE*♦ *Africa*

The primary basis for resettlement outside the region remains protection for refugees in life-threatening situations. Somalis will comprise the largest number of Africans in need of U.S. resettlement in FY 1996, although refugee admissions from other African countries are increasing as conditions on the continent change.

**Summary of Costs**

The total cost of all admissions activities in FY 1996 is estimated at \$126,300,000. The requested funds are directly related to costs incurred on behalf of refugees whose actual admission will occur in FY 1996. Some of the expenses incurred, however, are attributable to processing activities on behalf of refugees whose admission dates fall in the following fiscal year because of the effect of the processing pipeline. After a refugee is approved by the Immigration and Naturalization Service (INS) for the U.S. refugee admissions program, the refugee receives a medical examination, sponsorship in the United States is assured, travel arrangements are prepared, and all other steps necessary for admission to the United States are completed. Most transportation and reception and placement grant costs are incurred when the refugee departs the asylum country for resettlement in the United States. Funds also are used to support all ongoing activities related to admissions, such as pre-screening of refugee applicants, processing of applicant case files, and training and orientation programs.

The budget request for refugee admissions funds the programs described below. These funds may also be used for the evaluation of these programs.

♦ *Amerasian Admissions Costs*

Within the total admissions request, sufficient funds have been included to cover the admissions costs of Amerasian immigrants and their qualifying family members. These funds are included within the category requests that follow, but are not separately identified by activity.

♦ *Processing*

The Department of State funds several private voluntary agencies and IOM to assist with the processing of refugees worldwide to be resettled in the United States. In most locations, principal processing responsibilities focus on screening applicants to assess their eligibility for interview by INS adjudicators under the U.S. refugee program and, in the case of ODP, to identify those who may be eligible for immigrant visas. Therefore, more cases are processed during the course of the year than will actually be approved for admission to the United States as refugees. Processing funds also are used to pay for medical examinations and required documentation. The Department's request also funds direct processing costs related to ODP in Vietnam.

In addition to overseas processing operations, the Department funds certain services performed in the United States that are essential to the smooth and efficient operation of the admissions process. This includes maintaining a U.S.-based Refugee Data Center which operates a case allocation and reception and placement grant verification system. The Department also maintains the Washington Processing Center (WPC) as part of the NIS admissions processing operation.

*MIGRATION AND REFUGEE ASSISTANCE*♦ *Transportation and Related Services*

In FY 1996, the Department requests funds for transportation and related services provided by IOM in support of the U.S. admissions program. This activity includes funding for international and domestic airfares, IOM operational support, communications, and transit accommodations where required. The cost of the airfares is usually loaned to refugees; loan beneficiaries are responsible for repaying a designated sum over time after resettlement. Therefore, the requirement for appropriated funds for refugee transportation, in any given year, is partially offset by loan repayments from refugees previously resettled.

The small number of Amerasian immigrants who enter under the provisions of Section 584 of the *FY 1988 Further Continuing Resolution to the Appropriations Act*, P.L. 100-202, receive the same services provided to refugees. Other immigrants enter the United States on privately prepaid tickets.

♦ *Reception and Placement Grants*

Through the Department's Reception and Placement (R&P) program, private voluntary agencies receive funds on a per capita basis to provide basic services to refugees for initial resettlement in the United States. These agencies augment the federal grant by drawing on private cash and in-kind contributions that are essential to the success of this program. Services include pre-arrival planning, reception at the airport, initial housing, orientation to their communities, counseling, and referral to local social service programs. The request provides for a \$670 per capita R&P grant in FY 1996.

Within the overall program funding, the Department may support different resettlement services for groups of refugees with special resettlement needs, for example, unaccompanied minors destined for foster care programs.

The Department coordinates its reception and placement services with the refugee assistance programs administered by the Office of Refugee Resettlement in the Department of Health and Human Services (HHS/ORR).

♦ *English Language Training and Cultural Orientation*

The Refugee Processing Center in the Philippines was closed in FY 1994, marking the end of fourteen years of successful educational programs for refugees transiting the Philippines. The English language training and cultural orientation (ESL/CO) program in Thailand is being closed in FY 1995. As a result, ESL/CO costs for FY 1996 will be reduced.

The FY 1996 budget request for ESL/CO supports the continuation of programs serving Bosnian refugees in Europe, Iraqi refugees in Saudi Arabia, and African refugees in Kenya. These programs are designed to facilitate the refugees' integration into the United States. The budget also requests funds to support the distribution of resettlement guides and other information to refugees in locations where structured pre-entry training cannot be offered, such as in the NIS.

## MIGRATION AND REFUGEE ASSISTANCE

**FY 1996**  
**Refugees to Israel**

*(dollars in thousands)*

1994 Enacted	1995 Estimate	1996 Request	Inc./Dec.(-)
\$80,000	\$80,000	\$80,000	--

The FY 1996 request includes \$80,000,000 to support resettlement in Israel through a grant to the United Israel Appeal (UIA). This grant helps finance programs of the Jewish Agency for Israel that assist in the absorption into Israeli society of Jewish refugees coming to Israel from certain other countries. There were 72,000 arrivals in 1994. The U.S. grant covers only a portion of the overall costs of resettlement in Israel. Most of the funds supporting this effort come from private philanthropic sources.

## MIGRATION AND REFUGEE ASSISTANCE

**FY 1996**  
**Administrative Expenses**

(dollars in thousands)

1994 Enacted		1995 Estimate		1996 Request		Inc./Dec. (-)	
Positions	Funds	Positions	Funds	Positions	Funds	Positions	Funds
110	--	109	--	108	\$12,000	(1)	\$12,000

The Department requests \$12,000,000 to finance the salaries and administrative expenses of the Bureau of Population, Refugees, and Migration (PRM). In FY 1994 and FY 1995, funds for the administrative expenses of the Bureau in the amounts of \$11,500,000 and \$11,900,000, respectively, were included in the Diplomatic and Consular Programs appropriation, in accordance with the *Foreign Relations Authorization Act, Fiscal Years 1994 and 1995*. This request is consistent with National Performance Review recommendations to align program and support costs within the same accounts.

Since FY 1994, the Bureau has funded the Administrative Expenses of staff responsible for population policy and coordination. (Program funds to support international population activities are not requested within this account.)

The FY 1996 request provides funds for wage and price increases for domestic and overseas administrative operations, including the salaries of 108 permanent positions worldwide. Of the 108 positions, it is estimated that 86 will be in Washington and 22 will be overseas.

**ERMA SUMMARY STATEMENT**  
*(dollars in thousands)*

1994 Enacted		1995 Estimate		1996 Request		Inc./Dec. (-)	
<i>Positions</i>	<i>Funds</i>	<i>Positions</i>	<i>Funds</i>	<i>Positions</i>	<i>Funds</i>	<i>Positions</i>	<i>Funds</i>
--	\$79,261	--	\$50,000	--	\$50,000	--	--

The Emergency Refugee and Migration Assistance Fund (ERMA) is a no-year appropriation, drawn upon by the President to meet "unexpected urgent refugee and migration needs" whenever the President determines that it is "important to the national interest" to do so. *The Migration and Refugee Assistance Act of 1962, as amended*, provides permanent authorization for the account of up to \$100,000,000.

For FY 1996, the Department requests \$50,000,000 to replenish ERMA, the same level as appropriated in FY 1995.

Drawdowns authorized by the President from ERMA in FY 1994 totaled \$81,000,000. As of January 1, 1995, one drawdown of \$4,000,000 had been made in FY 1995.

### *FY 1994 Program Activities*

In FY 1994, the President authorized the following drawdowns:

♦ *Africa - \$74,000,000*

**Presidential Determination 94-5 (PD 94-5) - \$20,000,000**

On December 3, 1993, \$20,000,000 was authorized to meet the urgent and unexpected needs of certain refugees, conflict victims, and displaced persons in Africa. These funds were contributed to ICRC for its expanded appeals for Africa (\$12,500,000), UNHCR for Burundi refugees (\$4,250,000), the International Federation of Red Cross and Red Crescent Societies for Burundi refugees (\$750,000), and UNHCR for Sierra Leonean refugees and Liberian displaced persons (\$2,500,000).

**PD 94-23 - \$5,000,000**

On May 3, 1994, \$5,000,000 was authorized to meet the urgent and unexpected needs of Rwandan and Burundi refugees, returnees, displaced persons, and conflict victims. These funds were contributed to UNHCR (\$3,500,000), WFP (\$900,000), and the IFRC (\$600,000).

**PD 94-35 - \$19,000,000**

On July 17, 1994, \$19,000,000 was authorized to meet the unexpected, urgent needs of refugees, returnees, and conflict victims from Rwanda and Burundi. These funds were contributed to UNHCR (\$14,000,000), ICRC (\$1,000,000), WFP (\$2,000,000), and the IFRC (\$2,000,000).

*EMERGENCY REFUGEE AND MIGRATION ASSISTANCE***PD 94-56 – \$30,000,000**

On September 30, 1994, \$30,000,000 was authorized to meet the urgent and unexpected needs of refugees, returnees, and conflict victims from Rwanda and Burundi. These funds were contributed in FY 1995 to UNHCR (\$16,000,000), WFP (\$5,000,000), the IFRC (\$8,000,000), and IOM (\$1,000,000).

♦ ***Western Hemisphere - \$7,000,000*****PD 94-31 – \$7,000,000**

On July 1, 1994, \$7,000,000 was authorized to meet the urgent and unexpected needs of Haitian migrants.

**PD 94-47**

On September 9, 1994, PD 94-31 was amended to allow the funds to be used also for Cuban migrants.

***FY 1995 Program Activities***

In FY 1995, as of January 1, 1995, the President had authorized the following drawdown:

♦ ***Western Hemisphere - \$4,000,000*****PD 95-13 – \$4,000,000**

On December 31, 1994, \$4,000,000 was authorized to meet the urgent and unexpected needs of Haitian and Cuban migrants.

### Requirements by Object Class

(dollars in thousands)

Object Class	FY 1995 Opening Balance	FY 1996 Request
Grants, subsidies, and contributions	\$105,300 /1	\$50,000

/1 Of which, \$55,300,000 was carried forward from FY 1994 and \$50,000,000 was appropriated in FY 1995. On September 30, 1994, a \$30,000,000 drawdown (PD 94-56) was authorized by the President. This drawdown did not affect the balance of ERMA until FY 1995.

## ANTI-TERRORISM ASSISTANCE

### PROGRAM SUMMARY (DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
Total Budget Authority <sup>a</sup>	15.244	15.244	15.000
Full-Time Permanent Appointments, End-of- Year <sup>b</sup>	12	12	12

#### **Background**

The ATA program, authorized in 1983, provides training and equipment to foreign countries in order to enhance the anti-terrorism skills and abilities of foreign police and security officials. Concurrently, the ATA program seeks to strengthen U.S. bilateral ties with the participating countries by offering concrete assistance in this area of great mutual concern and to increase respect for human rights among foreign police officials by sharing modern, humane and effective anti-terrorism techniques.

The ATA program operates from the premise that the United States must rely on local law enforcement agencies overseas in order to counter and, ultimately, reduce terrorist activity. Foreign police and security officials are the first line of defense against terrorism for Americans abroad. Accordingly, the ATA program is structured to enhance the skills of foreign police and security officials while fostering cooperation with ATA recipients.

#### **ANTI-TERRORISM ASSISTANCE**

Training is the dominant activity of the ATA program. During the past eleven years, approximately 16,500 students representing 85 countries have participated in the ATA program and have learned anti-terrorism skills such as crisis management, hostage negotiations, airport security management, and deactivation of improvised explosive devices. The curriculum and instructors give trainees a solid foundation that enables them to operate in the field as well as share their new skills with colleagues. Starting in FY 1991, the program was authorized to provide training in selected courses overseas at sites where the students will employ their skills.

<sup>a</sup> The funding levels for FYs 1997 through 1999 are being provided in the out-year estimates section, under Workload Indicators, on the last page of this budget request. In keeping with the current budget climate, ATA plans no increases to offset inflation for these fiscal years. The target amount for each year is \$15,000.

<sup>b</sup> 22 U.S.C. 2349aa-2(f) prohibits the use of Anti-Terrorism Assistance (ATA) program funds for personnel compensation or benefits for Department of State's ATA staff. Consequently, the staffing is allocated and funded out of the Diplomatic Security program in the Department of State's Salaries and Expenses Appropriation.

*ANTI-TERRORISM ASSISTANCE*

During FY 1994, the ATA program conducted nine classes overseas, with a total of 253 participants.

Many participants come from developing nations lacking sufficient expertise and financial resources to provide an effective anti-terrorism training program. The ATA program augments student capabilities by providing them valuable skills, some support equipment, and on occasion, technical advice. It also establishes a professional relationship between the student and United States officials and police. These ties open new avenues of communication and cooperation for USG officials overseas. In sum, the ATA program is an essential element in the United States' effort to combat international terrorism.

## ANTI-TERRORISM ASSISTANCE

**Summary of the Budget Request**

As the ATA program enters its thirteenth year of operation the FY 1996 budget request is \$15,000,000. This amount maintains funding close to the FY 1995 level.

**Funding**

The tables on the following pages detail the allocation of the ATA program funds for FYs 1994, 1995, and 1996. The first table summarizes the funding by program activity. The second table summarizes the funding by object class. Each table provides obligation information for three years (actual FY 1994 and estimates for FY 1995 and FY 1996).

**FUNDING BY PROGRAM ACTIVITY***(dollars in thousands)*

Program Activity	1994 Actual	1995 Estimate	1996 Request	Increase/Decrease 1996 vs. 1995
Training and Evaluations	13,512	13,494	13,250	-244
Equipment Grants	800	800	800	
Program Design and Development	242	250	250	
Program Management	690	700	700	
Total Obligations	15,244	15,244	15,000	-

**FUNDING BY OBJECT CLASS***(dollars in thousands)*

Object Class	1994 Actual	1995 Estimate	1996 Request	Increase/Decrease 1996 vs. 1995
Travel and Transportation of Persons	250	250	200	-50
Transportation of Things	18	18	18	
Printing and Reproduction	7	7	7	
Other Services	11,254	11,254	11,100	-154
Supplies and Material	15	15	15	
Equipment	800	800	800	
Grants, Subsidies, and Contributions	2,900	2,900	2,860	-40
Total Obligations	15,244	15,244	15,000	-244

## ANTI-TERRORISM ASSISTANCE

**Justification of the FY 1996 Request****Training, Evaluations and Other Related Activities and Associated Equipment**  
(dollars in thousands)

Program Activity	1994 Actual	1995 Estimate	1996 Request	Increase/Decrease 1996 vs. 1995
Training, Evaluations and Other Related Activities (including Executive Seminars)	14,444	14,444	14,200	-2440
Equipment Grants	800	800	800	
Total Obligations	15,244	15,244	15,000	-244

Equipment is directly related to training. Therefore, these two program activities should be reviewed together.

The FY 1996 request is based on a comprehensive plan to provide ATA training and equipment to countries that meet one or more of the following criteria:

- The country is categorized as a critical or high threat post and cannot meet the terrorist threat within its own resources.
- There is a substantial United States presence in the country.
- The country is a last point of departure for flights arriving in the United States, or is served by an American carrier.
- There are important bilateral policy interests at stake.

*ANTI-TERRORISM ASSISTANCE*

The top priority of the ATA program is to provide assistance to friendly countries facing a significant level of terrorist activity. Accordingly, major recipients of ATA assistance in FY 1994 included countries such as Turkey, Egypt and Greece. The training programs are tailored to the specific needs of each country. As noted earlier, the training is intended to improve the anti-terrorism skills and capabilities of the recipient officials while enhancing the democratic and human rights values essential for a stable, free society.

Protecting American citizens is another criteria used to decide whether to invite a specific nation to participate in the ATA program. To this end, program assistance is directed towards countries such as Greece, Poland and Turkey where there is a significant American presence. Not only does ATA training enhance the local government's ability to protect its own citizens and its political institutions, it also helps ensure the safety of U.S. citizens living in or visiting foreign countries.

Countries in which United States air carriers operate are another high priority for the ATA program. The ATA program has trained hundreds of airport officials in more than 50 countries in procedures and techniques for operating a safe, secure airport and for protecting civilian passenger aircraft on the ground. The ATA airport security curriculum is based on security procedures more rigorous than those required by ICAO Annex 17 standards. In addition, the ATA program has provided limited quantities of equipment to improve airport security such as walk-through metal detectors, state-of-the-art X-ray machines, and dogs trained in the detection of explosives.

The ATA program has also been extended to those countries that do not face an immediate terrorist threat, but are in need of anti-terrorism training as part of a larger effort to develop institutions to encourage and protect fledgling democracies. For example, since 1990, the ATA program has provided extensive training to the democracies of Eastern Europe, such as Poland, Hungary, Bulgaria and the former Czechoslovakia. In FY 1993, training assistance was also initiated with Estonia, Latvia and Lithuania. The dismantling of the repressive security apparatus throughout Eastern Europe and the former Soviet Union has exposed all of these countries to the potential for terrorist activity.

## ANTI-TERRORISM ASSISTANCE

The following tables provide a three-year overview reflecting the distribution of resources (1) by region and (2) by major subject area.

**OBLIGATIONS BY REGION**  
(dollars in thousands)

	1994 Actual		1995 Estimate		1996 Estimate	
	\$	%	\$	%	\$	%
<b>Training &amp; Equipment:</b>						
African Affairs (AF)	14	0	0	0	778*	5
Inter-American Affairs (ARA)	2,867	19	5,293	35	4,072	27
East Asian and Pacific Affairs (EAP)	181	1	770	5	549	4
European and Canadian Affairs (EUR)	7,545	49	7,915	52	5,266	35
Near Eastern Affairs (NEA)	3,705	24	310	2	5,335	22
<b>Subtotal, Trg &amp; Equipment</b>	<b>14312</b>	<b>93</b>	<b>14,294</b>	<b>94</b>	<b>14,050</b>	<b>93</b>
<b>Program Design and Development</b>	242	2	250	2	250	2
<b>Program Management</b>	690	5	700	4	700	5
<b>Total</b>	<b>15,244</b>	<b>100</b>	<b>15,244</b>	<b>100</b>	<b>15,000</b>	<b>100</b>

\* ATA's increased aid for AF focuses on South Africa and Namibia. Both states are emerging democracies with ties to the U.S. Government. Aid would be centered on preventing violent dissident elements from disrupting the course of government, commerce and transportation.

## PROGRAM DESIGN AND DEVELOPMENT

*(Dollars in Thousands)*

	1994 Actual	1995 Estimate	1996 Request	Increase/ Decrease
Program Design and Development	242	250	250	-

These funds are used to develop approaches and objectives for instruction and assistance; to identify potential audiences and associated task and skill requirements; to collect information essential for training to be adapted to the needs of the participating countries; and to provide a basis for evaluations.

## PROGRAM MANAGEMENT

*(Dollars in Thousands)*

	1994 Actual	1995 Estimate	1996 Request	Increase/ Decrease
Program Management	690	700	700	

Travel, translations, transportation of ATA purchased equipment items and various other administrative support expenses for the ATA program are funded through this activity. The ATA staff manages and coordinates all phases of the program by promoting, presenting, and explaining the goals of the program to eligible countries; directing the assessment teams; and developing and scheduling training. In addition, the staff is involved in conducting essential follow-up evaluations on the effectiveness of training and equipment provided. In FY 1996, the ATA staff will continue to perform these duties in carrying out the program mission.

## NONPROLIFERATION AND DISARMAMENT

## NONPROLIFERATION AND DISARMAMENT FUND

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
NDF	10.000	10.000	25.000

The Nonproliferation and Disarmament Fund (NDF) provides the resources which support carefully selected project proposals to further the objectives of the Freedom Support Act of 1992 by supporting bilateral and multilateral efforts to halt the proliferation of weapons of mass destruction. Beginning in 1994, the NDF funded numerous projects for dismantling and destroying existing weapons of mass destruction and their delivery systems, strengthening international safeguards efforts, strengthening export control and nuclear smuggling efforts; a limited portion of the appropriation is used for administrative expenses for program implementation.

The Administration is requesting \$25 million for bilateral and multilateral assistance programs in FY 1996 down from \$37 million in FY 1995. The increase in NDF is due to a transfer of responsibilities and funding from other programs.

**\$10 Million for Freedom Support Act Activities**

The request continues at its current \$10 million level funding for activities, pursuant to the Freedom Support Act, that support US efforts to:

- Dismantle weapons of mass destruction and their delivery systems; and,
- Halt the spread of weapons related technologies.

**\$15 Million Transfer from Nunn-Lugar Program**

Due to a refocusing of the Department of Defense Nunn-Lugar programs, funding for certain activities formerly funded by the DoD have been shifted to the International Affairs budget request. In FY 1996, funding for export control activities previously conducted under DoD Nunn-Lugar programs is included in the funding request for NDF. The budget request contains \$15 million (vs. \$27 million in FY 1995), to continue support for:

- Developing systems in the former Soviet Union to control the export of weapons and weapons related technology.

**Current Mission**

The Nonproliferation and Disarmament Fund (NDF) provides resources to support carefully selected project proposals to further the objectives of the Freedom Support Act of 1992 by supporting bilateral and multilateral efforts to halt the proliferation of weapons of mass destruction. The Fund seeks to:

*NONPROLIFERATION AND DISARMAMENT*

- Dismantle and destroy existing weapons of mass destruction;
- Destroy delivery systems for weapons of mass destruction;
- Strengthen multilateral controls of sensitive exports and international nuclear safeguards; and
- Combat nuclear smuggling.

**Projects in Support of the Freedom Support Act of 1992:**

Recent NDF projects include:

- Procurement of highly enriched uranium stocks from Kazakhstan.
- Termination of the space launch missile infrastructure of a country with a newly democratic government and missile launch means in central Europe.
- Destruction of weapons stockpiles in the Middle East.
- Procurement of verification equipment for the International Atomic Energy Agency's Department of Safeguards.
- Deployment of seismic arrays in support of the Comprehensive Test Ban Treaty.
- Support for cooperative arrangements to deter nuclear smuggling; and
- Strengthening export control procedures in central European countries.

**Responsibilities Inherited from Nunn-Lugar Program:**

Funding to strengthen the control of militarily-sensitive goods and technologies by the Newly Independent States. Specifically, projects would support:

- Training and technical assistance for export licensing and enforcement systems;
- Customs advisors;
- Frontier force communication and interdiction equipment;
- Coastal force interdiction transport;
- Vehicle and pedestrian portal monitors;
- Hand-held radiation detectors.

Provision of export control assistance to Uzbekistan, Tajikistan, and Turkmenistan: three additional states in the former Soviet Union. The close proximity of these FSU states to countries of proliferation concern, such as Iran, Iraq, and Pakistan, make them prime candidates for expanded assistance. Priority items would include:

- Providing customs enforcement equipment;
- Enhancing border check points; and
- Training customs officials.

**Future of NDF Mission**

In the early stages of NDF, the primary emphasis was in the areas of destruction and safeguards. As NDF matures, this emphasis will continue, complemented by an added emphasis of enforcement efforts, notably nuclear smuggling.

Nearly \$50 million in proposals were received for funding consideration in 1994. After careful consideration, NDF approved 16 projects. The initial NDF funding level of \$10 million was

*NONPROLIFERATION AND DISARMAMENT*

insufficient for sustained large-scale destruction and dismantling of weapons of mass destruction and delivery systems. And with additional increased authority from refocusing Nunn-Lugar, the request for NDF's assistance will increase, as will responsibility to ensure current US commitments.

## INTERNATIONAL MILITARY EDUCATION AND TRAINING

## INTERNATIONAL MILITARY EDUCATION AND TRAINING

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
IMET	22.250	26.350 <sup>1</sup>	39.781

International Military Education and Training (IMET) provides military education and training on a grant basis to students from allied and friendly nations. It is recognized as one of the most cost effective components of U.S. security assistance. Since 1950, IMET and its predecessor programs have trained more than 550,000 foreign officers and enlisted personnel in areas ranging from professional military education to basic technical and nation building skills. This training has enabled U.S. friends and allies to establish and improve self-sufficiency in their military forces, as well as to strengthen their own training capabilities.

The IMET program exposes students to the U.S. professional military establishment and the American way of life, including U.S. regard for democratic values, respect for individual and human rights and belief in the rule of law. Students are also exposed to U.S. military procedures and the manner in which our military functions under civilian control. A less formal, but nonetheless significant, part of the program exposes students to the civilian community and its important democratic institutions. In addition, English language training, essential to attending courses in the United States, increases rapport between students and their U.S. counterparts, promoting important relationships which provide for US access and influence in a sector of society which often plays a critical role in the transition to democracy.

The Foreign Operations, Export Financing and Related Programs Appropriations Act, 1991, expanded the scope and purposes of the IMET program. Expanded IMET's principal objectives are: fostering greater respect for, and understanding of, the principal of civilian control of the military; improving military justice systems and procedures in accordance with internationally accepted standards of human rights; and increasing professionalism and responsibility in defense management and resource allocation. Expanded IMET education is available not only to military and defense officials, but also to civilian officials from non-defense ministries, legislatures, and non-government organizations (NGOs).

IMET requested for FY 1996 will enable the United States to build upon our investments in English language training, professional military education and Expanded IMET in the 26 new country programs instituted since 1991, primarily in Central Europe and the NIS. It will also restore some of the programs in Asia, Latin America and Africa reduced since FY 1994 that are important to the success of our regional security strategies. The IMET request will also continue training and education assistance for Middle East countries important to regional peace efforts.

The following table shows the FY 1996 IMET request. Detailed justification for the proposed programs are found in the Country and Program Papers section.

<sup>1</sup> Reflects \$850,000 transferred from the PKO account to the International Military Education and Training Account pursuant to P.L. 103-306.

## FOREIGN MILITARY FINANCING

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS):*

	1994 Actual	1995 Estimate	1996 Request
FMF Grant	3,055.832	3,151.279	3,262.020
FMF Loans (BA)	38.118	47.917	89.888
FMF Loan Amount	769.500	619.650	765.000

American leadership requires that we be ready to back our diplomacy with credible threats of force. To this end, the U.S. military remains the most powerful and effective fighting force in the world. When our vital interests are at stake, we are prepared to defend them alone. Sometimes, however, we can achieve better results at lower costs to human life and national treasure by leveraging our power and resources through alliances and multilateral institutions. We have a strong stake therefore in helping our allies and coalition partners to strengthen their defense so that they can share the common defense burden.

Foreign Military Financing (FMF) enables key friends and allies to improve their defense capabilities by financing acquisition of U.S. military articles, services, and training. As FMF helps countries provide for their legitimate defense needs, it promotes U.S. national security interests by enhancing interoperability with U.S. forces, strengthening coalitions with friends and allies and cementing strong foreign military relationships with the U.S. armed forces. FMF supports regional security cooperation with key allies. It helps meet post-Cold War challenges, such as peacekeeping in Africa and the Caribbean, by financing equipment and services in support of forces engaged in these efforts. It will also help the new democratic nations of Central Europe and the New Independent States of the former Soviet Union to obtain the training and equipment needed to participate in regional initiatives such as the Partnership for Peace, and the Baltic Peacekeeping Battalion.

A grant and loan program, FMF is distinguished from FMS, the system through which government-to-government sales occur. In general, FMF provides financing for FMS sales. Select countries, however, are eligible to use FMF for procurement through direct commercial contracts outside of FMS channels.

By meeting demand for U.S. systems, FMF also contributes to a strong U.S. defense industrial base — a critical element of the national defense. FMF also finances sales of defense items that lengthen production runs which can result in lower unit costs for DoD purchases while creating jobs.

*FOREIGN MILITARY FINANCING***FY 1996 FMF**

The FMF requested for FY 1996 will go to support two of the Administration's foreign policy objectives: Building Democracy, in the case of Haiti and Cambodia; and Promoting Peace, particularly Regional Peace and Security goals of the Partnership for Peace and the Baltic Peacekeeping Battalion. Our continuing commitment to assist those who take risks for peace in the Middle East is reflected in our FMF proposals for Israel and Egypt as well as other key states in the region.

The following table depicts the FMF request for FY 1996. Detailed justifications for the proposed programs are found in the Country and Program Papers section.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
FMF Grant	23.491	22.150	24.020

**DESCRIPTION:** The requested funding provides for the cost of administrative activities related to non-FMS security assistance programs implemented by the Unified Commands, Military Departments and DSAA.

**OBJECTIVES:**

- Cost-effectively sustain the necessary workload associated with worldwide administration of FY 95 and prior IMET.
- Support administrative costs for all security assistance activities incurred by the Unified Commands.
- Support administrative costs incurred by the Military Departments and DSAA headquarters for all security assistance activity not related to Foreign Military Sales.
- Fund operating costs of non-FMS activities of overseas security assistance offices (SAO).

**JUSTIFICATION:**

The proposed program level represents the projected costs required to prudently but effectively accomplish the managerial and administrative actions—headquarters, personnel management, budgeting and accounting, office services and facilities, including support for non-FMS functions of the Overseas Security Assistance Offices (SAOs) necessary to manage and implement the non-FMS segments of security assistance programs, as authorized under the AECA and the FAA.

The initiation and expansion of security assistance relationships with many new democracies around the world, but principally in Central Europe, the New Independent States, and South Africa, require the establishment of security assistance organizations (SAOs) in an increasing number of locations over the next few years. The FY 1996 request for Defense Administrative costs will fund the establishment of these SAOs and is essential to the effective management of security assistance programs with these new defense partners.

**EFFECTIVENESS MEASUREMENT:**

- Resources expended for Defense Administrative Costs are judged effective if the relative quality, timeliness and consistent accomplishment of all managerial and administrative actions necessary to carry out this segment of our security assistance mission are maintained or improved.

## FOREIGN MILITARY FINANCING

## FMF ADMINISTRATIVE COSTS

(Dollars in Thousands)

	Actual FY 1994	Estimated FY 1995	Proposed FY 1996
Departmental and Headquarters Administrative Expenses a/	6,603	6,735	7,020
SAO Administrative Expenses a/	16,888	15,415	17,000
Total Budget Authority	23,491	22,150	24,020

a/ Excludes those Defense Security Assistance Agency (DSAA) and overseas security assistance organizations (SAO) costs related to FMS which are financed from sales under sections 21, 22, and 29 of the Arms Export Control Act. See Overseas Military Program Management table for further details on SAO costs.

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
PKO	82.435	74.150 <sup>a</sup>	100.000

The Foreign Assistance Act of 1961, Part II, Chapter 6, as amended, authorizes assistance to friendly countries and international organizations for peacekeeping operations and other efforts at conflict resolution which further U.S. national security interests. For FY 1996 we propose a funding level of \$100 million for voluntary peacekeeping activities.

The number of situations requiring peacekeeping operations has risen dramatically since the end of the Cold War. This trend can be expected to continue in the years ahead. Potential flash points exist in Central and East Asia, Europe, Africa and Latin America. Well-planned peacekeeping operations are a useful and cost effective option for dealing with some conflicts and humanitarian crises. Peacekeeping clearly is not a substitute for a strong national defense and vigorous alliances; but it has a demonstrated capacity, under appropriate circumstances, to separate adversaries, maintain cease-fires, facilitate delivery of humanitarian relief, allow repatriation of refugees and displaced persons, demobilize combatants and create conditions under which political reconciliation may occur and democratic elections may be held. Thus it can reduce the likelihood of interventions by regional powers, prevent small conflicts from proliferating, facilitate the birth and growth of new market economies, contain the cost of humanitarian emergencies, and limit refugee flows.

While the bulk of funding for multilateral peacekeeping operations goes to the United Nations and falls outside the scope of this budget presentation, it is sometimes in the United States interest to support, on a voluntary basis, peacekeeping activities that are not UN mandated and/or are not funded by UN assessments. The Peacekeeping Operations (PKO) account provides the flexibility to, in the appropriate circumstances, proactively support conflict resolution, multilateral peace operations, sanctions enforcement and similar efforts outside the context of assessed UN peacekeeping operations. The PKO account promotes increased involvement of regional organizations in conflict resolution, which can sometimes result in more politically or cost-effective operations. The account is also used to encourage fair-share contributions to joint efforts where there is no formal cost sharing mechanism available. As a result we are often better able to assist countries in creating an environment of security and stability essential to their more rapid social, economic, and political progress. Key objectives of the fund are to:

- Promote peace and security by supporting multilateral peacekeeping initiatives.

<sup>a</sup> Reflects \$850,000 transferred from the PKO account to the International Military Education and Training Account pursuant to P.L. 103-306.

*PEACEKEEPING OPERATIONS*

- Encourage fair-share contributions to peacekeeping efforts from those countries that can and should pay while facilitating the participation of poorer countries when resource constraints would otherwise prevent their taking part.
- Minimize or avoid the use of U.S. troops by supporting the deployment foreign troops for peacekeeping operations

In addition to supporting long-term, non-assessed commitments such as the Multinational Force of Observers (MFO) in the Sinai, and Organization for Security and Cooperation in Europe (OSCE) initiatives, this funding will be used to promote regional involvement in the resolution of neighboring conflicts. Further, the funding request addresses potential operations in Europe and the New Independent States of the Former Soviet Union. Finally, PKO funding will be used to support monitoring and enforcement of United Nations sanctions activities around the world.

The following table lists FY 1996 proposals for PKO funding. Program papers providing descriptions and detailed justifications are included under Regional and Country Programs.

## PEACEKEEPING OPERATIONS

## PEACEKEEPING OPERATIONS

## PROGRAM SUMMARY

*SUB-SAHARAN AFRICA***SUB-SAHARAN AFRICA****OBJECTIVES:**

To further U.S. economic and political interests by assisting sub-Saharan African nations to adopt a system of democratic rule in order to enhance political stability, economic reform, and accountable governance. The specific objectives are:

- Regular, credible and transparent elections.
- Independent and accountable government institutions.
- An activist civil society and strong independent media.

To enhance regional stability by assisting sub-Saharan African nations with the development of a professional, apolitical, and economically affordable military forces and by supporting the deployment of forces to participate in regional peacekeeping operations and other conflict resolution efforts. The specific objectives are:

- Continued African support for, and participation in, international peacekeeping.
- A professional orientation of African militaries toward conflict resolution.
- Continued enhancement of professional competence on the part of African military forces.

**JUSTIFICATION:****Building Democracy**

In no other region has the worldwide trend toward democracy been more evident than in sub-Saharan Africa. Starting with only four democracies in 1989, Africa's political landscape has changed radically over the past five years. Transitional elections in twenty-eight countries, most of them credible, have moved authoritarian states towards democratic rule. Africans are strengthening democratic institutions and civil society, and preparing for at least seven more transitional elections.

The U.S. economic interest in helping to build stable African democracies is quite clear as massive humanitarian assistance, including military resources, and a good share of support for UN operations, flows toward the region in the wake of armed political and ethnic conflicts. Democratic reforms also set the stage for more efficient and accountable governance, greater participation, economic growth and sustainable development. In addition, democratic states tend to make better trading and investment partners.

The U.S. commitment to building democracy is implemented through policy dialogue and a strategic approach to resource allocation in the 48 sub-Saharan countries with which the United

*SUB-SAHARAN AFRICA*

States has diplomatic relations. On the multilateral level, the United States and other donors increasingly coordinate bilateral assistance, and are effectively pressing heads of state toward political and economic reform. Where the struggle for democracy continues, the United States seeks to provide support for reformers through modest programs while continuing to press the government toward greater change where needed.

African political reform is encouraging, but new democracies and countries in transition face difficult challenges, such as struggling economies, high levels of poverty, disease and environmental degradation, high population growth rates and, in some countries, entrenched authoritarian leaders, recalcitrant militaries, or civil conflicts which threaten the welfare of millions of people. Even where elections were most successful, a democratic culture and institutions are not easily or quickly established.

Africans continue to need outside assistance as they move toward ever greater political reform. While the bulk of U.S. assistance for Africa is funded through Development Assistance and therefore is outside the scope of this presentation, the ESF funds requested for the Africa Regional Democracy Fund play a critical role in supporting countries in transition through smaller, short-term, strategic interventions which are high-impact and cost-effective.

**Peacekeeping and Building a Democratic Military**

The United States holds as its security interests in Africa, apart from the benefits from military access, overflight and landing rights in a number of states, the objectives of fostering security, stability, and resolution of the many conflicts that plague the region. African militaries take an important part in the transition to and security of, democratic, stable governments. U.S. military contacts with, and assistance to, African militaries promote a positive assertion for the role of the armed forces in democratic societies, as well as respect for human rights and conflict resolution.

African militaries are often oversized and dominate scarce public spending. Through the IMET program, the United States can assist countries in developing defense management expertise and help African nations to downsize and rationalize their military force structure and to undertake technical and bureaucratic steps leading to more affordable armed forces. IMET training will also seek to promote development of national militaries with characteristics which support democracy: an apolitical role for the military; subordination of the military to civil government; respect for the rule of law; respect for human rights; primary military mission of external defense of the state; fiscal responsibility; and personal integrity. These characteristics have been and will continue to be the focus of our current range of interface with African militaries -- IMET (including defense resource management training), regional seminars, and various exercise programs.

Africa currently is witness to a substantial number of conflicts and regional conflict can reasonably be expected to continue for the foreseeable future. While peacekeeping is routinely referred to as a "growth industry," neither the U.S. nor the UN are currently inclined to take a proactive first person on-the-ground role in resolving most African conflicts. African militaries, notably those from Ghana, Senegal, Niger, Botswana, Zimbabwe, Tanzania, Uganda, Ethiopia, Zambia, Malawi, and Namibia, operating under UN and prospectively under OAU auspices, have contributed forces to international peacekeeping operations in

*SUB-SAHARAN AFRICA*

Cyprus, the Middle East, Cambodia, Desert Storm, Somalia, Mozambique, and Rwanda either in support or in lieu of U.S. and Western forces. FY 1996 PKO assistance will help to support African militaries' participation in international peacekeeping operations, either bilaterally or under the auspices of regional organizations such as the Organization of African Unity.

**EFFECTIVENESS MEASUREMENT:**

- Democratic rules of the game are established or progress is made toward that end in countries in transition. Regular, open and transparent elections occur, enhancing the accountability of elected officials with regard to human rights, political freedoms, economic reform and corruption.
- Democratic institutions such as the cabinet, legislature and judiciary exhibit greater independence, efficiency, and responsiveness to the needs of the governed. Civil society and the independent media are allowed to represent the interests of the governed, functioning as watchdogs on government and serving as educators regarding democracy and human rights.
- Participation in international peacekeeping operations indicates African support for international peace and stability.
- Initiation of a defense requirements review to design post-demobilization military force structures for selected African armed forces, and the preparation of a downsizing plan with time lines indicates successful commencement of military downsizing efforts.

## SUB-SAHARAN AFRICA

## AFRICA REGIONAL DEMOCRACY FUND

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide ESF for region-wide democracy building projects.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	0.000	0.000	14.350

## OBJECTIVE:

- Promote democratic governance and respect for basic human rights.

## JUSTIFICATION:

The Africa Regional Democracy Fund will promote democratic governance and basic respect for human rights on a regional basis through programs managed by African and U.S. non-governmental organizations. This kind of assistance is critical, especially in countries where no USAID mission is present to manage bilateral projects. The Regional Democracy Fund will also provide types of support for political transitions which are outside the scope of our Development Assistance request. These include work with the military and police, and balance of payments assistance. The Regional Democracy Fund will also reinforce and complement other USAID-funded bilateral democracy activities.

Specifically, programs carried out under the Africa Regional Democracy Fund will:

- Promote credible elections.
- Fund investigative efforts to identify and prosecute human rights violators.
- Strengthen effective grassroots political participation through the development of an active civil society.
- Train responsive, independent new legislatures.
- Improve the administration of justice.
- Assist new or weak democracies in responding to urgent economic needs.

## EFFECTIVENESS MEASUREMENT:

- Greater transparency in elections; fewer cases of electoral fraud; higher voter turnout; fair electoral laws; and effective political party and NGO poll watching.
- Fewer human rights violations observed and reported.

*SUB-SAHARAN AFRICA*

- Growth in number and effectiveness of grassroots political and human rights organizations, reflecting higher political participation and a more diverse civil society.
- Independent legislatures whose members understand the legislative process, the role of a loyal opposition, and ways to communicate with and represent constituents.
- Improvements in the administration of justice and increased independence of judicial officials evidenced by fair (if at times politically unpopular) decisions.
- Reductions in balance of payments deficits or other public obligations resulting in greater economic and political stability.

## SUB-SAHARAN AFRICA

## AFRICA REGIONAL PEACEKEEPING

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide requisite peacekeeping materiel and training assistance to the following countries to facilitate their participation in international and regional peacekeeping operations: Botswana, Congo, Eritrea, Ethiopia, Ghana, Kenya, Malawi, Mali, Namibia, Niger, Senegal, South Africa, Tanzania, Uganda, Zambia, and Zimbabwe.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
PKO	11.000	10.050	18.000

## OBJECTIVE:

- Enhance regional stability by assisting selected African militaries to participate in peacekeeping operations under the auspices of the Organization of African Unity and/or the United Nations.

## JUSTIFICATION:

A significant number of African countries have actively contributed military personnel and units for duty in international peacekeeping operations. African contingents participated in peacekeeping in the Congo Crisis during the 1960s, and in Cyprus, Lebanon, Operation Desert Storm, ex-Yugoslavia, Cambodia, Somalia, Mozambique, Rwanda and numerous other operations in subsequent years. Additional African states have also expressed the desire to participate in international peacekeeping, but have lacked resources, such as appropriate equipment and specialized training.

## EFFECTIVENESS MEASUREMENT:

- Increased commitment by select African states to participate in conflict resolution and peacekeeping activities.
- Wider African participation in Organization of African Unity and/or United Nations peacekeeping operations.

## SUB-SAHARAN AFRICA

## ANGOLA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	0.000	0.000	10.000

## OBJECTIVES:

- Promote Angola's democratic development.
- Promote economic stability.

## JUSTIFICATION:

The history of U.S. involvement in Angola, combined with that country's failure to complete the demobilization process prior to 1992 elections and the resulting resumption of civil war, have made bringing an end to Angola's bloody conflict a U.S. foreign policy priority in Africa. With the November 20 signing of the Lusaka Protocol, the Angolans and International community are engaged in implementing this political and military framework for peace. The success of the peace process depends on more than the commitment of the Angolan parties and peacekeepers. Significant resources are needed to support demining, quartering of UNITA troops, demobilization and reintegration of ex-combatants. We will also have to begin addressing long-term democratization, human rights and sustainable development requirements.

FY-96 ESF funds will be used for two broad objectives which are linked to the peace process: promoting democratic development and economic stability.

Three million dollars will be devoted to democratic development programs. Specific initiatives would include support for the rule of law and human rights through promoting an independent judiciary with technical assistance to enhance the independence and professionalization of the judiciary, and for training on human rights standards and investigative techniques within the judiciary and Ministry of Justice. Additionally, we would promote a representative and accountable legislature through technical assistance and training on a non-partisan basis to enhance the policy analysis and legislative skills of parliamentarians, to instruct MPs on the role of parties and on coalition-building, and to develop effective parliamentary committees. Finally, some funding would promote a participatory civil society through enhancing the status of women by funding NGO projects to promote women's economic, civil, political and human rights through education and legal aid projects.

Five million dollars will be devoted to short term economic stability efforts concentrated on the four provinces most affected by the war: Uige, Malange, Bie and Huambo. This assistance would dovetail with U.N. plans for demobilization and reintegration of former combatants and the repatriation of Angola's displaced and refugee populations. Through an umbrella grant, we will support quick impact projects aimed at revitalizing communities devastated by the war — allowing renewed economic activities in these once prosperous areas.

*SUB-SAHARAN AFRICA*

The remaining two million dollars will be devoted to promote more transparent and sound Angolan Government economic policy decisions based on sustainable, broad-based, market oriented principles. Specific initiatives would include training and advisory support for key economic ministries and the development of a credible economic data-base.

**EFFECTIVENESS MEASUREMENT:**

- Measurable increase in economic and agricultural activity in targeted provinces.
- The judiciary assumes independence from party politics in cases involving human rights and government corruption. The Ministry of Justice actively pursues allegations of corruption and human rights abuse.
- The National Assembly assumes a position of greater influence vis-a-vis the Executive Branch creating greater transparency in Government operations and diffusion of authority. Within the National Assembly, opposition parties voice constructive criticism, begin to form cross-cutting coalitions, and develop legislative reforms.
- Market-oriented and transparent economic policy decisions by the Government of Angola.

## SUB-SAHARAN AFRICA

## BENIN

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.099	0.100	0.150

**OBJECTIVE:**

- Enhance regional stability by assisting Benin in the development of a professional, apolitical, and economically affordable military force.

**JUSTIFICATION:**

Following its transition to democratic government and a free-market economy, the Government of Benin has identified the need to restructure and reduce the size of its armed forces to minimize the burden that the defense budget places on the national economy. However, it lacks the resources to undertake such an effort. The government also seeks to transform the military from being an instrument of the ruling party, to being an apolitical force dedicated to the defense of the nation. Training assistance will permit the continuation of military professionalization efforts.

**EFFECTIVENESS MEASUREMENT:**

- Notable progress towards development of an apolitical professional military, with respect for democratic institutions, human rights, and proper military-civilian roles in a democratic society.

## SUB-SAHARAN AFRICA

## BOTSWANA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.364	0.450	0.475

**OBJECTIVES:**

- Enhance the professionalism of the Botswanan military forces.
- Encourage Botswana to continue its support for, and participation in, international peacekeeping operations.

**JUSTIFICATION:**

Botswana has been a willing participant in international peacekeeping operations, but needs training assistance to meet its security objectives for national defense, to continue the process of professionalization and to permit continued credible participation in international peacekeeping operations. We propose to support this goal by providing various basic and advanced officers and non-commissioned officers professional development training programs.

**EFFECTIVENESS MEASUREMENT:**

- Notable progress towards the enhancement of professionalism of the Botswanan armed forces.
- Continued participation in international peacekeeping operations, indicating Botswanan support for international peace and stability.

## SUB-SAHARAN AFRICA

## BURUNDI

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.100	0.125

## OBJECTIVES:

- Enhance the professionalism of the Burundi armed forces.
- Encourage the Burundi military's respect for human rights and civilian control of the military in a democracy.

## JUSTIFICATION:

Burundi is in a fragile political state with deep divisions over the distribution of power within the society and polity. The role played by the Burundi military will significantly affect the stability of both Burundi and its neighboring states in central and eastern Africa. Our goal is to bring about greater professionalism within the military, concern for human rights and regard for the role of the military in a democratic process. We propose to support this goal by providing training on these issues for officers in the military forces of Burundi.

## EFFECTIVENESS MEASUREMENT:

- Notable progress towards development of an apolitical, professional military with respect for human rights and proper military-civilian roles in a democratic society.

## SUB-SAHARAN AFRICA

## CAMEROON

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.100	0.000	0.100

## OBJECTIVES:

- Improve civil-military relations, as manifested by continued respect by the military for civilian control.
- Promote greater competence by the military in managing limited resources.

## JUSTIFICATION:

Cameroon is a key country in the central Africa sub-region, and a democratic Cameroon could potentially play a leadership role among its neighbors. A professional and apolitical military which understands democratic norms will further U.S. interests in Cameroon by enhancing political (and therefore economic) stability and respect for human rights.

IMET assistance is requested to foster democratic civil-military relations. The military forces in Cameroon in general, and the segment trained in the U.S. in particular, have maintained a neutral role in the control of civil unrest and have refrained from taking actions against the government despite recurring pay and morale problems and continuing signs of widespread dissatisfaction. U.S.-trained Cameroonian military are among the most outspoken critics of the current system of government. Junior officers tend to be more aggressive in this regard than mid-grade officers who are more cautious at higher levels of the military hierarchy.

Improvement in defense resource management remains difficult due to continued corruption and political/ethnic competition within the government.

In view of these conditions, the United States proposes that IMET aimed at increasing respect for human rights and the apolitical role of the military in a democracy be provided for the Cameroonian military forces. Courses appropriate to this end include Civil-Military Relations, Defense Resources Management, the Navy Justice School series, education, and courses taught by the Defense Equal Opportunity Management Institute.

## EFFECTIVENESS MEASUREMENT:

- Civil-military relations improve, as manifested by continued respect by the military for civilian control and greater competence by the military in managing limited resources.

## SUB-SAHARAN AFRICA

## CAPE VERDE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.075	0.100

## OBJECTIVE:

- Foster increasing respect for human rights and the apolitical role of the military in a democracy.

## JUSTIFICATION:

In part, because of the example Cape Verde sets for other Portuguese-speaking African countries, the continuation and strengthening of multiparty democratic rule is a major U.S. policy interest in Cape Verde. Cape Verde supplies peacekeepers to Mozambique, has worked for peace in Angola and served with distinction on the UN Security Council during 1992 and 1993. The conduct of the Cape Verdean military will be critical to the country's continued progress on democratization, and the military looks to the United States for assistance in developing a professional competence with due respect for civilian control.

In 1991 Cape Verde became the second African country (after Mauritius) to change governments peacefully following a popular election won by an opposition party. Replacing a one-party, Marxist regime that had ruled since 1975, the new Government has worked diligently to carry out its promises of democracy, protection of human rights, and economic liberalization. Unfortunately, aside from symbolic changes such as a new flag, there has been little to satisfy the heightened expectations brought about by the change in government. In February 1994, Prime Minister Veiga headed off a strong challenge from party colleagues who are unhappy with the slow pace of economic development and are now talking of starting a third party.

Courses appropriate to enhanced incorporation of democratic values include Civil-Military Relations, Defense Resources Management, the Navy Justice School series and courses taught by the Defense Equal Opportunity Management Institute.

## EFFECTIVENESS MEASUREMENT:

- Civil-military relations are enhanced, as manifested by continued respect by the military for civilian control and greater competence by the military in managing limited resources.

## SUB-SAHARAN AFRICA

## CENTRAL AFRICAN REPUBLIC

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.175	0.125

## OBJECTIVES:

- Foster democratic civil-military relations, including respect for the rule of law and human rights.

## JUSTIFICATION:

The Central African Republic is one of Africa's newest multiparty democracies, having held successful elections in late 1993. The new government has evidenced respect for human rights and is seeking to implement further political and economic reforms. The C.A.R.'s strategic location at the center of the continent and willingness to support regional humanitarian operations and promote negotiations in neighboring countries' conflicts make them an important partner, emphasizing the need to consolidate the C.A.R.'s new democracy. A professional, apolitical and pro-democratic military will be an important bulwark for this nascent democracy.

The IMET program for C.A.R. military personnel has already led to a strongly pro-American officer corps more cognizant of its professional obligations, as witnessed in the positive role the army played during the 1993 presidential elections. As requested by the independent electoral commission, the army provided impartial and non-threatening security for polling locations. The 1996 training goal for the military forces is to increase their professional competence in managing limited resources and accountability to civilian government authorities. FY 1996 IMET will also foster respect for the rule of law and human rights by military and security forces.

## EFFECTIVENESS MEASUREMENT:

- Increased respect for human rights and the rule of law by military and security forces evidenced by fewer violations observed and reported.
- Improvement in civil-military relations, as manifested by continued respect by the military for civilian control and greater competence by the military in managing limited resources.

## SUB-SAHARAN AFRICA

## CHAD

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.225	0.175	0.100

## OBJECTIVES:

- Assist the Chadian government in rationalizing the size of their military establishment.
- Promote improved civil-military relations.

## JUSTIFICATION:

U.S. support for completion of the democratic transition in Chad, is in the national interest because of Chad's strategic location and its significant oil reserves. A stable, democratic government in Chad will be an important bulwark against spreading terrorism, radicalism and anti-Americanism as fomented by Libya and Sudan, and will be a stabilizing force on the whole central African region. U.S. investment in Chad's oil industry is already about \$1 billion and will increase significantly when a proposed oil pipeline through Cameroon is built. A professional, apolitical and pro-democratic military will be a prerequisite for the success of a democratic regime in Chad.

FY 1996 IMET assistance is requested to foster democratic civil-military relations. Following years of war with Libya and internal conflicts, the Chadian Government now finds itself with an overlarge military establishment. It dominates scarce domestic resources, straining the national budget and impeding improved civil-military relations.

## EFFECTIVENESS MEASUREMENT:

- The initiation of a Chadian plans to downsize its military.
- Improvement of civil-military relations, as manifested by continued respect by the military for civilian control and greater competence by the military in managing limited resources.

## SUB-SAHARAN AFRICA

## COMOROS

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.000	0.075

## OBJECTIVE:

- Promote improved civil-military relations, emphasizing the proper role of the military in a democracy.

## JUSTIFICATION:

The United States' interest in promoting democracy in the Comoros revolves around the need to establish a bulwark against the potential influence of radical fundamentalism in the region. The weakness of the Comorian economy is a significant obstacle to the country's transition to democracy.

The Comoros' defense force has shown itself to be a disciplined service, and its leadership has demonstrated its acceptance of civilian control. Despite three attempted coups in the past five years, the Comoro military has remained loyal to the civilian government. Continued control of the military by civilian authorities is a prerequisite for the ongoing success of democracy in the Comoros.

The Federal Islamic Republic of Comoros comprises three islands and claims a fourth, Mayotte, which is still governed by France. Until the assassination of President Abdallah in November 1989, the Comoros was a de facto one-party state. Early in 1990, opposition politicians returned from exile and a wide spectrum of political leaders and eight political parties contested presidential elections in two stages. The acting president, Said Mohamed Djohar, emerged the winner in the second round. The Djohar coalition government went through several reorganizations and survived three coup attempts, the most recent in September of 1992 by two sons of the late President Abdallah.

In view of the fragile democratic circumstances in the Comoros and the critical nature of continued defense force support for civilian authorities, the administration proposes that IMET on human rights and the apolitical role of the military in a democracy be provided for Comoros military forces.

## EFFECTIVENESS MEASUREMENT:

- Continued respect by the Comoros defense force for roles and activities in support of civilian authority.

## SUB-SAHARAN AFRICA

## CONGO

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.109	0.175	0.165

## OBJECTIVES:

- Enhance regional stability by assisting Congo with the development of a professional, apolitical, and economically affordable military force.
- Encourage Congo to continue its support for, and participation in, international peacekeeping operations.

## JUSTIFICATION:

The Government of Congo seeks to transform the military from being an instrument of the ruling party to being an apolitical, professional force dedicated to the defense of the nation. Congo has been a strong supporter of international peacekeeping operations, providing military observers for the Organization of African Unity peacekeeping effort in Rwanda in 1993, and peacekeepers for the UN sanctioned peacekeeping operation in Rwanda in 1994. Training assistance will permit continued credible participation in international peacekeeping operations and enhance professionalism by providing various basic and advanced officer and non-commissioned officer professional development training.

## EFFECTIVENESS MEASUREMENT:

- Notable progress towards development of an apolitical, professional military with respect for human rights and proper military-civilian roles in a democratic society.
- Continued participation in international peacekeeping operations, indicating Congo's support for international conflict resolution efforts.

## SUB-SAHARAN AFRICA

## COTE D'IVOIRE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.150	0.150	0.160

## OBJECTIVES:

- Promote civil-military relations, emphasizing the proper role of the military in a democracy.

## JUSTIFICATION:

U.S. interests in West Africa will be facilitated through the regional leadership exercised by a democratic Cote d'Ivoire. Under President Bedie, Cote d'Ivoire has emerged as a major supporter of regional peace, stability, and cooperation. President Bedie has encouraged American involvement in his country's economy, and the United States also has a stake in supporting Cote d'Ivoire as a noteworthy example of economic progress in the West African region.

The Ivorian military forces have maintained a neutral role in the control of civil unrest and have refrained from taking actions against the government despite recurring pay and morale problems. U.S. trained Ivorian officers are consistently assigned highly visible positions in the military; candidates are carefully chosen and must be approved by the minister of defense. Defense training provides useful exposure to the U.S. model of civilian-military relations. However, improvement in defense resource management remains difficult due to continued economic decline and budgetary constraints imposed on the military.

In view of these conditions, the United States proposes that defense training be provided for Ivorian military forces. Courses appropriate to enhanced incorporation of democratic and human rights values include Civil-Military Relations, Defense Resources Management, the Navy Justice School series, the Law of War, Judge Advocate General education, and courses taught by the Defense Equal Opportunity Management Institute.

## EFFECTIVENESS MEASUREMENT:

- Improved respect and sensitivity by the military for human rights through integration of human rights training in military training courses, increased media attention to the issue and introduction of accountability mechanisms for human rights violations.
- Improved civil-military relations, as manifested by continued respect by the military for civilian control and greater competence by the military in managing limited resources.

## SUB-SAHARAN AFRICA

## DJIBOUTI

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
ESF	1.000	0.000	0.000
IMET	0.106	0.120	0.150

## OBJECTIVES:

- Enhance regional stability by assisting Djibouti in the development of a professional, apolitical, and economically affordable military force.

## JUSTIFICATION:

Given Djibouti's strategic location and steady movement toward accommodating the rebel movement in 1994, the U.S. has an interest in assisting Djibouti's full transition to Democracy. U.S. assistance will also provide tangible evidence of our appreciation for Djibouti's unstinting support for U.S. military activities in the Horn.

While maintaining the military's mission to defend the state, the Djiboutian Government also seeks to transform the military's professional culture from a wartime to a nation building outlook. IMET assistance will permit the continuation of military professionalization efforts and support the military's participation in the post-conflict national reconstruction.

## EFFECTIVENESS MEASUREMENT:

- Increased progress towards development of an apolitical, professional military dedicated to nation-building and respectful of the proper military-civilian roles in a democratic society.

## SUB-SAHARAN AFRICA

## ERITREA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.082	0.200	0.250

**OBJECTIVES:**

- Enhance regional stability by assisting Eritrea in the development of a professional, apolitical, and economically affordable military force.
- Encourage Eritrea's support for, and participation in, international peacekeeping operations.

**JUSTIFICATION:**

While maintaining the military's mission to defend the state, the Eritrean Government seeks to transform the military's professional culture from a wartime to a nation building outlook. Training assistance will permit the continuation of military professionalization efforts, permit credible participation in international peacekeeping operations and support the military's involvement in the post-conflict national reconstruction.

**EFFECTIVENESS MEASUREMENT:**

- Increased progress towards development of an apolitical, professional military dedicated to nation-building and respectful of the proper military-civilian roles in a democratic society.
- Participation in international peacekeeping operations, indicating Eritrean support for international peace and stability.

## ETHIOPIA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.113	0.250	0.300

**OBJECTIVES:**

- Enhance regional stability by assisting Ethiopia in the development of a professional, apolitical, and economically affordable military force.
- Encourage Ethiopia's continued support for, and participation in, international peacekeeping operations.

**JUSTIFICATION:**

While maintaining the military's mission to defend the state, the Ethiopian Government also seeks to transform the military's professional culture from a wartime to a nation building outlook. IMET will permit the continuation of military professionalization efforts, permit credible participation in international peacekeeping operations and support the military's involvement in the post-conflict national reconstruction.

**EFFECTIVENESS MEASUREMENT:**

- Increased progress towards development of an apolitical, professional military dedicated to nation-building and respectful of the proper military-civilian roles in a democratic society.
- Continued participation in international peacekeeping operations, indicating Ethiopian support for international peace and stability.

**OBJECTIVES:**

- Enhance the professionalism of the Ghanaian military forces.
- Encourage Ghana to continue its support for, and participation in, international peacekeeping.

**JUSTIFICATION:**

Ghana has been a willing participant in international peacekeeping operations, but needs training assistance to meet its security objectives for national defense, to continue the process of professionalization and to permit continued credible participation in international peacekeeping operations. We propose to support this goal by providing various basic and advanced officers and non-commissioned officers professional development training programs.

**EFFECTIVENESS MEASUREMENT:**

- Continued progress towards the enhancement of professionalism of the Ghanaian armed forces.
- Continued participation in international peacekeeping operations, indicating Ghanaian support for international peace and stability.

## SUB-SAHARAN AFRICA

## GUINEA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

- Continued participation in international peacekeeping operations, indicating Guinean support for international peace and stability.

## SUB-SAHARAN AFRICA

## GUINEA-BISSAU

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.102	0.075	0.100

## OBJECTIVE:

- Enhance the professionalism of the Guinea-Bissau military forces.

## JUSTIFICATION:

Guinea-Bissau needs training assistance to meet its security objectives for national defense and to permit continued credible participation in operations providing coastal security. Our IMET program to date has been effective in assisting the reorganization of the military's administrative system, focusing attention on resource management. A graduate of Judge Advocate General training has returned to Guinea-Bissau to be the chief attorney for the military court. We propose to continue supporting these reforms by providing training to the military forces of Guinea-Bissau.

## EFFECTIVENESS MEASUREMENT:

- Increased progress toward enhancement of the military's ability to provide an adequate national defense and credible force to participate in coastal security operations.
- Continued commitment by the Guinea-Bissau military to a democratic society which respects human rights and regional stability.

## SUB-SAHARAN AFRICA

## KENYA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.288	0.280	0.350

## OBJECTIVES:

- Enhance the professionalism of the Kenyan military forces.
- Encourage Kenya's continued support for, and participation in, international peacekeeping operations.

## JUSTIFICATION:

Kenya has been a willing host for numerous international peacekeeping and humanitarian missions in the region. The Kenyan military has maintained an apolitical, professional role that enhances regional security in East Africa, but needs training assistance to meet its security objectives for national defense, to enhance professionalism and to permit credible participation in international peacekeeping operations. We propose to support this goal by providing various basic and advanced officer and non-commissioned officer professional development training programs.

## EFFECTIVENESS MEASUREMENT

- Notable progress towards the enhancement of professionalism of the Kenyan armed forces.
- Continued participation in international peacekeeping operations.
- Continued access to Kenyan ports and airfields for the achievement of regional objectives.

## SUB-SAHARAN AFRICA

## LESOTHO

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.050	0.075

## OBJECTIVES:

- Improve civil-military relations, emphasizing the proper role of the military in a democracy.

## JUSTIFICATION:

The United States has an interest in strengthening democracy in Lesotho in order to prevent the country from descending into chaos and disorder which could negatively affect South Africa, its only neighbor and a new democracy facing challenges of its own.

A fully successful transition to sustainable democratic rule in Lesotho requires redefinition of the army's role and training to increase professionalism and respect for civilian authority in the ranks. There clearly remains much improvement to be made in terms of establishing civilian control, a concept military officers understand in principle, but have difficulty putting into practice. In view of the fragility of democracy in Lesotho and the importance of avoiding a military coup, the administration proposes that courses focused on human rights and military operations and civil-military relations be provided by mobile training teams in Lesotho, in order to bring the resource materials and training to the greatest number of individuals possible.

## EFFECTIVENESS MEASUREMENT:

- Improved civil-military relations, manifested by greater civilian control over the military.

## SUB-SAHARAN AFRICA

## MADAGASCAR

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.000	0.100

**OBJECTIVE:**

- Enhance the professionalism of the Malagasy military force.

**JUSTIFICATION:**

Madagascar has completed a transition from over 15 years of socialist dictatorship to a multiparty democracy; economic restructuring toward a market-based economy has begun. To sustain the momentum, democracy must become more firmly anchored in civic society because the economic challenges are daunting.

The political turbulence of 1991-1992 underscored the need for the armed forces to continue to adhere to their apolitical role. A policy of encouraging the military to become a nation building/civic action institution assumes added importance in the effort to rebuild the devastated economic infrastructure. We propose to support this goal by providing, through IMET, courses which reinforce respect for human rights, military justice systems and the rule of law, and the role of the military in a democratic society.

**EFFECTIVENESS MEASUREMENT:**

- Notable progress toward development of an apolitical, professional military dedicated to nation-building and respectful of the proper military-civilian roles in a democratic society.

IMET	0.134	0.155	0.150

## OBJECTIVES:

- Enhance regional stability by assisting Mali with the development of a professional, apolitical, and economically affordable military force.
- Encourage Mali to continue its support for, and participation in, international peacekeeping.

## JUSTIFICATION:

The Government of Mali seeks to transform the military to that of an apolitical force dedicated to the defense of the nation. Mali has been a strong supporter of international peacekeeping operations, providing military observers for the Organization of African Unity peacekeeping effort in Rwanda in 1993, and peacekeepers for the UN sanctioned peacekeeping operation in Rwanda in 1994. Training assistance will support continued credible participation in international peacekeeping operations and enhance professionalism by providing various basic and advanced officer and non-commissioned officer professional development training.

## EFFECTIVENESS MEASUREMENT:

- Notable progress towards development of an apolitical, professional military, respectful of the proper military-civilian roles in a democratic society.
- Continued participation in international peacekeeping operations, indicating Mali's support for international conflict resolution efforts.

## SUB-SAHARAN AFRICA

## MOZAMBIQUE

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.125	0.125

**OBJECTIVE:**

- Enhance regional stability by assisting Mozambique in the development of a professional, apolitical, and economically affordable military force.

**JUSTIFICATION:**

Holding its first democratic elections in 1994, Mozambique is currently engaged in a massive effort to demobilize the two major opposing military establishments and integrate them into a new unified national armed force. A large international peacekeeping contingent is in place in Mozambique and a successful transition would boost confidence in such peacekeeping initiatives.

The proposed FY 1996 IMET program will reinforce democracy through courses that emphasize respect for human rights and the role of the military in a democracy. It will also provide professional military education to mid-level officers in the unified armed force.

**EFFECTIVENESS MEASUREMENT:**

- Notable progress towards depoliticizing the military's professional culture, and cultivating its respect for human rights and its dedication to the defense of the nation.
- Continued acceptance by the military of the leadership role of the civilian government, leading to increased peace and stability.

## SUB-SAHARAN AFRICA

## NAMIBIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.220	0.150	0.250

## OBJECTIVES:

- Enhance the professionalism of the Namibian military forces.
- Encourage Namibia to continue its support for, and participation in, international peacekeeping.

## JUSTIFICATION:

Namibia has built a successful multiparty democracy following independence in 1990, becoming a model of national reconciliation to emerging democracies in the region and on the continent. Individual rights are protected under the Constitution, a document of which Namibians across the political spectrum are proud and which all parties helped craft. The USG supports the professional development of the small Namibian Defense Force as an apolitical body, respectful of human rights and democratic values, including civilian control of the military. Namibia has demonstrated a willingness to participate in peacekeeping operations, contributing equipment and personnel to the UN peacekeeping operation in Cambodia. Training assistance is necessary to enable Namibia to meet its security objectives for national defense, to enhance professionalism, and to permit continued credible participation in international peacekeeping operations. The proposed FY 1996 IMET program will support this goal by providing various basic and advanced officer and non-commissioned officer professional development training programs.

## EFFECTIVENESS MEASUREMENT:

- Notable progress towards maintaining the military's apolitical professional culture, and cultivating its respect for human rights and its dedication to the defense of the nation.
- Continued participation in international peacekeeping operations, indicating Namibian support for international peace and stability.

## SUB-SAHARAN AFRICA

## NIGER

## SUB-SAHARAN AFRICA

## ORGANIZATION OF AFRICAN UNITY

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: To provide assistance to the Organization of African Unity (OAU) in supporting peacekeeping operations.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
PKO	2.000	5.000	5.000

## OBJECTIVE:

- To promote peace and stability in Africa by supporting OAU peacekeeping operations and conflict resolution efforts.

## JUSTIFICATION:

The Organization of African (OAU) is in a unique position to conduct early intervention in African conflicts, thereby reducing the magnitude of human suffering and the level of destruction. The OAU has undertaken the commitment to actively engage in conflict prevention and resolution of crises on the African continent. During 1992-1993, the OAU conducted peacekeeping in Rwanda, where it provided and supervised a force of military observers, while OAU and other African mediators brokered a negotiated settlement to the Rwandan civil war. In December 1993, the OAU dispatched a small observer mission to Burundi as a confidence building measure in that ethnically divided country. For FY 1996, PKO funding will provide flexible support for OAU peacekeeping and conflict resolution efforts, allowing African nations to take the lead in resolving regional conflicts and averting humanitarian disasters.

## EFFECTIVENESS MEASUREMENT:

- Deployment of credible regional peacekeeping and conflict resolution operations by the OAU
- Reduced necessity for UN and/or U.S. peacekeeping and emergency relief efforts in Africa.

## SUB-SAHARAN AFRICA

## SAO TOME &amp; PRINCIPE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.075	0.075

## OBJECTIVES:

- Improve civil-military relations through training, emphasizing the proper role of the military in a democracy.

## JUSTIFICATION:

Sao Tome and Principe held free and fair multi-party elections in 1991 which replaced the ruling party with an opposition party. Political stability, respect for human rights, and the continuation of democratic governance in a region which has experienced problematic political transitions and human rights abuses are the major U.S. interests in Sao Tome and Principe (STP). The United States also is completing a \$61 million Voice of America facility in STP which will soon be operational.

Since the constitutional reforms of 1990 and the elections of 1991, Sao Tome and Principe has made great strides toward developing its democratic institutions and further guaranteeing the civil and human rights of its citizens. Legislative elections are scheduled again in October of 1994. While there have been disagreements and political conflicts within the branches of government and the national assembly, the debates were carried out and resolved in open, democratic, and legal fora, in accordance with the provisions of GSTP law. The GSTP's respect for human rights has improved measurably in recent years.

The STP military forces, while maintaining an impartial position for the elections, has requested U.S. assistance to improve their level of competence in managing meager resources efficiently and in serving the civilian government in efforts compatible with the role of a military in a democracy. To achieve these objectives, the U.S. proposes that IMET on defense resources management, human rights and the role of an apolitical military in a democracy be provided for Sao Tomean military forces.

## EFFECTIVENESS MEASUREMENT:

- Civil-military relations improve, as manifested by increased respect by the military for civilian control and greater competence by the military in managing limited resources.

## SUB-SAHARAN AFRICA

## SENEGAL

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.450	0.600	0.600

## OBJECTIVES:

- Enhance the professionalism of the Senegalese military forces.
- Encourage Senegal to continue its support for and participation in international peacekeeping operations.

## JUSTIFICATION:

Senegal has been a willing participant in international peacekeeping operations, but needs training assistance to meet its security objectives for national defense, to continue the process of professionalization and to permit continued credible participation in international peacekeeping operations. We propose to support this goal by providing various basic and advanced officers and non-commissioned officers professional development training programs.

## EFFECTIVENESS MEASUREMENT:

- Notable progress towards the enhancement of professionalism of the Senegalese armed forces.
- Continued participation in international peacekeeping operations, indicating Senegal's support for international peace and stability.

## SUB-SAHARAN AFRICA

## SEYCHELLES

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.000	0.060

## OBJECTIVES:

- Provide economic support for a struggling new democracy.
- Promote civil-democratic relations through training, emphasizing the proper role of the military in a democracy.

## JUSTIFICATION:

Presidential and legislative elections held in the Seychelles in mid-1993 were the first multiparty elections to be held since a June 1977 military coup, and were judged to be credible by national and international observers. Only one opposition candidate gained a seat in the National Assembly, and President France Albert Rene was returned to power. Since the democratic transition, the government has made substantial progress in respecting the rights of its citizens.

IMET is requested to foster democratic civil-military relations. In prior years, the IMET program, which emphasized Coast Guard training, was quite important to Seychelles, which has a large, strategically located economic exclusion zone. For example, in 1993 Seychelles captured the M/V Maria which was illegally transporting arms (including Serbian arms) to Somalia. In response to the re-establishment of multiparty democracy in the Seychelles, training is proposed for the military to improve defense resource management and enhance incorporation of democratic values. Proposed courses will emphasize civil-military relations, defense resources management and military justice.

## EFFECTIVENESS MEASUREMENT:

- Improvement of civil-military relations, as manifested by continued respect by the military for civilian control and greater competence by the military in managing limited resources.

## SUB-SAHARAN AFRICA

## SIERRA LEONE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.050	0.120

## OBJECTIVES:

- Improve civil-military relations, with emphasis on the proper role of the military in a democracy.

## JUSTIFICATION:

The establishment of a stable, democratic government in Sierra Leone is an important U.S. policy interest in West Africa. The United States has benefitted, directly and indirectly, from Sierra Leone's significant contributions to Liberian and other peacekeeping missions, including the Persian Gulf. The U.S. supported Sierra Leone's successful structural adjustment program, and historically have maintained a small military aid program. The United States also funds 70 percent of the cost of emergency relief for more than one million Sierra Leoneans displaced by civil war. The government's success with democracy, economic, and security programs will promote peace and stability at home and in neighboring Liberia.

As the Government of Sierra Leone prepares for elections, it has identified the need to reduce the size of its armed forces and return the military to professional standards appropriate to institutions operating in an elected democratic government and to minimize the burden that the defense budget places on the national economy, but has lacked the resources to undertake such an effort. Sierra Leone also seeks to depoliticize the military's professional culture, and change it to that of an apolitical force dedicated to the defense of the nation. The military has also been implicated in human rights abuses.

In view of the expressed intention to return to democratic traditions in Sierra Leone and the need to increase respect for human rights, the FY 96 IMET program will offer courses such as civil-military relations, defense resource management, military justice, and courses taught by the Defense Equal Opportunity Management Institute.

## EFFECTIVENESS MEASUREMENT:

- Human rights abuses by the military decline.

## SUB-SAHARAN AFRICA

## SOUTH AFRICA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.104	0.250	0.500

**OBJECTIVE:**

- Encourage South Africa to support and participate in international peacekeeping operations.

**JUSTIFICATION:**

The peaceful transition to nonracial democracy in South Africa has had a significant impact on national and regional stability and political and economic confidence. The Government is engaged in a massive force integration effort, bringing members of the former national military, the homeland forces and the liberation armies together in a new, unified armed force. A successful consolidation of the military will further boost stability and confidence in a region of growing interest to the U.S. Because of its prestige and legitimacy, the new Government can potentially lend substantial support to conflict resolution in Africa, and its capable military establishment has the potential to make significant contributions to multilateral peacekeeping operations. The proposed FY 1996 IMET program will provide professional military education for officers in middle and upper ranks of the new integrated armed forces, focusing on the proper role of a military in a democracy, civil/military relations and affirmative action in the military.

**EFFECTIVENESS MEASUREMENT:**

- Participation in international peacekeeping operations indicating South Africa's support for international peace and stability.

## SUB-SAHARAN AFRICA

## SWAZILAND

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.050	0.080

**OBJECTIVES:**

- Enhance the professionalism of the Royal Swazi Defence Force.
- Encourage Swaziland's support for, and participation in, international peacekeeping operations.

**JUSTIFICATION:**

Swaziland is ruled by a traditional African monarchy responding to pressure to democratize. U.S. military training programs are aimed at solidifying the concept of military subordination to civilian control and improving the professional development of the Swazi military. The Government of Swaziland has indicated its willingness to provide troops for regional peacekeeping operations, but requires training to professionalize its military and to gain competence in the functional aspects of peacekeeping activities. We propose to support these goals by providing various basic and advanced officer and non-commissioned officer professional development training programs.

**EFFECTIVENESS MEASUREMENT:**

- Notable progress towards development of an apolitical, professional military, respectful of the proper military-civilian roles in a democratic society.
- Continued participation in international peacekeeping operations, indicating Swaziland's support for international peace and stability.

## SUB-SAHARAN AFRICA

## ZAMBIA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.075	0.100	0.150

## OBJECTIVES:

- Enhance regional stability by assisting Zambia with the development of a professional, apolitical, and economically affordable military force.
- Encourage Zambia to continue its support for, and participation in, international peacekeeping operations.

## JUSTIFICATION:

Zambia is a politically stable country with a democratically- elected government that generally respects human and civil rights. The Zambian armed forces are apolitical and focused on their national security mission. Zambia has demonstrated its commitment to collective security and peacekeeping, providing forces for UN operations in Mozambique and by pledging forces for peacekeeping in Rwanda and Angola. Training assistance will permit the continuation of military professionalization efforts and expose Zambian personnel to international peacekeeping concepts and standards.

## EFFECTIVENESS MEASUREMENT:

- Maintenance of the Zambian military's apolitical role and its dedication to defense of the nation.
- Continued participation in international peacekeeping operations, indicating Zambian support for international conflict resolution efforts.

## SUB-SAHARAN AFRICA

## ZIMBABWE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.241	0.250	0.250

## OBJECTIVES:

- Enhance regional stability by assisting Zimbabwe with the development of a professional, apolitical, and economically affordable military force.
- Encourage Zimbabwe to continue its support for, and participation in, international peacekeeping.

## JUSTIFICATION:

Zimbabwe plays an important political and economic role in southern Africa and has been an active participant in international peacekeeping, contributing one battalion of troops to Somalia and small contingents to Angola and Rwanda. Civil and human rights are generally respected and the judiciary has proven to be independent. The military is highly professional, accepts civilian control and has been a source of stability in the region. Training assistance will enhance military professionalization efforts and expose the military to international peacekeeping standards.

## EFFECTIVENESS MEASUREMENT:

- Maintenance of the military's respect for civilian control and its dedication to national defense.
- Continued participation in international peacekeeping operations, indicating Zimbabwe's support for international conflict resolution efforts.

## EAST ASIA AND THE PACIFIC

### OBJECTIVES:

To enhance regional peace and security in East Asia and the Pacific, all of the program requests for FY 1996 are specifically designed to support the President's four priorities in this most important region:

- Continued American military engagement in the region.
- Stronger efforts to combat the proliferation of weapons of mass destruction.
- New regional dialogues on the full range of our common security challenges.
- Support for democracy, respect for universal principles of freedom and human rights and more open societies throughout the region.

### JUSTIFICATION:

East Asia and the Pacific is the world's largest consumer market and our biggest export market. Last year (in 1993) our exports were worth more than 135 billion dollars and accounted for about 2.6 million American jobs. Thirty-six percent of U.S. trade is with the region, more than half again as large as with Western Europe. The economic vigor of the United States increasingly is dependent on global economic health and development. President Clinton has declared our domestic economic renewal as his highest priority, and no region of the world is more crucial in this regard than Asia and the Pacific. This economic development that is so vital to our nation's economy has only been made possible in Asia through the peace and stability which U.S. forces and a U.S. presence have provided over the last 45 years.

As President Clinton stated in his speeches at Waseda University in Japan and before the Korea National Assembly last year, the United States intends to remain actively engaged in East Asia and the Pacific. The United States is, after all, a Pacific nation. The best way to deter regional aggression, perpetuate the region's robust economic growth, and secure our own maritime and other interests, is to have an active presence.

Major uncertainties exist regarding the region's continued stability. Economic and political development is uneven. We have fought three wars in Asia during the past half century. In the aftermath of the Cold War, historical animosities and regional tensions could threaten U.S. economic and political influence and spark fresh arms races in Asia. For the first time since World War II, key countries in the region are calling for a continued U.S. military presence in East Asia. Our friends and allies fear that a precipitous U.S. withdrawal would create a power vacuum others might be tempted to fill.

Our bilateral alliances in East Asia and the Pacific and our forward-deployed forces are the cornerstone of our security engagement in the Asia-Pacific region. Our strong partnership with Japan is especially important. Our bilateral security alliance and close political cooperation allow us to work with Japan towards common goals and to enhance regional stability. Conventional deterrence on the Korean peninsula and continued international pressure on North Korea over the nuclear issue are critical national security concerns. As the PRC continues its transition toward a market economy and more open society, promoting China's integration into the Asian community serves U.S. interests and is vital to regional stability.

*EAST ASIA AND THE PACIFIC*

While we are not seeking new bases in East Asia and the Pacific, access to repair and logistic facilities in Southeast Asia is essential to our ability to respond to contingencies in the region and in the Middle East. We are also committed to support the emerging democracies in Cambodia and Mongolia, and assist President Ramos in the Philippines as he moves that nation toward national reconciliation and economic liberalization. The President has also continually stressed our commitment to the fullest possible accounting for our POW/MIAs in Southeast Asia.

The Administration believes that the modest programs we have proposed for selected countries and purposes in Asia and the Pacific are a sound investment for the United States. The Southeast Asia Regional Fund was created in FY 1993 in anticipation of the continued demand for U.S. assistance following the Cambodia peace accords and to support cooperation on POW/MIA matters, expand cooperation on counter-narcotics, and begin to address global and regional security issues. This year's Asian Regional Democracy and Security Fund request will respond to changing security situations in the region and provide a modest program targeted at reducing tensions, preventing arms races, and combatting the proliferation of weapons of mass destruction through the ASEAN Regional Forum (ARF) and other regional dialogues on these issues. It will also support regional trends toward democratization and greater respect for human rights.

The South Pacific Regional Fisheries Treaty guarantees continued access by the U.S. fishing fleet to large portions of the South Pacific, which harbor two-thirds of the world's tuna resources. This FY 1996 economic aid program is required by the Treaty.

Our IMET programs enhance our interaction with armed forces in the region and serve our long-term security interests. They are an invaluable tool that complement our political military objectives of broadening our relations with the armed forces in the region, increasing joint exercises, and enhancing our access to service facilities for our forward-deployed forces. By increasing the exposure of foreign armed forces personnel to U.S. concepts concerning civilian control of the military and human rights, these programs support our goal of furthering democratization.

**EFFECTIVENESS MEASUREMENT:**

- Recognition by friends and allies in the region of a continued American military commitment and engagement through security assistance programs, IMET programs, ship visits, and maintenance of U.S. forces stationed in the Asia-Pacific theater.
- Decline in the proliferation of weapons of mass destruction through increased contacts, conferences, and cooperation.
- Reduction of tensions and insurance of continuing peace and stability in the region through participation in ASEAN Regional Forum (ARF) workshops and other regional security fora which address the full range of our common security challenges.
- Increased interoperability with, and access, for U.S. forces.
- Increased support for democracy, respect for universal principles of freedom and human rights and more open societies throughout the region.
- Support of world-wide narcotics control efforts.

Country and program detail follows.

## EAST ASIA AND THE PACIFIC

## ASIA REGIONAL DEMOCRACY &amp; SECURITY FUND

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
ESF	0.000	0.000	8.810

## OBJECTIVES:

- Promote respect for the rule of law and human rights.
- Help build a participatory civil society.
- Promote a free and open media.
- Promote representative and accountable government.
- Promote regional security dialogues.

## JUSTIFICATION:

While East Asia and the Pacific holds some of the world's most advanced democracies, democratic development in the region is uneven. Several Pacific Island countries continue to experience growing pains relative to their constitutions and parliamentary government. Fiji is in the process of reviewing its constitution. Tonga wrestles with a traditional monarchy. Papua New Guinea is considering its provincial government structure. Kiribati (July, 1994) and Tuvalu (December, 1993) recently held elections and are in the process of developing the concept of a "loyal opposition". Promoting democracy and security in East Asia and the Pacific remains a high priority of the Administration.

The ESF requested for this Fund would support a range of programs to promote democracy, human rights, security and economic development. Workshops and seminars would be developed specifically to promote respect for the rule of law and human rights; the growth of participatory civil society and human rights awareness; the development of a free and open media; and representative and accountable government. Included is a \$5 million program to promote the growth of civil society in China. Security programs will focus on Pacific Island economic stability and U.S. investment in the region, confidence building measures, non-proliferation, peacekeeping, disaster relief, military transparency measures, and maritime security issues.

## EFFECTIVENESS MEASUREMENT:

- Overall evidence of a more efficient and independent judiciary, minimizing delay in court cases and increasing observance of the rights of defendants.
- The involvement of a wider spectrum of Asian governmental and societal representatives in constructive dialogues on human rights and democracy in Asia.
- Progress toward the observance and implementation of universal standards of human rights, and international standards of worker rights, as demonstrated by government policy and verified by independent observation.

*EAST ASIA AND THE PACIFIC*

- NGO activity that indicates a more active and independent civil sector.
- Evidence that the media is able to report candidly and critically on government policy and actions, without reprisal.
- Increased understanding of the role of the legislature by legislators, and increased competence and participation of legislative officials in public policy debates.
- Establishment of a Pacific Island Regional Joint Commercial Commission Secretariat and increased trade and investment with the United States.
- Emergence of a consensus for various confidence building measures that reduce pressures for conventional arms races and proliferation while framing resources in national budgets for sustainable economic development in the Asia-Pacific region.

## EAST ASIA AND THE PACIFIC

## CAMBODIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
ESF	14.861	19.500	39.520
FMF	0.750	1.300	3.000
IMET	0.122	0.200	0.300

## OBJECTIVES:

- Develop stronger mechanisms and organizations to promote democratic processes.
- Develop transparent and credible legal, regulatory, and judicial systems.
- Promote broad-based economic growth.
- Restructuring and develop basic military infrastructure.
- Promote civilian control of the military, military justice, and respect for international human rights standards.

## JUSTIFICATION:

U.S. interests in Cambodia are fundamental: preserving hard-won democratic gains in the former "killing fields" and preventing the return to power of the brutal Khmer Rouge. Cambodia is an illustration of democracy's promise, but its success cannot be taken for granted. The peaceful status of the country and the strength of the government are fragile.

In 1993, 90 percent of eligible Cambodians showed their commitment to democracy by braving threats of violence to participate in democratic elections following over 20 years of civil war and totalitarian government. This election was the culmination of one of the United Nations' largest and most successful peacekeeping operations. Cambodia now has a coalition government which is fostering an open political climate. At the same time, it is struggling to build a democratic culture in the face of enormous challenges, including the ongoing threat posed by the Khmer Rouge insurgency.

Cambodia's democratic institutions require and merit sustained international support. Requested ESF programs for FY 1996 are intended to develop stronger mechanisms and organizations to promote democratic processes. Implementation of transparent and credible legal, regulatory, and judicial systems is essential. Cambodia needs improved administrative and analytical support to the legislative process. Judicial functioning must be strengthened. Administrative efficiency, analytic capability and management of resources in ministries should be brought to higher levels, and public access to legal information increased. Cambodian democracy cannot survive without broad-based economic growth. Planned programs nurture growth by helping to establish an outward-looking market-oriented policy framework. The focus is on improved policy formulation and implementation in key economic ministries. Programs also seek to involve rural communities in Cambodia's shift to market economics and democratic politics by rehabilitating farm-to-market roads.

*EAST ASIA AND THE PACIFIC*

Foreign military financing would purchase engineering, medical and land, sea and air transportation assets for reform, restructuring and development of the basic military infrastructure. U.S. defense training would expose current and emerging Cambodian leadership to military professional development courses and technical training and would continue training of civilian and military officials in courses promoting civilian control of the military, military justice, and respect for international human rights standards.

**EFFECTIVENESS MEASUREMENT:**

- Promulgation of criminal, contract, and environmental legislation.
- Development and availability to public of database of existing laws.
- Adoption and publication of a legislative agenda.
- Publication of program and operating budgets within ministries.
- Publication of court dockets and regular assignment of judges to courts and cases, in both the civilian and the military justice systems.
- Establishment of functioning command, control, and communications systems.
- Publication and implementation of schedules for regular payment of salaries and maintenance of equipment.
- Promulgation of RCAF regulations on respect for human rights and democratic civil-military relations.

## EAST ASIA AND THE PACIFIC

## INDONESIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.000	0.000	0.600

## OBJECTIVES:

- Improve the overall professionalism and readiness of the Indonesian Armed Forces.
- Assist in addressing U.S.-Indonesian interoperability issues during peacekeeping operations by training key officers in our doctrine and operational techniques.
- Support safe operation and maintenance of U.S. defense articles through provision of technical training on U.S. equipment.
- Promote military accountability, respect for civilian authority, and the observance of human rights.

## JUSTIFICATION:

The Indonesian military historically has played a large role in government and society, viewing itself as a unifying force among the various ethnic, religious and political elements in Indonesia. The U.S. continues to encourage Indonesia to strengthen its democratic processes and respect for internationally recognized human rights standards. Recent years have seen the de facto emergence of an independent trade union, the growth of NGOs, an increasingly open press, and growing understanding of international human rights norms. The U.S. will use its influence with the military to encourage an appreciation of these emerging democratic developments, as well as to promote enhanced professionalism, accountability, and respect for civilian authority.

IMET can expand the Indonesian Armed Forces' own education and training programs and develop in the IAF a cadre of trainers which can further improve their individual military education and training capabilities. Courses have primarily been in the following areas: post graduate management, professional military education, technical skills courses, and English language instructor courses.

IMET graduates have played a major role in improving interoperability with U.S. forces and in furthering the development of an effective training and education system in Indonesia. Upon completion of a professional military education course, each graduate is normally assigned to develop curriculum. Graduates have also been instrumental in rationalizing the Army's personnel management system, developing a new reserve force, establishing and upgrading the information management systems, establishing a modern patient care system in health services, and introducing modern training technologies, including simulations. The FY 1996 IMET program will also emphasize Expanded IMET training. Funds requested to support English language training are particularly essential for interoperability and to ensure the availability of future language-qualified candidates for training in the U.S.

*EAST ASIA AND THE PACIFIC***EFFECTIVENESS MEASUREMENT:**

- The development and exercise of a modern doctrine that encompasses combined, joint, multi-national, and peacekeeping operations, initially taking the form of simulations and command post exercises.
- An expressed interest in pursuing interoperability issues within the context of combined peacekeeping operations.
- An effort to modernize and streamline the Indonesian military's logistics system.
- The adoption of U.S. military systems, including systems in personnel, logistics, and tactical training.
- Increased professionalism and respect for human rights among military officers.

## EAST ASIA AND THE PACIFIC

## LAOS

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
INC	2.000	2.200	2.000

## OBJECTIVES:

- Reduce opium produced to make heroin for international markets.
- Disrupt production, distribution, and trafficking of heroin.
- Combat opium and heroin abuse in Laos.

## JUSTIFICATION:

While Laos remains a major opium producer, estimated potential opium production has dropped more than 50 percent since U.S. and United Nations alternative development/opium crop reduction programs began in 1989. The Government of Laos (GOL) stresses its commitment to suppressing opium production, reflected in four consecutive years of declining estimated opium production, but economic underdevelopment and the limited rural infrastructure pose serious obstacles to continued progress. The Lao government recently unveiled a comprehensive drug control plan through the year 2000.

The U.S.-financed Houaphan Opium Crop Control Project includes infrastructure development, agricultural and health training, and extension services. Road-building to open remote areas to markets is continuing, as is construction of three small dams to irrigate 460 hectares of new rice paddies, making two districts nearly self-sufficient. The project also offers modern agricultural techniques to grow and market such alternative crops as soybeans, coffee and livestock, and will help start other income-producing activities such as weaving. Health centers are being expanded to provide better services and treat opium addicts.

The recently-created police counternarcotics unit is now housed in its own quarters and equipment is being supplied. The unit has received some training and is functioning. This initial unit is envisioned as the nucleus of a larger force that will expand into other areas of the country. However, Laos' mountainous borders with Burma, Thailand, Vietnam, Cambodia, and China are ideal for smuggling heroin and other contraband, while police and customs officers are poorly paid, trained and equipped. The **Narcotics Law Enforcement Project** will increase Lao capability to fulfill its counternarcotics responsibilities through provision of training, equipment, and supplies. The project will also assist the Lao Customs anti-smuggling unit, established in 1991, to improve its counternarcotics capability.

The **FY 1996 Alternative Crop Development Project** will focus on dam construction, while sustaining agricultural extension, health and community development programs. Completion of the dams are essential to increase paddy lands, which provide an alternative food and income source to opium farmers. FY 1996 funding is necessary to complete the original project after discovery of unexploded ordnance at all three dam sites.

*EAST ASIA AND THE PACIFIC*

The **Law Enforcement Project** will continue in FY 1996 with procurement of equipment and training where needed.

**Program Development and Support** funds will provide salaries, benefits and allowances for U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation. A direct-hire NAS position was established in FY 1993.

**EFFECTIVENESS MEASUREMENT:**

- Completion of dam construction for the Houaphan Project to promote and increase access to alternative, non-drug markets.
- Expansion of the police counternarcotics unit, and provision of equipment and training.

## EAST ASIA AND THE PACIFIC

## EAST ASIA AND THE PACIFIC

## MALAYSIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.318	0.500	0.600

## OBJECTIVES:

- Broaden and enhance military relations and influence in the region by gradually increasing military contacts with Malaysia.
- Expand cooperation and training with U.S. forces.
- Expand U.S. access to Malaysian military facilities.
- Strengthen Malaysian self defense capabilities.

## JUSTIFICATION:

The U.S. conducts a series of land, sea, and air exercises with Malaysia and also carries out a formal intelligence exchange. Military cooperation is carried out through the bilateral training and consultative group (BITAC). The U.S. security assistance program, comprised of FMS, commercial, or cash sales to the Malaysian Government, and the IMET program reinforce our defense cooperation under BITAC.

U.S. defense cooperation directly supports Malaysia's continued economic and political stability. Since independence in 1957, Malaysia has maintained an open, parliamentary political system, fair elections, and a free-market economy. Malaysia's small and highly professional military establishment plays no significant political role.

The provision of IMET funds to Malaysia is pursuant to the U.S. policy objective of promoting peace by enhancing Malaysia's ability to contribute to regional alliances, coalition operations, and other collective security efforts to counter aggression and maintain international peace and security.

## EFFECTIVENESS MEASUREMENT:

- Promotion of IMET graduates to senior leadership positions.
- Improvement of operational readiness rates of major military equipment items (i.e. fighter aircraft, frigates, logistical support) based on Malaysian military personnel being exposed to U.S. military educational system.

## EAST ASIA AND THE PACIFIC

## MONGOLIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
ESF	0.000	0.000	10.000
IMET	0.050	0.100	0.100

## OBJECTIVES:

- Maintain peace and promote regional stability in Central Asia, along the Chinese-Russian border, by helping develop Mongolia's democratic government and market economy through near-term support of the energy sector.
- Maintain Mongolia's energy system until international financial institutions develop and implement a plan to replace the country's three antiquated, Soviet-built power plants.
- Enhance the operational skills and effective management of the Mongolian military in a democratic society

## JUSTIFICATION:

Mongolia, located between Russia and China, acts as a key buffer zone in Central Asia. The transition of Mongolia, a Soviet-style communist state for over six decades until 1990, to a more democratic society and open economy serves as an example of the benefits of reform to other former communist states and developing nations. That transition is not complete, and the principal threat to it is the energy situation. There have been major problems with energy supplies due to the antiquated infrastructure and poor conditions of the coal mines. Mongolia is facing another harsh winter with very uncertain energy supplies. In the past, the U.S. provided to Mongolia significant technical and humanitarian assistance as well as emergency food aid and balance of payments support.

The U.S. energy project, in operation since 1991, has given Mongolia breathing room to continue economic reforms in the face of hardships and severe winters. An independent Mongolian government helps maintain peace and stability in Central Asia. A lack of electricity or heat would threaten reform, development, and regional stability, and potentially lead to a dangerous, destabilizing power vacuum on the borders of Russia and China.

The IMET program in Mongolia aims to enhance the operational skills, professionalism, and effective management of the military in a democratic society. This will be accomplished through participation in professional military education programs and courses addressing resource management and civil-military issues.

## EFFECTIVENESS MEASUREMENT:

- Maintenance of the Mongolian energy system through the winter such that it provides sufficient electrical power and heating to permit the Mongolian government, military, and private sector not only to function, but also to develop and reform the country.
- Enhanced professionalism of the military and greater respect for U.S. values, including civilian control of the military.

## EAST ASIA AND THE PACIFIC

## PAPUA NEW GUINEA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.050	0.125	0.175

## OBJECTIVES:

- Engage the Papua New Guinea Defense Force (PNGDF) in the prevention of poaching, furthering area fisheries treaties.
- Enable PNGDF to further its security and stability by removing unexploded WWII ordnance at Bougainville Island.

## JUSTIFICATION:

The maritime training would enhance PNGDF ability to prevent fisheries poaching by foreign vessels. It would also support regional efforts to develop maritime search and rescue and law enforcement capabilities. Explosive ordnance disposal training will enable the PNGDF to remove munitions from Bougainville island, scene of a continuing insurgency, as well as World War II munitions elsewhere in PNG.

## EFFECTIVENESS MEASUREMENT:

- Assignment of IMET graduates to positions utilizing their training upon return to PNG.

## EAST ASIA AND THE PACIFIC

## PHILIPPINES

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.876	1.195	1.400

## OBJECTIVES:

- Support Philippine participation in regional peacekeeping operations.
- Improve professionalism of Armed Forces of the Philippines.
- Open lines of communication between military line and JAG officers and their civilian counterparts, and enhance cooperation in adhering to the rule of law and lessening or eliminating human rights abuses.

## JUSTIFICATION:

The formal closing of our bases in 1992 ended an era of U.S. military units in the Philippines. However, we retain broad strategic interests in the Philippines based on shared obligations in the Mutual Defense Treaty; the key role the Philippines Armed Forces play in maintaining domestic order, combatting insurgencies and contributing to peace and stability in the region; and the importance of a secure and stable Philippines as a market for U.S. goods and services.

A small amount of security assistance helps promote increased defense cooperation with the United States and signals to the Philippines, as well as other nations in the region, that we intend to remain engaged there. Cooperation, training and other assistance-related efforts provide the U.S. with access to current and future decision-makers in the event that we require assistance to move or resupply essential forces and materiel during a future crisis. No form of assistance has been shown to be more cost-effective in maintaining and assuring the continuation of a strong working relationship between the AFP and U.S. forces than the U.S. IMET programs.

For FY 1996, this request is seeking an expanded level of training in the area of military justice and human rights to open lines of communication between military line and JAG officers and their civilian counterparts and enhance cooperation in adhering to the rule of law and lessening human rights abuses. IMET programs requested for FY 1996 include part of the curriculum of the four-phase Naval Justice School, Military Justice Systems and Human Rights Seminar and professional military education courses. In addition, the Philippines has hosted the Pacific Region Defense Resources Management (DRM), with participants from the Philippines and four other Asian countries. The Philippines is considering starting a DRM program of its own.

## EFFECTIVENESS MEASUREMENT:

- Enhanced readiness and effectiveness of AFP in dealing with security threats and in contributing to the maintenance of regional security.
- Continued decline in or elimination of human rights abuses by the AFP.

## EAST ASIA AND THE PACIFIC

## SINGAPORE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.010	0.020	0.020

**OBJECTIVES:**

- Maintain U.S. access to Singapore ship repair and other facilities.
- Assist Singapore Armed Forces to enhance its professionalism.

**JUSTIFICATION:**

Singapore is a staunch supporter of the continued presence of the United States in Asia and of our policies in the region. Its leaders have repeatedly emphasized the need for a continued U.S. military presence in the Pacific region in the aftermath of the Cold War.

Singapore's location at the crossroads of major shipping and air routes is of great importance to U.S. force readiness in the Asian-Pacific region. In November 1990, the U.S. and Singapore signed a Memorandum of Understanding which provides U.S. military aircraft and ships with access to Singapore's airfields and port facilities. In January 1992, the U.S. and Singapore reached agreement to move a small U.S. Navy logistics unit from Subic Bay to Singapore to provide essential repair and maintenance support for the U.S. Seventh Fleet. The U.S. made no reimbursement for improvements to the facilities we use in Singapore. In addition, the U.S. and Singapore hold annual joint exercises.

Our modest IMET program helps promote increased defense cooperation with the United States and reinforces our intention to remain engaged in the Asian Pacific. Singapore values the professional military training obtained under the IMET program; in return, the program allows the U.S. to maintain continued close contact with Singapore's military officers and encourage continued utilization of U.S.-manufactured weapons. Among the benefits derived from this relationship are access to Singapore's facilities and overflight rights for U.S. military assets, a valuable intelligence exchange, and purchase of U.S. defense equipment and spare parts by the Singapore Armed Forces.

**EFFECTIVENESS MEASUREMENT:**

- Continued ascent of IMET graduates in the Singapore government hierarchy.
- Improved ship repair and port facility access.

## EAST ASIA AND THE PACIFIC

## SOLOMON ISLANDS

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.008	0.100	0.125

**OBJECTIVE:**

- Help the Solomon Islands maintain an adequate maritime security capability.

**JUSTIFICATION:**

IMET funding is used to send RSIP members to the U.S. for training to develop maritime skills, including maritime law enforcement and to train for military operations. Management courses for RSIP members also improve RSIP budgeting and logistics capabilities, fostering professional attitudes within the force.

[WHAT DOES RSIP STAND FOR?]

**EFFECTIVENESS MEASUREMENT:**

- Assignment of IMET graduates to positions which make use of their training.
- Improved maritime security procedures and enforcement.

## EAST ASIA AND THE PACIFIC

## SOUTH KOREA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.021	0.010	0.010

## OBJECTIVES:

- Improve U.S.-ROK interoperability and assist Korea in acquiring modern conventional arms, including advanced land, air, and sea systems.
- Encourage improvements in ROK defensive skills and professionalism of its armed forces, and enhance military support for democratization.
- Encourage more balanced access in U.S.-ROK trade in the defense sector.

## JUSTIFICATION:

The United States and Korea enjoy a close and mutually beneficial security relationship that consists of cash FMS and commercial sales of defense equipment, services, and training. These sales promote U.S.-ROK defense cooperation in industry and armament, safeguard U.S. technology transfers, enhance technical data exchanges, and contribute to the U.S.-ROK balance of trade. Korea increased its cost sharing funds for support of U.S. forces from \$150 million to \$180 million in FY 1992. In 1995, in addition to facilities and bases the Koreans provide to stationing U.S. forces, they also provide \$300 million in direct costs..

After almost one year of stalled and unsatisfactory talks with North Korea, on October 21, 1994 the United States succeeded in concluding an agreed framework to resolve the North Korea nuclear problem. Our goal is to make permanent the current freeze on North Korea's nuclear development program, help North Korea convert its nuclear power industry to light water reactors, progress in the South-North talks, and obtain North Korean agreement to full scope IAEA safeguards.

Renewed hostilities on the peninsula, however, remain the most likely threat to peace in Northeast Asia. North Korea's million-man army and quantitative advantage over the South in equipment make it well-positioned for an attack that still could come with little or no warning. The combined U.S./ROK forces defending the South use common doctrine and tactics. Selected ROK officers attend U.S. service and military management courses to maintain ROK military operational skills at a high level. As the U.S. moves to a supporting role in defense of the ROK, the ROK armed forces will require increased training in management of intelligence, efficient use of advanced technology, and large unit operations.

South Korea's relative economic success has increased its ability to share the burden of security-related costs. At the same time, however, Korea is modernizing its force structure and establishing a more modern command and control system. Procurement of U.S. weapons systems promotes interoperability and supportability, which is highly important to maintaining a credible deterrent posture on the peninsula.

IMET funding is used to pay only a small portion of the overall military school costs. The ROK pays the bulk of its direct international military training expenses, including all

*EAST ASIA AND THE PACIFIC*

transportation and personnel support costs. ROK funding indicates that it recognizes the importance of the program in training its personnel to take on increasing responsibility for its own security.

**EFFECTIVENESS MEASUREMENT:**

- Enhanced U.S.-ROK interoperability.
- Evidence of increased military support for democratization.

## EAST ASIA AND THE PACIFIC

## SOUTH PACIFIC MULTILATERAL FISHERIES TREATY

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
ESF	14.000	14.000	14.000

## OBJECTIVE:

- Enhance access of U.S. fishing vessels to Pacific ocean fishing areas.

## JUSTIFICATION:

The funding will be disbursed in FY 1996 for the first time through the U.S. Department of State instead of USAID. The Department is working with USAID to develop proper procedures for disbursement and anticipates no difficulties in ensuring timely and accurate payment.

Failure to make payments to treaty parties would result in denial of access for U.S. fishing vessels to areas they now fish. Such a failure would also set back relations with the region. The treaty has prevented conflict between the U.S. and Pacific island nations over the management of highly migratory species such as tuna, contributing to the consolidation of friendly relations with those countries.

## EFFECTIVENESS MEASUREMENT:

- Continued access of U.S. fishing vessels to Pacific fisheries.

## EAST ASIA AND THE PACIFIC

## THAILAND

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.895	1.000	1.600
INC	3.000	1.250	1.500

## OBJECTIVES:

- Enhance Thai commitment to counternarcotics efforts.
- Support efforts to target major kingpins, arrest traffickers and provide for improvements to Thai enforcement institutions.
- Reduce domestic planting of opium poppy and marijuana.
- Ensure the continued stability, independence and territorial integrity of Thailand.
- Support the continued professionalization of the Thai military.
- Help to institutionalize Thai democracy.
- Maintain security cooperation, especially access to Thai facilities.

## JUSTIFICATION:

Thailand is one of our closest and most important security partners in Southeast Asia. Thailand conducts the most robust joint exercise program in Asia, provides ready access to its facilities for our ships and planes, furnishes key support to our POW/MIA accounting efforts, and provided extensive cooperation to the Allied forces during the Desert Shield/Storm deployments. Thailand has consistently ranked as one of the world's ten fastest growing economies and procures much of its military equipment from the U.S.

Prime Minister Chuan and his government fully support close security cooperation with the U.S. and a healthy U.S. military education program. This type of training contributes to our ability to conduct joint operations with Thailand, Thai purchases of U.S. defense articles and services, the further professionalization of the Thai military, and, ultimately, to regional stability and economic development. Our training program is one of the few direct benefits that country receives from the U.S. for its substantial security cooperation.

Narcotics enforcement efforts in Burma, the main source of Golden Triangle heroin, virtually ended after domestic political turmoil led to the military seizing power in 1988. Thailand's superior transportation and communications infrastructures make it the route of choice for the major trafficking organizations operating in the region.

Thai opium production has decreased from perhaps 150 tons 15 years ago to approximately 40 tons today. The U.S.-funded Thai Army opium eradication program, one of the most cost-effective programs in the world, serves to speed the transition to licit crop cultivation by diminishing the likelihood of a successful opium harvest.

*EAST ASIA AND THE PACIFIC*

Because of Thailand's rapid economic development and increasing per capita income, its own counternarcotics expenditures have increased substantially over the past ten years. This permits budget reductions as Thailand funds more of its own counternarcotics responsibilities.

To implement the heroin strategy, U.S. programs in Thailand support Thai narcotics control activities in three areas:

The **Narcotics Law Enforcement Project** will provide carefully targeted equipment and assistance to police and other law enforcement units with counternarcotics functions. FY 1996 funds will support the northern Counternarcotics Task Force project, to include a Task Force Center in Bangkok.

The **Crop Control Project** funds will be reduced to a minimal level in FY 1996, reflecting a reduced budget and increased expectations of Thai responsibility to fund this program.

The **Drug Awareness and Demand Reduction Program** will help improve drug abuse prevention efforts, and seek to build public opinion and thereby political will against drug production and trafficking.

**Program Development and Support** funds will provide salaries, benefits and allowances for U.S. and foreign national personnel, TDY assistance, and general administrative and operating expenses.

**EFFECTIVENESS MEASUREMENT:**

- Increased government responsibility for crop control.
- Increased government efforts to improve institutional capabilities of the police and other law enforcement units.
- Assignment of successful IMET graduates to duties requiring recently acquired training.
- Support of the democratic system; renunciation of the "right" to coups.

## EAST ASIA AND THE PACIFIC

## TONGA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.015	0.050	0.200

## OBJECTIVES:

- Insure that Tongan forces are sufficiently trained to further regional security and voluntary peacekeeping in the South Pacific or other areas.

## JUSTIFICATION:

Tonga has recently indicated an interest in a possible regional peacekeeping role, in concert with other Pacific island nations, to provide security on Bougainville in Papua New Guinea, scene of a five-year-old insurgency.

The IMET program will provide professional military education and management training to improve leadership within the military.

The military is one of the more conservative elements of Tongan society. U.S. leadership and management courses and basic military education programs stress civilian control, the rule of law and other values of a free society. Those will increase the likelihood that as democratic change occurs in Tonga, the military will assist in accommodating the change rather than resisting it. The proposed IMET will provide professional military training and management training focusing on military justice, respect for human rights, and issues emphasizing civilian control of the armed services.

## EFFECTIVENESS MEASUREMENTS:

- Tonga is able to provide a force in support for any possible regional peacekeeping.
- Successful IMET graduates are assigned to related military duties upon return.
- Military trainees demonstrate greater understanding and application of the principles of democratic civil-military relations.

## EAST ASIA AND THE PACIFIC

## VANUATU

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.015	0.050	0.095

## OBJECTIVES:

- Maintain Vanuatu's capability to protect its oceanic resources through maritime monitoring.
- Promote the proper role of the military in a democracy.

## JUSTIFICATION:

The funding would be used to provide training via a U.S. Coast Guard mobile education team for two members from the maritime elements of the paramilitary Vanuatu Mobile Force (VMF). The training will help the VMF implement maritime security enforcement and facilitate their understating of the need for civilian control of security forces.

## EFFECTIVENESS MEASUREMENT:

- Successful IMET graduates assigned to positions which utilize training upon return.
- Enhanced civil-military relations.

## EAST ASIA AND THE PACIFIC

## WESTERN SAMOA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.015	0.050	0.050

## OBJECTIVES:

- Promote civil-military relations, emphasizing the proper role of the security forces in a democracy.
- Protection of human rights in maritime operations.

## JUSTIFICATION:

Western Samoa is a parliamentary democracy but only high chiefs are allowed to run for parliamentary seats. In 1990, universal suffrage was approved, and women's issues are starting to be taken more seriously. As the country continues to develop along democratic lines, a struggling economy has held it back.

The proposed IMET program would build on successful U.S. training which has provided better and more accountable security forces and official handling of relief efforts. This training will provide: paramilitary police officers (the country has no formal military) with U.S. leadership and management training, focusing on military justice, human rights, and issues emphasizing civilian control of the armed services; and provide maritime law enforcement management training which focuses heavily on protection of civil and human rights in maritime operations.

## EFFECTIVENESS MEASUREMENT:

- Police and government trainees demonstrate an understanding of the principles of democratic civil-military relations in the discharge of their professional duties.
- Increase respect for civil and individual rights in maritime-control activities.

**EUROPE AND THE NEW INDEPENDENT STATES****OBJECTIVES:**

- Foster the emergence of competitive, market-oriented economies in which the majority of economic resources are privately owned and managed.
- Assist CE and NIS transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen CE and NIS capacity to manage the human dimension of the transition to democracy and a market economy.
- Make irreversible the reforms underway in Russia and the other New Independent States (NIS) that will prevent a return to the political tension and military competition of the Cold War.
- Create opportunities for a broad range of cooperative multilateral security activities.
- Build bilateral ties between the U.S. and CE/NIS militaries which will provide the U.S. with opportunities to influence positively the evolution of the restructuring defense establishments.
- Improve the compatibility of CE militaries with U.S. and NATO forces.
- Further the military preparedness of traditionally responsible European nations thereby strengthening the NATO Alliance.

**JUSTIFICATION:**

Historically, the waging of war by the United States has been directly linked to European stability. We propose therefore to promote regional peace and security throughout Europe through the provision of carefully targeted assistance funding. The majority of resources will be devoted to providing economic assistance to countries in transition to market economies and democratic political systems. We also propose providing military assistance to bolster the military capabilities of key NATO allies while expanding our security cooperation eastward through FMF and IMET programs for the countries of Central Europe and the NIS as a part of our larger objective of laying the foundation for long term security throughout Europe.

**THE NEW INDEPENDENT STATES OF THE FORMER SOVIET UNION (NIS)**

The United States seeks to make irreversible the reforms underway in Russia and the other New Independent States (NIS) that will prevent a return to the political tension and military competition of the Cold War. The passing of the Cold War means not only that resources formerly devoted to the East-West competition can be used for other endeavors, both domestic

*EUROPE AND THE NIS*

and abroad, but also that the U.S. can develop commercial relationships in the NIS that benefit both U.S. companies and workers.

It is in the U.S. interest to support NIS efforts to transform themselves into partners for the international community. Stability and prosperity are essential for the success of this transformation. History shows that broad-based prosperity is best achieved through a market economy, and that stability is best achieved through democracy. Over the long run, each is essential to the success of the other. Thus, our overall assistance effort seeks to advance democracy, free markets and regional stability.

Significant support to governments should be directed at states which embrace fundamental economic and political reforms. Resources will be concentrated in areas which are essential, i.e., without which the objectives cannot be achieved. Those include democracy-building; privatization of the economy; establishment of basic laws and regulations permitting the private sector to operate without need for subjective governmental action; establishment of clear market signals (primarily world-market pricing) which permit rational decisions, and therefore reward reduction in waste of energy and other resources; and de-monopolization of the economy.

In some cases, comprehensive economic reform will be dependent on assistance from international financial institutions, the IMF and World Bank in particular. U.S. assistance to facilitate agreements between reforming NIS nations and the IMF and World Bank can leverage both economic reform in the NIS and financial assistance from the IFIs. Where commitment to reform is limited, assistance will be primarily for programs operating outside governmental channels.

Beyond measures setting clear rules for domestic and foreign investors, adequate funds must be available to encourage and facilitate investments in the NIS by U.S. firms, particularly while the investment climate is not capable of attracting foreign investment on its own.

The overall goal of normal bilateral relations based on mutual respect requires that we move as quickly as possible through the three phases of assistance -- from humanitarian to technical to trade and investment -- and beyond to cooperation based on normal commercial relations.

The role of the military establishments in the NIS will be crucial to the success of the transition to democracy and free markets. The militaries will help build confidence in the nation-building effort by serving as defenders of independence and guarantors of internal stability. Most will also significantly contribute to the formulation of key national policies.

IMET funding for the NIS serves U.S. national security and foreign policy interests by supporting the military establishments in the NIS that respect civilian, democratic control, that engage in prudent management of defense resources and that are committed to a cooperative relationship with the U.S. and its allies.

The United States also believes that successful integration of the NIS into NATO's Partnership for Peace will be a crucial step toward creating a stable European security architecture. Assistance provided to the NIS under the President's Warsaw Initiative will help ensure their active participation in PFP activities and will signal strong U.S. interest in all partners.

*EUROPE AND THE NIS*

Support for reform in Russia and the NIS is a key U.S. foreign policy priority. Our overall assistance effort seeks to advance democracy, free markets and regional stability. The role of NIS military establishments will be crucial to the success of the transition to democracy and free markets. The militaries will help build confidence in the nation-building effort by serving as defenders of independence and guarantors of internal stability. Most will also significantly contribute to the formulation of key national policies.

Funding for IMET provided by the United States serves U.S. national security and foreign policy interests by supporting the military establishments in the NIS that respect civilian, democratic control, that engage in prudent management of defense resources and that are committed to a cooperative relationship with the U.S. and its allies.

**CENTRAL EUROPE**

Five years after the revolutions of 1989, the non-combatant states of Central Europe (CE) are still committed to the goals of Western-style democracy, market economies, and fuller integration with pan-European and Euro-Atlantic institutions. Still, these processes in Europe's youngest democracies are in the consolidation phase, and growing "reform fatigue" could pose a threat to sustained progress.

A failure of reform - and resultant instability - in the historically volatile CE would have direct repercussions for U.S. foreign policy interests. The security and stability of CE is inextricably linked with that of Europe and the trans-Atlantic region as a whole. Since many CE states border our NATO allies or the NIS, instability in CE would reverberate in other strategic regions. Already twice this century, the United States has been called on to participate in wars ignited by conflicts involving the volatile CE region. The ongoing conflict in the ex-Yugoslavia provides ample testimony to the dangers of instability in CE, especially the Balkans. . The U.S. must therefore continue the important task of providing economic assistance to help these emerging democracies through the difficult transition to market economies and democratic political systems.

NATO's historic Partnership for Peace (PFP) initiative, launched in January 1994, represents a major step forward in bolstering the security of the region and of the transatlantic community as a whole. By creating opportunities for a broad range of cooperative multilateral security activities -- including military exercises -- the PFP will spawn a stabilizing and confidence-building web of security relationships among the states of the region, including historical rivals. Already, all of the non-combatant CE states have signed up for PFP or have asked to join.

The U.S. therefore has a clear and compelling interest in using its bilateral programs to support the objectives of the PFP, as well as to foster enhanced bilateral security links with the CE states individually. Training and equipment-transfer programs will be aimed at improving the compatibility of CE militaries with U.S. and NATO forces, thereby facilitating their participation in PFP exercises and other multilateral activities (such as peacekeeping). These programs will also build bilateral ties between the U.S. and CE militaries and will provide the U.S. with opportunities to influence positively the evolution of the restructuring CE defense establishments.

*EUROPE AND THE NIS*

In order to advance our security objectives in the region, ensure the success of the PFP, and accelerate the integration of the CE states into the transatlantic community, we will need to increase substantially our bilateral assistance to these states. The FY 1996 requests for CE therefore include FMF components to facilitate CE acquisition of NATO-interoperable equipment. In addition, as announced by the President in Warsaw in July, the Administration is requesting \$100 million for bilateral programs to support the active participation of PFP partners in PFP activities.

**OTHER EUROPEAN AREAS**

The FY 1996 request proposes to further the military modernization of key responsible members of the community of nations to bolster NATO's capacity as an effective tool of regional stability in post Cold War Europe. To this effect we are proposing FMF and IMET for Greece and Turkey and IMET for Portugal. Other IMET programs seek to cement ties and cooperation between the U.S. and non-NATO members. We are also seeking funding to support narcotics control programs in selected countries.

**EFFECTIVENESS MEASUREMENT**

- Increasing share of national assets transferred from state to effective private control.
- Passage of civil laws which ensure basic rights, support privatization and economic development, and allow NGOs to work freely.
- More efficient and effective social services that are financially sustainable.
- CE and NIS militaries continue to assist in the promotion of area stability; civilian control over the military; and military support for Democratization.
- Strengthened relations between the U.S. and non-NATO members.
- PFP is strengthened, including through increased partner participation in PFP activities.
- Fulfillment of U.S. funding commitment to Turkey and Greece's military modernization program.

## EUROPE AND THE NIS

## ALBANIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		28.540	31.000 <sup>*</sup>
IMET	0.165	0.200	0.400
FMF	0.000	0.000	4.525 <sup>†</sup>

## OBJECTIVES:

- Facilitate continued agricultural development through policy reform, creation of a land market, stimulation of agribusiness and improvements in agricultural production.
- Assist in development of a market economy through help in implementation of key structural reform measures, privatization, small business development, management training and technical training.
- Advancement of democratic institutions through citizen participation, improvement of technical and institutional parliamentary framework, and support for judicial and legal reform.
- Improve health care and other quality of life needs.
- Improve the interoperability of the Albanian defense establishment with the armed forces of the U.S. and NATO.
- Support the modernization and professionalization of Albania's armed forces.

## JUSTIFICATION:

Regional stability and the institutionalization of democracy and free enterprise are the key U.S. interests in Albania. Also important is the development of a market economy. These conditions contribute to regional stability and encourage U.S. investment. The stakes are high: Albania's large diaspora concentrated in neighboring Kosovo, the FYROM, Greece, and Montenegro presents a significant unresolved national, ethnic, and religious challenge to regional stability. Albania's long history of Stalinism and autarchy and the region's ongoing conflicts pose high hurdles to the democratic government's reform efforts. U.S. technical and material assistance is designed to support those efforts.

In response to the economic and social collapse attending the fall of communism in Albania in 1992, the U.S. sent substantial food, medical, and other emergency assistance. Principal U.S. assistance has shifted to facilitate economic restructuring and development of democratic institutions that will result in the building of economic, political, and societal well-being.

<sup>\*</sup> Albania may also receive South Balkan Development Initiative funding.

<sup>†</sup> FMF request includes \$2.525m for Partnership for Peace and \$2.0m for CE Defense Infrastructure.

*EUROPE AND THE NIS*

U.S. assistance programs in Albania have had an impact on the country's development, nowhere more apparent than in the agricultural sector. We expect to establish the Albanian-American Enterprise Fund in 1995. A complementary side of these efforts are SEED activities designed to strengthen the institutional reform needed to achieve sustainability and efficiency, requisites for a market economy and a democratic society.

Promoting increased defense cooperation between Albania and the U.S. will play a role in bolstering the stability of the volatile Balkan region. Our programs have already played, and can continue to play, a key role in shaping the evolving Albanian military to best support the civilian, democratic government-- by enhancing the professionalism and effectiveness of Albanian defense officials, training Albanians in U.S. practices, and exposing Albanians to the U.S. system of civilian oversight of the armed forces.

We will continue to train Albanian defense officials at U.S. facilities in areas such as defense planning, military doctrine, and peacekeeping in order to improve Albania's understanding of U.S. practices and to expand cooperation between our militaries, including in the areas of national guard and reserve forces. We will continue to emphasize English-language instruction for Albanian defense officials in order to facilitate multilateral military cooperation among Albanian, U.S., and NATO militaries. This emphasis is particularly important given the strong commitment by the Albanian military to train all of its officers and civilian officials in English. U.S.-trained Albanian officers have already assumed key command positions in the Albanian military.

**EFFECTIVENESS MEASUREMENT:**

- Parliament makes decisions based on independent and sound policy research.
- Local governments make operations more transparent and responsive to citizens.
- Policy, laws and regulations are made to establish markets and expand the private sector.
- Albanian participation, alongside U.S. and NATO forces, in multilateral activities employing U.S.-provided training.
- Advancement of IMET graduates to responsible positions in the Albanian armed forces, or assignment to positions which utilize their IMET training.

## EUROPE AND THE NIS

## ARMENIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		40.713	30.000
FMF	0.000	0.000	0.000*

## OBJECTIVES:

- Strengthen Armenia's capacity to manage the human dimension of the transition to democracy and a market economy.
- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Support comprehensive economic reforms and restructuring in cooperation with other international donors, IMF and IBRD.
- Assist Armenia's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.

## JUSTIFICATION:

Armenia, currently the largest per capita recipient of U.S. aid in the NIS, has faced extreme economic hardship since independence in 1991. It has also been greatly affected by the conflict over Nagorno-Karabakh. Despite this, the Government of Armenia has taken steps to privatize agriculture and industry and has, for the most part, made progress in observing democratic principles and human rights.

The United States' highest assistance priority continues to be to reach the vulnerable population within Armenia with enough heating fuel and food to prevent extreme suffering or loss of life. We are also conducting a pilot project for a World Bank-financed fund which will create jobs at the local level by financing labor-intensive local public works projects and by promoting micro-enterprise development. In order to move from emergency to developmental assistance, USAID is supporting a number of U.S.-based private voluntary organizations (PVOs) to assist and advise vulnerable groups and to develop an NGO network.

To help develop a market economy, U.S. technical assistance efforts are focused in two critical areas of need: increasing the knowledge of key policy-makers to develop a legislative and policy framework to support a market environment; and assisting new entrepreneurs by providing them the business management tools and small amounts of start-up capital with which to conduct profitable businesses.

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

To help develop a market-oriented housing sector that can respond to housing needs in a restructured economy, USAID will assist in creating the legislation, organizations, and procedures necessary for a well-functioning private housing sector.

To help reform the energy sector, vital for economic growth, assistance has been initiated to improve coal production and increase oil production. USAID-funded teams are helping improve thermal power plant operations, increase the efficiency of district heating systems, and install energy-saving equipment in Yerevan. A U.S. energy team completed engineering work for a \$60 million European bank for Reconstruction and Development (EBRD) loan to finish construction of the Hrazdan power plant. Future U.S. assistance will emphasize improving the efficiency of large energy consumers, such as industrial plants and urban housing.

USAID assistance to promote democratic institutions will include training, exchange and long-term academic programs for journalists to encourage development of free and independent news media. A rule of law program will help Armenia combat crime and corruption and improve public administration at all levels. Limited assistance will be directed at strengthening judicial institutions and criminal justice procedures.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- The extent to which assistance reaches the most vulnerable, and to which NGOs are functioning to meet local needs.
- Establishment of policies, enactment of legislation and development of regulatory procedures necessary to break up monopolies, establish markets, and expand the private sector.
- Increased number of private businesses of all sizes.
- Decreased government budget deficit.
- Promulgation of energy standards, policies, and legislation that support subsector restructuring and commercial market development of energy efficiency and related environmental technologies and services.
- Increased percentage of total volume of electricity and heating produced and distributed by privatized sources.
- Improved energy efficiency at local firms assisted or influenced by USAID activities and replicated elsewhere.
- A constitutional and legal framework and judicial process which provide for more secure individual rights.

*EUROPE AND THE NIS*

- Improved management and delivery of services at the municipal level which is more cost effective and responsive to local needs and desires.
- Multiple private media outlets functioning free of government control.

## EUROPE AND THE NIS

## AUSTRIA

**PROGRAM SUMMARY**  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.010	0.015	0.015

**OBJECTIVES:**

- Provide a limited number of Austrian officers and NCOs specialized military technical and management training unavailable in Austria.
- Familiarize Austrian trainees with U.S. military equipment and technology.
- Enhance the effectiveness of Austria's contributions to U.N. peacekeeping operations.

**JUSTIFICATION:**

In providing training unavailable in Austria, this program serves American interests by enhancing the participants' understanding of U.S. policy and fostering personal contacts among the Austrian, U.S. and NATO armed services. By exposing Austrians to U.S. military equipment and technology this program lays the groundwork for potential military sales to Austria.

These training opportunities may also enhance the effectiveness of Austria's contributions to U.N. peacekeeping operations. It is in the U.S. interest to encourage participation in peacekeeping forces by countries such as Austria that have a record of support for these efforts.

**EFFECTIVENESS MEASUREMENT:**

- IMET graduates are assigned to a position that utilizes their U.S. training.

## AZERBAIJAN

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		9.973	9.000
FMF	0.000	0.000	0.000*

## OBJECTIVES:

- Strengthen Azerbaijan's capacity to manage the human dimension of the transition to democracy and a market economy, and help sustain the neediest sectors of the population during the transition period.
- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Assist Azerbaijan's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.

## JUSTIFICATION:

Azerbaijan, with its oil and natural gas reserves, has the richest resource base of any of the Caucasus countries. However, despite its rich potential, the Azerbaijan economy has declined almost as much as those of its Caucasus neighbors. The seven year-old Nagorno-Karabakh conflict has displaced almost one million people in Azerbaijan -- one-seventh of the population. It is in the U.S. interest to help find a peaceful resolution to the conflict, encourage political and economic reform, and support U.S.-Azerbaijani commercial ties. Our humanitarian efforts are limited to direct aid through private and voluntary organizations (PVOs) due to legislative restrictions on government-to-government aid (Section 907 of the FREEDOM Support Act). While Section 907 has hindered USG efforts to encourage political and economic reform within the Azerbaijani government, we have been able to implement small programs on a grass-roots level.

Through grants to U.S. PVOs and international organizations, USAID provides food, medicine, and emergency shelter to refugees and displaced persons. USAID will continue to support programs that give the beneficiaries skills they can use when they are able to return to their homes, such as the International Rescue Committee's proposed project to teach displaced persons how to build low-cost housing from local materials. USAID will continue to provide emergency medicines and medical supplies to address the severe lack of medical care for refugees and displaced persons. USAID will continue to provide food aid to vulnerable populations in Azerbaijan through U.S. PVOs.

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

USAID's activities in the democracy-building area are limited to the provision of training opportunities for private citizens and NGO leaders involved in democracy building.

Because of Section 907 restrictions, USAID's training and exchange program to foster a market economy will be limited to two groups in the private sector -- private farmers and agribusiness entrepreneurs and small-scale entrepreneurs, business people and bankers. In addition, training opportunities will be offered to faculty and administrators of private universities which will focus on curriculum development in areas of economics, business administration, health care and English-language training. The Farmer-to-Farmer program has been initiated emphasizing high-value crops and processing.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Humanitarian assistance is appropriately targeted and reaches the beneficiary in a timely manner.
- Individuals trained are able to use their newly acquired skills to carry out tasks of their organizations.
- Development of private media and press freedom.
- Select private citizens are better equipped to manage the transition to a market economy through technical skills training.
- The number of private enterprises and businesses increases.

## EUROPE AND THE NIS

## BALTIC PEACEKEEPING BATTALION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Build upon the successful multilateral effort in FY 1995 to develop a highly professional multinational peacekeeping unit deployable to UN and other international peacekeeping operations. Provide additional NATO-compatible peacekeeping-related equipment and training for the battalion to bring it up to professional standards. (\$5 million)

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FMF	0.000	0.000	5.000

## OBJECTIVES:

To promote peace, both globally and in the potentially volatile Baltic region, by assisting the Baltic states in playing a larger, more effective role in international peacekeeping activities. The specific objectives are:

- Advance the goals of the Partnership for Peace (PPF), a key dimension of which is promotion of peacekeeping activities.
- Promote regional cooperation by encouraging regional peacekeeping efforts.
- Improve the interoperability of the fledgling Baltic defense forces with U.S. and NATO armed forces.

## JUSTIFICATION:

In FY 1995, the U.S. participated actively in a multilateral donor effort, including the Nordic states, Germany, and the UK, to assist the three Baltic states in the formation of a joint, dedicated peacekeeping battalion deployable to multinational peacekeeping operations. This initiative by the Baltic states marks the first example of voluntary cooperative peacekeeping in the region.

The initial U.S. contribution to the effort included NATO-compatible communications gear, uniforms and personal gear, and excess vehicles. Other donors provided language and peacekeeping training, ammunition, and other miscellaneous equipment. These contributions enabled the Battalion to begin training at the Adazi facility in Latvia in January 1995.

While much progress has been made, and the most urgent equipment needs met, this initiative requires additional infusions of sustainment funding in FY 1996 to ensure that the unit is brought up to fully professional standards. For example, the unit still lacks basic peacekeeping equipment, such as mine detectors, binoculars, night vision equipment, and standardized NATO-compatible defensive weaponry. This program would assist the BALTBAT in acquiring

*EUROPE AND THE NIS*

such equipment from the U.S., ensuring its effective deployment and enhancing its ability to participate in PFP activities. In tandem with our own efforts, other donors will continue to provide training and other equipment needs.

**EFFECTIVENESS MEASUREMENT:**

- BALTBAT participation, alongside U.S. and NATO forces, in PFP peacekeeping exercises.
- Deployment of BALTBAT to multinational peacekeeping operation(s).

## EUROPE AND THE NIS

## BELARUS

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		5.250	19.000
FMF	0.000	0.000	0.000*
IMET	0.100	0.100	0.275

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Support comprehensive economic reform and restructuring in cooperation with other international donors, the IMF and IBRD.
- Assist Belarus' transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen Belarus' capacity to manage the human dimension of the transition to democracy and a market economy and to sustain the neediest sectors of the population during the transition period.
- Foster the integration of political, military and economic principles that support democratic, constitutional values into the Belarus defense infrastructure.
- Promote a stable and cooperative military relationship between the U.S. and Belarus.
- Assist in development of safe and reliable air space management and air/flight safety capability.

## JUSTIFICATION:

The United States has an interest in promoting a democratic Belarus with a market-oriented economy and a military under civilian control, fully integrated into the wider community of nations. Situated between Poland and Russia, the Baltics and Ukraine, Belarus historically has been at a key crossroads in Europe. Since independence in 1992, it has been an important center of stability in Central Europe and a leader in denuclearization. Having ratified early the nuclear nonproliferation treaty, Belarus expects to complete the withdrawal of all Russian strategic nuclear rockets by 1996, years before the deadline imposed by the START Treaty. Belarus elected its first president in a democratic ballot in 1994, the same year it adopted a new constitution. In 1994, Belarus also began to take the first serious steps toward economic

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

reform. Continued U.S. assistance and engagement in Belarus will be vital to advancing these encouraging developments.

To assist in the development of a market-economy, USAID is supporting pilot privatization auctions in several cities. The West NIS Enterprise Fund is reviewing proposals for possible equity investments in private Belarusian firms. The Farmer-to-Farmer program assists in the privatization of selected collective farms and promotes private farming and efficient farm management.

If Belarus maintains a serious commitment to comprehensive economic stabilization and restructuring, the United States may provide funds for support of structural reform. This support would likely take the form of commodities, commodity transport, and trade or investment credits as Belarus comes to terms with the International Monetary Fund or the World Bank on structural adjustment loans.

The USAID-supported rule of law program consists of judicial training, continuing legal education, and assistance in legal drafting related to commercial and criminal law. Other USAID democracy efforts include election support and monitoring, training of journalists and development of independent media, and support of indigenous nongovernmental organizations (NGOs).

IMET will support the establishment and maintenance of a Belarus military supportive of Belarus' democratic and economic transition and committed to a durable pattern of cooperation with the West. The proposed FY 1996 IMET program for Belarus will offer professional military education for military officers, defense resources management training, English language instructor training, and training in air space management and air flight safety.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Increased number of private sector businesses and farms.
- Free elections at local and national levels with viable, independent political parties.
- NGOs attract wide-spread participation, evidenced by numbers of people taking part in NGO activities, diversity of issues being lobbied for, and range of contributions.
- Improved efficiency, quality and access to health care services.
- Pollution management problems resolved through regional cooperation.
- IMET participants reintegrated into the defense infrastructure in positions where the training provided may be applied.

## EUROPE AND THE NIS

## BOSNIA-HERZEGOVINA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		25.403	80.640
IMET	0.000	0.070	0.200

## OBJECTIVES:

- Support indigenous governmental and non-governmental structures assisting the victims of trauma suffered during the war, and provide a limited quantity of critical humanitarian goods.
- Reinforce the Bosnian Muslim-Croat Federation in central Bosnia and Sarajevo via programs combining intercommunal cooperation, Federation linkages, and resolution of selected constraints on rehabilitation.
- Stimulate the international community and make a direct U.S. contribution to reconstruction in war-torn Bosnia-Herzegovina.
- Bolster the Bosnian Federation by promoting contacts and cooperation between the U.S. and Bosnian defense establishments.
- Advance an understanding of U.S. defense doctrine and practices for Bosnian defense officials.

## JUSTIFICATION:

While the Bosnia conflict does not pose an immediate threat to our security which would warrant unilateral U.S. involvement, the aggression which has driven it and which violates the fundamental values of a much broader theater give the U.S. a clear and compelling interest in taking steps to restore and preserve stability in the volatile Balkan region. After three years of warfare focused predominantly on civilians and their homes, the dislocation of people, destruction of housing, cessation of economic activity, reliance on relief for survival, and deep-seated hostility set a challenging stage for the rebuilding of an interethnic community and a viable Bosnia-Herzegovina capable of participating in the broader community of free nations. Humanitarian programs are aimed at both relieving suffering and building indigenous capacity to cope with the aftermath of war.

Federation-building is intended to reinforce the best prospect for containing conflict and rebuilding society. In that context, municipal rehabilitation activities will put flesh in the form of resources on the bones of the nascent Federation structure, while fostering intercommunal decision-making and problem-solving. Small lending programs will enable eager entrepreneurs to jump-start the desired market economy, providing goods, employment and self-reliance.

\* FY 96 SEED request includes \$60 million for reconstruction.

*EUROPE AND THE NIS*

And public administration support will foster democratic governance at all levels, with emphasis on regional and municipal.

Reconstruction in B-H is intended to stimulate and leverage international support, including at the bilateral, regional and IFI levels, for what will prove to be a massive need. Since the conditions for meaningful reconstruction are directly linked to the success of the Federation and the relative peace it provides in central Bosnia, support for reconstruction also constitutes support for the Federation.

By establishing defense links with Bosnia – such as through the IMET program described here – we can play a key role in shaping the character of Bosnian military institutions in their formative stages and in encouraging those institutions to pursue stability-enhancing objectives. Training programs will also foster enhanced cooperation within the Federation military.

This program would emphasize English-language instruction for Bosnian civilian and military officials as a bridge-building tool between our defense establishments. Another component would promote better understanding of U.S. defense doctrine and practices and of the U.S. model of civilian oversight of the military in order to imbue Bosnian officials with an appreciation for the proper role of the armed forces in a civil democratic society.

**EFFECTIVENESS MEASUREMENT:**

- Relief of humanitarian constraints; operational support structures for victims of trauma.
- Evidence of increased Federation role and interethnic cooperation; success of private enterprises.
- Flow of resources for reconstruction from new sources; initiation of actual reconstruction activities.
- Promotion of IMET graduates to senior military or defense ministry positions.
- Eventual establishment of an English language laboratory.

## BULGARIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		29.338	42.030
FMF	0.000	0.000	7.275 <sup>†</sup>
IMET	0.300	0.400	0.700

## OBJECTIVES:

- Build public participation in the governmental process at the local level through civic, trade union and non-governmental organizations in a long-term effort to strengthen local government and facilitate decentralization.
- Develop private enterprise and free markets by promoting small and medium-scale private business development through loan and investment programs, municipal privatization and a business program of training plus financial and technical assistance, all reinforced when possible by an enabling legal environment for private sector growth.
- Establish a long-term vehicle for leadership development through several training programs and through support to the only American university in Central Europe.
- Improve the quality of life by supporting comprehensive environmental policies, a more efficient energy sector, and development of pilot safety net programs.
- Improve the interoperability of the Bulgarian defense establishment with the armed forces of the U.S. and NATO.
- Support the professionalization of Bulgaria's armed forces and foster respect for civilian control of military.

## JUSTIFICATION:

Bulgaria's first steps in the transition to democracy and a free market economy were impressive. The reform process, however, has slowed. Nevertheless, at the local level, many take the initiative to work for democratic, market-oriented goals. The assistance program in Bulgaria helps to encourage decentralization by building public participation at the local level through civic, trade union, and non-governmental organizations and to strengthen local government. Assistance also facilitates small and medium-size business development; municipal privatization efforts; and an integrated program of training, financial and technical assistance to private enterprises. Assistance also targets improvement of the legal and regulatory environment.

\* Bulgaria may also receive South Balkan Development Initiative funding.

<sup>†</sup> FMF request includes \$4.275m for Partnership for Peace and \$3.0m for CE Defense Infrastructure.

*EUROPE AND THE NIS*

The Bulgarian-American Enterprise Fund was established to promote the development of free enterprise, entrepreneurship and market-based lending activities by pursuing potential investments in food, agribusiness, electronics and tourism. The Fund also provides support to Bulgaria's small business sector.

Increased U.S.-Bulgarian defense cooperation will contribute to the stability of the volatile Balkan region. Our programs have already played, and can continue to play, a key role in shaping the newly democratic and evolving Bulgarian military – by enhancing the professionalism of Bulgarian defense officials, training Bulgarians in U.S. practices, and exposing Bulgarians to the U.S. system of civilian oversight of the armed forces.

Through this program, Bulgarian defense officials will train at U.S. facilities in areas such as defense planning, military doctrine, and peacekeeping. We will continue to emphasize English-language instruction for Bulgarian defense officials in order to facilitate multilateral military cooperation among Bulgarian, U.S., and NATO militaries.

**EFFECTIVENESS MEASUREMENT:**

- Strengthened management ability at the local level coupled with growing authority for local mayors and councils.
- Enactment of legislation and development of regulatory procedures necessary to establish markets, expand the private sector and strengthen competitiveness in key economic sectors.
- Improved efficiency, better regulations, and improved transparency of financial markets.
- Bulgarian participation, alongside U.S. and NATO forces, in multilateral activities employing U.S.-provided training.
- Promotion of IMET graduates to senior military or defense ministry positions, and appointment to significant command units.

## EUROPE AND THE NIS

## CENTRAL EUROPEAN DEFENSE INFRASTRUCTURE

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FMF	0.000	0.000	20.000

## OBJECTIVES:

- Assist the reorientation of the former Warsaw Pact militaries to peaceful, non-offensive roles.
- Promote peace and stability, both globally and in CE, by assisting these newly democratic states in acquiring new and used U.S.-origin, NATO-compatible systems.
- Aid CE militaries in overcoming deeper military infrastructural deficiencies and NATO compatibility problems. Enhance the compatibility of CE's defense infrastructure with NATO, a general goal of the Partnership for Peace (PFP).
- Encourage the CE states to assume greater peacekeeping responsibilities in the post-Cold War world.
- Improve stability-enhancing defensive and deterrent capabilities.

## JUSTIFICATION:

In the interest of contributing to the stability of the European continent -- especially the historically volatile CE region -- the United States has a clear and compelling interest in nurturing expanded defense cooperation with the newly democratic CE states. Through this program, we can contribute to regional stability by supporting concretely the ongoing military reform efforts of the democratic CE governments. Specifically, we can support, primarily via equipment transfers, the reorientation of CE militaries to defensive postures, regional cooperation based on uniform standards of equipment (e.g., radar, transponders, radios), and expanded military cooperation with NATO forces both bilaterally and through the PFP.

This program is separate and distinct from our proposed assistance to PFP partners under the \$100 million "Warsaw Initiative" program. That program encompasses all PFP partners, including the NIS states. Furthermore, assistance provided under that program will be for the purpose of immediately facilitating Partner participation in PFP activities (e.g., C<sup>3</sup>I for specialized units likely to participate in PFP activities, communications links with NATO headquarters, NATO familiarization training, exercise support, etc.). The present program, by contrast, will address deeper infrastructure deficiencies which may or may not immediately facilitate greater PFP participation, but which serves the broader goal of improved compatibility with NATO. This program will also focus specifically on supporting the efforts of CE states to develop dedicated peacekeeping units, including such units which may never participate directly in PFP activities.

*EUROPE AND THE NIS*Defense Infrastructure

Burdened by Soviet-trained and -equipped militaries and austere defense budgets, the CE states face manifold obstacles to closer integration with NATO. Through this program, we will support discrete, high priority projects in areas where NATO compatibility is deficient (e.g., radar, IFF, communications, transportation, etc.). Where possible, funding will be used to support transfers of NATO-compatible excess defense articles (EDA). Assistance provided under this program will focus especially on enhancing defensive capabilities of CE militaries -- in order to assist their ongoing re-orientation to defensive postures, help them rationalize their defense planning, and allow them to deter potential aggressors within or without the region.

Peacekeeping

Virtually all the non-combatant CE states already maintain, or are in the process of developing, dedicated peacekeeping units deployable to multinational peacekeeping operations. These units lack, however, basic NATO-compatible equipment, including communications, personal gear, and transportation, thereby limiting their ability to participate effectively alongside U.S. or NATO units in international peacekeeping operations.

It is clearly in the U.S. interest to support CE peacekeeping efforts through training and equipment transfers. In addition to advancing the objectives of PFP, U.S. support for improved CE peacekeeping capabilities will:

- Improve interoperability and practical political-military cooperation with NATO.
- Help channel the CE states' defense efforts toward maintaining forces adequate for their own security, consistent with their resources, and capable of operating with the forces of NATO member states and others in multinational peacekeeping missions.
- Reduce the need for U.S. peacekeeping deployments in Europe and around the world.
- Create a larger pool of professional peacekeepers available for international deployment.

**COUNTRY PROGRAMS**

**Albania (\$2 million):** Address a variety of high-priority infrastructure needs, including NATO-compatible airfield navigational aids, information upgrades for the Defense Ministry, and training and communications, personal gear, and transportation equipment for the Albanian peacekeeping company.

**Bulgaria (\$3 million):** Support the Defense Ministry's center for training military personnel; assist in transfer of EDA transportation and medical equipment; provide command/ control and transportation equipment for light infantry peacekeeping battalion.

**Czech Republic (\$3 million):** Support Czech acquisition of IFF transponders and interrogators, ground-based radar upgrades; provide communications equipment for aircraft and dedicated peacekeeping battalion.

*EUROPE AND THE NIS*

**Hungary (\$4 million):** Facilitate Hungarian acquisition of new or excess air defense radars, navigational aids, and anti-tank systems; provide communications gear, vehicles, and personal equipment to already-established dedicated peacekeeping unit.

**Poland (\$2 million):** Support Polish acquisition of air defense systems, defensive weaponry, IFF transponders, and ground-based radars; provide communications gear and/or components for Polish peacekeeping battalion.

**Romania (\$4 million):** Support Romanian acquisition of NATO-compatible air defense and other defensive systems; provide communications gear, vehicles, and personal equipment to dedicated peacekeeping unit.

**Slovakia (\$2 million):** Assist Slovakia in acquiring NATO-compatible navigational and air defense systems; provide communications gear for eventual peacekeeping unit.

**EFFECTIVENESS MEASUREMENT:**

- CE acquisition of U.S. equipment that advances their long-term goal of NATO interoperability.
- Deployment of CE peacekeeping units to international peacekeeping operation(s).

## EUROPE AND THE NIS

## CENTRAL EUROPE REGIONAL PROGRAMS

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		44.246	53.166

## OBJECTIVES:

- Foster privatization of state-owned enterprises and support the growth of small and medium sized businesses.
- Helping to build democratic attitudes and institutions by strengthening NGOs, supporting independent media, and building the administrative capacity of local government.
- Improve the quality of life by helping to restructure social services and supporting environmental improvement.

## JUSTIFICATION:

The SEED program began as a regional initiative to give our assistance maximum flexibility to start activities quickly in different countries as opportunities arose in a fast changing situation. As time has passed, we have developed assistance strategies for each country and are increasingly designing programs on a country-by-country basis. However, we continue to fund regional activities that are supportive of more than one country, such as: environmental program that address cross-border problems; financial sector advisors who provide assistance to several countries; and regional conferences and courses.

In addition, we set aside "performance funds" within certain priority sectors to increase funding for projects that are implemented more rapidly than expected or as new opportunities arise. There are also certain programs that are still in the design stages where country levels have not been decided.

In FY 96, SEED regional assistance includes:

- Helping to speed economic reform through privatization of state-owned companies, assistance to nascent small and medium-sized private businesses and funding for the Enterprise Funds (\$23.0 million);
- Strengthening efforts of local government to improve administration, the environment, and social services; building the ability of indigenous NGOs to promote a democratic society; promoting an independent media by providing technical support and training (\$19.2 million); and

*EUROPE AND THE NIS*

- Improving quality of life through efforts in labor market transition, environmental restoration, energy efficiency, and reform of the social service system (\$10.9 million).

For greater programmatic detail of the FY 96 regional SEED request, refer to the USAID FY 96 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Continued growth of private sector share of GDP.
- Greater democratic participation in the governing process.
- Expansion in number and improvement in quality and independence of the non-governmental media sources.
- Rationalization and improvement of social services.

## CROATIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		14.603	13.210
IMET	0.000	0.065	0.200

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which most economic resources are privately owned and managed.
- Support the transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Mitigate the near-term negative impact of the war in Bosnia-Herzegovina and strengthen the capacity to manage the human dimension of the transition to democracy and a market economy, and help sustain the neediest sectors of the population during this transition period.
- Build contacts and cooperation between the U.S. and Croatian defense establishments.
- Enhance Croatian defense officials' understanding of U.S. defense doctrine and practices.

## JUSTIFICATION:

Croatia is struggling to establish a democratic government and a market economy with three burdens – the legacy of Yugoslav communism, the control of over one-fourth of the country by secessionist Serbs, the presence of nearly 400,000 refugees from Bosnia and Croatia. Nevertheless, it has conducted reasonably fair and free multiparty elections for president and legislature and has stabilized its currency and economy sufficiently to win IMF backing. Another important part of the Croatian experiment has been Zagreb's crucial assistance in ending the fighting between Croats and Muslims in neighboring Bosnia and in supporting the federation between the two groups. Similarly, Croatia has followed a path of trying to regain its territory by peaceful means, and, at least until recently, cooperated with the UN Protection Force operating to help bring peace and stability to the region.

Following the outbreak of war in 1991 in Croatia, most U.S. assistance has been humanitarian, targeted for Bosnian refugees and Croatian displaced persons. By supporting private and public Croatian institutions assisting these refugees, such as hospitals, schools, and voluntary organizations, the assistance has fostered the development of democratic institutional systems in Croatia.

In 1992, the U.S. established diplomatic ties with Croatia as most hostilities ceased. A modest SEED program (\$1 million for 1993) for democracy building began. In addition, SEED

*EUROPE AND THE NIS*

provided an additional \$3 million for trauma-related assistance for war victims. In FY 1994, the funding level grew to \$2.8 million for democratic initiatives and training. An additional \$12.6 million funded humanitarian and trauma assistance, including emergency repairs, micro-enterprise activities, NGO development, and conflict resolution activities. FY 1995 SEED money will provide modest technical assistance for the banking and financial sector.

Because Croatia is a key to stability in the Balkans, we have a clear and compelling interest in encouraging it to play a responsible role in the region -- especially vis-à-vis its security policies and the development of its military. A modest military education program would encourage Croatia to continue to seek closer integration with Western security structures, provide an incentive for a deepened bilateral security relationship, and promote our general objective of fostering stability in the region. Specifically, we would emphasize English-language instruction for Croatian civilian and military defense officials as a bridge-building tool between our defense establishments. IMET programs would also imbue Croatian officials with an appreciation for the proper role of the armed forces in a civil democratic society.

**EFFECTIVENESS MEASUREMENT:**

- Increased numbers of licensed private sector businesses (of all sizes) and of licensed viable private commercial banks.
- Development and institution of local government procedures that make their operations more transparent and increase citizen involvement.
- Indigenous NGO relief operations are in place and providing humanitarian assistance.
- Promotion of IMET graduates to senior military or defense ministry positions.
- Establishment of an English language laboratory in Croatia.

## EUROPE AND THE NIS

## CYPRUS

**PROGRAM SUMMARY**  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
ESF	15.000	15.000	15.000

**OBJECTIVES:**

- Enhance the prospects for a negotiated settlement to the division of Cyprus through bi-communal activities.
- Allow Greek Cypriots and Turkish Cypriots to work together in projects in the area of urban planning, health, and conservation.
- Provide scholarships for students from both communities.

**JUSTIFICATION:**

Allowing the two communities to work together will play a key role in bringing about the end of the division of Cyprus.

**EFFECTIVENESS MEASUREMENT:**

- Successful implementation of the bi-communal programs.
- On-going contact between individuals of the two communities after the completion of specific programs.

## CZECH REPUBLIC

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		13.811	7.460
FMF	0.000	0.000	11.900*
IMET	0.500	0.500	0.700

## OBJECTIVES:

- Support continued expansion of the private sector.
- Strengthen the financial sector.
- Strengthen administrative and financial capabilities of local authorities.
- Assist democratic institutions at the grass roots level by strengthening NGOs, supporting legal and judicial reforms, and training independent and professional media.
- Improve the interoperability of the Czech defense establishment with the armed forces of the U.S. and NATO.
- Support the professionalization of the Czech Republic's armed forces.

## JUSTIFICATION:

The Czech Republic continues its rapid evolution as an important political, trade and security partner of the United States. Since 1990, the Czech economy has shifted from 98% public to over 80% private ownership, while vigorous economic reforms have produced solid growth and remarkably low unemployment. A prosperous and secure Europe is vital to the political and economic interests of the United States and the Czech Republic has demonstrated its determination to become an integral member not only of Europe but of the Transatlantic community.

Assuming that economic and institutional reforms continue at their present pace, the U.S. Government believes SEED assistance for the Czech Republic can be phased out over the 1995-1997 period. U.S. assistance has been instrumental in the rapid privatization of the Czech economy, but much of the difficult enterprise restructuring must still be done. In addition, public and private institutions that are the fabric of society in democratic market economies remain fragile and require our continued support.

In FY 96, SEED assistance to the Czech Republic emphasizes:

- \* developing workable systems to finish privatizing state enterprises, improving banking and financial services and training business managers (\$3.4 million);

\* FMF request includes \$8.9m for Partnership for Peace and \$3.0m for CE Defense Infrastructure.

*EUROPE AND THE NIS*

- improving the quality of life through increased energy efficiency, improved delivery of health services and housing privatization (\$3.0);
- strengthening democratic institutions by helping reform the legal, regulatory, institutional, and administrative structures (\$1.1 million).

For greater programmatic detail of the FY 96 SEED request, refer to the USAID FY 96 Congressional Presentation.

The Czech Republic, although facing a major military downsizing and restructuring, is intent on adopting U.S. and Western models of defense organization to facilitate its cooperation with U.S. and NATO forces through the PFP. The U.S. and the Czech Republic already enjoy a robust and expanding bilateral security relationship, including training programs.

Our programs will continue to play a key role in shaping an evolving Czech military -- by enhancing the professionalism of Czech defense officials, training Czechs in U.S. practices, and exposing Czechs to the U.S. system of civilian oversight of the armed forces. We will continue to train Czech defense officials at U.S. facilities in areas such as defense planning, military doctrine, and peacekeeping. We will also continue to emphasize English-language instruction for Czech defense officials in order to facilitate multilateral military cooperation among Czech, U.S., and NATO militaries.

**EFFECTIVENESS MEASUREMENT:**

- Continued growth of the private sector.
- Stronger financial intermediaries.
- Improved efficiency of national and municipal authorities.
- Continued improvement in commercial law and regulation.
- Czech participation, alongside U.S. and NATO forces, in activities employing U.S.-provided training.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## ESTONIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		1.752	0.000
FMF	0.000	0.000	2.916*
IMET	0.152	0.200	0.385

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Support the transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Improve the interoperability of the Estonian defense establishment with the armed forces of the U.S. and NATO.
- Promote the professionalism of Estonia's fledgling armed forces.

## JUSTIFICATION:

Estonia has made considerable progress implementing its reform programs. Estonia has established a vibrant democratic government, has joined the United Nations, the Organization for Security and Cooperation in Europe, the Partnership for Peace, and has concluded a Europe agreement with the European Union. Estonia's economy is gradually transforming from large, state-owned industrial complexes into market-driven businesses. Estonia's legal structure reform, particularly the new value added tax and national budget reform acts, is substantially complete. Environmental legislation has strengthened the Estonian's ability to correct decades of pollution.

In light of Estonia's successful reform efforts and the considerable European donor assistance available to meet the requirements of sustainable development, the U.S. assistance program is being restructured. The U.S. will gradually phase-out new obligations for assistance to Estonia by September 1996. Until the phase-out is complete, the SEED program will focus on the Estonian Government's highest priorities. These include assistance to (1) privatize state-owned enterprises; (2) promote U.S. and other foreign capital investments and help expand trade with the West; (3) reform the health sector and enhance hospitals' modern medical techniques; (4) promote environmental initiatives to reduce health risks and stem environmental degradation; and (5) strengthen municipal governance and improve managerial, operational, and fiscal systems of local and national governments.

---

\* FMF request includes \$1.25m for Partnership for Peace and \$1.667m for Baltic Peacekeeping Battalion.

*EUROPE AND THE NIS*

In FY 1995, resources will be allocated to anti-crime and corruption programs, public administration, advice to small business, non-governmental organization development, and environmental programs. The work of the USAID advisory team on privatization will continue. The Baltic-American Enterprise Fund (BAEF) and associated activities will extend beyond the phase-out date.

Increased defense cooperation between Estonia and the U.S. will demonstrate U.S. commitment to Estonian sovereignty, bolster the stability of the Baltic region, and advance the objectives of PFP. Our programs have already played, and can continue to play, a key role in shaping the fledgling Estonian military -- by enhancing the professionalism of Estonian defense officials, training Estonians in U.S. practices, and exposing Estonians to the U.S. system of civilian oversight of the armed forces.

We will continue to train Estonian defense officials at U.S. facilities in areas such as defense planning, military doctrine, peacekeeping, and financial accountability. We also will continue to emphasize English-language instruction for Estonian defense officials (which Estonia has identified as a high priority) in order to facilitate multilateral military cooperation among Estonian, U.S., and other militaries.

**EFFECTIVENESS MEASUREMENT:**

- Increased number of private citizens owning securities of private companies.
- Establishment of well-functioning, efficiently regulated, transparent and open financial markets.
- Local and regional government roles and responsibilities clarified and better executed.
- Firmly establish the framework for an independent judicial system.
- Estonian participation, alongside U.S. and NATO forces, in multilateral activities employing U.S.-provided training.
- Promotion to senior military or defense ministry positions of graduates of U.S. IMET programs.

## EUROPE AND THE NIS

## EUROPE PEACEKEEPING

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Assist, in conjunction with other contributors, in efforts to deploy Central European peacekeeping units to multinational peacekeeping operations.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
PKO	0.000	3.710	25.000

## OBJECTIVES:

- Reduce the need for U.S. deployments to international peacekeeping operations in Europe and around the globe.
- Promote regional cooperation by encouraging regional peacekeeping efforts.
- Encourage the CE states working with NATO to assume greater peacekeeping responsibilities in the post-Cold War world.

## JUSTIFICATION:

Over the past several years, the new CE democracies, eager to integrate themselves ever more fully into the international community, have taken increasingly active roles in international peacekeeping. Almost all the non-combatant CE states already maintain, or are in the process of developing, dedicated peacekeeping units. Several CE states have already had to limit their deployments, however, because of inadequate resources.

The United States has a clear and compelling interest in supporting and reinforcing this trend, which is consistent with and supportive of the objectives of PFP. In its invitation extended to prospective PFP partners, the Alliance pledged that it will "work in concrete ways towards ...creating an ability (among PFP partners) to operate with NATO forces in such fields as peacekeeping..."

By helping to deploy CE units to peacekeeping operations, the U.S. can play a key role in supporting CE peacekeeping efforts. Support of this kind provides the flexibility to support conflict resolution, multilateral peace operations, and similar efforts in Europe outside the context of formal assessed UN peacekeeping operations. These voluntary operations take advantage of regional institutions to promote stability and security and can result in more effective operations, usually at lower cost to the U.S..

Such U.S. support would not only provide an incentive for CE countries to maintain or create dedicated peacekeeping units, but would also improve interoperability and practical political-military cooperation with NATO. It would help channel the CE states' defense efforts toward

*EUROPE AND THE NIS*

maintaining forces adequate for their own security, consistent with their resources, and capable of operating with the forces of NATO member states and others in multinational peacekeeping missions. Experienced CE peacekeeping units will also serve as "transmission belts" of NATO military practices into the broader CE armed forces. We expect that this assistance would be provided in conjunction with assistance from other contributors (e.g., the Baltic Battalion donor group).

A major emphasis of this program will be to encourage regional peacekeeping efforts, such as the Baltic Peacekeeping Battalion initiative. Such voluntary regional cooperation will promote regional security, enhance inter-ethnic cooperation, and subdue cross-border tensions. Rewarding cooperative regional efforts will also serve as an inducement for other states in the region to emulate projects such as the Baltic Battalion.

**EFFECTIVENESS MEASUREMENT:**

- Deployment of CE peacekeeping units to international peacekeeping operations, especially alongside units from NATO member countries.

## EUROPE AND THE NIS

## FINLAND

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.010	0.015	0.015

## OBJECTIVES:

- Continue to facilitate attendance of Finnish officers at U.S. PME institutions to maintain good military relations with that country.
- Use this training to support the F/A-18 purchase with maintenance technologies.

## JUSTIFICATION:

The proposed program enhances the continued contact between mid-grade, upwardly mobile Finnish officers and U.S. military through attendance at Command and Staff and War College level courses. This will give their future senior leadership an exposure to U.S. security policy interests and further enhance the working relationship between the U.S. and Finland. The Commander-in-Chief (designate) of the Finnish Armed Forces is a graduate of the U.S. Army Command and General Staff College. The Finnish Air Force commander and the commandant of the War College are also graduates of U.S. service schools.

## EFFECTIVENESS MEASUREMENT:

- Continued advancement of U.S.-trained officers to the highest levels of command.

## GEORGIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		24.973	21.000
FMF	0.000	0.000	0.000*
IMET	0.063	0.075	0.250

## OBJECTIVE:

- Strengthen Georgia's capacity to manage the human dimension of the transition to democracy and a market economy, and help sustain the neediest sectors of the population during the transition period.
- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Assist Georgia's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Foster the integration of democratic and constitutional political, military and economic principles and values into the Georgian defense infrastructure.
- Promote a stable and cooperative defense relationship between the U.S. and Georgia.

## JUSTIFICATION:

The United States has multiple interests in promoting political stability, economic progress and strengthened democracy in Georgia, and in assisting Georgia to establish a polity based on unity and consensus. Georgia, a multi-ethnic state of 5.5 million people on the Black Sea, is an important transit point for humanitarian aid to Armenia and to persons displaced by the fighting in Nagorno-Karabakh. Georgia has been wracked by internal strife; although the situation has stabilized somewhat, more than 250,000 Georgians remain displaced from their homes. A prosperous Georgia at peace internally would help ensure stability in the Caucasus and southern Russia.

The highest priority of the U.S. program will continue to be the provision of humanitarian assistance and to assist the Georgian Government in dealing with the relief effort. As the country's economic situation stabilizes, humanitarian assistance will be increasingly directed towards longer-term development objectives such as micro-enterprise, public works and management improvements.

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

To foster the development of conditions for economic growth, USAID is providing long-term advisors to work with the Deputy Prime Minister and the Ministers of Finance and Economy and individuals in a new economic policy center in key reform areas such as currency stabilization, foreign exchange operations, and fiscal management; broadened technical assistance for economic restructuring activities, including the continued support of a long-term business development advisor responsible for promoting business efforts through the provision of training and consultative services. USAID will continue work with the Georgian Ministry of Energy to improve the availability and distribution of energy resources through the country and technical assistance and advisory services in the agriculture and agribusiness sector through Tri-Valley Growers and the Farmer-to-Farmer Program.

To promote democratic development, USAID will support the activities of the National Democratic Institute (NDI), Congressional Human Rights Foundation, Eurasia Foundation and the Institute for Soviet-American Relations in Tbilisi. Through the exchanges and training program, training opportunities will be offered in nongovernmental organization (NGO) management, independent media development, parliamentary process and rule of law. USAID also is planning to provide assistance to improve the legal system and codification of laws. Technical assistance also will be provided to independent radio and the media.

IMET for Georgia is designed to support U.S. objectives related to the establishment and maintenance of a Georgian military that is supportive of Georgia's independence and stability. The proposed FY 1996 IMET program for Georgia will center on senior service professional military education for military officers.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Humanitarian assistance appropriately targeted and reaching the beneficiary in a timely manner. Over the longer-term, beneficiary employment and enterprise start-up will be measured.
- Implementation of various macroeconomic policies (reduced budget deficit, elimination of food and energy subsidies, improved tax collection).
- Increased portion of GDP by private sector; increased number of new business licenses.
- Multiple private media outlets functioning free of government control.
- A constitutional and legal framework and judicial process which provide for more secure individual rights.
- Establishment of environmental NGOs that affect policy changes; and viable independent political parties that respond to their constituencies.
- Promotion of IMET graduates to positions of leadership and command.
- Improved military/civilian relationship in a stable, democratic environment.

## EUROPE AND THE NIS

## GREECE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FMF Loan Subsidy (BA)	15.139	19.731	37.000
FMF Loan	283.500	255.150	315.000
IMET	0.100	0.050	0.050

## OBJECTIVES:

- Enhance regional peace and security by strengthening Greece's ability to play a leading positive role in the Balkans and meet NATO requirements on the alliances southern flank.
- Support a strong bilateral defense relationship and continued access to bases on Greek territory.
- Encourage Greece's continued active participation in NATO, enhance its ability to carry out NATO responsibilities, and improve Greek interoperability with other NATO forces.
- Seek to arrange peacekeeping exercises in Greece and to arrange the training of Greek military personnel in peacekeeping procedures in the United States.
- Meet our treaty commitment to assist with the completion of Greece's five-year defense modernization program.

## JUSTIFICATION:

Training support provides Greek military personnel with the training needed to improve interoperability with U.S. and NATO forces. It also enhances Greek military officers' understanding of U.S. foreign policy and defense concerns. Supporting the continued modernization of Greece's armed forces will contribute to the country's capacity to play a leading positive role in the Balkans and help the U.S. and NATO respond to threats to security in the more volatile areas of Southeastern Europe and the Middle East. Greece has nearly completed an ambitious five-year defense modernization program to improve its military capability and its ability to operate more effectively with the military forces of NATO allies. The proposed FY 1996 request will primarily provide sustainment funding for the U.S.-origin weapons systems already in the Greek inventory, and allow for the support of additional U.S. equipment acquired through the Southern Region Amendment, including six P-3 aircraft. Funding will also allow planned refurbishment newer model tanks received through CFE cascading. In addition, funding will allow acquisition of some new weapon systems, such as HARM missiles and AMRAAM.

Training support continues to provide Greek military personnel with the training needed to improve interoperability with U.S. and NATO forces. It also enhances Greek military officers'

*EUROPE AND THE NIS*

understanding of U.S. foreign policy and defense concerns. Training funds should be used in part to provide instruction to Greek military members in peacekeeping techniques.

**EFFECTIVENESS MEASUREMENT:**

- Continued U.S. access to military bases in Greece and conduct of joint exercises.
- Continued support for NATO, including expanded Greek participation in NATO exercises.
- Continued agreement to become involved in peacekeeping efforts, to host peacekeeping exercises and to send students for training in peacekeeping procedures.
- Continued upgrading of major items of equipment in all three services.

## EUROPE AND THE NIS

## HUNGARY

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		27.529	27.400
FMF	0.000	0.000	7.200*
IMET	0.700	0.700	0.950

## OBJECTIVES:

- Foster the continued growth of a competitive, market-oriented economy in which most economic resources are privately owned and managed.
- Build democratic attitudes and institutions by enhancing the role of individuals and citizens' groups in guiding public policy and encouraging government accountability through civic education, developing and strengthening NGOs, and building the administrative capacity of local government.
- Improve the quality of life and help ameliorate the negative effects of the transition.
- Provide tangible evidence of the U.S. commitment to integrate Hungary into the Western community of nations, including security institutions.
- Improve the interoperability of the Hungarian defense establishment with the armed forces of the U.S. and NATO.
- Promote understanding and performance in civilian control and support the modernization and professionalization of Hungary's armed forces.

## JUSTIFICATION:

Hungary lies in the heart of Central Europe, an area of ethnic diversity and historical suspicion that has been a significant source of geopolitical instability. With the conclusion of the Cold War, it is of vital interest to the United States to assist regional efforts to consolidate democracy and build strong economies in an attempt to preclude further assaults on freedom in Europe which could arise from either ethnic tensions or poverty. Long term European security depends on our meeting these challenges so that the area can be incorporated into the western community of nations.

U.S. government assistance to the Republic of Hungary is based on helping it meet a series of strategic objectives in areas of democratic governance, economic restructuring, and quality of life. This assistance helps to facilitate privatization of state-owned companies, strengthen nascent small and medium- sized private businesses and expedite financial sector reform. Democracy-building programs strengthen the efforts of local government to improve

\* FMF request includes \$3.2m for Partnership for Peace and \$4.0m for CE Defense Infrastructure.

*EUROPE AND THE NIS*

administration, the environment, and social services as well as facilitate education reform and build the ability of indigenous NGOs to promote a democratic society. Assistance also provides support for the labor market transition, environmental restoration, energy efficiency, privatization of housing, and reform of the social service system.

For greater programmatic detail of the FY 96 SEED request, refer to the USAID FY 96 Congressional Presentation.

Expanded defense cooperation between Hungary and the U.S. will contribute to stability in CE while advancing the broad objectives of PFP. Our programs continue to play a key role in shaping the newly democratic and evolving Hungarian military -- by enhancing the professionalism of Hungarian defense officials, training Hungarians in U.S. practices, and exposing Hungarians to the U.S. system of civilian oversight of the armed forces.

We will continue to train Hungarian defense officials at U.S. facilities in areas such as defense planning, military doctrine, and peacekeeping in order to improve Hungary's understanding of U.S. practices and to expand cooperation between our militaries. We will also emphasize English-language instruction for Hungarian defense officials (a GOH priority) in order to facilitate multilateral military cooperation among Hungarian, U.S., and NATO militaries.

**EFFECTIVENESS MEASUREMENT:**

- Accelerated privatization of enterprises and banks.
- Increased efficiency of national and municipal authorities.
- Greater public participation and support for reform process.
- Hungarian participation, alongside U.S. and NATO forces, in multilateral activities employing U.S.-provided training.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## IRELAND FUND

**PROGRAM SUMMARY**  
*(DOLLARS IN MILLIONS)*

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
ESF	19.600	19.600	29.600

**OBJECTIVE:**

- Promote peace and reconciliation in Northern Ireland, and further recent successes.

**JUSTIFICATION:**

The United States supports the International Fund for Ireland as a tangible expression of our desire to promote peace and reconciliation in Northern Ireland. The Fund was established in 1986 to demonstrate United States support for the Anglo-Irish Agreement; the European Union is the major contributor. This program is responsible for the creation of thousands of jobs to date. It contributes to the promotion of peace by bettering the economic situation of Northern Ireland and the border counties of Ireland. The Fund operates on the principle that its disbursements are distributed on the basis of equality of opportunity and nondiscrimination in employment, addressing the needs of both Catholic and Protestant communities.

The President has underlined our commitment to the Fund. Economic development and the peace process are mutually reinforcing. The peace process will engender the stability needed to attract investment, create jobs and break the cycle of dependency. The fund continues to be the logical channel through which the U.S. can encourage further progress in the peace process.

**EFFECTIVENESS MEASUREMENT:**

- Increased job creation and economic development in Northern Ireland and the border counties of Ireland.

## KAZAKHSTAN

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		43.563	62.000
FMF	0.000	0.000	0.000*
IMET	0.090	0.100	0.375

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Support comprehensive economic reform and restructuring in cooperation with other international donors, the IMF and IBRD.
- Assist Kazakhstan's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen Kazakhstan's capacity to manage the human dimension of the transition to democracy and a market economy.
- Foster the integration of democratic and constitutional political, military and economic principles and values into the Kazakhstan defense establishment.
- Promote a stable and cooperative military relationship between the U.S. and Kazakhstan, in particular through English language training of the officer corps.

## JUSTIFICATION:

The Kazakhstani Government is committed to close relations with the United States and has adopted responsible positions with regard to international peace and security, including complete denuclearization. Kazakhstan is a massive country located strategically among Russia, China, and the rest of Central Asia. It has potentially huge petroleum reserves, and SS-18 missiles -- the former Soviet Union's most potent nuclear weapons -- remain temporarily deployed on its territory. The U.S. has a compelling interest in helping Kazakhstan to pursue its ambitious plans to establish a market-based democracy.

USAID is assisting Kazakhstan in drafting new or revised legislation related to the tax code, central and commercial banking, accounting, external debt, securities, the stock market and pension reform. Assistance will be provided to the GOK in improving the budgetary system. USAID will help the GOK establish a tracking system for external debt. Financial sector

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

assistance will include help in initiating new accounting standards and chart of accounts in the Central Bank, commercial banks and public or publicly traded enterprises.

USAID assistance to promote privatization of state enterprises will focus on developing regulations and guidelines for the transparent trading of enterprise shares, and limiting the role of holding companies and monopolies. USAID will also help conduct public education campaigns promoting the benefits of privatization and participation in it by private domestic and foreign investors. The Central Asia Enterprise Fund will provide both loan and equity financing and related technical assistance to Kazakh enterprises. The Fund also will establish a small business lending program.

USAID advisors will assist in the drafting of civil and commercial codes, new foreign investment legislation, new property, contract and bankruptcy law. USAID will work with Kazakhstani counterparts to draft legislation regarding energy policy and regulation. This will be followed with assistance in corporatization and private investment in energy entities.

If Kazakhstan maintains a serious commitment to comprehensive economic stabilization and restructuring, the United States may provide funds for support of structural reform. This support would likely take the form of commodities, commodity transport, and trade or investment credits as Kazakhstan comes to terms with the International Monetary Fund or the World Bank on structural adjustment loans.

To promote transparency and accountability in democratic governance, USAID will help establish a legislative information management system in parliament and a government auditing capacity. USAID will also consult with government officials on executive actions which should be made public. To strengthen local government capacity USAID advisors will introduce a pilot system for municipal budgeting, finance, and management. Advocacy training and small grants are being provided through USAID to local NGOs. USAID is also supporting the development of a legal and regulatory environment more conducive to NGOs. In the media area, training and technical assistance are being offered to strengthen public interest reporting and the effective use of media during elections. Support for rule of law in Kazakhstan includes workshops and training for legislators and others involved in the development of commercial and civil law; and advice in improving the administration of justice, legal procedures, and administrative management.

Improving the delivery, sustainability and quality of core social services is crucial to improved social welfare and the building of popular support for the economic and political reform process in Kazakhstan. Under the housing sector reform project, USAID will continue to work on developing policies to replace subsidized rent with targeted support for vulnerable renters. Health finance systems will be strengthened by examining alternative options such as insurance schemes, privatization, or continued public financing of certain services. USAID is also supporting the World Bank's efforts to privatize industries in south Kazakhstan by assisting industries with divestiture of health facilities. Assistance will also be provided to improve the legal and regulatory environment surrounding the social sector in Kazakhstan, especially with respect to private medical practice and pharmaceuticals.

In health, intensive demonstration sites in Kazakhstan include efforts aimed at increasing the productivity and efficiency of both hospitals and primary care facilities. Other activities will improve public health surveillance systems and disease control, especially in the areas of

*EUROPE AND THE NIS*

preventable diseases and reproductive health. Training and seminars will be used to promote the development of professional standards and capabilities in the housing sector. Finally, the Aral Sea initiative includes specific programs to improve water quality, access to clean drinking water, and regional management of scarce water resources in the Aral Sea region.

Model activities are being introduced to demonstrate how alternative, private sector-based approaches can be developed to address key issues related to housing construction, maintenance and rehabilitation. Similar demonstration activities are either underway or planned in the health sector, aimed in part on improving incentives and promoting more efficient health service delivery. Assistance is also planned to help in the privatization of the pharmaceutical industry.

IMET for Kazakhstan is designed to support U.S. objectives related to the establishment and maintenance of a Kazakhstan military supportive of Kazakhstan's democratic and economic transition and committed to a durable pattern of cooperation with the West. The proposed FY 1996 IMET program for Kazakhstan will center on English language instructor training, senior service professional military education for military officers, and visits by U.S. military mobile education teams.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Increasing share of national assets transferred from state to effective private control.
- Passage of civil laws which ensure basic rights, support privatization and economic development, and allow NGOs to work freely.
- Establishment of health insurance funds with contributions from employers.
- Privatization of Pharmatsia, the public sector entity which now manages all pharmaceutical distribution.
- Increase in the number of housing finance institutions that provide market-based construction and housing mortgage loans.
- More efficient and effective child immunization services.
- Increase in contraceptive prevalence rate and a decrease in the abortion rate.
- Increase in number of households with access to clean drinking water.
- Advancement of U.S.-trained officers to positions of command.

## KYRGYZSTAN

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		20.810	17.000
FMF	0.000	0.000	0.000*
IMET	0.050	0.050	0.225

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Assist Kyrgyzstan's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen Kyrgyzstan's capacity to manage the human dimension of the transition to democracy and a market economy.
- Foster the integration of democratic and constitutional political, military and economic principles and values into the Kyrgyz defense infrastructure.
- Promote a stable and cooperative military relationship between the U.S. and Kyrgyzstan.

## JUSTIFICATION:

Guiding Kyrgyzstan's development along free-market lines and within democratic principles offers the best hope for its future, and will also enable it to serve as a model for other newly independent states. Shortly after independence, Kyrgyzstan distinguished itself as an early and aggressive economic reformer, which the U.S. has recognized through substantial assistance. Kyrgyzstan's isolation and scarce resources will challenge its transition from a heavily subsidized province of the Soviet Union to an economically-viable independent state. Integrating Kyrgyzstan into the regional and world economy will help discourage its becoming a major source and transit point for narcotics, but will not be a substitute for direct counter-narcotics assistance.

USAID is assisting the Kyrgyz Republic in drafting new or revised legislation related to the tax code, central and commercial banking, accounting, external debt and securities and the stock market. Assistance is also being provided in improving the budgetary process. USAID will help the GOK establish a tracking system for external debt. Financial sector assistance will include help in initiating new accounting standards and chart of accounts in the Central Bank, commercial banks and public or publicly traded enterprises.

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

Planned activities to foster transfer of enterprises to private ownership include monitoring privatization legislation, auction procedures and training facilities, making adjustments needed to promote broad based participation and prevent collusion; developing regulations and guidelines for the transparent trading of enterprise shares; limiting the role of holding companies and monopolies; conducting effective public education campaigns promoting the benefits of privatization and participation in it by private domestic and foreign individuals, funds and entities; and providing post privatization assistance to a range of enterprises.

During 1995-1996, USAID advisors will assist in the drafting of civil and commercial codes and implementing regulations, new foreign investment legislation including mineral provisions, and new property law, contract law and bankruptcy legislation. The Central Asia Enterprise Fund is opening an office in Bishkek to provide both loan and equity financing and related technical assistance. The Fund will establish a small business lending program in Kyrgyzstan. USAID will work with Kyrgyz counterparts to help draft and review legislation regarding energy policy and regulation. This will be followed with assistance in corporatization and private investment in energy entities.

USAID encourages local NGO's to work with elected officials at the parliamentary and local level. Seminars and workshops on political party development, coalition building and conflict resolution have either been offered or are in the planning stages. Training and technical assistance to the judiciary and advice on developing an independent bar association are also supported by USAID. USAID will cooperate with the Kyrgyzstan parliament to strengthen legislative functions, especially in the area of transparency, oversight and accountability. Small grants to human rights NGOs will be made.

Improving the quality, delivery, and sustainability of core social services is crucial to improving social welfare and building popular support for the economic and political reform process in Kyrgyzstan. In housing, USAID resources are aimed at improving public welfare through improved targeting of housing subsidies; increased housing quality and choice for all consumers, and greater availability of affordable housing.

Under the housing sector reform project, USAID is helping develop policies to replace subsidized rent with targeted support for vulnerable renters. USAID is also helping clarify ownership and land rights and facilitate private investment in urban land development; an effective, market-based system of titling and valuing property is also planned. Health finance systems will be strengthened by examining alternative options such as insurance schemes, privatization, and better targeting of publicly financed services. An intensive demonstration site for health finance/delivery will be established. USAID is supporting the modernization of two family planning service delivery sites in Bishkek. Future social sector efforts will include improving the legal and regulatory environment, especially with respect to private medical practice and pharmaceuticals. Technical, legal and legislative assistance will be provided in the development of progressive energy sector laws and regulations. The Centers for Disease Control and Prevention will be providing technical assistance to the government to improve public health surveillance systems and response to disease outbreak. Technical assistance will be provided to support sustainable childhood immunization services.

IMET for Kyrgyzstan is designed to support U.S. objectives related to the establishment and maintenance of a Kyrgyz military supportive of Kyrgyzstan's democratic and economic transition and committed to a durable pattern of cooperation with the West. The proposed FY

*EUROPE AND THE NIS*

1996 IMET program for Kyrgyzstan will center on English language training, senior service professional military education and visits of U.S. mobile training teams.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Drafting, passage and implementation of the commercial and civil laws, standards and systems by the end of 1996.
- Increased share of national assets are transferred from state to effective private control.  
Transfer of all technical assistance support functions to local counterparts.
- Free elections taking place at local and national levels.
- Greater transparency in the executive and legislative process.
- Demonstrated ability of courts to assert their independence.
- Enactment of legal and institutional reforms to support private housing markets, health insurance systems, and financial and managerial autonomy for health providers.
- Reduction of rent subsidies and introduction of market pricing for housing maintenance services.
- Increase in the number of housing finance institutions providing market-based construction and housing mortgage loans.
- Improved system of quality assurance in health care at the facility and oblast level.
- More efficient and effective child immunization services.
- Advancement of U.S.-trained officers to positions of command.
- Improved military/civilian relationship in a stable, democratic environment.

## LATVIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		6.915	7.450
FMF	0.000	0.000	2.917*
IMET	0.195	0.200	0.385

## OBJECTIVES:

- Support the economic transition through open market reforms, including private sector development, banking reform, energy efficiency and environmental protection.
- Support development of democratic institutions through the strengthening of local and national government and nongovernmental organizations.
- Improve the interoperability of the Latvian defense establishment with the armed forces of the U.S. and NATO.
- Support the professionalism of Latvia's fledgling armed forces.
- Demonstrate support for Latvia's sovereignty and territorial integrity.

## JUSTIFICATION:

Latvia regained its independence from the Soviet Union in September 1991. Assistance to the Republic of Latvia through the SEED Act began shortly thereafter. Initial support consisted of emergency humanitarian assistance and energy programs that responded to immediate needs. The program quickly evolved into a comprehensive technical assistance system supportive of the Government of Latvia's development objectives. As of September 30, 1994, cumulative obligations to Latvia under the SEED Act totaled \$22.5 million.

Latvia's impressive economic accomplishments, including the successful introduction of a fully-convertible national currency, continuity in economic policy reform during a time of political change, and rapid reintroduction of democratic institutions have led to a sharpened focus of SEED activities. Assistance efforts will concentrate on those public and private sector recipients who benefit from liberalization of the business climate such as the banking industry and newly-privatized enterprises.

A growing challenge to the sovereignty and economic growth of Latvia and other countries in the region has been the rise of international crime. The U.S. has developed a regional "Law and Democracy" program to assist interested Central European governments by providing training to develop skills requisite to the detection and prosecution of corruption, white collar and organized crime. Latvia will participate in this program, which contributes to U.S.

\* FMF request includes \$1.25m for Partnership for Peace and \$1.667m for Baltic Peacekeeping Battalion.

*EUROPE AND THE NIS*

objectives of supporting the transition to market economies and democratic systems of government, and deepening respect for human rights in Central Europe.

Increased defense cooperation between Latvia and the U.S. will demonstrate U.S. commitment to Latvian sovereignty, bolster the stability of the Baltic region, and advance the objectives of PFP. Our programs have already played, and can continue to play, a key role in shaping the fledgling Latvian military -- by enhancing the professionalism of Latvian defense officials, training Latvians in U.S. practices, and exposing Latvians to the U.S. system of civilian oversight of the armed forces.

We will continue to train Latvian defense officials at U.S. facilities in areas such as defense planning, military doctrine, peacekeeping, and financial accountability. We also will continue to emphasize English-language instruction for Latvian defense officials (which Latvia has identified as a high priority) in order to facilitate multilateral military cooperation among Latvian, U.S., and other militaries.

**EFFECTIVENESS MEASUREMENT:**

- Establishment of policy, enactment of legislation, and development of regulatory procedures necessary to establish markets and expand the private sector.
- Well-functioning, efficiently regulated, transparent and open financial markets in place.
- Viable, independent political parties.
- Multiple private media outlets, free of government control.
- Institution of transparent government procedures and increased citizen involvement, including at the local level.
- Latvian participation, alongside U.S. and NATO forces, in multilateral activities employing U.S.-provided training.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## LAW AND DEMOCRACY

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide Law Enforcement Training and Support for Rule of Law Programs in Central Europe and the NIS.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED	0.000	6.000	10.000
ESF	0.000	1.000	0.000

## OBJECTIVES:

- Facilitate police training and exchanges, and investigative and technical assistance activities related to international criminal activities.
- Strengthen democratic institutions through an enhanced criminal justice system, based on the rule of law and respect for human rights.
- Improve the effectiveness of law enforcement and judicial officials in their ability to address the problems of organized and white collar crime and narcotics trafficking.
- Demonstrate support for the sovereignty of the countries in transition in the region.

## JUSTIFICATION:

During his July 1994 visit to Poland and Latvia, the President announced a new effort to support the democracies of Central and Eastern Europe in their fight against crime, which is growing throughout the region. White collar crime, fraud, customs violations and corruption damage the fabric of democracy. Part of the legacy of communism was a legal system inadequate to enforce the rule of law in a free market environment and serve as the foundation for democracy. Organized criminal groups and narcotics traffickers -- some from outside the CE region -- are also taking advantage of more open societies to conduct illegal activities throughout the region.

The United States has developed a regional program, "Law and Democracy," to assist interested Central and East European governments by providing training to develop skills requisite to the detection and prosecution of corruption, white collar and organized crime. The program will focus on banking regulation, securities markets, counterfeiting, customs control, money laundering, organized crime and narcotics trafficking. It will provide training -- both long-term and short-term -- in methods of detecting crime and building cases against suspects in accordance with the norms of democratic society. When appropriate, an advisor will be placed in country to identify specific training needs and work with host country officials in drafting and implementing legislation. The program will also assist in training judges and prosecutors.

*EUROPE AND THE NIS*

The Law and Democracy program, building on ongoing "rule of law" activities, contributes to U.S. objectives of supporting the transition to market economies and democratic systems of government, and deepening respect for human rights in Central and Eastern Europe. The program will be regional, available to CE countries which desire such assistance and in which such a program is a priority element of our assistance strategy. We have initiated the program in Poland and the Baltic states and plan to expand it to other CE countries later in 1995.

Closely tied to the program is the establishment of a U.S. Law Enforcement Training Center in Budapest, Hungary, announced by the President in December on the occasion of the OSCE Summit. The Center plans to open its doors at the end of April, with an initial training program for some 30 mid-level law enforcement officials drawn from the region. The Center, which will be renovated during the course of 1995, will eventually be able to offer five 8-10 week mid-level training courses each year for some 50 participants (annual total of 250), divided among CE and NIS countries. In addition, the Center will be used for short-term training courses which focus on combating organized crime, financial or economic crimes, and narcotics trafficking.

We have identified \$5 million in FY 95 SEED funds for country-specific and regional training programs in Poland and the Baltics, and through the U.S. Law Enforcement Center in Budapest. This law enforcement assistance will be tied closely to ongoing "rule of law" programs in order to ensure that such assistance is based on a solid democratic foundation. In addition to the money for law enforcement training, we have set aside \$1 million in FY 95 to fund legislative assistance and prosecutorial and judicial training in Poland and the Baltics. We have also identified \$1 million of FY 95 ESF funds for the renovation of the Budapest facility.

**EFFECTIVENESS MEASUREMENT:**

- Better trained law enforcement officials in the region.
- Decrease in economic and white collar crime.
- Development of capable, independent judiciaries.
- Closer, more effective cooperation between U.S. and Central and European law enforcement officials.

## EUROPE AND THE NIS

## LITHUANIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		12.262	12.689
FMF	0.000	0.000	2.917*
IMET	0.150	0.200	0.385

## OBJECTIVES:

- Develop the newly-privatized business sector, with emphasis on financial sector reform.
- Address the need for energy efficiency and the safety of the Ignalina nuclear power plant.
- Strengthen democratic institutions, both governmental and nongovernmental.
- Improve the interoperability of the Lithuanian defense establishment with the armed forces of the U.S. and NATO.
- Support the professionalism of Lithuania's fledgling armed forces.
- Demonstrate support for Lithuania's sovereignty and territorial integrity.

## JUSTIFICATION:

Assistance under the SEED Act began in the Republic of Lithuania in October 1991. Immediate needs were for rapid-delivery humanitarian and energy programs. Almost immediately, the Government of Lithuania (GOL) engaged in efforts to transform the economy into a full-fledged market system; U.S. assistance has kept pace with the developments to offer timely help in the fulfillment of this goal. The United States, having never recognized the forcible incorporation of Lithuania into the Soviet Union, is the largest bilateral donor in the country and plays an active role among the international community. As of September 30, 1994, total U.S. assistance to Lithuania was approximately \$29.6 million.

The successful and irreversible economic and democratic transition of Lithuania into the Central European community is one of the United States' highest foreign policy objectives in the region. A recent review of strategic objectives has resulted in an increased emphasis on environmental efficiency investment and improving the role of formerly state-owned agro-industries in the economic transformation process. Special emphasis will be given to production, pricing, and infrastructure support services.

Increased defense cooperation between Lithuania and the U.S. will demonstrate U.S. commitment to Lithuanian sovereignty, bolster the stability of the Baltic region, and advance the objectives of PFP. Our programs have already played, and can continue to play, a key role

\* FMF request includes \$1.25m for Partnership for Peace and \$1.667m for Baltic Peacekeeping Battalion.

*EUROPE AND THE NIS*

in shaping the fledgling Lithuanian military -- by enhancing the professionalism of Lithuanian defense officials, training Lithuanians in U.S. practices, and exposing Lithuanians to the U.S. system of civilian oversight of the armed forces.

We will continue to train Lithuanian defense officials at U.S. facilities in areas such as defense planning, military doctrine, peacekeeping, and financial accountability. We also will continue to emphasize English-language instruction for Lithuanian defense officials (which Lithuania has identified as a high priority) in order to facilitate multilateral military cooperation among Lithuanian, U.S., and other militaries.

**EFFECTIVENESS MEASUREMENT:**

- Establishment of policy, enactment of legislation, and development of regulatory procedures necessary to establish markets and expand the private sector.
- Well-functioning, efficiently regulated, transparent and open financial markets in place.
- Competitive pricing for the efficient use of electricity resources.
- Viable, independent political parties.
- Multiple private media outlets, free of government control.
- Development and institution of transparent local government procedures and increased citizen involvement.
- Lithuanian participation, alongside U.S. and NATO forces, in multilateral activities employing U.S.-provided training.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## THE FORMER YUGOSLAV REPUBLIC OF MACEDONIA (FYROM)

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		13.383	16.724
FMF	0.000	0.000	0.750*
IMET	0.000	0.125	0.250

## OBJECTIVES:

- Build a democratic and civil society through programs that encourage broad citizen participation.
- Develop the private sector and free markets working through pilot privatization programs, technical assistance to the banking industry, and management training.
- Support improvements in regional East-West transportation links.
- Improve the FYROM's ability to cooperate with UN, U.S., and other multinational forces.
- Support the modernization and professionalization of the FYROM's armed forces.

## JUSTIFICATION:

The Former Yugoslav Republic of Macedonia (FYROM) declared its independence in 1991 and has been struggling for survival ever since. The FYROM's stability is the linchpin of stability in the South Balkans. FYROM territory has been the object of four wars in this century alone. It has been recognized by only two of its four neighbors, is situated on the edge of a war zone, and shares a border with Kosovo, the most potentially volatile area in the South Balkans.

U.S. policy aims to maintain regional stability by shoring up political and economic stability in the FYROM. The FYROM's economy suffered from the breakup of Yugoslavia and has continued to deteriorate under the double pressures of sanctions against Serbia to the north and the Greek embargo on its southern border. U.S. economic and technical assistance, while inadequate in and of itself to stop the steady decline of the Macedonian economy, has had a positive impact on fledgling democratic institutions, and sends an important signal to neighboring countries that the U.S. considers FYROM's survival important to regional stability. The USG's intention to provide assistance in the transport sector under the South Balkan Initiative is critical at this time when the FYROM's access to ports and foreign markets is so difficult.

The FY 1994 SEED program focused on providing technical assistance in two key areas: support to the stabilization program through financial and economic restructuring, and democratization. Early efforts addressed a broad spectrum of financial activities -- the national

\* FMF request is for Partnership for Peace.

*EUROPE AND THE NIS*

budget, taxation, pensions, banking, and privatization -- with the objective of creating the financial infrastructure necessary for a successful transition to a market economy. As international financial institutions began to take a more active role in the FYROM, U.S. assistance was narrowed to focus on specific and related areas of concern.

Promoting increased defense cooperation between the FYROM and the U.S. will play a key role in bolstering the stability of the volatile Balkan region. Our programs can play a key role in shaping the fledgling Macedonian military -- by enhancing the professionalism of Macedonian defense officials, training Macedonians in U.S. practices, and exposing Macedonians to the U.S. system of civilian oversight of the armed forces. We can also promote regional peace and security by promoting the compatibility of the poorly-equipped and trained Macedonian military with U.S. and NATO forces. U.S.-provided training will also facilitate cooperation with UNPROFOR forces in the FYROM.

We will train Macedonian defense officials at U.S. facilities in areas such as defense planning, military doctrine, and peacekeeping in order to improve the FYROM's understanding of U.S. practices. We will continue to emphasize English-language instruction for Macedonian defense officials to facilitate cooperation among Macedonian, U.S., and NATO militaries.

**EFFECTIVENESS MEASUREMENT:**

- Increased number of licensed, viable private commercial banks, and effective system established to regulate private banking.
- Decrease percent of national business assets in state hands.
- Local and regional government roles and responsibilities clarified and better executed.
- Plans established for improved East-West transportation links.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## MALTA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.018	0.065	0.075

## OBJECTIVES:

- Improve defense resource management capabilities.
- Further development of a Western-oriented professional officer corps.

## JUSTIFICATION:

Located in the Mediterranean in close proximity to NATO ally Italy and to Libya, Malta has moved steadily closer to the U.S. and Europe in its security posture, and can effectively use assistance to further its ability to participate in key aspects of regional security. To support this goal, we propose providing infantry officer, military police and search and rescue training.

## EFFECTIVENESS MEASUREMENT:

- Increased willingness of the Maltese military to cooperate with U.S. forces and NATO.
- Evidence of the government's readiness to contribute to international peacekeeping/observer missions.
- Improved standards of maintenance and operation readiness.
- Improved interdiction and anti-terrorism capabilities.

## MOLDOVA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		22.180	30.000
FMF	0.000	0.000	0.000*
IMET	0.057	0.050	0.225

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Support comprehensive economic reform and restructuring in cooperation with other international donors, the IMF and IBRD.
- Assist Moldova's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen Moldova's capacity to manage the human dimension of the transition to democracy and a market economy.
- Foster the integration of democratic and constitutional political, military and economic principles and values into the Moldovan defense infrastructure.
- Promote a stable and cooperative military relationship between the U.S. and Moldova.

## JUSTIFICATION:

Since independence in 1992, Moldova has charted a firm course toward macroeconomic stabilization in close cooperation with the international financial community and with considerable assistance from the United States. The reforms have had great success toward establishing a stable currency, privatizing enterprises, freeing consumer prices, and dramatically reducing inflation. There is still considerable work to be done, however, and Moldova's economic recovery has yet to take hold. Politically, Moldova conducted successful elections and instituted a new constitution. Moldova is committed to a peaceful settlement of its ethnic and separatist disputes, again setting a forceful example for that strife-torn region. Continued U.S. technical assistance for structural reform is essential for Moldova to remain an example to neighbors facing similar political, economic, and social difficulties.

To promote the transition to a market economy, USAID will assist mass privatization through cash auctions and case-by-case privatizations; train Moldovan nationals and provide assistance to improve corporate management and support restructuring; provide assistance to private

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

farmers to improve incomes and quality of life, and to identify joint agribusiness ventures; train professors of agriculture; and provide equity investments in private businesses and a small business lending program through the West NIS Enterprise Fund. USAID will help the Moldova Stock exchange develop a modern securities exchange.

If Moldova maintains a serious commitment to comprehensive economic stabilization and restructuring, the United States may provide funds for support of structural reform. This support would likely take the form of commodities, commodity transport, and trade or investment credits as Moldova comes to terms with the International Monetary Fund or the World Bank on structural adjustment loans.

Securing energy resources is vital to Moldova's fledgling private enterprises. USAID is helping establish energy efficiency standards and promote institutional reform for the country's energy enterprises. USAID will provide assistance to the Moldovan legislature as it establishes sound environmental laws, regulations, and regulatory bodies. A demonstration project using a large farm will highlight environmentally-sound agricultural practices.

Assistance in the area of rule of law will include help in drafting legal and regulatory frameworks protecting the rights of the individual and of private property ownership. Assistance will also support work by the Parliament to address legal issues regarding elections. Initiatives aimed at voter education and strengthening the capacity of indigenous NGOs are also planned.

Partnerships between Moldovan and U.S. hospitals will provide exchanges and training visits to the United States. USAID will provide follow-on technical assistance and continue to work with the GOM to develop a self-sustaining immunization system. Additional technical assistance is planned to assist in drafting new health insurance legislation.

IMET for Moldova is designed to support U.S. objectives related to the establishment and maintenance of a Moldovan military supportive of Moldova's independence and stability, its democratic and economic transition and committed to a durable pattern of cooperation with the West. The proposed FY 1996 IMET program for Moldova will center on senior service professional military education for military officers, English language training for instructors and visits of U.S. mobile education teams.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Privatization of more than 1,500 enterprises by the end of the Moldovan government's 1995-1996 program.
- Emergence of well-functioning capital markets.
- Establishment of energy-efficient power utilities.
- Constitutional and legal framework and judicial process provide for more secure individual rights.

*EUROPE AND THE NIS*

- Development of a national immunization policy and improved vaccine and cold chain management.
- Moldovan participation, alongside U.S. and NATO forces, in PFP and multilateral activities employing U.S.-provided training.
- Promotion to senior military or defense ministry positions of graduates of U.S. IMET programs.

## EUROPE AND THE NIS

## NIS PEACEKEEPING

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
PKO	0.000	5.000	5.000

## OBJECTIVE:

- Support peacekeeping efforts in the NIS financed by voluntary means and conducted in accordance with the UN Charter and OSCE principles.

## JUSTIFICATION:

U.S. assistance policy toward the NIS is designed to further regional stability, free markets and democracy in the countries that comprised the former Soviet Union. It seeks to help consolidate the democratic and economic reforms underway in Russia and the other NIS that will prevent a return to the political tension and military competition of the Cold War era.

It is a fundamental objective of the United States to support the independence, sovereignty and territorial integrity of all of the NIS. Disputes and conflicts in several NIS undermine the viability of these states and threaten stability, democratization and reform in the region. Funding under this program will be directed toward supporting, as appropriate, peacekeeping operations in the NIS financed by voluntary means. The United States will continue to lead and support international efforts to assist the parties in arriving at peaceful solutions.

The NIS militaries serve as guarantors of independence and internal stability as well as contribute to the formulation of national policies. Proper conduct by the militaries of the NIS will inspire confidence in, and serve as an example and guide for, the peoples of the NIS involved in nation-building. To the extent that U.S. funding to NIS militaries involved in peacekeeping operations promotes and supports such operations being carried out in accordance with the UN Charter and OSCE principles, our overall regional goals will be advanced.

The proposed PKO funding would support of peacekeeping operations in the New Independent States of the Former Soviet Union (NIS) that are not financed by UN assessed contributions. Assistance would be provided in the form of training, technical or logistical assistance, or material assistance, as appropriate. In addition to helping bring an end to armed conflict and to restoring stability and a climate for successful reform efforts, U.S. contributions to voluntary peacekeeping operations in the NIS gives us some leverage over the conduct of the operation and enhances our ability to persuade others to contribute.

## EFFECTIVENESS MEASUREMENT:

- Peaceful resolution of armed conflicts in the region.

## EUROPE AND THE NIS

## NIS/EAST EUROPE REGIONAL COUNTERNARCOTICS COOPERATION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: This new regional program will support cooperating countries in developing and implementing narcotics control programs.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
INC	0.000	0.000	4.000

## OBJECTIVE:

- Enhance cooperation among regional governments of the Newly Independent (NIS)/East Europe (EE), with U.S. counternarcotics efforts.

## JUSTIFICATION:

The increased incidence of NIS/EE narcotics-related organized crime elements attempting to extend their operations to the U.S. poses a direct threat to our national security. The corrupting presence of thriving drug trafficking organizations in these countries also constitutes a hindrance to the establishment of democratic institutions, and lessens the potential for stable economic growth. This new regional account will provide a much broader capability to counter the debilitating influence of the narcotics trade in this critically important area of the world.

Counternarcotics assistance already provided to the region in Fiscal Years 1993 and 1994, includes:

- Over \$1 million of our UNDCP contribution earmarked for projects in NIS/EE;
- \$700,000 in bilateral enforcement, customs, and demand reduction training to Eastern Europe and the NIS; and
- Travel of an interagency team to Central Asia in May 1993 to assess the drug problem and evaluate the capabilities of local authorities.

Bilateral training has focused on promoting a regional response. In light of the serious drug-related problems facing the NIS, most, if not all, of the governments in the region have a critical need for additional individualized advice and support. Funds from this new regional account will be used principally to provide bilateral commodity and technical assistance, which will bolster initiatives already underway from counternarcotics training and international organization accounts.

*EUROPE AND THE NIS*

Law enforcement organizations in the region are working with the U.S. to target international drug operations, but lack basic equipment and expertise to track and prosecute cases. In Bulgaria, for instance, the Central Service for Combating Organized Crime and Narcotics is developing a national data base to improve investigation of drug cases throughout Bulgaria. Counternarcotics funds were used to provide the Central Service with personal computers and other office equipment to develop this data base and improve communication between the Central Service offices and DEA Athens. Similar projects will be developed in most of the countries of the region.

Many regional police organizations have been successful in making numerous small-scale drug seizures and some larger ones, but capabilities have often been limited by a lack of basic equipment. Items such as handcuffs, radios, forensic equipment and drug testing kits are a top priority. Funds from the regional account will be used to address these procurement issues as well.

Many governments have requested assistance to bring their national legislation into line with the requirements of the 1988 UN Vienna Convention, and others have solicited specific advice on drafting legislation on money laundering, anti-racketeering, anti-organized crime, asset forfeiture and seizure, and other related areas. FY 1996 funds will finance the travel, per diem, interpretation, translation and other administrative costs associated with providing such assistance. U.S. experts will work with their counterparts involved in drafting legislation, and offer seminars geared for policy-level people from a range of interested ministries and other bodies. The focus will be on legislation and sensitizing policy makers. U.S. experts will also be utilized to assist governments in elaborating national drug control strategies, and in articulating a systematic approach to meeting training and equipment needs.

The new Narcotics Affairs Section (NAS) in Moscow, scheduled to be opened in FY 1995, will be funded by this regional account.

**EFFECTIVENESS MEASUREMENT:**

- Better exchange of information with U.S. law enforcement agencies, resulting in enhanced cooperation on operations and investigations.
- Increased cooperating country counternarcotics institutional capacities.
- Increased public drug awareness and decreased market demand for drugs.

## EUROPE AND THE NIS

## OSCE PEACEKEEPING

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: To provide the FY 1996 U.S. contribution to the peacekeeping operations of the Organization for Security and Cooperation in Europe (OSCE).

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
PKO	0.620	4.000	7.000

## OBJECTIVES:

Our FY 1996 request for U.S. voluntary contributions to the OSCE supports U.S. policy goals of preventing destabilizing conflicts in the former Soviet Union, and containing/reducing conflict in the Balkan states. It will be used in the following operations: (1) conflict prevention missions in Bosnia, Estonia, the Former Yugoslav Republic of Macedonia, Georgia, Latvia, Moldova, Serbia, Tajikistan, Ukraine and any other OSCE missions approved by the U.S. in the course of FY 1995-6; (2) monitoring of sanctions enforcement against the former Yugoslavia; (3) a peacekeeping force and civilian oversight monitors for the enclave of Nagorno-Karabakh -- to be deployed once a cease-fire is in place between Armenia and Azerbaijan; and (4) other OSCE preventive diplomacy, conflict prevention and peacekeeping missions decided on by consensus vote of the OSCE.

## JUSTIFICATION:

The proposed U.S. voluntary contribution is approximately nine percent of total OSCE peacekeeping expenditures and may be used in exceptional circumstances to further the above mentioned goals beyond the nine percent contribution to which the U.S. is politically committed. The amount requested will be sufficient to meet the requirements of this year's program plus a deployment to Nagorno-Karabakh. Moreover, all seven OSCE missions to date have succeeded in reducing tensions and avoiding open conflict in their areas of deployment, thus justifying this low-cost response to dangerous conflicts.

## EFFECTIVENESS MEASUREMENT:

- Effectiveness of the program will be measured by the missions' effectiveness in containing conflict and tensions, and by the ability of sanctions enforcement teams to effectively enforce the sanctions regime against the former Yugoslavia.

## EUROPE AND THE NIS

## PARTNERSHIP FOR PEACE (PFP)

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide grant FMF to democratic European states to advance the goals of the Partnership for Peace (PFP).

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FMF	0.000	0.000	60.000
Defense Authorities	0.000	30.000	40.000

## OBJECTIVES:

- Advance the goals of PFP by facilitating -- through training and equipment transfers -- participation by democratic European states in cooperative military activities with NATO.

## JUSTIFICATION:

A crucial national security objective for the United States is to ensure that NATO's PFP initiative, in keeping with its primary goal of furthering stability and security in the region, (1) builds strong practical ties between NATO and its new democratic partners and (2) develops strong candidates for NATO membership.

PFP was initiated at the January 1994 NATO Summit. It seeks improved interoperability and an avenue for the PFP partners to develop closer military relations with NATO. PFP will encourage, *inter alia*, joint planning, training, and military exercises with U.S. and NATO forces; greater interoperability of military equipment, forces, procedures and conformity of doctrine. PFP will also help emerging democracies establish shared values and interests; free market economies; civilian control of the defense forces; and commitment to the stability and security of the region.

Partner participation in PFP activities, as well as partner interoperability with NATO, has been hampered by serious logistical and resource deficiencies, equipment obsolescence, and operational (doctrine/training/leadership) shortcomings. In order to jump-start PFP, President Clinton announced last July his "Warsaw Initiative", a commitment to request \$100 million (\$25 million for Poland) in FY 1996 assistance for new democratic partner states for the purpose of advancing PFP goals. Warsaw Initiative funds will be used to build the foundations of partner participation in PFP and interoperability with NATO, and eventual integration of some partners into NATO. This initiative is consistent with the spirit of the NATO Participation Act of 1994 and builds upon Congress' FY 1995 appropriation of \$30 million to the Defense Department to support partner participation in PFP activities.

FY 1996 budget requests by the Department of State (Foreign Operations Appropriations) and Department of Defense (Defense Appropriations) are required to fund the \$100 million Warsaw

*EUROPE AND THE NIS*

Initiative. To implement the Initiative under existing legislative authorities, the State Department requests \$60 million to implement the bilateral military assistance program for proposed equipment transfers and training. The DoD is requesting the balance of \$40 million to be allocated among programs supporting individual partner participation in joint exercises as well as programs for advancing NATO-PFP interoperability.

Careful consideration has been given to an initial strategy for funding under the Foreign Operations Appropriation. To facilitate cooperation through PFP by interested states, the requested funding will seek to address deficiencies that hamper greater participation in PFP-related activities. This program will support transfers of equipment where appropriate, to enhance the interoperability of partner forces with NATO forces, including, for example, tactical radios, night vision equipment, global positioning system receivers, search and rescue equipment for helicopters, and command, control and communications (C3) upgrades. Special attention will be focused on supporting specialized units in partner militaries that are likely to participate in PFP activities.

Training would include expanded instruction of English (a NATO language) through increased in-country training, transfers of additional language labs, and associated training materials. Mid- and lower-level trainees would be targeted for basic comprehension training (in contrast with IMET which focuses language training on obtaining advanced comprehension levels to facilitate participation in U.S. DoD professional military education programs). We would also expand training (in-country, CONUS, Brussels) designed to familiarize partner defense officials with U.S. and NATO defense structure, doctrine and operations. A further goal would be to foster development of professional NCO cadres in partner defense forces (unlike IMET which primarily focuses upon programs for partner defense forces' professional military corps and civilians involved in military matters).

Collateral efforts funded by the DoD budget (\$40 million, FY 1996) would include support for individual PFP partners participation in joint exercises and other activities to enhance NATO interoperability. These programs are discussed in the DoD Congressional Justification for funding under Title 10.

**EFFECTIVENESS MEASUREMENT:**

- Enhanced ability of PFP partners to take part in PFP activities.

## EUROPE AND THE NIS

COUNTRY-BY-COUNTRY DISTRIBUTION - WARSAW INITIATIVE  
USG SUPPORT TO THE PARTNERSHIP FOR PEACE

## EUROPE AND THE NIS

## POLAND

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		74.972	65.425
FMF	0.000	1.000	18.475*
IMET	0.700	0.700	0.950

## OBJECTIVES:

- Support private sector development.
- Assist development of the financial sector.
- Reform an obsolete public sector to better support democratic development and a market economy.
- Strengthen democratic institutions at the grass roots level by strengthening NGOs, supporting legal and judicial reforms, and creating independent, professional, and ethical media.
- Improve the interoperability of the Polish defense establishment with the armed forces of the U.S. and NATO.
- Support the professionalization of Poland's armed forces.

## JUSTIFICATION:

Poland is the largest Central European state with a population of more than 40 million. This size, which offers the potential for Poland to become a major player in the region, produces complexity and limits the possibility of easy solutions. How Poland does in its struggle to put in place broad-based democracy and a functioning free market, with full respect for human rights, is extremely important to U.S. policy.

Poland is the largest recipient of U.S. assistance in Central Europe with nearly \$720 million in SEED funds obligated as of September, 1994. From the beginning of the program, key aspects of the Polish transition to a viable market economy and democratic civil society such as economic restructuring, private and financial sector development, governmental decentralization, housing sector development, environment and energy, agribusiness, health care, human resources, and strengthened democratic institutions have received extensive U.S. government assistance. After five years, Poland's transformation is firmly on track, despite the 1993 election of a coalition government which has slowed the pace of reform in critical areas.

---

\* FMF request includes \$16.475m for Partnership for Peace and \$2.0m for CE Defense Infrastructure.

*EUROPE AND THE NIS*

USAID-administered SEED assistance is focused on overcoming what remains of major impediments to sustainable, long-term economic growth and resilient democracy, building on lessons learned and a strategy that employs the mutually reinforcing objectives of private, public, financial, and democratic sector development.

Poland plays a pivotal role in the region and vigorously seeks membership in NATO and the Western security framework. Poland avidly pursues a broad range of defense cooperation with the U.S., including a variety of training and exchange programs, as well as bilateral and multilateral military exercises. It currently boasts one of the largest and most active IMET programs in the region. We expect that IMET graduates will continue to be assigned to senior positions in the Polish defense establishment.

In FY 1996, we will continue to train Polish defense officials at U.S. facilities in areas such as defense planning, military doctrine, and peacekeeping in order to improve Poland's understanding of U.S. practices and to expand cooperation between our militaries. We will also continue to emphasize English-language instruction for Polish defense officials in order to facilitate multilateral military cooperation among the Polish, U.S., and NATO militaries.

**EFFECTIVENESS MEASUREMENT:**

- Decreased percent of national business assets/securities in state ownership.
- Increased percent of GDP attributable to private sector activities.
- Local and regional government roles and responsibilities clarified and better executed.
- Market reforms introduced to pension and health care systems.
- Improved efficiency, quality and access to health care services.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## PORTUGAL

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FMF	1.132	0.000	0.000
IMET	0.500	0.500	0.800

## OBJECTIVES:

- Enhance the Portuguese force modernization effort, thus strengthening Portugal's ability to play an active role in collective defense organizations.
- Reinforce Portugal's Atlanticist orientation by building ties to future military leaders.
- Strengthen Portugal's capability to contribute to international peacekeeping efforts, e. g., in Lusophone Africa.
- Reinforce the existing preference for U.S.-manufactured defense equipment.

## JUSTIFICATION:

At a time of shrinking defense and assistance budgets, both in the U.S. and in Portugal, the IMET program gives the best return of any security assistance investment. Most of Portugal's senior military officers in positions of influence are IMET graduates, as are many of its junior personnel. This training is an essential component of the Portuguese military force modernization program, which is being accomplished almost entirely through the purchase or transfer of U.S.-manufactured equipment. If the Portuguese are to continue to operate and maintain this equipment in support of their NATO missions, IMET is a must. In combination with U.S. military equipment, it works to maintain a pro-American attitude in Portuguese government and society as evidenced by Portugal's close cooperation in NATO and its strong general support for U.S. political goals. More specifically, instances of support include participation in embargo enforcement related to the former Yugoslavia, cooperation in the efforts toward peace in the former Portuguese colonies in Africa, participation in humanitarian relief efforts for Rwanda, and ever ready willingness to host contingency operations at Lajes airbase in the Azores.

## EFFECTIVENESS MEASUREMENT:

- Continued Portuguese cooperation on key issues of European defense, and continued excellent access to Portuguese civilian and military decision-makers.
- Enhanced Portuguese participation in international peacekeeping efforts.
- Continued opportunities for the American defense industry.

## EUROPE AND THE NIS

## ROMANIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		32.520	46.046
FMF	0.000	0.000	13.275*
IMET	0.312	0.465	0.700

## OBJECTIVES:

- Support economic restructuring through assistance to implement market principles and increasing the role of the private sector, particularly in business and agriculture.
- Build democratic attitudes and institutions by enhancing the role of individuals and citizens' groups in guiding public policy and encouraging government accountability through civic education, independent media, developing and strengthening NGOs, and building the administrative capacity of local government.
- Improve the quality of life by helping to restructure health care systems and supporting environmental improvement.
- Support the modernization and professionalization of Romania's armed forces.
- Improve the interoperability of the Romanian defense establishment with the armed forces of the U.S. and NATO.

## JUSTIFICATION:

With 23 million people, Romania is the second largest country in Central Europe. It is situated between two regions of vital interest to the United States, the European Union and the former Soviet Union, and borders on the former Yugoslavia. The United States accordingly attaches great importance to Romania's development as a prosperous, democratic, and stabilizing presence in the region. Beyond its geopolitical importance, Romania--a country endowed with abundant natural resources and an educated and well-trained workforce--has potential to become an important trade and investment partner for U.S. businesses. In late 1993, Congress restored MFN trading status to Romania, and in 1994 a bilateral investment treaty went into effect between the United States and Romania. Romanian cooperation has been crucial to the enforcement of UN sanctions against Serbia, at significant cost to itself.

The SEED program to assist Romania in its transition to a free market economy and democratic government is among the fastest growing programs in the region. The reform process started slowly in Romania, but in 1994, a number of important economic and political reforms were

\* FMF request includes \$9.275m for Partnership for Peace and \$4.0m for CE Defense Infrastructure.

*EUROPE AND THE NIS*

instituted. The emphasis in the SEED program is shifting to take advantage of and encourage the recent reform efforts of the Romanian Government.

U.S. assistance to Romania began in 1990 with priorities in humanitarian assistance for children and democratic institution building. Since then, resources have shifted to emphasize economic restructuring. Through September 1994, nearly \$110 million in SEED funding has been obligated for Romania, with 55 percent of that total going to promote economic reform.

The Romanian military has earned respect for its Western orientation, contribution to democratic stability and participation in multinational peacekeeping and humanitarian operations. An enthusiastic PFP Partner, Romania actively seeks expanded defense cooperation with the U.S. and its Allies. Romania is an active participant in a range of other cooperative defense activities with us.

IMET will emphasize training of Romanian defense officials at U.S. facilities including defense planning, military doctrine, and peacekeeping in order to improve Romania's understanding of U.S. practices and to expand cooperation between our militaries. We will continue to promote English-language instruction for Romanian defense officials to facilitate multilateral military cooperation among the Romanian, U.S., and NATO militaries.

**EFFECTIVENESS MEASUREMENT:**

- Increasing percent of GDP attributable to private sector activities.
- Greater public access to parliament -- publication of draft laws, open galleries for plenary sessions for all citizens, increased parliamentary communication with constituents.
- Significant improvement in the health of the population.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## RUSSIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		344.476	260.000
FMF	0.000	0.000	0.000*
IMET	0.471	0.700	1.075

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Assist Russia's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen Russia's capacity to manage the human dimension of the transition to democracy and a market economy.
- Foster the integration of democratic and constitutional political, military and economic principles and values into the Russian defense infrastructure.
- Promote a stable and cooperative military relationship between the U.S. and Russia.

## JUSTIFICATION:

The development of a democratic Russia with a functioning civil society and a market economy is very much in the U.S. interest. Such a Russia can serve as a positive force in world affairs and a constructive partner on a wide range of global issues. The benefits to the United States of a reforming Russia are direct and tangible, including reduced defense requirements, expanded opportunities to market U.S. goods and services to a country of 150 million with enormous pent-up demand, cross-fertilization of scientific and technical knowledge among some of the world's leading scientists and increased cooperation on global environmental issues. Conversely, a Russia in political and economic turmoil would have the potential to destabilize the region and adversely affect a variety of U.S. interests, as would a return to an adversarial relationship. While Russia has made significant strides, much remains to be done. Additionally, the full implications of the crisis in Chechnya are still not clear. We will be watching the situation closely to assess what impact it is having on reform and to make appropriate adjustments to our assistance program.

The success of a transition to a market system is essential for long-term sustainable growth, increased employment and higher living standards. With the successful privatization of a large

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

segment of Russian industry, attention has turned to helping create a legal and regulatory climate in which private business can thrive and assisting traditional enterprises restructure along market lines. U.S. assistance is supporting a variety of post-privatization programs and initiatives to spur the growth of private business. A major new initiative has the goal of training a core of Russian management consultants in the course of restructuring selected enterprises which will serve as models. These consultants will carry out these functions on a commercial basis after U.S. assistance ends.

To stimulate the growth of new small businesses, the U.S. is supporting the creation of multi-purpose business development centers, which will provide training and services to small businesses. They are designed to serve as models for replication, and to be operated eventually by trained Russians on a self-financing basis.

Legal advisors will provide advice and training to counterparts in areas such as de-monopolization, real estate sales, securities market regulation and banking supervision. Experts will assist the central government improve revenue and expenditure analysis and tax collection, as well as tax administration at the regional and local level.

To help create the conditions necessary to mobilize savings for investment in a modernized economy, U.S. advisors are providing training in capital markets, accounting, reporting and auditing standards, protection of shareholder rights, and bank supervision. USAID will also support investment and trade directly through the Russian-American Enterprise Fund, the Fund for Large Enterprises in Russia and a small loan window managed through the European Development Bank.

In the area of land privatization and agricultural restructuring, U.S. assistance supports pilot projects on land market development to promote secure land tenure and sale of land, prerequisites to investment. U.S. advisors are working with Russian counterparts to institute real estate information systems to permit land titling, transfer, mortgage transfer, zoning, and eventual property taxation. Development of basic land legislation is being assisted. Pilot efforts will also be undertaken to foster privatization and reorganization of state farms and land owned by privatized enterprises.

Work is underway on helping Russia develop options for restructuring the electric power industry on a market-oriented basis and for promoting private investment in modern power generation facilities. Efforts will continue to help Russia improve demand-side energy efficiency.

Environmental assistance is designed to help Russia gain experience in countering the severe health risks from industrial pollution, reducing urban pollution and managing natural resources. Local demonstration of sound environmental practices will lead to models that can be replicated in other regions.

Strengthening of the nascent democratic system is needed to ensure completion of the economic transition and to avert the reemergence of authoritarian abuses which characterized Russia's past.

U.S. assistance is working to support a wide spectrum of democratically oriented political parties and organizations, as well as the election process itself. Political party development and

*EUROPE AND THE NIS*

support to advocacy groups such as labor unions focus on building skills in organizing and public education. Legislative bodies are being strengthened through development of research entities at the federal level, and assistance to regional legislatures will be considered as opportunities arise.

U.S. advisors and professionals-in-residence are helping independents Russian newspapers, television stations and other media groups to achieve the business expertise needed for true economic independence. Future programs will focus on: developing partnership activities between Russian media organizations and American counterparts; fostering linkages between U.S. and Russian journalism schools; and supporting independent wire services.

USAID's assistance to some of the many newly emerging NGOs in Russia is contributing to the development of a democratic society. Ongoing grants and training programs will continue with increasing focus long-term partnerships between Russian and U.S. NGOs, and on effective financial self-sufficiency of grassroots organizations.

USAID will continue to work with the President's office and the Parliament on the next phase of the new Civil Code.

Priority areas for U.S. assistance include strengthening government accountability, and developing a judicial system which will be accessible to individuals and firms and will apply laws fairly, impartially, and efficiently. Cooperation between U.S. and Russian law enforcement agencies is directed toward combating organized crime, traffic in illicit arms and drugs and financial crimes with international implications. U.S. assistance will continue to strengthen judicial institutions through training and continuing education of judges, prosecutors, and other legal practitioners, and through an expanded jury trial program. The jury trial program remains a key vehicle in the reform of the whole criminal justice system.

U.S. legal experts will continue to advise the legislative and executive bodies and which support reform of criminal and civil law. In addition, U.S. assistance will continue to support the parliamentary bodies (the Duma and the Federation Council) in developing the capacity to analyze policy and draft legislation. Ongoing efforts to help develop non-governmental institutions focused on human rights and women's issues will continue.

Collaboration between U.S. technical advisors and three municipal governments (Moscow, Nizhny Novgorod, and Vladivostok) has brought about key local government reforms to make city government more transparent, increase accountability and participation, and upgrade management and administration of service delivery.

Russia's success in managing the human dimensions of political and economic change will have a major effect on the viability and durability of democratic and market reforms. The perception that reforms benefit only a privileged few and harm the social and economic welfare of the average Russian, is creating opposition and backlash to fledgling democratic and market institutions. U.S. assistance must therefore demonstrate that the give-and-take of democracy and an open, market-based economic system can be compatible with adequate delivery of social services and the problems faced by vulnerable population groups.

U.S. assistance supports pilot model efforts in health care financing and service delivery at the local (oblast) level in Siberia. The pilot programs encourage medical providers to focus on

*EUROPE AND THE NIS*

preventive health care, allow consumer choice, and offer quality, cost-effective services on a fee basis with recourse to state subsidies. A special new initiative to support efforts to improve women's' reproductive health is just being launched. Four Russian-American hospital partnerships will continue so that Russian medical personnel can gain experience with modern hospital management and consider new approaches to hospital administration and medical treatment, the essential component of health sector restructuring.

On the housing front, a pilot program on the formation of condominium associations will address the legal framework for condominium ownership and urban apartment buildings. Expectations are that this will be ready for replication to over 100 cities in Russia by 1997. Other legal advisory and consulting services are being supplied with USAID assistance to address the need for a basic urban land code and related implementing laws. Training of real estate professions has been initiated and will continue so that when the legal framework is developed, Russia will have tested both successful models and appropriate people to develop a private residential real estate market. A means-tested housing allowance system is now being experimentally introduced in Moscow and other cities.

The United States has a critical interest in a stable Russian military establishment. IMET for Russia is designed to support U.S. objectives related to reforms within the Russian military that will help consolidate Russia's strengthening of a durable pattern of cooperation with the West. The proposed FY 1996 IMET program for Russia will center on senior service professional military education for military officers and defense resources management training, primarily for civilian defense-related government employees.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Reduction and eventual elimination of subsidized credits to state-enterprises.
- Establishment of an equitable and efficient tax system.
- Enactment by end of 1996 of a code of criminal procedure with guarantees to speedy trial, right to counsel, and due process.
- Increase in proportion of population served by independent, financially sustainable local TV stations.
- Modern clinical practices and market reforms introduced in Russian hospitals result in improved quality of care.
- Increased proportion of housing operating costs covered by rents.

## EUROPE AND THE NIS

## SLOVAKIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		27.450	32.465
FMF	0.000	0.000	5.550
IMET	0.296	0.350	0.525

## OBJECTIVES:

- Foster the continued growth of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Build democratic attitudes and institutions by enhancing the role of individuals and citizens' groups in guiding public policy and encouraging government accountability through civic education, developing and strengthening NGOs, and building the administrative capacity of local government.
- Improve the quality of life by helping to restructure health care systems and supporting environmental improvement.
- Improve the interoperability of the Slovak defense establishment with the armed forces of the U.S. and NATO.
- Support the modernization and professionalization of Slovakia's armed forces.

## JUSTIFICATION:

Given its geographic position – directly between Western Europe and the former Soviet Union – Slovakia is critical to the security of Europe, and by extension the U.S. Since its split from the Czech Republic, Slovakia has experienced a difficult economic contraction and continued political uncertainty. The economy now seems on the path of strong growth and macro-stability, but much remains to be done to privatize and restructure its industry, and to strengthen its as yet fragile democratic institutions.

U.S. assistance plays a valuable role in completing the transformation of Slovakia from a communist state to a fully functioning multiparty democracy with a market economy and a Western-leaning military. Worthy of particular note is our assistance through non-governmental channels that fosters the development of political organizations and of independent media.

Additional assistance facilitates education reform, promotes the establishment of multi-voiced media, prepares locally-elected officials to manage city assets, and provides technical assistance for the creation of an independent judiciary. In helping to accelerate the transition to a market

\* FMF request includes \$3.55m for Partnership for Peace and \$2.0m for CE Defense Infrastructure.

*EUROPE AND THE NIS*

conomy, the U.S. lends assistance to restructure enterprises and create a strong banking system, while encouraging the growth of small and medium-sized private enterprises. During the transition period, quality of life issues are important. Our assistance helps in health care finance reform, rationalization of housing, and projects to help workers make the transition to a free market economy.

For greater programmatic detail of the FY 96 SEED request, refer to the USAID FY 96 Congressional Presentation.

Faced with developing its own military since the break-up of Czechoslovakia, Slovakia has chosen to emulate Western models of defense organization, planning, and operations and to seek integration with NATO and Western security structures. As such, it looks to the U.S. to provide its fledgling defense establishment with training, guidance, and equipment.

Our programs continue to play a key role in shaping the newly democratic and evolving Slovak military -- by enhancing the professionalism of Slovak defense officials, training Slovaks in U.S. practices, and exposing Slovaks to the U.S. system of civilian oversight of the armed forces. We will continue to train Slovak defense officials at U.S. facilities in areas such as defense planning, military doctrine, and peacekeeping in order to improve Slovakia's understanding of U.S. practices and to expand cooperation between our militaries. We will continue to emphasize English-language instruction for Slovak defense officials in order to facilitate multilateral military cooperation among the Slovak, U.S., and NATO militaries.

**EFFECTIVENESS MEASUREMENT:**

- Greater democratic participation in the governing process.
- Expansion in number and improvement in quality and independence of the non-governmental media sources.
- Continued growth of private sector share of GDP.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## SLOVENIA

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED		6.276	4.295
FMF	0.000	0.000	0.400*
IMET	0.113	0.125	0.300

## OBJECTIVES:

- Foster the rationalization and privatization of the financial sector.
- Build democratic attitudes and independent media.
- Improve the interoperability of the Slovenian defense establishment with the armed forces of the U.S. and NATO.
- Support the modernization and professionalization of Slovenia's fledgling armed forces.

## JUSTIFICATION:

Slovenia, the wealthiest and most developed of the ex-Yugoslav republics, is intent on strengthening links to the West. The country is an island of stability in a conflict-ridden region. It has rapidly established a functional democracy with a multiparty political system, a free press, and a mixed presidential/parliamentary form of government. Slovenia leads all of the post-communist countries, with a per capita GDP of over \$6,000 in 1993 and turned the corner economically in 1993, registering growth in that year and in 1994. Slovenia's successful democratic transition and economic transformation, its peacefulness and stability, serve as an example to the other nations of the region. It is strongly in the USG interest to support the consolidation of Slovenia's accomplishments.

The July 1993 Technical Assistance Plan of the Government of Slovenia requested U.S. help in two sectors: reform of the financial and banking sector and the privatization of several key industries. SEED assistance in these areas complements the efforts of other donors and the international financial institutions, and is modest in cost, tightly focused in scope, and of limited duration. In addition, USIA manages several democracy strengthening activities.

Independent only since 1991, Slovenia is creating a military from scratch and is eager to build on its nascent, but expanding security relationship with the U.S. With little experience of its own to draw on, Slovenia welcomes U.S. training programs such as IMET as an effective vehicle for promoting expanded defense cooperation with the U.S. and NATO. Slovenia became the first non-NACC country to join the Partnership for Peace in March and is close to completing its Individual Partnership Program.

---

\* FMF request is for Partnership for Peace.

*EUROPE AND THE NIS*

Our programs continue to play a key role in shaping the newly democratic and evolving Slovenian military -- by enhancing the professionalism of Slovenian defense officials, training Slovenians in U.S. practices, and exposing Slovenians to the U.S. system of civilian oversight of the armed forces. In FY 1996, we will continue to train Slovenian defense officials at U.S. facilities in areas such as defense planning and military doctrine. We will also continue to emphasize English-language instruction for Slovenian defense officials in order to facilitate multilateral military cooperation among Slovenian, U.S., and NATO militaries.

**EFFECTIVENESS MEASUREMENT:**

- Progress on reform and privatization of the banking system.
- Increased private sector share of GDP.
- Promotion of graduates of U.S. IMET programs to senior military or defense ministry positions.

## EUROPE AND THE NIS

## SPAIN

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.049	0.050	0.050

**OBJECTIVE:**

- Ensure the continued professionalism and enhance the technical, systems, and management skills among military officers through a Professional Military Education (PME) program.

**JUSTIFICATION:**

A PME program will ensure military professionalism and strengthen technical and managerial skills among Spanish officers. Qualitative improvements among the officer corps, combined with the multiplier effect achieved when PME-trained officers return to Spain, strengthen the entire armed forces structure.

In addition, a PME program will encourage continued close ties between the U.S. armed forces and the Spanish military, increasing support for an extension of the Defense Cooperation Agreement (DCA) and reinforcing the armed forces' transition to an appropriate role in society. A well-trained, modern Spanish armed forces will continue to play constructive roles internationally, such as participating in peacekeeping missions and pressing for better observance of human rights.

**EFFECTIVENESS MEASUREMENT:**

- Positive Spanish military attitudes toward an extension of the DCA.
- Spanish participation in international peacekeeping operations and participation in Partnership for Peace exercises.

## EUROPE AND THE NIS

## SOUTH BALKAN DEVELOPMENT INITIATIVE

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: To provide \$30 million from FY 1996 funds for a U.S. contribution to seed a "South Balkan Development Initiative", a project to promote regional infrastructure development. This program will promote general peace, security and cooperation in the emerging democracies of the volatile Southern Balkan region (Albania, the Former Yugoslav Republic of Macedonia--FYROM, and Bulgaria).

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
SEED	0.000	0.000	30.000

## OBJECTIVES:

- Support regional economic restructuring by providing funding to launch a multilateral effort to promote regional infrastructure development to assist the countries most affected by the sanctions against Serbia/Montenegro and most dependent on Serbian goodwill for access to European markets.
- Support regional integration and promote commercial and cultural cooperation in the Southern Balkan region.

## JUSTIFICATION:

An obstacle to the development of stable democracy and a market economy in the southern Balkan region is the war in the territory of the former Yugoslavia. Sanctions against Serbia/Montenegro have impacted the economies of the region, choking off reliable access to key European markets. Other factors such as the Greek trade embargo toward the Former Yugoslav Republic of Macedonia (FYROM) further complicate the picture.

Ensuring the development of prosperous, democratic states in the Southern Balkans is the surest hedge against instability in the region, as well as potentially in the broader Euro-Atlantic area. Ultimately, regional stability will hinge on preventing the spillover of the current conflict into the front-line states bordering Serbia.

One possible infrastructure project under this initiative is an East-West transportation link to replace the traditional North-South route running through Serbia to stimulate trade among the formerly isolated countries of the region. It would attract substantial containerized traffic bound for Central Asia, avoiding the long circuitous route currently used to get to the Black Sea. The presence of alternate routes would enhance regional stability by depriving some states of the use of their strategic monopolies on existing north-south transport routes as a form of economic blackmail.

*EUROPE AND THE NIS*

Countries in the South Balkan region are also attempting to facilitate privatization and small business development, which elsewhere in the region has been driven by small trading companies. Without secure market access, the activities of these new entrepreneurs and concomitant job creation could be delayed, placing a severe drag on these countries' overall private sector development plans.

The U.S. contribution to such a project will promote U.S. leadership in the region by providing feasibility studies, training and technical assistance that will attract other donors and IFIs. Funds may be needed for other financial vehicles such as loan guarantees. The primary beneficiaries will be the countries of Albania, FYROM and Bulgaria, although most of the countries of south central Europe could benefit from enhanced trade routes.

Due to the large size of any such regional effort, with inputs possibly exceeding \$1 billion, there are significant opportunities for U.S. companies.

**EFFECTIVENESS MEASUREMENT:**

- Significant increase in regional trade and cooperation, especially for Albania and the FYROM.
- International support for an infrastructure project that will provide jobs and will continue to create private sector employment opportunities in a strengthened economy.
- Establishment of a trade route that will outlive the sanctions and embargoes in the region.

## TAJKISTAN

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		9.230	7.000

## OBJECTIVES:

- Strengthen Tajikistan's capacity to manage the human dimension of the transition to democracy and a market economy, and help sustain the neediest sectors of the population during the transition period.
- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Assist Tajikistan's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.

## JUSTIFICATION:

Tajikistan is at a crossroads -- it has survived a bloody civil war which uprooted half a million persons and resulted in tens of thousands of deaths and is now embarked on a UN-brokered peace process with the goal of national reconciliation. The U.S. has an interest in promoting democracy and market reform in this newly independent country and in preventing instability there from spreading through the region. The bulk of U.S. assistance will go to alleviate the humanitarian crisis exacerbated by the civil conflict. Modest technical assistance and training is being provided to encourage and support economic and political reform.

USAID programs focus mainly on responding to emergency and humanitarian needs stemming from the civil war and its aftermath. The need for food and medical emergency information is great in Tajikistan, particularly in the south. USAID funds an array of emergency relief activities involving international organizations and a number of U.S. private voluntary organizations (PVOs). Activities focus especially on food, medicine and shelter.

USAID is supporting local and U.S.-based training in health-care finance, pharmaceutical management, epidemiology and disease surveillance, and women's reproductive health to begin addressing longer-term health system needs. A partnership with an American hospital will soon be established which will focus on improving maternal and pediatric care. The Centers for Disease Control and Prevention will be providing technical assistance to the government to improve public health surveillance systems and response to disease outbreak. Technical assistance will be provided to support sustainable childhood immunization services.

As the peace process moves forward in Tajikistan, increasing focus is being given to long-term development needs. Training efforts in the area of economic restructuring have been useful, but now there is a need to follow that up with a macroeconomic policy advisor who can provide

*EUROPE AND THE NIS*

follow-through and mentoring for returned participants, coordinate with other donors and act as a catalyst for economic reform. USAID will provide a long-term macroeconomic policy advisor to the office of the Prime Minister, supplemented by short-term technical assistance and training in key areas related to fiscal and financial reform. In FY 1996, activities may also include assistance in developing a basic privatization strategy to support the broader macroeconomic effort.

Human rights assistance will focus on the constitution, human rights legislation, and the election law. Several small human rights legal resource centers are planned for Dushanbe and elsewhere to provide information to both the public and to policy makers, and to serve as sites for seminars and other events. A small grants program for nongovernmental organizations (NGOs) will support groups such as the Association of Young Lawyers, the Children's Fund, and NGOs focused on inter-ethnic relations. Following parliamentary elections in 1995, new initiatives will be developed to support the parliament as a check on executive branch power. If support for revising the constitution is requested in the context of peace negotiations, USAID will respond with short-term advisors and training related to constitutional development.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Food, medicine and medical supplies successfully delivered to targeted beneficiaries in a timely manner.
- Improved health surveillance system at the national and oblast levels
- More efficient and effective child immunization and disease control services.
- Growth in the numbers of NGOs supporting human rights.
- Passage of human rights and election law legislation.

## EUROPE AND THE NIS

## TURKEY

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
ESF	119.978	50.000	100.000
FMF Loan Subsidy (BA)	21.667	28.186	52.888
FMF Loan Amount	[405.000]	[364.500]	[450.000]
IMET	1.006	1.000	1.000
INC	0.400	0.400	0.400

## OBJECTIVES:

- Maintain Turkey's status as a functioning secular democracy with improved standards of human rights observance capable and willing to support U.S. and Western interests in a troubled and strategic area.
- Sustain the support of the Government of Turkey for the Provide Comfort humanitarian relief mission and continuance of the sanctions regime against Iraq.
- Support continued modernization of Turkey's armed forces, in particular the continuation of the Peace Onyx I and II programs for F-16 coproduction.
- Seek to arrange peacekeeping exercises in Turkey to include the participation of states in the Partnership for Peace, and the training of Turkish military personnel in peacekeeping procedures in the United States.
- Encourage the continuation and success of the Turkish Government's austerity reform measures through timely ESF.
- Support the interruption of the flow of illicit drugs through Turkey, the elimination of heroine laboratories, and the prosecution of major traffickers.

## JUSTIFICATION

Turkey stands out as a democratic and secular nation in a region which has few democratic traditions, where Islamic fundamentalism is increasing, and where political instability is commonplace. While Turkey's influence with neighboring nations on specific issues should not be exaggerated, the fact that it is a functioning democracy with a pro-western outlook has a broad and beneficial impact on U.S. interests in the region. As a committed member of NATO, Turkey both strengthens western defenses and offers the potential to extend the reach of the west into an unstable part of the world which has critical oil resources. Over the long-term, Turkey offers both the largest market in the Middle East and a potential regional center for trade and finance. For these reasons, the U.S. has serious political, military and economic interests in maintaining a healthy and friendly relationship with Turkey.

*EUROPE AND THE NIS*

To defend its own borders, as well as to offer assistance to allies, it is imperative for Turkey to have the necessary economic resources and military force structure. If the Turks are unable to continue to modernize and streamline their armed forces, they will find it increasingly difficult, and perhaps ultimately impossible, to assume the necessary security role in the region. Such modernization is also dependent on building a healthier economic base through expanded trade and increased investment by the West.

The loss of grant funding jolted Turkey's defense budget. A few modernization programs are continuing, but many others have been shelved for lack of resources. FY 1996 is the last year of U.S. financing for the critical Peace Onyx F-16 coproduction program. Training not only improves the professionalism of future leaders, but also introduces them to U.S. concepts of the proper role of the military in a democratic society. Economic support funding will help Turkey cope with the IMF austerity program imposed in April 1994. Additionally, training funds should be used in part to provide instruction to Turkish military personnel in peacekeeping techniques.

The Turkish government is keenly aware of its role as a narcotics gateway to Europe, and is working aggressively to diminish both the heroin passing through and that which is processed in country. The Government of Turkey has made particularly effective use of equipment provided to it in the past.

**EFFECTIVENESS MEASUREMENT:**

- Willingness by the Government of Turkey (GOT) to permit the continuation of Operation Provide Comfort and to maintain sanctions against Iraq.
- Successful completion of the final year of financing for the Peace Onyx F-16 coproduction effort and the furtherance of other modernization programs leading to continued GOT willingness to support U.S. area initiatives.
- Turkey's agreement to become further involved in peacekeeping efforts, to host peacekeeping exercises and to send students for training in peacekeeping procedures.
- Continuation by the GOT of its difficult economic reform program, and the success of the program in producing measurable improvements in the economy.
- Increase in the quantity of heroin seized by both Turkish National Police and Customs officials.

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		5.123	4.000
FMF	0.000	0.000	0.000*
IMET	0.050	0.050	0.225

## OBJECTIVES:

- Assist Turkmenistan's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen the capacity to manage the human dimension of the transition to democracy and a market economy.
- Promote a stable and cooperative military relationship between the U.S. and Turkmenistan.

## JUSTIFICATION:

Turkmenistan has made limited progress to date in making the transition from a Soviet-era political and economic system. The U.S. has an interest in preserving Turkmenistan's sovereignty and independence, promoting democratic and market-based reform and adherence to basic human rights, and encouraging business and investment opportunities stemming from Turkmenistan's huge natural gas reserves and agricultural potential. The modest U.S. assistance program has focused on humanitarian assistance and, more recently, on technical assistance and training to support the transition to democracy and a market economy.

USAID training and related activities concentrate on building a new generation interested in democratic values. The small grants program for nongovernmental organizations (NGOs) will take special notice of opportunities for development in Turkmenistan. Turkmen participation in regional training and seminars will also be important.

Indigenous NGOs can potentially provide an important avenue of information and opportunity for citizens to actively and effectively participate in the political and economic life of their country, but few NGOs have been organized in Turkmenistan. USAID will work to encourage development of the legal infrastructure for registration and operation of NGOs. Small grants programs will seek opportunities to assist the establishment of grassroots NGOs, especially in the area of human rights. Support will be provided through organizational advice and assistance.

---

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation

*EUROPE AND THE NIS*

The Turkmenistan segment of the Aral Sea environmental program also is substantial, involving both a local demonstration potable water project and involvement in regional policy-related activities.

The proposed FY 1996 IMET program for Turkmenistan will center on English language training, which will help prepare Turkmen military personnel to take advantage of future training opportunities.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- More effective NGOs engaged in monitoring and advocacy of human rights and rule of law issues.
- Number of local residents benefiting from USAID-funded potable water activity.
- Decreased volume of water used for irrigation in the Aral Sea region.
- Promotion of IMET graduates to senior military or defense ministry positions.

## EUROPE AND THE NIS

## UKRAINE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		160.138	159.000
FMF	0.000	0.000	0.000*
IMET	0.600	0.600	0.950

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Support comprehensive economic reform and restructuring in cooperation with other international donors, the IMF and IBRD.
- Assist Ukraine's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen Ukraine's capacity to manage the human dimension of the transition to democracy and a market economy.
- Promote a stable and cooperative military relationship between the U.S. and Ukraine.

## JUSTIFICATION:

The United States has a significant interest in promoting a independent, democratic, non-nuclear Ukraine with a market-oriented economy and a military under civilian control. Ukraine has the second largest population and economy of the New Independent States, and its stability and prosperity is key to a secure and undivided Europe. U.S. assistance programs promote economic and democratic reform and nuclear disarmament. In 1994, Ukraine elected a new president and parliament, began to implement an ambitious economic reform program in conjunction with the IMF, and acceded to the nuclear nonproliferation treaty as a non-nuclear weapon state.

USAID is working at both the local and national levels to assist Ukraine in transferring state enterprises, land and real estate to private ownership and in improving the understanding of how markets function. This includes helping to identify and implement effective strategies to promote popular participation and interest in privatization; technical assistance in structuring and implementing the mass privatization program; support for the development of institutions, legislation, and market structures needed for competitive capital, land and real estate markets that will drive the process of economic restructuring; wide dissemination of information on

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

market reform and training on economic issues for key individuals; and assistance with pilot activities such as land privatization and zoning, titling, recording and registration systems.

To promote financial sector reform, USAID's program concentrates on enhancing Ukrainian capacity to develop a viable financial sector, including the establishment of a banker training institute and the provision of equipment and technical assistance to strengthen Central Bank operations.

In the area of energy, in conjunction with the Group of Seven Energy Action Plan, USAID is providing technical assistance to Ukraine to support energy sector restructuring, increase energy efficiency and reliability, improve domestic fuel resources and nuclear safety. USAID activities support the restructuring of the power sector, including the development of a legal, regulatory and tariff framework and the corporatization of thermal power generation companies; introduction of low-cost technology investments for Kiev power-heat plant #5; energy audits and efficiency equipment for industry plants, buildings, and power-heat plants; demonstration of electricity demand-side management; assistance leading to improved utilization of domestic energy resources; and improvement in the operations and safety of nuclear power plants. In environmental areas, USAID is helping Ukraine to restructure its environmental management to meet the needs of a market democracy, including pilot technology demonstration projects, water resource management, strengthening nongovernmental organization (NGO) public information and participation programs and improving environmental information for decision-making.

USAID will provide assistance for the development of business support centers to foster the emergence of private business structures which can operate successfully in a competitive domestic and international market environment. USAID will assist with mass production and dissemination of training materials on new business start-up and operation. The USAID-funded American Business Center will serve as a hub for contacts between American and Ukrainian businesses. The West NIS Enterprise Fund to invest in or loan to new and privatized Ukrainian businesses and joint ventures with American firms. A number of other activities, such as the Farmer-to-Farmer program, Peace Corps, Eurasia Foundation and the agribusiness partnership program are assisting Ukrainians in business development, many of them with American expertise provided on a voluntary basis.

If Ukraine maintains a serious commitment to comprehensive economic stabilization and restructuring, the United States may provide funds for support of structural reform. This support would likely take the form of commodities, commodity transport, and trade or investment credits as Ukraine comes to terms with the International Monetary Fund or the World Bank on structural adjustment loans.

To foster the development of a democratic society with broad-based participation in political and economic life, USAID assistance is geared toward helping to increase public participation in the political process, particularly by assisting political and governing individuals to be more efficient, responsive and accountable; helping to develop the appropriate legal framework that a market-oriented democracy needs to function; and strengthening the capacity of Ukrainian NGOs. Complementary to these activities are training programs targeting high school, undergraduate and graduate students, teachers and faculty, government officials, entrepreneurs and other professionals. USAID will support law enforcement programs and assist criminal

*EUROPE AND THE NIS*

justice reform, including help to combat organized crime, fight financial crime, interdict the flow of narcotics, and reform the criminal justice system.

Ukraine's economic decline has had a dramatic human element. Economic reforms and restructuring of state enterprises can help arrest economic deterioration and encourage foreign exchange flows to purchase critical imports. However, restructuring also will entail transitional social costs such as unemployment and shrinkage of social services delivered by the state.

Given overwhelming needs, USAID is maintaining a clear focus on key activities to help manage the present transition and create working models for the future including: (a) helping Ukraine structure new systems for providing social services appropriate for a market economy; (b) where government policy allows effective collaboration, helping strengthen both state and nongovernmental capacity to carry out critical social service functions; and (c) increasing indigenous nongovernmental capacity to alleviate the present suffering of the neediest groups in the population.

The United States has a significant interest in promoting a stable, independent Ukraine with a market-oriented economy and a military under civilian control. IMET for Ukraine is designed to support U.S. objectives related to the establishment and maintenance of a Ukrainian military confident of its ability to maintain the country's independence, supportive of Ukraine's democratic and economic transition and committed to a durable pattern of cooperation with the West. The proposed FY 1996 IMET program for Ukraine will center on senior service professional military education for military officers and defense resources management training.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- Increased percent of gross domestic product (GDP) attributable to private sector activities.
- Increased number of private citizens are investing in securities held by private companies.
- Increased number of viable private commercial banks.
- Adoption of specific policies related to rational energy pricing, competitive markets, private and foreign investment, trade liberalization and environmental protection.
- Courts free of political control and influence.
- Legal protections for press freedom has been put into effect or improved.
- Market reforms are introduced to Ukrainian hospitals and health centers.
- Local governments developed sustained alternative sources of revenue separate from central government and have control over their own budgets.

*EUROPE AND THE NIS*

- Reintegration of IMET participants into the defense infrastructure in positions where the training provided may be applied.

## EUROPE AND THE NIS

## UZBEKISTAN

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
FSA		11.380	11.000
FMF	0.000	0.000	0.000*
IMET	0.000	0.050	0.225

## OBJECTIVES:

- Foster the emergence of a competitive, market-oriented economy in which the majority of economic resources are privately owned and managed.
- Assist Uzbekistan's transition to transparent and accountable governance and the empowerment of citizens through democratic political processes.
- Strengthen Uzbekistan's capacity to manage the human dimension of the transition to democracy and a market economy.
- Promote a stable and cooperative military relationship between the U.S. and Uzbekistan.

## JUSTIFICATION:

Uzbekistan's location and burgeoning population (four of ten Central Asians are Uzbeks) make it the regional heavyweight in Central Asia. Its assumption of a responsible regional role should be encouraged. We also have a unique opportunity, at this early stage in Uzbekistan's nation statehood, to influence its development toward a free-market economy and a open, pluralistic political system. Such a positive direction would brighten the prospects of U.S. business ventures in Uzbekistan, and offer greater assurance of long-term internal stability.

To foster progress towards a market economy, USAID activities will support the design and implementation of a new tax code; development and implementation of pension reform policies; reform of Central Bank procedures to increase independence; and tightened commercial bank supervision and capitalization requirements. Training programs will be a significant component of these activities. Targeted technical advice and training aimed at the overall macroeconomic environment will be considered in support of Uzbekistan's macroeconomic stabilization and economic restructuring programs with the International Monetary Fund (IMF) and the World Bank. The Central Asia Enterprise Fund will provide both loan and equity financing and related technical assistance. The Fund will carry out a small business lending program in Uzbekistan.

Efforts are underway to establish a productive collaboration in areas related to NGO development and human rights. USAID-supported NGO projects will provide organizational

\* May receive FMF under the President's Warsaw Initiative, allocations for which will be finalized after further refinement of partner plans for Partnership for Peace participation.

*EUROPE AND THE NIS*

advice, will help develop the legal infrastructure for NGO operations, and will provide small grants for start-up NGOs.

Improving the delivery and sustainability of core social services is crucial to improving social welfare and building popular support for economic and political reform. USAID will utilize the NIS exchanges and training program to support social sector reform by allowing key individuals to learn first-hand how a broad range of social sector issues are addressed in the United States. Health finance systems will be strengthened by examining alternative options, such as insurance schemes, privatization, or continued public financing of certain services. Work will continue on developing a test market for the commercial sale of contraceptives. A hospital partnership established between two Tashkent hospitals and the University of Illinois Medical Center will promote the introduction of more efficient practices and technologies. The Centers for Disease Control and Prevention will provide technical assistance to the government to improve public health surveillance systems and response to disease outbreaks. Technical assistance will be provided to support sustainable childhood immunization services. Environmental health activities will focus on measuring levels of selected pesticides in the environment, will promote health awareness on pesticide use, and will conduct baseline water quality and epidemiological investigations. As part of the regional Aral Sea Initiative, USAID is helping improve the operation and maintenance of several water treatment plants. In addition to providing laboratory and chlorination equipment, a public health education program will assist in enhancing the public's understanding of water-use issues in the region.

IMET for Uzbekistan is designed to support U.S. objectives related to the establishment and maintenance of an Uzbek military supportive of democratic and economic transition and committed to a durable pattern of cooperation with the West. The proposed FY 1996 IMET program for Uzbekistan will center on English language training, senior service professional military education and visits of U.S. mobile education teams.

For greater programmatic detail of the FY 1996 FREEDOM Support Act request refer also to the USAID FY 1996 Congressional Presentation.

**EFFECTIVENESS MEASUREMENT:**

- New tax code in place.
- Greater independence of the Central Bank.
- Enactment of human rights legislation.
- Strengthened legal and regulatory framework to support health insurance and independence of health facilities and providers.
- More efficient and effective child immunization services.
- Increase in the number of households with access to safe drinking water.
- Reintegration of IMET participants into the defense infrastructure in positions where the training provided may be applied.

## LATIN AMERICA AND THE CARIBBEAN

### PROGRAM DESCRIPTION AND BUDGET REQUEST:

**DESCRIPTION:** The U.S. assistance program provides IMET, ESF, FMF and INC assistance to the countries of the region for the purpose of furthering U.S. interests.

### JUSTIFICATION:

The continued consolidation of the recent gains of democracy, peace, and economic growth in Latin America and the Caribbean will require United States foreign assistance, albeit at a considerably diminished level. The development of a safe, secure, and prosperous hemisphere of democratic governments presiding over free and open market economies is vital for political stability. This hemispheric community vigorously supported the restoration of democracy in Haiti. The Summit of the Americas is another historic example of the political and economic convergence in the region.

The economic and political maturation of the countries of the region, with the notorious exception of Cuba, has required changes to the structure and focus of our security relationships. The region faces several threats. Crime, corruption, and poverty continue to plague societies. Narcotrafficking threatens governments as diverse as Colombia and St. Kitts and Nevis. Economic migrants from Latin America continue to cross U.S. borders.

Relinquishing political power and downsizing the region's militaries is exposing them to new leadership and more appropriate roles. In Argentina, Chile, and Brazil, the military remains under civilian authority and participates actively in international peacekeeping operations. Costa Rica has no military, relying on police forces for its national security. El Salvador is developing a civilian police force. This is not to say that traditional military forces are unnecessary. Colombia, for example, continues to face threats from guerrillas and narcotraffickers. Latin American countries are also vulnerable to terrorists reacting to peace in the Middle East as bombings in Panama and Argentina in 1994 demonstrate. The legacy of past unrest - thousands of landmines - continues to be a problem, maiming and killing innocent civilians. With the Organization of American States in the lead, the regional governments continue to explore means, such as confidence- and security-building measures, to strengthen peace.

IMET and FMF programs assist in developing professional forces that can face these challenges. Many of the region's militaries face shrinking budgets and deteriorating equipment. This situation is especially acute in the smaller nations of the Caribbean, which, despite their resource limitations, contributed significantly to the multinational forces in Haiti. By educating Latin American and Caribbean forces about efficiently managing resources and technical maintenance and logistics, the U.S. helps them maintain operational readiness and capabilities. Foreign military assistance also aids the U.S. military by providing shared doctrines, increasing interoperability, and maintaining the U.S. industrial base. Our assistance programs will allow hemispheric governments to continue to contribute to peacekeeping missions in areas vital to U.S. interests, such as Haiti, in which they would otherwise be unable to participate.

*LATIN AMERICA AND THE CARIBBEAN*

Economic strength has replaced military might as the measure of power and prestige in Latin America. Latin America has become a vital market to U.S. businesses. U.S. exports to the Western Hemisphere have grown from \$30 billion in 1985 to over \$78 billion in 1993, and account for roughly one-sixth of global sales. Capital inflows are three times the levels in the 1980's. Inflation has decreased as have import tariffs. Markets are being deregulated and trade liberalized. Nations are establishing regional trade blocs and seeking to become part of NAFTA. Although growing, Latin American economies need to develop: poverty and marginalization remain widespread and visible disparities of wealth abound. It is estimated that 200 million people live below the poverty line. Maintaining macroeconomic discipline, reforming government structures, and increasing middle class capacity to save and produce are some of the tasks at hand that U.S. ESF will support.

The international narcotics trade is one of the most pervasive and insidious problems we face, and it is particularly acute in Latin America. Drug production and trafficking activities endanger democracy, economic development, and the environment. Driven by both supply and demand forces, the threat must be fought through an integrated global response of enforcement, public awareness/demand reduction, and economic support initiatives. Supporting these efforts is a key component of our assistance programs for Latin America in for 1996. The FY 1996 program reflects our most extensive effort yet to integrate counternarcotics police and military law enforcement activities, drug awareness and demand reduction programs and training, and sustainable economic growth into comprehensive regional and country counternarcotics programs.

**EFFECTIVENESS MEASUREMENT:**

- Improved efforts and institutional infrastructure to reduce drug production, trafficking and use.
- Adaptation to new military roles, including increased collaboration in peacekeeping and improvement in civil-military relations.
- Continued liberalization of the region's economies.
- Continued democratic governance and strengthened democratic institutions.

## LATIN AMERICA AND THE CARIBBEAN

## ARGENTINA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.102	0.100	0.300

## OBJECTIVES:

- Enhance the professionalism of the Argentine defense forces to further Argentina's ability to operate successfully with U.S. and allied forces in peacekeeping and other coalition operations.
- Continue institutionalization of civilian control of Argentine military, defense resource management, and respect for human rights.

## JUSTIFICATION:

Argentina has become one of our most reliable partners in the hemisphere, providing strong and visible support for U.S. policy. Argentina was the only Latin American country to provide forces for the Gulf War and to participate in all phases of the restoration and consolidation of Haitian democracy. Argentina is an active supporter of international peacekeeping, contributing forces to operations throughout the world. The training requested will increase the interoperability of Argentine forces with the U.S. and other allies, and promote closer civil-military.

## EFFECTIVENESS MEASUREMENT:

- Successful U.S./Argentine collaboration in regional peacekeeping and humanitarian activities.

## LATIN AMERICA AND THE CARIBBEAN

## THE BAHAMAS

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.011	0.000	0.100
INC	0.700	0.700	0.700

## OBJECTIVES:

- Preclude use of Bahamian territory and territorial waters for the movement of cocaine or other illicit drugs; controlling money laundering and facilitating the arrest and prosecution of drug traffickers to the fullest extent of the law.
- Discourage drug abuse by supporting local drug abuse control, prevention and education programs.
- Promote the professionalism of the Royal Bahamian Defense Force (RBDF), furthering its interoperability with U.S. and allied forces in peacekeeping and other joint exercises and operations.

## JUSTIFICATION:

Strategically located near Florida, The Bahamas is a major cocaine transit and a significant money laundering country. On the basis of seizure levels, it appears that effective interdiction efforts and local law enforcement and prosecutions, combined with other international narcotics control efforts, have made inroads in reducing the amount of U.S.-destined cocaine passing through The Bahamas. Cocaine seizures in The Bahamas and adjacent international waters in 1993 totaled 1.9 metric tons, dropping year by year from the 1987 high of 12.6 metric tons.

The United States provides assistance to the Royal Bahamas Police Force (RBPF), the Royal Bahamas Defense Force (RBDF), and other Government of the Commonwealth of The Bahamas (GCOB) agencies, to carry out effective drug law enforcement operations. The counternarcotics program also supports judicial enhancement activities to increase the efficiency and effectiveness of Bahamian courts in bringing drug law violators to justice. IMET is also provided for the RBDF.

Drug interdiction cooperation between the United States and The Bahamas is excellent and will remain so. Bilateral cooperation has permitted establishment of a significant interdiction and investigation infrastructure in The Bahamas, involving U.S. aircraft, ships, radar, and personnel. U.S. Coast Guard and Army helicopters assigned to joint interdiction bases in Nassau, George Town, Great Inagua, and elsewhere support Operation Bahamas, Turks and Caicos (OPBAT), an effort by The Bahamas and Turks and Caicos Islands police and DEA to intercept loads of cocaine and conduct investigations. The United States will encourage the GCOB to assume increased responsibility in OPBAT and to take action on tightening money laundering controls.

*LATIN AMERICA AND THE CARIBBEAN*

The narcotics assistance program seeks to strengthen Bahamian agencies engaged in counternarcotics activities, including the RBPF and the GCOB judicial system. It includes support for OPBAT bases, a Joint Information Collection Center (JICC), training and materiel for Bahamian narcotics law enforcement personnel, improvements in the judicial system, and drug awareness and demand reduction efforts.

The Bahamian government has insufficient resources to simultaneously train and maintain its small defense force. Providing IMET enhances prospects for continued close bilateral military cooperation. During 1994, the Bahamian government has permitted U.S. military forces to conduct exercises in Bahamian territory. The Bahamas is actively participating in multinational peacekeeping operations in Haiti.

**EFFECTIVENESS MEASUREMENT:**

- Increase the effectiveness of the combined counternarcotics operations of the U.S., The Bahamas, and Turks and Caicos Islands (OPBAT);
- Improve the capabilities of the Bahamian law enforcement agencies by increasing the efficiency and effectiveness of criminal justice institutions; enhance money laundering controls; reduce drug abuse and increase intolerance of drug trafficking.
- Increase the number of operational patrol craft.
- Successful U.S./Bahaman collaboration in regional and international peacekeeping activities.

## LATIN AMERICA AND THE CARIBBEAN

## BELIZE

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.050	0.040	0.250

## OBJECTIVES:

- Promote continued regional stability by supporting further professionalization of the Belize Defense Force (BDF).
- Support BDF involvement in peacekeeping operations.

## JUSTIFICATION:

Belize, a Westminster-style democracy since its independence from Great Britain in 1981, has held four national elections since then which have resulted in three peaceful changes of government. Belize has served as a valuable example to other nations in the region, volunteering to contribute military personnel to both the United Nations Mission in Haiti (UNMIH) and the Multinational Force (MNF) for Haiti. On January 1, 1994, Great Britain turned over responsibility for the physical security of the country to the Belize Defense Force (BDF). In September 1994, Britain withdrew its garrison in Belize.

An improved BDF will permit Belize to control its side of the common border with Guatemala, an important confidence-building measure. This will assuage Guatemalan concerns that the disputed territory could be used by Guatemalan guerrillas and/or narco-traffickers, contributing to the stability of both governments and encouraging continued peaceful attempts to resolve the dispute.

## EFFECTIVENESS MEASUREMENT:

- Continued involvement by the BDF in international peacekeeping operations.
- Effective monitoring and control of its side of the border with Guatemala.
- Continued cooperation with the U.S. on countering narcotics trafficking and illegal immigration.

## LATIN AMERICA AND THE CARIBBEAN

## BOLIVIA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	24.995	11.750	0.000
FMF	2.967	2.829	0.000
IMET	0.439	0.350	0.500
INC	16.100	13.000	60.000

## OBJECTIVES:

- Promote strong, cohesive democratic institutions of government capable of stopping narcotics production and trafficking in Bolivia.
- Establish and encourage sustained economic growth and reduce the effects of the drug trade on the economy of Bolivia.
- Strengthen and improve the efficiency of the Bolivian criminal justice system.
- Promote a politically neutral military and help professionalize it by providing training in logistics and resource management.

## JUSTIFICATION:

Bolivia is the world's second largest producer of illicit coca and the second largest producer of refined cocaine. Coca cultivation rose by four percent in 1993 from the previous year after three years of steady decline. An estimated 47,200 hectares were cultivated in 1993, as compared with 45,500 hectares in 1992. Most cultivation is in the Chapare Region.

The United States supports improvements in ground, air, and riverine law enforcement counternarcotics operations; chemical control efforts; investigations and prosecutions of major drug traffickers; improved counternarcotics intelligence gathering and dissemination; programs to control the transport and marketing of legal coca; and reduced coca cultivation and processing. US assistance efforts are designed to strengthen the Bolivian judicial system, develop economic alternatives to the coca industry, and help the Government of Bolivia to meet its international financial obligations and to stabilize its economy. IMET is provided to the Bolivian military to encourage its continued professionalization.

The **Narcotics Law Enforcement** projects strengthens the civilian police units which conduct counterdrug law enforcement operations and the military units which support them. Most funding within this project targets agencies of the Ministry of Government and special units under the Ministry of Defense which support efforts of the police. The primary counternarcotics law enforcement entity is the Special Force for the Fight Against Narcotics Trafficking (FELCN), with its uniformed interdiction force, the Police Rural Mobile Patrol

*LATIN AMERICA AND THE CARIBBEAN*

Units (UMOPAR), and the investigative branch, the urban narcotics police. Special prosecutors of controlled substances are assigned to the units. In coca control, DIRECO performs coca eradication and DINACO monitors coca considered legal under Bolivian law. The Bolivian military provides transport to the police by air, land, and river. Three Bolivian Air Force units, including the Red Devils Task Force helicopter unit, provide air transport for joint UMOPAR/DEA interdiction operations. The Bolivian Navy has four task groups, known as the Blue Devils Task Force, which monitor riverine traffic for drugs and chemicals in coordination with UMOPAR. The Army Green Devils Task Force provides ground mobility and logistical support to the police.

The counternarcotics law enforcement program for FY 1996 is designed to expand the Government of Bolivia's responsibility for directing and financing counternarcotics efforts. The program will sustain UMOPAR and assist counternarcotics police units operating on the frontiers and in strategic cities. A primary objective of law enforcement operations is to disrupt the transport and sale of illegal coca leaf for a sustained period, resulting in devalued and unstable coca leaf prices. This then encourages farmers to move from coca cultivation to other income opportunities afforded by the Sustainable Development Project.

The successful institution-building efforts of the waterways law enforcement program will continue. The Bolivian Navy now has four task groups developed, equipped, and trained with USG counternarcotics funds, located in Trinidad, Puerto Villarroel, Riberalta, and Guayaramerin. The waterways program has increased the Navy's operational tempo while developing a Bolivian-sustainable training academy.

In coca control, program funds will be used to help DIRECO carry out the ongoing eradication program conducted primarily by seeking out coca growers to enroll in the program for voluntary, Government of Bolivia-compensated eradication of coca. We will assist DINACO in continuing its road checkpoints throughout the Chapare, as well as joint night patrols with UMOPAR to disrupt the transport of illicit coca. DINACO will continue to work towards a system to identify and track shipments of coca which are legal under Bolivian law.

**The Sustainable Development Project** seeks to promote counternarcotics-related development opportunities in the Chapare coca-growing area, in Cochabamba, and elsewhere in Bolivia. The project goal is to support a shift from the dependence on coca cultivation by providing incentives for the development of income-earning alternatives for coca farmers. It includes subprojects to expand electrical service to parts of the Chapare region, promote Bolivian exports, and support macroeconomic balance-of-payment obligations through cash transfer to the GOB. Local currency generated through cash transfer supports GOB participation in sustainable development.

For FY 1996, the sustainable development program will continue to promote broad-based economic growth led by the private sector by creating an attractive climate for foreign trade and investment. Alternative development projects will continue, such as the development of alternative crops and improved farm practices, and the construction or upgrading of farm-to-market roads. A subproject of electrification for alternative development will develop the Bolivian capability to plan, construct and sustain electrification projects for rural areas.

**The Judicial Reform Project** is designed to promote an efficient and fair judicial system in Bolivia as a fundamental element of a strong democracy. For 1996, one subproject will

*LATIN AMERICA AND THE CARIBBEAN*

continue the process of strengthening investigative, prosecutorial, and judicial human resources, and improving case tracking and administrative management. A second subproject will continue to enhance the effectiveness of Bolivian drug prosecutors by providing training and equipment to them.

The **Program Development and Support Project** provides administrative support and salaries for 19 direct-hire and contract personnel in the Embassy's Narcotics Affairs Section.

**IMET:** The Bolivian military remains a significant force in the country, despite budget and resource reductions. Command, control, and communications capabilities in the Bolivian armed forces are lacking. Long-term logistical/maintenance planning is virtually unknown. U.S. IMET, both in logistical and resource management and in civil-military affairs, has provided Bolivian military personnel exposure to well-organized, professional operations and training; has reinforced the importance of civilian command and oversight of the armed forces in a democracy; and has encouraged a more modern armed forces structure in view of resource constraints. The FY 1996 request for IMET assistance will provide training on improving civil-military relations and respecting human rights and democratic values, as well as courses in military professionalism and defense management.

**EFFECTIVENESS MEASUREMENT:**

- Eradicate coca in Bolivia beyond that authorized for legal use while helping create viable, licit income-earning alternatives for coca producers.
- Arrest and prosecute major drug traffickers.
- Interdict and seize cocaine and other illicit coca derivatives, precursor materials, and assets of the coca trade.
- Increase the Bolivian population's awareness of the dangers of drug abuse and trafficking to Bolivia's economy and society.
- Continued Bolivian armed forces support for civilian leadership despite the severe resource and training shortages faced by the military.
- Assignments of U.S. IMET graduates to positions of command.

## LATIN AMERICA AND THE CARIBBEAN

## BRAZIL

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.096	0.100	0.200
INC	0.400	0.600	1.000

## OBJECTIVES:

- Improve the institutional capabilities of the Federal Police to disrupt the activities of major trafficking organizations, interdict illegal drugs and control precursor chemicals;
- Improve the effectiveness of Brazilian organizations working to reduce drug abuse and decrease the domestic demand for drugs.
- Develop political support for narcotics control in Brazil by political leaders, decision makers, and key public figures.
- Enhance the professionalism of Brazil's armed forces to further their ability to operate with U.S. and allied forces in peacekeeping and other efforts to enhance international peace and security.

## JUSTIFICATION:

As Latin America's diplomatically and economically most powerful country, Brazil is a major factor in regional political and security matters, including global issues of concern to the U.S. such as nonproliferation and counternarcotics. In 1994, Brazil ratified the Quadripartite Safeguards Agreement, providing for full-scope nuclear safeguards, and the Treaty of Tlatelolco, providing for a nuclear free zone in Latin America.

Brazil is a significant transit country for cocaine en route from Bolivia, Peru, and Colombia to the U.S. and Europe. It manufactures and imports large amounts of the chemicals used in cocaine production, and these chemicals are being diverted illegally to the Andean countries. Colombian and Bolivian traffickers appear to be making more use of Brazilian transit routes and are establishing cocaine refineries there. Coca is cultivated in remote, inaccessible areas of the Amazon Basin. Most of the marijuana grown in Brazil is consumed locally, and no export to the U.S. has been noted. Domestic drug abuse is increasing.

Most USG counternarcotics funding provides equipment and training for the Brazilian Federal Police (DPF), which has primary responsibility for drug law enforcement. This year the U.S. and other missions in Brasilia that are members of an informal consultative group of donors, called the Dublin Group, worked more closely to coordinate assistance and diplomatic initiatives. The attention of the new Cardoso administration to the growing narcotics problem and its support for counternarcotics enforcement will be crucial to the success of Brazilian counternarcotics efforts in 1995.

*LATIN AMERICA AND THE CARIBBEAN*

The Brazilian armed forces are redefining their role; IMET will be used to promote peace and regional security, strengthening ties with the Brazilian military. The Brazilian military wants a close, but formal, relationship with the U.S. military and has a keen interest in improving its capability to participate in multilateral peacekeeping operations, a mutual goal. Returning graduates from U.S. service schools have proven to be extremely valuable to the Brazilian military, multiplying the effect of their training by developing new training courses for their colleagues.

**EFFECTIVENESS MEASUREMENT:**

- Successful Federal Police investigations of major cartel operations, interdictions of cocaine shipments and arrest and prosecution of traffickers.
- Implementation and funding for good project proposals submitted by local demand reduction organizations through the National Drug Council (CONFEN).
- Greater GOB political will by continuing to encourage bilateral and multilateral counternarcotics discussions.
- Successful Brazilian collaboration in UN peacekeeping operations, continued respect for civilian control of the military, and continued respect for human rights.

## LATIN AMERICA AND THE CARIBBEAN

## CARIBBEAN REGIONAL PEACEKEEPING FUND

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
FMF	0.000	0.000	3.000

## OBJECTIVES:

- Maintain a regional coalition supportive of U.S. policy objectives.
- Maintain readiness to participate in regional and international peacekeeping efforts.
- Promote regional solutions to security-related issues and responses to natural disasters.
- Provide needed funding to maintain material readiness and interoperability with U.S. Forces.

## JUSTIFICATION:

Caribbean nations have traditionally been strong allies of the U.S. They worked closely with the U.S. in the recent efforts to restore the legitimate regime in Haiti. Caribbean countries formed the CARICOM battalion, which was one of the building blocks of the Multinational Force (MNF). They have agreed to continue on when UNMIH takes over from the MNF. The CARICOM battalion has been one of the principal components in the success of the U.S.-led coalition effort in Haiti. Countries contributing to the battalion include: Belize, Guyana, Jamaica, Trinidad, Antigua and Barbuda, Barbados, Dominica, Grenada, St. Kitts and Nevis, St. Lucia, and St. Vincent.

The latter seven nations also comprise the Regional Security System (RSS). The RSS states are highly vulnerable to internal security problems and natural disasters, and frequently unite to respond to threats to regional and internal stability. In late 1994, St. Kitts experienced narco-trafficking-related assassinations of a prominent police inspector and the deputy Prime Minister's son. The RSS responded to contain a subsequent prison riot in St. Kitts. The RSS has also been called upon for disaster relief.

The success of the CARICOM contributions is a direct result of past U.S. assistance programs. FMF and IMET assistance to this region over the years has allowed countries to sustain and maintain small, professional military forces; the best soldiers make the best peacekeepers. Because of this, the U.S. was able to recruit, train, and deploy the CARICOM units quickly. One of the lessons learned from recent peacekeeping experiences is the necessity to improve the capabilities of other countries and regional organizations to conduct peace operations, reducing the over-reliance on U.S. forces and resources. The limited funding proposed will help maintain individual Caribbean and regional peace capabilities as well as help provide interoperability with U.S. military forces in joint operations.

*LATIN AMERICA AND THE CARIBBEAN*

FMF will satisfy legitimate military assistance needs to support the RSS and other missions essential to regional peace and stability (disaster relief, border security, counternarcotics, and peacekeeping). RSS and other CARICOM participants lack the economic means to fully fund their security forces training, equipment, and operational requirements. FMF will be used to improve communications capabilities, purchase small arms, vehicles, spare parts, and maintain existing U.S.-supplied equipment. FMF is especially vital for the continued operation of the RSS. Without U.S. assistance, the RSS will suffer a reduction in readiness, the regional maritime forces will cease to operate, and the RSS will become extinct in five years.

**EFFECTIVENESS MEASUREMENTS:**

- Continued support for U.S. policies in the region.
- Ability to participate in peacekeeping operations.
- Enhanced security in the Caribbean.
- Sustained/upgraded natural disaster response capability.
- Improved drug interdiction.

## LATIN AMERICA AND THE CARIBBEAN

## CHILE

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.097	0.100	0.300

## OBJECTIVES:

- Enhance the professionalism of Chile's armed forces and contribute to Chile's operational compatibility with U.S. and allied forces in UN peacekeeping and other coalition operations.
- Promote the consolidation of Chile's democracy and respect for civilian control of the military.

## JUSTIFICATION:

The U.S. and Chile have excellent bilateral relations. Chile is an important economic partner and key diplomatic ally in international fora, particularly in support of human rights and democracy. Chile also plays a role in international peacekeeping.

With its free market economy, commitment to free trade, and peaceful return to democracy, Chile is a natural model for other developing nations and has been invited to join NAFTA. Consolidation of Chilean democracy and respect for civilian control of the military is important to broader U.S. interests in promoting democracy and peace well beyond our bilateral relationship.

The Chileans have taken full advantage of direct military training offered by the United States, sending their brightest and best to U.S. courses, and can be expected to continue to do so in the future. Graduates of these courses have put to good advantage new skills, and occupy mainstream leadership and technical positions in all three services.

## EFFECTIVENESS MEASUREMENT:

- Successful U.S./Chilean collaboration in international peacekeeping activities.
- Continued progress on civil/military relations and human rights performance.

## LATIN AMERICA AND THE CARIBBEAN

## COLOMBIA

**PROGRAM SUMMARY**  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	1.022	0.000	0.000
FMF	7.700	10.000	0.000
IMET	0.900	0.600	0.900
INC	20.000	19.000	35.000

**OBJECTIVES:**

- Strengthen host nation capabilities to disrupt and ultimately dismantle major drug trafficking organizations.
- Destroy the cocaine processing industry and stop the diversion of licit chemicals into illicit channels.
- Eliminate the cultivation of opium poppy, coca leaf and marijuana.
- Promote internal and regional stability through improved operational counterterrorism/counternarcotics readiness, protection of human rights, development of sound defense resource management skills, and professionalization of the military.
- Provide enhanced interoperability with U.S. military for combined operations.

**JUSTIFICATION:**

The United States provides assistance to Colombia to counter the drug trafficking threat to its security, political system and economy; and to disrupt the cocaine trafficking infrastructure through investigation, evidence-gathering, arrest, prosecution, asset seizure, and other law enforcement actions. IMET is provided to Colombia's armed forces. This budget continues implementation of the President's decision to consolidate international counternarcotics law enforcement and military funds into a single account.

In FY 1996, counternarcotics assistance will continue for the Directorate of Anti-Narcotics (DIRAN) and other Colombian National Police (CNP) elements, as well as military units supporting DIRAN efforts, to sustain and improve investigative capabilities, take action against trafficking organizations, and destroy illicit crops. As a comprehensive counternarcotics law enforcement program, emphasis will be placed on enhancing the planning and tactical capabilities of the CNP and other security units. Project activities will include judicial protection, enhancement of military counternarcotics actions, assistance to the Department of Administrative Security, infrastructure support, and public awareness and education.

The primary goal in Colombia is to eliminate the drug cartels. Advances toward that goal have been made with the virtual elimination of the Medellin cartel. Continued GOC raids on

*LATIN AMERICA AND THE CARIBBEAN*

trafficker operations have given authorities valuable information from which to further attack Cali cartel activities which have supplanted those of the Medellin cartel since 1993. The DIRAN has seized over 225 metric tons of cocaine products since 1990 and arrested or killed many drug traffickers. The DIRAN has eradicated approximately 23,000 hectares of opium poppy since February 1992. In FY 1996, the DIRAN will continue a broad scale coca eradication program.

Support to the CNP and military counternarcotics units are subproject activities of the **Narcotics Law Enforcement Project**. The CNP will remain the principal GOC recipient of our counternarcotics assistance to Colombia. By FY 1996, the DIRAN, an independent brigade-sized narcotics intelligence gathering and interdiction force, will be increased to over 3,000 personnel. This will include a small DAN headquarters staff, 18 interdiction companies, 20 intelligence groups, and an aviation service of 68 aircraft.

The GOC plans to increase aviation support for the CNP aviation branch in FY 1996. The expected increase in flight hours, maintenance, and other operational and support costs will meet the continued demands on aviation resources to sustain the successful opium poppy eradication program and the coca eradication program initiated in FY 1994. Aviation support will also assist cocaine interdiction operations.

In FY 1996, the GOC will continue a strategy to establish four DIRAN geographical zones, each with three to five companies and dedicated aircraft. Each regional zone commander will have the authority to deploy units and direct airlift and support equipment without obtaining approvals from headquarters in Bogota. Improving existing forward operating bases and adding new locations will increase security and operational effectiveness. As a result of the GOC's increased capabilities to collect intelligence data, heliports will be strategically placed throughout the country to enable timely heliborne deployments against narcotics targets. This project will also fund avionics, flight gear, vehicles and maintenance, night vision equipment, field gear, intelligence equipment, and aviation and other training.

Assistance to military units will be directed to those activities supporting the CNP's counternarcotics efforts. The Colombian Air Force will receive helicopter support and training as well as parts and maintenance for its fleet of 25 UH-1H helicopters. Additional support will be given to the Air Force's fixed wing C-130 units and OV-10 and A-37 aircraft that support counternarcotics operations, primarily in isolated and unsecured areas of the country. The Colombian Navy and its Marine branch will continue a counternarcotics campaign on the rivers and the coast. To sustain the important military contribution to the counternarcotics effort, equipment and training will be provided to the Colombian riverine and Coast Guard Harbor Patrol programs. Commodities include patrol boats for the Coast Guard and boats and spares for Marine riverine units. Spare parts, maintenance packages, and training for members of the Coast Guard and Marines will be provided. The Army will receive much-needed communications and global positioning equipment as well as vehicles.

The **Department of Administrative Security (DAS) Project** will help the GOC to attack the cocaine trafficking infrastructure by providing computer and data collection equipment used in drug and money laundering investigations. The DAS, Colombia's equivalent to the FBI, Secret Service, and INS, monitors movements of aliens, controls personnel movement through ports of entry, and is the GOC host agency for Interpol. It also has investigative authority for drug

*LATIN AMERICA AND THE CARIBBEAN*

and money laundering cases. We will provide modest support for the DAS's Interpol office and its asset seizure office.

The **Infrastructure Support Project**, created in 1992, enhances the GOC's public profile on implementation of a vigorous anti-drug campaign. The GOC established a counternarcotics policy board, the National Council of Dangerous Drugs (NCDD), comprising key cabinet ministers such as those for Defense and Justice, the directors of the DAS and the CNP, and others. A permanent NCDD research staff issues and recommends, coordinates and monitors counternarcotics policy. NCDD is also the GOC's point of contact for the international donor community. In FY 1994, the NCDD was instrumental in acquiring full GOC approval to use herbicides to aerially eradicate coca cultivations.

The NCDD will receive basic support, including personnel, communications upgrades, information management systems, and help for council and staff members to attend and sponsor international meetings to foster contact with counterparts in donor and trafficking/producing countries. This project will also support other infrastructure development activities in the offices of the Attorney General and the Prosecutor General and surveys on improvements in customs and port security.

The **Judicial Protection Project** will provide training for security personnel, armored vehicles, and communications equipment to enhance security for the judges involved in prosecuting alleged narcotics violators in the five public order courts.

The **Drug Awareness and Demand Reduction Project** will help the Colombian government and private organizations assess drug abuse through periodic surveys and share this information at seminars and other meetings. This project will publicize to government officials, opinion makers and the general public the threat of illegal drugs to Colombian society. It will also communicate the national interest benefits to a populace that confronts and maintains pressure on traffickers and other lawbreakers. Activities include forming public awareness campaigns using all media, collecting and disseminating substance abuse data, publishing and distributing educational literature, and sponsoring key Colombian figures to attend national and international conferences.

**Program Development and Support** funds will provide for salaries, benefits and allowances of permanently assigned U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

**IMET.** Colombia has demonstrated a serious commitment to creating democratic institutions to promote a society that respects the rule of law and recognizes the subordinate role of the military to civilian rule. The new Colombian administration has committed itself to promoting universally accepted principles of human rights. The IMET assistance requested will assist the Colombians in achieving these goals. IMET training is also aimed at addressing technical and professional deficiencies among the mid-level officer and enlisted ranks throughout the services, allowing them to respond more effectively to internal instability which has escalated to a level that threatens regional stability. Professional military education results in forums for cross-pollination of democratic ideals among Colombian military and civilian personnel, especially in the area of human rights. Technical training courses will provide the Colombian military the ability to carry out more effective search and rescue operations and humanitarian

*LATIN AMERICA AND THE CARIBBEAN*

assistance, and to continue successful logistical, quality control and on-the-job safety consciousness.

**EFFECTIVENESS MEASUREMENT:**

- Increased operational effectiveness of the Colombian National Police Anti-Narcotics Directorate.
- Improved drug eradication in Colombia (in priority order: opium poppy, coca and cannabis) using herbicides applied aurally (e.g. for coca and opium poppy).
- Strengthened Colombian judicial system to overcome corruption and intimidation and expedite proceedings/trials against drug traffickers.
- Seized assets of, and disrupted money laundering by, major traffickers.
- Increased government and public awareness of how drug production, trafficking and abuse damages Colombian society.
- More efficient execution of military missions, especially in humanitarian/search and rescue/civic action exercises; better human rights performance; greater counternarcotics cooperation; improved civil/military relations; and improved logistical support and resource budgeting and management.

## LATIN AMERICA AND THE CARIBBEAN

## COSTA RICA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.101	0.050	0.150

## OBJECTIVES

- Promote peace and stability in Central America by supporting Costa Rica's critical political role as a moderating influence in the region and as an example of a successful free market democracy.
- Support continued professionalization of Costa Rican security forces.

## JUSTIFICATION:

Costa Rica has been an important regional friend and an historic and practical example of the viability of democratic governance for Central America. The country is a stable, free-market democracy which respects human rights and the rule of law. Costa Rica has no military, relying on police forces for its national security. Given Costa Rica's traditional ambivalence towards its national police, however, criminal groups including narcoterrorists may increasingly seek to operate within that country's open, pluralistic society. The new government is committed to police professionalization – one of our key bilateral goals. IMET helps strengthen Costa Rica's ability to protect public order and mount counternarcotics operations.

## EFFECTIVENESS MEASUREMENT:

- Increase in security-related expenditures, leveraging U.S. assistance for continued Costa Rican attempts to upgrade national security.
- Implementation of the police professionalization law and further development of the Academy for the Civil and Rural Guards, partially financed by the USG through IMET, demonstrating Costa Rican commitment to police professionalization.
- Increase in the retention of U.S.-trained personnel when they return to Costa Rica, leveraging U.S. training funds for long-term police improvement.

## LATIN AMERICA AND THE CARIBBEAN

## DOMINICAN REPUBLIC

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
FMF	0.300	0.000	0.000
IMET	0.308	0.200	0.500

## OBJECTIVES:

- Promote professionalism of the Dominican military, including respect for human rights and civilian control of the military.

## JUSTIFICATION:

The IMET request is divided between Professional Military Education courses (PME), directed at promoting support for U.S. objectives among flag officers, and technical training, which recently has focused on maintenance and repair of Dominican naval assets.

In contrast to many Latin American countries, civilian control of the military is firmly established in the Dominican Republic. The threat to the armed forces' professionalism is that poorly-paid, low-status military officials will abandon professional and ethical standards in favor of the temptation to profit monetarily from a military position. This problem has been dramatized over the past year by reports of military collusion to violate the Haiti embargo. Less well-known, but equally dramatic are the returns of the bare-bones military assistance program in enforcing the embargo. For example, an IMET-trained officer earned the praise of the U.S. military for working out the framework for the joint Dominican-U.S. coastal patrol in support of the Haiti embargo.

The assistance program proposed for 1996 is the minimum calculated for maintaining continuity. The Dominican military leadership faces a generational shift over the next several years making IMET more important than it has been in the last twenty years. Provision of U.S. assistance is contingent upon the resolution of the disputed 16 May 1994 elections according to international norms.

## EFFECTIVENESS MEASUREMENT:

- Continued professionalization of the Dominican armed forces.
- Entry of IMET graduates into positions of leadership and influence.

## LATIN AMERICA AND THE CARIBBEAN

## EASTERN CARIBBEAN

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
FMF	0.390	0.000	0.000
IMET	0.239	0.200	0.300

## OBJECTIVES:

- Maintain a regional coalition supportive of U.S. policy objectives.
- Promote regional stability via inter-island solutions to security-related issues and responses to natural disasters.
- Enhance RSS management and technical skills and interoperability with U.S. forces.

## JUSTIFICATION:

The Regional Security System (RSS) is a defense organization comprising all seven Eastern Caribbean states. The RSS states are highly vulnerable to internal security problems and natural disasters, and frequently come together to respond to a threat. In late 1994, St. Kitts experienced narcotrafficking-related assassinations of a prominent police inspector and the deputy Prime Minister's son. The RSS responded to contain a subsequent prison riot in St. Kitts.

IMET is vital for the continued operation of the RSS. Without U.S. assistance, the RSS will suffer a reduction in readiness, the regional maritime forces will cease to operate, and the RSS will become extinct in five years. This will adversely affect U.S. goals of peace and stability in the region. Although the organization's participating states lack the economic means to fully fund its training, equipment, and operational requirements, they are active participants and take their membership seriously.

## EFFECTIVENESS MEASUREMENT:

- Continued support for U.S. policies in the region.
- Enhanced security for the Eastern Caribbean.
- Improved drug interdiction.
- Improved ability to participate in peacekeeping operations

## LATIN AMERICA AND THE CARIBBEAN

## ECUADOR

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
FMF	0.130	0.000	0.000
IMET	0.379	0.300	0.400
INC	0.500	0.500	0.850

## OBJECTIVES:

- Developing institutional capabilities to interdict illegal drugs and precursor chemicals, prosecute traffickers, seize drug assets, and reduce money laundering.
- Improving intelligence collection, processing, and dissemination against major trafficking organizations.
- Promoting public awareness and education about drugs.
- Improving the professionalization of the Ecuadoran military through emphasis on defense resource management and civilian control of the military.

## JUSTIFICATION:

Ecuador is a significant transit country for drugs and essential chemicals and a locus for drug money laundering. Ecuador eradicated most coca cultivation in the 1980's and has no tradition of coca use. Narcotics kingpins appear to be trafficking approximately 30 metric tons of cocaine per year through loosely-monitored Ecuadoran ports and road networks. Drug traffickers also take advantage of weak banking laws to launder and protect their illicit proceeds. The recent ambush and massacre of a national police riverine patrol by a guerrilla group, allegedly involved in drug trafficking, on the Colombian border has stimulated a comprehensive Government of Ecuador (GOE) review of how to address the threat posed by the drug trade to the people, economy, and sovereignty of Ecuador.

The GOE has centralized drug enforcement in the Narcotics Police; established a police intelligence center, a financial investigations unit and chemicals unit; and legislated a drug control role for the military. To build on police successes in dismantling several narcotics trafficking groups tied to Colombian drug kingpins and to improve regional cooperation, the Ecuadoran military has agreed to relocate a radar site to cover a key air corridor in the Oriente favored by drug traffickers transiting Ecuadoran air space. Information on suspected drug trafficker air traffic in the corridor would be provided to Colombian authorities.

The GOE through its National Drug Council (CONSEP) has developed a national drug strategy; passed laws to criminalize and control trafficking in illicit drug plants, drugs, and

*LATIN AMERICA AND THE CARIBBEAN*

chemicals; conducted (with USG assistance) a money laundering threat assessment; and developed procedures between the Superintendency of Banks and the police, which enable the police to conduct more effective money laundering investigations. CONSEP, with U.S. assistance, is conducting a study to determine the extent of licit and illicit use of precursor chemicals in Ecuador and how to control such chemical trafficking.

The Customs Police have completed training and consolidated two dog programs into a unified detector dog program in which dogs and guides conduct more effective mobile roadblock operations.

Ecuador signed an asset sharing agreement in 1994 and cooperated with Switzerland and the U.S. in the prosecution of Jorge Hugo Reyes-Torres, a major narcotics trafficking kingpin tied to the Colombian Cali Cartel. The GOE is striving to make further progress in the Reyes-Torres case. When the GOE makes such progress, cooperating authorities will likely be willing to share such assets again.

In FY 1996, the U.S. will continue to work closely with the GOE to develop a greater emphasis on **Narcotics Law Enforcement** projects. Support will be given to the Attorney General's office through the national police, customs, military, and the national drug council.

The **National Police Project** will focus on strengthening the Interpol Police law enforcement capability, continue to improve police skills and performance, and support a police counternarcotics training center. The center will provide counternarcotics training for police anti-drug personnel, and fund courses and seminars for military counternarcotics personnel and other public agencies. Police counternarcotics units will also receive field equipment, international training opportunities, and technical guidance from mobile training teams. Customs activities will focus on acquiring additional detector dogs and training for guides, as well as sophisticated search equipment to employ in air and seaports and along border areas.

The GOE, through the Attorney General's Office initiative, will receive anti-corruption training for judges, particularly those located in outlying provinces, and training in prosecution techniques.

The **National Drug Council Project** will emphasize ministerial-level drug coordination efforts, including money laundering efforts; asset seizure and storage; control and monitoring of precursor and essential chemicals; and drafting of related counternarcotics laws and procedures. Funding for a database to track information, training, conferences and seminars, as well as office equipment, will help the council address these many tasks.

The **Drug Awareness and Demand Reduction Project** will be increased to complement USAID, USIS, and UNDCP drug prevention and education programs by offering travel, conference and seminar support, research, and other assistance to ensure that the public remains aware of the dangers of drug abuse.

**Program Development and Support** funds will provide salaries, benefits and allowances of U.S. and foreign national personnel, short-term TDY assistance, and other administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

*LATIN AMERICA AND THE CARIBBEAN*

**IMET:** U.S. military assistance in Ecuador focuses on professionalization through IMET. Professionalizing Ecuador's military reinforces concepts such as the role of the military in a democratic society and civilian control over the armed forces, and also helps to achieve our antinarcotics goals. The proposed program focuses on professional military education and management and technical training. Military professionalization sustains economic reform in Ecuador by encouraging military activities to focus on purely military objectives as opposed to military-controlled or influenced economic ventures which potentially displace more vibrant private sector activity.

**EFFECTIVENESS MEASUREMENT:**

- Enhancement of Ecuadoran counternarcotics law enforcement capabilities, development of a precursor chemical control program, increased effectiveness of prosecutors, and establishment of procedures to control money laundering.
- Establishment of a police intelligence training program and intelligence center.
- Establishment of community-based drug abuse prevention programs and increase Ecuadoran public awareness of the dangers of drug abuse.
- Emergence of the military as a professional, non-political class responsible to executive and legislative branches for budget and selection of top officers.
- Assignment of U.S. IMET graduates to leadership and command positions.

## LATIN AMERICA AND THE CARIBBEAN

## EL SALVADOR

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
ESF	44.291	16.000	0.000
IMET	0.400	0.400	0.450

**OBJECTIVES:**

- Implement and consolidate democratic reforms enunciated in the 1992 peace accords.
- Institutionalize democratic civil-military relations, including civilian control of a politically neutral military.
- Promote continued Salvadoran military restructuring, including participation in peacekeeping missions.

**JUSTIFICATION:**

After 12 years of brutal civil war, El Salvador's armed factions signed peace accords in 1992 which provided the basis for substantial social, political and economic reforms that will transform Salvadoran political culture and society. U.S. support in FY 1996 will continue to support the ultimate consolidation of these reforms into enduring democratic institutions and precepts, including respect for basic human rights of all citizens.

The requested FY 1996 military assistance package will support professional military education and other IMET to advance reforms ensuring El Salvador's military is a politically neutral, competent force appropriately subservient to the elected government and observant of human rights. This assistance will promote the military's continued restructuring from a counterinsurgency force to one focused on territorial defense and other appropriate missions, including peacekeeping.

**EFFECTIVENESS MEASUREMENT:**

- Greater transparency in military appropriations and decision-making, particularly in resource management and promotions.
- The military defines new role, adapts institutions accordingly, and polices self effectively.
- The military accepts the guidance and leadership of the elected government.

## LATIN AMERICA AND THE CARIBBEAN

## GUATEMALA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
ESF	0.300	2.000	0.000
IMET	0.036	0.200	0.250
INC	2.000	2.500	2.550

**OBJECTIVES:**

- Complete and implement peace accords and make successful transition to peace.
- Support efforts of the GOG to reduce cocaine trafficking from and through Guatemala to the U.S., and reduce opium production and discourage cultivators from renewing opium production.
- Develop an effective civilian narcotics law enforcement agency and improve judicial handling of narcotics cases.
- Increase public awareness of the dangers of drug production and abuse.
- Improve civilian control over the military and respect for human rights.
- Prepare the military for new peacetime roles and missions.

**JUSTIFICATION:**

The USG is committed to assisting Guatemala to end the insurgency, continuing democratic and economic development, and improving adherence to internationally recognized human rights standards. IMET is requested to assist in improving the Guatemalan military's adherence to human rights standards and to strengthen civil-military ties. Counternarcotics assistance to the Government of Guatemala is provided to improve its interdiction and eradication capabilities, and to continue U.S./Guatemalan cooperation on a variety of counternarcotics activities, including law enforcement, crop eradication, and demand reduction.

The provision of IMET allows continued engagement with the Guatemalan military on issues of human rights and promotion of civil-military relations. Additionally, training in areas such as resource management and strategic planning would help provide the tools for the military's adjustment to peace.

The two major narcotics threats in Guatemala are cocaine transshipments to the U.S. and opium production. Substantial amounts of cocaine transit Guatemala en route to the U.S. The Government of Guatemala (GOG) and the U.S. cooperate on a variety of counternarcotics activities, including law enforcement, crop eradication, and demand reduction.

*LATIN AMERICA AND THE CARIBBEAN*

The GOG does not possess a radar system able to track trafficker aircraft nor the means to intercept them. Nevertheless, with assistance from the U.S. the GOG seized or controlled seven metric tons of cocaine in 1993. Combined USG-GOG air and ground operations eradicated most of the opium poppy cultivation in Guatemala during 1992 and 1993. Growers planted new fields in the 1993-1994 growing season.

A joint USG-GOG law enforcement/interdiction effort, called Operation Cadence, began in July 1991. Its goals are to sharply increase interdiction of cocaine transiting Guatemala, dismantle trafficking organizations, and arrest traffickers.

The **Cocaine Interdiction Project** supports Operation Cadence and other law enforcement efforts by Guatemalan authorities. From summer 1993 through summer 1994, Cadence attained a 100 percent interdiction rate against aircraft suspected of smuggling drugs.

Most of the opium poppy in Guatemala is cultivated in small plots hidden in steep, narrow, high-mountain valleys near the Mexican border. Using air assets in tandem with the cocaine interdiction project, the **Aerial and Manual Eradication Project** supports U.S.-owned and operated aircraft which aerially eradicate large amounts of opium poppy and smaller amounts of marijuana cultivated in remote areas. In addition, the project assists manual eradication efforts by the GOG. In 1993, 426 hectares of opium poppy and 200 hectares of marijuana were eradicated using three T-65 Thrush spray planes, four helicopters, and one Caravan transport aircraft. Guatemalan Treasury Police officers provide security and search-and-rescue.

The **Narcotics Law Enforcement Project**, initiated in 1991, has sponsored the organization, training, and equipping of new narcotics control units in the Guatemalan Treasury Police. These units carry out missions in the areas of: manual eradication; airmobile interdiction (as part of Operation Cadence); port control; investigations; riverine operations; and roadblocks/land interdiction and inspection. This project also supports development of the Joint Intelligence Coordination Center (JICC), the canine unit with eight dogs at the Guatemala City International Airport, and the chemical control office.

The **Drug Awareness and Demand Reduction Project** uses various media to show that narcotics cultivation, trafficking and drug abuse harm Guatemalan society as well as the health of Guatemalan citizens.

**FY 1996 Program.** The key to a successful counternarcotics policy is the flexibility to take the initiative against the traffickers who respond with considerable resources and ingenuity. The **Narcotics Law Enforcement Project** will help the GOG upgrade existing counternarcotics units and organize, train, and equip other Treasury Police units for interdiction and eradication responsibilities. The GOG will provide continued training and support to units engaged in riverine/coastal patrol, airmobile support and interdiction, roadblocks and land interdiction, and inspection units (including canine-equipped) at ports and airports. The project will also help the GOG improve the headquarters section, expand the activities of both the public relations office and the new narcotics investigation squad, and continue operations of the JICC and chemical control office.

The program in Guatemala has been highly successful in recent years in eradicating opium poppy cultivation. From a peak of 2,000 hectares planted in 1990, cultivation in 1993 was

*LATIN AMERICA AND THE CARIBBEAN*

down to negligible levels. The **Aerial and Manual Eradication Project**, which is funded jointly with the Cocaine Interdiction Project, will provide fuel for the U.S. aircraft engaged in eradication (the Bell-212s as well as the T-65 Thrush and Cessna Caravan) and other operational costs such as herbicide, ground support equipment, field rations, and communications and photographic equipment.

The **Cocaine Interdiction Project** will maintain a credible response to trafficking threats, despite some retrenchment due to FY 1994 budget cuts. To support Operation Cadence, four or five U.S. Bell 212 helicopters carry GOG Treasury Police and U.S. law enforcement advisors to suspected trafficking sites; the same aircraft will perform opium eradication missions. The project will fund operational support, such as fuel and other operating costs for the aircraft and crews.

**Drug Awareness and Demand Reduction** activities will focus on various media publications and presentations to inform Guatemalan citizens how drug trafficking and abuse harm their society. These activities also promote better implementation of effective narcotics legislation.

**Program Development and Support** funds will provide salaries, benefits and allowances of U.S. and foreign national personnel, short-term TDY assistance, and other administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

**EFFECTIVENESS MEASUREMENT:**

- Increased number of U.S.-trained military and civilian personnel in positions of influence.
- Notable success with civilian and military-initiated reforms.
- Increased institutional capability within the Treasury Police, the GOG's lead counternarcotics law enforcement agency for cocaine interdiction, opium poppy eradication, and prosecution of drug traffickers.
- Enhanced degree of drug awareness, demand reduction, and counternarcotics expertise developed among prosecutors, public health, media, and educational institutions.

## LATIN AMERICA AND THE CARIBBEAN

## GUYANA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	1.000	0.000	0.000
FMF	0.180	0.000	0.000
IMET	0.005	0.075	0.150

## OBJECTIVES:

- Assist the government of Guyana to maintain internal stability and the integrity of its borders.
- Assist Guyana Defense Force (GDF) readiness to participate in regional peacekeeping and defense of democracy operations.

## JUSTIFICATION:

Guyana's democracy is still fragile; in 1992 the first free and fair elections since before independence were held. The new democratic government needs a reliable, apolitical security force to ensure internal stability. Guyana's land borders with Brazil, Suriname and Venezuela cover a large area which is difficult to patrol. A well-trained military could interdict drug traffickers, smugglers of contraband and terrorists. Although not a member of the Eastern Caribbean's Regional Security System (RSS), the GDF takes part in the annual RSS Tradewinds training exercise. Guyana was an active participant in the restoration of Haiti's democratic regime, contributing personnel to the CARICOM battalion.

The IMET program will consist of grants to provide military professional and technical training for GDF officers and enlisted men. The purpose of the training is to sustain the professional outlook of the GDF as a security force subject to civilian government control. Training in resource management and administration will be useful.

## EFFECTIVENESS MEASUREMENT:

- Continued ability of the GDF to participate in regional and international peacekeeping operations.
- Maintenance of a proper civil/military relationship and human rights performance.

## LATIN AMERICA AND THE CARIBBEAN

## HAITI

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	21.830	79.900	90.270
FMF	0.000	3.000	7.000
IMET	0.000	0.000	0.400

## OBJECTIVES:

- Implementing and consolidating transition from military to civilian rule following Haitian return to democracy, including creation of an apolitical, civilian police force and an independent judiciary, as well as the formation of a democratic political culture free of violent intimidation.
- Support economic reform and recovery of Haiti's economy after the ravaging effects of the military government and the embargo; create economic opportunities for marginalized sectors of society -- including employment opportunities, and encourage long-term sustainable development.
- Institutionalize democratic civil-military relations, including civilian control of a small, restructured, professional, politically neutral military, should the Government of Haiti decide to retain armed forces.

## JUSTIFICATION:

With the restoration of President Aristide and the legitimately elected Haitian Government, the United States is leading a multilateral effort to promote long-term sustainable economic development and to establish firm foundations for Haiti's fragile democracy. The United States and other international donors have pledged over \$1 billion to support Haiti reconstruction. Assistance to Haiti's democracy will strengthen institutions such as the police, legislature, and the judiciary; improve the efficiency of the executive branch; strengthen government and grass roots organizations at the local level to encourage full participation in the democratic process; and encourage respect for human rights.

The FY 1996 assistance package will support:

**Economic and Social Reform:** The U.S. is committed to promoting economic growth and sustainable development in Haiti not only as a means to meet humanitarian needs but also to encourage long-term political stability that could result from a revitalized Haitian economy. The economic challenge for the future is formidable. Haiti has taken the step of clearing accumulated arrears and begun negotiations for international financial institution assistance necessary for economic revitalization. Balance-of-payments assistance is also needed. The proposed aid program provides assistance to the Haitian government to help it generate

*LATIN AMERICA AND THE CARIBBEAN*

revenue. U.S. funding will also focus on creating opportunities for marginalized sectors of society. Budget support will be needed to ensure the basic essential services expected of responsive democratic governments, as well as to ensure adequate funding for the newly created police force. U.S. aid is necessary to stimulate private sector-led growth.

**Humanitarian Assistance:** U.S. assistance is required to alleviate the suffering of disadvantaged Haitians through direct feeding and health service programs. Assistance will also be directed to educational programs. These funds will leverage other donor efforts.

**Establish National Police Force/Restructure Military:** The U.S. and the international community have begun the creation of a civilian Haitian National Police Force. It will be accountable, efficient and responsive to civilian control. Should the Haitian Government decide it wishes to have armed forces, FMF and IMET will contribute to the formation of a smaller, professional, restructured Armed Forces of Haiti, which is politically neutral, and loyal to the civilian government, and would observe human rights standards. IMET is also requested for human rights and civil-military relations training for both civilians and security force personnel.

**EFFECTIVENESS MEASUREMENT:**

- **Short-term:** Identification of development and health projects. Greater respect for individual rights within the court system and training of civilian National Police officers. Establishment of programs designed to increase employment among the marginalized and restoration of basic public services.
- **Mid-term:** Judicial reforms adopted and implemented, greater responsiveness of state institutions to citizen demands; increased health service delivery and expanded basic education programs; free and fair elections with high voter participation levels, peaceful transition of power. National civilian police deployed, exert their role, and win citizen cooperation and support for their efforts. Non-intervention by the military, should it be retained by the Government of Haiti, in politics, after the departure of UN forces in 1996. Decline in human rights violations. Unemployment and underemployment levels decrease.
- **Long-term:** Government resources allocated on basis of transparent criteria with broader consideration of citizens' needs and desires. Judicial system responds to legal norms rather than political pressures, and does not grant de facto impunity to any sector. Human rights and democratic freedoms are broadly respected. Democratic events such as debates, elections, union activities, and political protests are held without fear of intimidation or reprisal. The police and military, should the Haitian Government retain a military, accept the guidance and leadership of the elected government.

## LATIN AMERICA AND THE CARIBBEAN

## HONDURAS

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.524	0.325	0.400

## OBJECTIVES:

- Continue the professionalization of the Honduran Armed Forces (HOAF) and improve its resource management.
- Promote respect of the Honduran defense forces for civilian authority, and respect for human rights.

## JUSTIFICATION:

Honduras has made progress in securing and consolidating democratic institutions. It has held credible, transparent, free and fair multi-party elections since the early 1980s. It has a free and open press and free trade union associations.

The Reina administration has made significant inroads into extending civilian authority over the military. Well-focused training through management and professional military education programs for middle-grade officers will help prepare for the generational change to come. Training is also proposed in logistics and personnel management. The requested assistance will continue the professionalization of the Honduran military.

## EFFECTIVENESS MEASUREMENT:

- Increased readiness of Honduran forces, improved ability to manage resources, and improved maintenance levels.

## LATIN AMERICA AND THE CARIBBEAN

## JAMAICA

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
FMF	0.300	0.000	0.000
IMET	0.201	0.170	0.450
INC	0.600	0.600	1.000

## OBJECTIVES:

- Conduct a full range of drug law enforcement operations throughout Jamaica.
- Arrest and prosecute major Jamaican traffickers.
- Inform Jamaicans about the dangers of drugs and the threat narcotics trafficking poses to their country.
- Maintain Jamaican Defense Force (JDF) readiness to launch migrant interdiction operations and respond to natural disasters.
- Promote JDF readiness to participate in regional peacekeeping operations and its interoperability with U.S. forces.

## JUSTIFICATION:

Jamaica is a vital U.S. ally in the region and is active and influential among Caribbean states. It was one of the first countries to permit USG off-shore processing of Haitian migrants; this example of leadership was instrumental in encouraging others to follow suit. The Jamaican Defense Force (JDF) is one of the most capable and credible military forces in the area. Jamaica is participating in multinational peacekeeping operations in Haiti and offered to participate in others. Jamaica was instrumental in the formation and deployment of the CARICOM battalion operating as part of the Multinational Force in Haiti. The JDF is also supporting the Jamaican Constabulary Force (JCF) in its efforts to reduce crime in tourist areas and Kingston. The capabilities of the JDF result in no small way from past U.S. assistance.

The IMET program will enhance logistics management and technical maintenance skills of JDF forces to keep old equipment functional. IMET will enhance Jamaican interoperability with U.S.-furnished equipment and forces, thus promoting JDF ability to participate in regional peacekeeping operations.

Through assistance to the JCF, JDF, and other Government of Jamaica (GOJ) agencies, the USG assists the GOJ to carry out effective drug law enforcement operations. We also support the GOJ drug awareness program. A related USAID development program is beginning the fourth year of a five-year Administration of Justice program aimed at improving the justice system, and the Department of Justice provides training and curriculum development help to

*LATIN AMERICA AND THE CARIBBEAN*

increase professional capabilities in the JCF through the International Criminal Investigative Training Assistance Program.

Jamaica, favorably situated for cocaine trafficking from South America to the United States, is also a traditional source of marijuana for U.S. markets. Jamaica's airstrips, ports and offshore waters offer many opportunities for traffickers. There is evidence that cocaine traffickers are using Jamaica's well-established marijuana networks to ship cocaine. Money laundering does not appear to be a major problem, although removal of foreign exchange controls in September 1991 could tempt money launderers. Production and transit of essential chemicals in Jamaica are negligible.

An enhanced extradition treaty between the United States and Jamaica, which entered into force in July 1991, has greatly increased the number of Jamaicans extradited to the United States, to the point where Jamaica is now one of our most active extradition partners in the region. By late 1993, seven extradition cases were active and twenty more pending, including several for drug traffickers. The United States is seeking Jamaican ratification and implementation of a mutual legal assistance treaty ratified by the United States in 1992. In 1994, Jamaica passed asset seizure and forfeiture legislation. The United States is now encouraging GOJ passage of money laundering laws and ratification of the 1988 UN Convention.

The JCF Narcotics Unit, the major Jamaican counterdrug law enforcement group, cooperates with DEA and other law enforcement agencies. The United States has provided extensive training and equipment to the JCF Narcotics Unit, the Contraband Enforcement Team, and the Port Security Corps, including an innovative program of integrity training for customs personnel. Jamaica's Joint Information Coordination Center (JICC), established with USG funding, is the keystone of the GOJ's anti-narcotics data collection and analysis effort. In 1993, JICC information was responsible for seizures of 1,553 kilograms of marijuana in Jamaica, and 4,950 kilograms of hash oil and 405 kilograms of cocaine in the United States. Also as a result of JICC-Kingston data, 120 persons were arrested on drug charges, and 3 more on murder charges. In 1993, total drug seizures by the GOJ included 160 kilograms of cocaine, 69 metric tons of marijuana, and 177 kilograms of hash oil. It arrested 73 suspected drug traffickers, of whom 61 percent were Class I or II violators by DEA criteria.

**FY 1996 Projects.** The **Narcotics Law Enforcement Project** has two aspects: support GOJ efforts to adopt and implement narcotics control legislation and to ratify and implement the 1988 UN convention and our bilateral Mutual Legal Assistance Treaty; and provide assistance to Jamaican drug law enforcement activities. Training for law enforcement and judicial personnel is a major aspect of the project. Material assistance to GOJ law enforcement activities will consist mainly of spare parts, maintenance, operational support, and some replacements for equipment previously provided. We will support expansion of JICC operations, including provision of upgraded equipment and advanced training. Continuance in FY 1996 of a substantial funding level will permit the GOJ to undertake the intensity of drug law enforcement activities necessary to permit sustainable development in this struggling economy.

The Jamaican public is poorly informed about drug abuse and its consequences, about what their government is doing about drugs and why, and about the international dimensions of the narcotics problem. We will work with the GOJ to increase awareness through the **Drug Awareness and Demand Reduction Project**. US Government-funded survey results will be

*LATIN AMERICA AND THE CARIBBEAN*

used to concentrate resources on the groups most vulnerable to drug abuse. The GOJ, the National Council on Drug Abuse, the Jamaica Information Service, and community action organizations will conduct activities to increase public awareness of the overall drug problem in Jamaica and its effects on the country. They will also build political support for a more assertive GOJ counternarcotics policy.

**Program Development and Support** funds will provide for salaries, benefits, and allowances of permanently assigned U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

**EFFECTIVENESS MEASUREMENT:**

- Increased capabilities of Jamaican drug law enforcement and judicial personnel and expand their bases of operation to additional sites around the country.
- Increased number of major Jamaican traffickers arrested and brought to justice.
- Increased awareness among Jamaicans of the dangers of drug use and the threat narcotics trafficking poses to their country.
- Increased JDF participation in regional migrant interdiction and peacekeeping operations.
- Improved JDF responses to civil disturbance and natural disasters.

## LATIN AMERICA AND THE CARIBBEAN

## LATIN AMERICA REGIONAL COUNTERNARCOTICS COOPERATION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
INC	4.100	4.000	7.000

## OBJECTIVES:

- Adopt and implement strong narcotics control legislation, improve the efficiency and effectiveness of judicial institutions to bring drug offenders to justice, and develop bilateral and multilateral mutual legal assistance cooperation.
- Improve counternarcotics law enforcement in Central America, the Caribbean, and South America by assisting and strengthening narcotics enforcement and interdiction agencies.
- Interdict shipments of drugs and precursor materials, seize assets of drug traffickers, and reduce money laundering.
- Develop government and non-government organizations' institutional and resource bases to control the growth of drug abuse in the region.
- Eradicate illegal drug cultivation by providing commodities and technical support.

## JUSTIFICATION:

As drug control efforts in several Latin American program countries have become more effective, traffickers have sought new routes in the Caribbean, Central America and southern South America, and they have developed new methods of transportation through major transit points such as Mexico. These areas are of increasing importance for the transshipment of cocaine, and to a lesser extent opium and marijuana production. Governments in most of these countries lack resources, strong infrastructures, and adequately trained personnel to meet the challenges. Many of the countries covered in this account are known heavy laundering centers or are emerging as such.

Latin America regional funds support programs in countries that may not have the infrastructure to support large country programs or where the threat does not warrant large programs but are used increasingly by traffickers and money launderers to finance and sell their illegal products. Regional assistance is used to improve host government capabilities in all aspects of narcotics control, including infrastructure development of law enforcement and judicial institutions engaged in drug control, and training. To assist in meeting the challenges of attacking the drug problem at the source, equipment and supplies are provided to help

*LATIN AMERICA AND THE CARIBBEAN*

develop programs to detect illicit cultivations for eradication, reduce drug trafficking, destroy narcotics processing and storage facilities, and assist in drug investigations, arrests and prosecution. Additionally, this program provides public information/awareness materials to educate the public about the dangers of drug consumption and trafficking.

In FY 1996, the program will seek to strengthen these countries' abilities to address more effectively the ever changing conduct of drug producers and traffickers. The contract Regional Telecommunications Adviser will also continue to serve the entire area. Support for Joint Intelligence Coordination Centers (JICC) will continue. Regional Narcotics Affairs Officers in Miami, Barbados, Panama, and Guatemala will help manage multi-country programs in their areas of responsibility.

**Caribbean.** The program will strengthen countries' law enforcement and judicial institutions by providing training and equipment. The program seeks to encourage regional counternarcotics cooperation and continue to support activities to combat narcotics trafficking through the Caribbean islands and waters of the Lesser Antilles, the Guianas, the Dominican Republic, and other countries. The Department of State and U.S. law enforcement agencies actively encourage and support many Caribbean nations that cooperate in joint drug interdiction operations. The program will expand countries' drug investigative capabilities by providing existing Joint Information Coordination Centers (JICCs) with upgraded equipment and advanced training. New JICCs will be established where appropriate. We will provide training to develop local community action partnerships for drug abuse prevention and to improve the effectiveness of drug treatment professionals. The budgets for Jamaica and the Bahamas appear as separate requests.

**Central America.** A full range of activities to assist Belize, Costa Rica, El Salvador, Honduras, and Panama disrupt trafficking and strengthen indigenous law enforcement infrastructures will continue in FY 1996. A small allocation will also support prevention education in Nicaragua. The Guatemala program appears as a separate request.

Support for interdiction operations will be maintained in Central America. In Panama, program activities will assist strengthening police and coast guard capabilities to interdict drug and chemical traffic and reduce money laundering. Eradication programs will continue as needs in the region dictate, particularly building on the 1993 successful coca eradication mission in Panama.

In FY 1993, the Government of Mexico (GOM) assumed responsibility for funding the aviation maintenance contract and other field support activities previously funded by the USG (reaching \$20 million by FY 1992). The GOM decision was very much in keeping with our objective of greater host government counternarcotics independence and self-sufficiency. In response to this fundamental change, traditional programmatic activities are being phased out. FY 1996 funds will provide training and technical support as requested by, and/or reimbursed by, the GOM during this transition period, as well as to enhance bilateral and multilateral counternarcotics cooperation.

**South America.** Drug trafficking in the Southern Cone countries of South America is increasing alarmingly. Paraguay, Chile, Uruguay, and especially Argentina are used as transit points for cocaine originating in Bolivia. The FY 1996 plan includes continued support to Argentina to strengthen its capacity to disrupt trafficking and investigate money laundering and

*LATIN AMERICA AND THE CARIBBEAN*

chemical diversion. In Paraguay and Chile, programs will assist the police to investigate and prosecute traffickers and train those in charge of enforcing money laundering legislation (now pending). In Uruguay, equipment and training will be provided to develop the enforcement capabilities of the new narcotics police force, urge ratification of the Vienna Convention, and legislation of strong money laundering laws.

**EFFECTIVENESS MEASUREMENT:**

- Increased arrests and prosecutions of major drug traffickers and money launderers.
- Increased capabilities of regional counternarcotics law enforcement agencies as demonstrated by larger quantities of drugs interdicted.
- Disruption of trafficker networks.
- A decrease in drug abuse and an increase in intolerance of drug trafficking in the region.
- A decrease in the amount of drugs produced in the region.

## LATIN AMERICA AND THE CARIBBEAN

## LATIN AMERICA AND THE CARIBBEAN REGIONAL DEMOCRACY FUND

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	5.845	10.000	27.550

## OBJECTIVES:

- Preserve and strengthen democratic institutions and processes.
- Foster respect for human rights.
- Promote full, vibrant, and economically sustainable democratic societies.

## JUSTIFICATION:

In general, the region continues to lead a global trend toward replacing authoritarian regimes with elected civilian governments. As the tragic case of Haiti demonstrates, however, the roots of new democracies are seldom deep. There are constant threats that populist demagogues will exploit discontent with social and economic conditions; that traditional holders of power will prove intransigent; and that narco-traffickers will use money and terror to subvert democratic institutions.

Effective democracy is based, among other fundamentals, on free and transparent elections and includes the right of all citizens to participate in government. United States policy promotes democracy as the form of government most responsive to the will and the rights of the people, most able to build prosperity, and most likely to provide long term security and stability. Efficiency and honesty in government, greater participation by all groups of society in political and economic decision-making, and increase economic opportunities are crucial to building stable democratic societies. A free, professional press and independent non-governmental institutions such as political parties; research, labor and human rights organizations; and business and professional associations are the bedrock of a democracy.

The proposed regional democracy program will provide ESF to those nations where democracy, support for human rights, economic reform, and equitable growth need to be consolidated. A wide variety of programs in the region will be supported to promote and strengthen democratic institutions, including state/provincial/department and local governments, the media, labor, and grassroots citizen organizations. Programs will also support human rights training for non-governmental organizations, militaries and elected and appointed officials throughout the hemisphere. Assistance may also be provided to assist countries in making the transition to peace.

*LATIN AMERICA AND THE CARIBBEAN***EFFECTIVENESS MEASUREMENT:**

- Increase in the number of countries where police investigation relates to the judicial evidentiary process.
- Development of a stronger public constituency to foster human rights and strengthen due process of law.
- Greater understanding of, and adherence to, human rights standards on the part of government and security forces.
- Enforcement of electoral reforms recently promulgated.
- Introduction of further reforms to strengthen the role and conduct of democratic elections.
- Increase in the number of countries where there is a serious and open dialogue on improving civilian control over the military.
- Increase in the number of countries where civilians in the executive and legislature, as well as NGOs, understand military management and have the capacity to provide oversight of the military (including defense budgets) and exercise that capacity.
- Greater involvement of NGOs in the democratic process

## LATIN AMERICA AND THE CARIBBEAN

## MEXICO

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.201	0.200	1.000

## OBJECTIVES:

- Improve military command and technical capabilities.
- Improve military adherence to human rights standards.

## JUSTIFICATION:

Recent events in Mexico, including a strengthening of our bilateral economic and political relationship, have fostered a climate for increased cooperation between our two nations' military forces. In the past, our small training program has been a key opening we have had with the traditionally inwardly-focused Mexican military and now presents the best means by which to forge expanded ties.

The training proposed would help Mexico enhance the professionalism of its military and, by influencing officer perspectives and skills, promote an officer corps which remains responsive to civilian control. Our training would also concentrate on command courses designed to improve officers' abilities to perform their missions under changing circumstances and technical courses to ensure effective use of military systems. This training would support the military's role as a source of stability for a democratic system.

## EFFECTIVENESS MEASUREMENT:

- Promotion of IMET graduates to leadership and command positions.

## LATIN AMERICA AND THE CARIBBEAN

## NICARAGUA

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

**PROGRAM SUMMARY**  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.100	0.200

**OBJECTIVES:**

- Consolidate stable and democratic government.
- Establish civilian control over the military.

**JUSTIFICATION:**

The primary U.S. interest in building democracy in Nicaragua is the consolidation of stable, democratic government in Central America, after over a decade of conflict. The U.S. investment of over \$1 billion since 1990 has been critical in helping Nicaragua's transition to democracy and a market economy. Continuing U.S. commitment, demonstrated through assistance at reduced levels, is essential to the survival and strengthening of Nicaragua's democratic institutions.

Specific U.S. objectives are closely tied to Nicaragua's democratic reform. The country is on track to hold general elections in 1996. Civil strife is greatly reduced and all political parties have joined the National Assembly where they are working on significant legislation, including constitutional reform. Unprecedented public debate and recent passage of military reform advanced the critical goal of establishing civilian control over the military.

U.S. military cooperation with the Sandinista Army (EPS), contingent on establishment of civilian government control and ending impunity for human rights violators, will include IMET for civil-military relations and human rights, and emphasize training of civilian defense managers.

**EFFECTIVENESS MEASUREMENT:**

- Progress in implementation of military reform.
- Increased civilian control of the military.

## LATIN AMERICA AND THE CARIBBEAN

## PARAGUAY

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.089	0.125	0.150

## OBJECTIVE:

- Support the consolidation of Paraguay's democracy, with emphasis on transparency and civilian-military cooperation.

## JUSTIFICATION:

It is U.S. policy to support the consolidation of Paraguay's democracy, with emphasis on transparency and civilian-military cooperation. A stable, civilian government in Paraguay will help advance U.S. interests in combatting narcotics trafficking, and in economic investment in the country.

The inauguration of Paraguay's first freely-elected civilian president and opposition-dominated congress in 1993 marked the opening of a new era in Paraguayan affairs. As a result there is substantial opportunity to move towards consolidating a strong democracy in Paraguay. Encouraging professionalism in the military, supporting the idea of civilian control, and honoring the concept of non-interference in politics are key. Defense training, with its interaction between the two militaries supports these goals. Without support for these ideas, progress towards a civilian-led democracy and progress in strengthening democratic institutions and economic development will be impeded.

The purpose of the FY 1996 IMET program is to support Paraguay's democratic consolidation. Training courses will be chosen to provide both civilians and military personnel with an understanding of how a professional military operates under civilian control and how the military must remain politically neutral for democracy to succeed. The U.S. has encouraged the establishment of a new "strategic planning directorate" under the office of the Vice-Minister of Defense to examine issues such as redefining the mission of the armed forces in a democracy, modern budgeting and accountability systems, and respect for human rights.

## EFFECTIVENESS MEASUREMENT:

- Transformation of Paraguay's military into a professional, nonpolitical force under civilian control.

*LATIN AMERICA AND THE CARIBBEAN***PANAMA CANAL AREA MILITARY SCHOOL PROGRAM****PROGRAM DESCRIPTION AND BUDGET REQUEST:****PROGRAM SUMMARY**  
*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.524	0.425	0.600

**OBJECTIVES:**

- Reinforce security partnerships by improving standardization and interoperability among the region's coastal and riverine forces – and ours.
- Promote the professionalization of Latin American and Caribbean officers and NCO's assigned to the regions coastal and riverine elements.
- Provide navies and coast guards the capability to enforce environmental rules and regulations.
- Improve capabilities against international terrorism, narcotics trafficking and smuggling.

**JUSTIFICATION:**

The U.S. Navy Small Craft Instruction and Technical Training School (NAVSCIATTS) trains personnel working on smaller craft on the rivers and coastal waters of Latin America and the Caribbean Sea. This component of the Latin American navies and coast guards are essential to meeting the challenges that international terrorism, narcotic traffickers and smugglers pose to national security and regional peace. Graduates of the training play a pivotal role in building security partnerships with the U.S. and other governments throughout the region.

**EFFECTIVENESS MEASUREMENT:**

- Successful U.S.-Latin American and regional collaboration in riverine and coastal naval cooperation.
- Active participation of the region's naval and coast guard elements in environmental law enforcement.

## LATIN AMERICA AND THE CARIBBEAN

## PERU

**PROGRAM SUMMARY**  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	0.000	5.500	0.000
IMET	0.000	0.325	0.500
INC	8.400	12.000	42.000

**OBJECTIVES:**

- Build host nation capabilities in order to foster institutionalization of Peruvian policy-making and coordination and to Peruvianize all aspects of counternarcotics law enforcement.
- Reduce and ultimately eliminate the illicit cultivation of coca and trafficking of cocaine and cocaine base from Peru.
- Support Peruvian economic reforms that eliminate the illicit coca cultivation economy.
- Help the military and police fully support the civilian government by developing greater respect for civilian control and human rights while strengthening their ability to combat security threats such as terrorism.

**JUSTIFICATION:**

Nearly two-thirds of the world's cocaine supply originates from coca leaf grown in Peru. The Government of Peru (GOP) has demonstrated the political will to act against cocaine trafficking, but its ability to make an impact on the narcotics trade is limited by institutional weaknesses, corruption and a lack of resources. Sustainable long-term reduction in the amount of coca raw material for drug production is only possible by integrating enforcement measures that disrupt the cocaine export industry with economic development activities leading to coca eradication by or with the consent of producers. Inefficiencies and defects in the judicial process also hamper the Peruvian justice system, and make prosecution of narcotics traffickers difficult.

The goal of the U.S. counternarcotics strategy in Peru is to reduce, and ultimately to eliminate, production of refined coca products for export to the U.S. or elsewhere, or for domestic abuse. This goal will be attained by helping the GOP develop an institutional capability to carry out an integrated counternarcotics program including law enforcement, sustainable alternative development, coca eradication, and public awareness/demand reduction.

The counternarcotics program provides commodities, services, and advice to Peruvian government agencies engaged in developing or implementing counternarcotics-related programs, including enforcement programs to disrupt coca cultivation, wholesale purchase, industrial-scale processing, and export of refined coca products; judicial reform programs to

*LATIN AMERICA AND THE CARIBBEAN*

improve Peruvian judicial process and training; and economic assistance programs aimed at both economic restructuring and sustainable development in coca-related areas. All specific projects are aimed at institutionalizing all aspects of the Peruvian counternarcotics effort.

Specific programs include: training and equipping counternarcotics law enforcement air and ground units; developing local municipalities; strengthening the judicial system; supporting microenterprises and local economies, as well as infrastructure and agricultural activities in coca-growing areas; supporting broad-based economic growth to establish a stable market economy; establishing mobile air operations at forward locations for law enforcement operations against major Peruvian traffickers; controlling precursor chemicals at ports of entry and in the interior; developing actionable law enforcement intelligence; supporting Peruvian air force, navy and police efforts to intercept trafficking aircraft and control municipal airfields; and supporting government demand reduction efforts nationally and locally.

The FY 1996 budget will implement the President's decision to consolidate international counternarcotics law enforcement, economic and military funds into a single account.

**The Coca Eradication and Sustainable Development Projects:** Coca eradication is currently limited to the eradication of coca seedbeds through the use of Peruvian laborers (CORAH). Mature coca eradication was terminated in 1990. The 1996 program envisions initiating a mature coca eradication program in coordination with coca-growing communities receiving projectized development assistance and related broader based economic growth activities. Small-scale community projects which were implemented by the USG in coca-growing areas between 1990 and 1993 had a discernible impact on participating communities, providing alternatives to illicit coca cultivation and resulting in at least two local voluntary coca eradication agreements. Budget reductions ended these test projects in 1993. Plans to redesign and implement revised project designs in these areas will be in the early stages of implementation in FY 1995. Small-scale community projects will reinforce USG counternarcotics and democracy development goals by providing agricultural assistance, road-building, community development projects and long-term technical assistance to municipalities. These projects will serve as the basis for international financial institution and other donor assistance affecting the illicit coca economy.

Efforts will be focused also on ensuring that the Government of Peru implements comprehensive macroeconomic policy reforms to establish a stable market-oriented system through the provision of technical advice and coordination of the international donor community. Without a complementary effort to initiate structural reforms at the national level, community-level development efforts will fail for lack of a long-term drive to reform the Peruvian market economy.

Counternarcotics law enforcement efforts are based on a mobile-basing concept which allows police and helicopters to conduct operations against major trafficking facilities from a variety of secure locations, using the Ucayali town of Pucallpa as the rear area logistical and maintenance depot. Major helicopter maintenance and USG support for the Peruvian police base at Santa Lucia in the Huallaga Valley have been terminated due both to budgetary constraints and a shift in trafficking patterns, although Peruvian counternarcotics police continue some activities from there.

*LATIN AMERICA AND THE CARIBBEAN*

The Anti-Drug Directorate (DIRANDO) of the PNP is responsible for counternarcotics law enforcement, including illegal trafficking in essential chemicals. Headquartered in Lima, it has operating units in several key narcotics trafficking areas, a training base at Mazamari, and investigators in major urban areas. The narcotics field support subproject provides essentially all costs for training, equipping, and operating DIRANDO units and personnel, except for salaries, including units which investigate trafficking, financial crimes, chemicals trafficking, and a major violators unit.

The National Police Aviation Division (DIVPA) provides general aviation support for the entire PNP. It provides pilots, aircrews, and support personnel for 10-12 Department of State-owned UH-1H helicopters which support mobile law enforcement actions in the field. The aviation support funds these counternarcotics operations, providing fuel, maintenance, hangaring and warehousing, aircraft rental when needed, and operational support for DIVPA personnel.

In FY 1996, the Narcotics Field Support and Aviation Support projects cover operating and maintenance costs for police mobile basing operations, as well as construction and incidental support (fuel, parts, training) required by the Peruvian Air Force and Navy to carry out their legally mandated counternarcotics missions, including support for police enforcement activities.

The chemicals needed to make cocaine are not produced in quantity in Peru, and have few legitimate uses in the rural coca growing areas where most coca processing takes place. Most of the needed chemicals are diverted after commercial importation, and moved by road to the UHV. The Ministry of Commerce and Industry is responsible for licensing and regulating the importation, sale, and use of these chemicals, while DIRANDO is responsible for investigating diversion or illegal trafficking of controlled chemicals. The **Chemicals Control Project** will provide support to enhance the ability of the Ministry of Commerce and Industry to carry out its duties, and fund training and operational support for other agencies involved in chemicals control.

The Peruvian Customs Service cooperates with DEA, including sharing intelligence. The **Customs Project** is a narcotics interdiction activity to provide limited logistic support for the Customs Service, e.g., vehicles, investigative and communications equipment, training, and operational support.

The **Judicial Reform Project** will support the implementation of an accusatory criminal legal system, with due regard for the rights of the accused, replacing Peru's inquisitorial system, which has been ineffective in providing a fair and efficient system through which to prosecute key narcotics traffickers. The project will include training for prosecutors under the new legal system, implementation of a delay reduction case tracking system for the courts, fiscal management training for justice sector personnel, technical assistance for professional training academies for prosecutors and judges, as well as resources to upgrade the physical security of personnel and courts that handle narcotics cases.

**Drug Awareness and Demand Reduction Project** activities will be enhanced to concentrate on providing the Peruvian public with information about the harmful personal and societal effects of cocaine production and abuse, conducting surveys on drug abuse to identify groups requiring assistance, and supporting educational fora for Peruvian prevention and treatment professionals.

*LATIN AMERICA AND THE CARIBBEAN*

**Program Development and Support** funds will fund salaries, benefits and allowances of U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

**IMET:** The U.S. halted the noncounternarcotics security assistance program in Peru in April 1992, following the auto-coup. An opportunity to reengage in Peru is approaching, and a more normal aid relationship in FY 1996 is anticipated, assuming free and fair presidential elections in April 1995.

An IMET program for Peru would be designed to enhance civilian control over the military. Courses for mid-level, junior and non-commissioned officers will include human rights instruction as well as professional military education. Assuming military assistance is resumed in FY 1995, the resumption of mid- and senior level PME courses will be critical. Our objective is to insure the selection of the "best and brightest" field grade officers of the Peruvian services to attend these courses. Through engagement, an appreciation of the U.S. military and its role in the democratic process will be solidified and reinforced, and we will open new channels of communication with the Peruvian military. As the graduates return to duty in Peru, they will more likely support and enforce positive democratic policies than they would through a non-engagement strategy.

**EFFECTIVENESS MEASUREMENT:**

- Immobilization of Peruvian cocaine production and transportation organizations.
- Reforms in the Peruvian justice system.
- Development of viable alternatives to the illegal coca economy, including implementation of comprehensive macroeconomic policy reforms and projects in and outside of coca-growing areas.
- Decreased flow of essential chemicals into and through Peru.
- Increase in the Peruvian population's awareness of the dangers of drug abuse and drug trafficking to Peru's economy and society.
- Emergence of a professional, apolitical military responsible to executive and legislative branches and respectful of human rights.

## LATIN AMERICA AND THE CARIBBEAN

## SURINAME

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.000	0.050	0.050

## SPECIFIC OBJECTIVE:

- Promote civil-military relations and human rights, with emphasis on the role of the military in a democracy.

## JUSTIFICATION:

Suriname, having gained independence in 1975, is emerging from a period of extended military rule and involvement by the military in the political process (1980-1991). U.S. interests in consolidating democratic gains will be served by continued efforts to stabilize this democracy promoting a greater respect for democracy and human rights within Suriname's military establishment, and assisting the government to develop greater civilian participation in the oversight of defense institutions will help ensure long-term security and stability.

The program will consist of in-country professional training for the Surinamese military with emphasis on the promotion of democratic civilian-military relations and on strengthening the control of civilian authorities over the military. U.S. interests will be served by the development of a new cadre of officers who will have been trained to work with and support the civilian government which defines their mission. Specifically, funds will be used to provide military police training in effective investigative and interviewing methods to decrease the likelihood of human rights abuse and civil-military relations course.

## EFFECTIVENESS MEASUREMENT:

- Continued improvement in the civil/military relationship and human rights performance.
- Peaceful transition elections in 1996.

## LATIN AMERICA AND THE CARIBBEAN

## TRINIDAD AND TOBAGO

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.010	0.000	0.050

## OBJECTIVES:

- Enhance professionalism of the Trinidad and Tobago Defense Force (TTDF).
- Enhance Trinidad and Tobago's ability to participate in regional security and international peacekeeping operations.

## JUSTIFICATION:

The U.S. is Trinidad and Tobago's largest trading partner and has sizable and rapidly growing investments in that country, principally in oil and petrochemicals. The Trinidad and Tobago Defense Force is one of the largest security forces in the English-speaking Caribbean and, with foreign logistical assistance, is in a position to contribute to most regional coalitions to counter threats to peace and stability. The TTDF played a significant role in the restoration of democracy in Haiti by providing personnel to the multinational forces in Haiti. This signaled a change in direction for the Government of Trinidad and Tobago (GOTT); since independence, Trinidad and Tobago had previously not elected to participate in any regional peacekeeping operation.

The TTDF has undergone a recent formal restructuring that consolidated its command structure, improved its chain-of-command, and enhanced the flow of information. U.S. IMET would build on this initiative by providing education and training in leadership, resource management, and decision-making. Such training would also benefit the TTDF by providing it with a tool to effectively manage its diminishing budget. Interoperability with U.S. and U.S.-trained forces would also be improved.

## EFFECTIVENESS MEASUREMENT:

- Improved drug and migrant interdiction.
- Increased GOTT participation in peacekeeping operations.
- IMET graduates are promoted to positions of leadership where there is an opportunity to use their education and training.

## LATIN AMERICA AND THE CARIBBEAN

## URUGUAY

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

**PROGRAM SUMMARY**  
(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.167	0.100	0.250

## SPECIFIC OBJECTIVE:

- Enhance the professionalism of Uruguay's armed forces.
- Increase the Uruguayan military's ability to operate successfully with U.S. and allied forces in U.N. peacekeeping and other coalition operations.

## JUSTIFICATION:

Since Uruguay's return to democratic rule in the mid-1980s, it has become one of the region's strongest democracies. Civil-military relations are good; the armed forces are politically neutral and professionally oriented.

Uruguay has dramatically expanded its participation in U.N. peacekeeping operations to become the second largest contributor from Latin America. Both civilian and military officials have expressed a desire to further expand their country's participation. Military training to update and enhance the capabilities of the Uruguayan armed forces to participate in international peacekeeping missions directly advances U.S. goals of promoting peace and building democracy.

The proposed IMET program will help military professionals keep up-to-date on U.S. tactical/strategic thinking, and provides a vehicle to further U.S. policy objectives.

## EFFECTIVENESS MEASUREMENT:

- Successful U.S./Uruguayan collaboration in peacekeeping activities.
- Improved professionalism in a military that is respectful of civilian leadership and human rights.

## LATIN AMERICA AND THE CARIBBEAN

## VENEZUELA

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.195	0.250	0.300
INC	0.400	0.500	0.500

## OBJECTIVES:

- Improve Government of Venezuela's institutional ability to detect and interdict drug and precursor shipments.
- Enhance the professionalism of the Venezuelan armed forces to improve its ability to respond to external threats, including Colombian insurgents, kidnapers and drug producers in the West and illegal Brazilian miners in the South.

## JUSTIFICATION:

Venezuela experienced two unsuccessful military coup attempts in 1992. A small percentage of military officers participated in these coup attempts, but the vast majority remained loyal to the government and fought to preserve the democratically elected government. None of the officers that had received previous training in the U.S. participated in either attempt. President Caldera restored the authority of the presidency when he replaced the military high command in response to the high command's attempts to encroach on presidential authority during the period between the impeachment of Carlos Andres Perez in June 1993 and Caldera's inauguration in February 1994.

US assistance programs support Government of Venezuela (GOV) efforts to develop institutional capabilities to interdict drug shipments transiting Venezuela, reduce illicit drug production, conduct effective drug investigations, enhance the professionalization of the Venezuelan military, and improve civil-military relations.

An estimated 100 to 200 metric tons of cocaine transit Venezuela annually, primarily concealed in large containers loaded onto commercial and private ocean vessels and aircraft. Narcotics seizures by the Government of Venezuela law enforcement agencies declined in 1993. Seizures of cocaine transhipped through Venezuela totaled about 10 metric tons, discovered in shipments of legitimate cargo.

The counternarcotics program in Venezuela will help improve Venezuela's institutional ability to detect and interdict drug and chemical shipments by enhancing enforcement operations at land, air and water ports, and to target outbound containerized shipments.

*LATIN AMERICA AND THE CARIBBEAN*

The **Narcotics Law Enforcement Project** will provide training and commodities to improve GOV drug information-sharing capabilities and facilitate increased interdiction. The National Guard (GN) and Judicial Technical Police (PTJ) will receive such assistance as detection and interdiction training, computers, and radios. It will also support crop control activities. FY 1996 activities will include:

- A narcotics crop control project designed to gather more complete information on the extent of narcotics cultivation in Venezuela and to sustain bilateral eradication efforts;
- The drug analysis facilities project to strengthen the investigative and forensic skills of the PTJ and the GN, which have been assigned greater responsibility for toxicological investigations by the new GOV drug law. This project provides training in forensics and advanced chemical analysis to GN laboratory specialists. Three new laboratory facilities, with upgraded equipment, will be established in outlying regions of Venezuela;
- The national guard detector dog school project will maintain normal operating expenses and complete improvements on the water supply equipment for this widely-recognized regional training center. With U.S. assistance, the school hosts multiagency conferences for officials with detector dog responsibilities from the Caribbean, Central America, and other Latin American nations; and,
- A waterways interdiction project to provide boats, investigative and other equipment, maritime and riverine interdiction training, and operational support to strengthen the Venezuelan Coast Guard and Venezuelan Marines interdiction capability along the Caribbean Coast and extensive river systems. The Maritime interdiction initiative will concentrate on patrolling known eastern Caribbean narcotics trafficking routes; the Riverine initiative will concentrate on monitoring, intercepting, and seizing illicit narcotics and precursor/essential chemical shipments on the Orinoco River System. The United States will continue developing a cooperative relationship between the Venezuelan Coast Guard, the Marines and GN, and seek to establish mechanisms to share intelligence. Also key to successful GOV waterways interdiction is completion of two Caribbean Basin Radar Network (CBRN) sites and repair of the air defense radar system.

The **Money Laundering Project** will develop the capabilities of the PTJ and GN to investigate and dismantle money laundering operations. Funding will assist the PTJ in the development of a computer database on suspected money launderers and financial transactions. The PTJ, with USG assistance, will also develop an effective multiagency financial crimes task force.

The **Drug Awareness and Demand Reduction Project** will focus on engaging the new Venezuelan administration, which took office in February 1994, on narcotics issues, particularly the need to increase public support for counternarcotics programs. Other initiatives include a comprehensive national drug abuse survey, an epidemiological study, training workshops with local NGOs and sports-based drug prevention training programs with U.S. Major League Baseball.

The **Program Development and Support Project** funds will provide for salaries, benefits and allowances of permanently assigned U.S. personnel in Venezuela, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

*LATIN AMERICA AND THE CARIBBEAN*

**IMET.** An IMET program for Venezuela would be designed to enhance civilian control over the military. Courses for mid-level, junior and non-commissioned officers will include human rights instruction as well as professional military education. Our objective is to insure the selection of the "best and brightest" field grade officers of the Venezuelan services to attend these courses. Through engagement, an appreciation of the U.S. military and its role in the democratic process will be solidified and reinforced, and we will open new channels of communication with the Venezuelan military.

**EFFECTIVENESS MEASUREMENT:**

- Progress toward a more professional and apolitical military with a greater respect for civilian authority, effective military justice, and respect for human rights.
- Strengthen Venezuela's waterways operational effectiveness.
- Establish a counternarcotics coordination mechanism in the Government of Venezuela.
- Improve controls on precursor chemicals and enact more comprehensive money laundering legislation.
- Identify illicit drug cultivation, develop an eradication capability, and eradicate coca and opium poppy.
- Promote greater drug awareness in Venezuela's public and private sectors.

*NEAR EAST***THE NEAR EAST****PROGRAM DESCRIPTION AND BUDGET REQUEST:**

**DESCRIPTION:** The Administration is requesting over \$5 billion in security assistance for Regional Peace and Security in the Middle East. These funds will be channeled through FMF, ESF, IMET, and PKO to promote regional peace and security in helping to meet the legitimate security needs of parties engaged in the peace process and promoting economic reform and the growth of the private sector. The vast majority of assistance in the region supports the long-standing U.S. foreign policy goal of seeking a just, lasting and comprehensive peace between Israel and her Arab neighbors, including the Palestinians.

**OBJECTIVES:**

- Promote the Middle East peace process which remains one of the highest foreign policy priorities for the U.S.
- Maintain our steadfast commitment to Israel's security and well-being.
- Promote Palestinian ability for democratic self-government through economic development and institution-building in the West Bank and Gaza Strip.
- Support the bilateral negotiating tracks and multilateral and trilateral Groups through direct assistance to the governments of Jordan and Lebanon and regional programs.
- Promote Jordan's economic stability through debt forgiveness.
- Pursue the broader U.S. goal of promoting regional security in the Persian Gulf region through modest IMET funds for Oman and Bahrain.
- Promote regional security in North Africa through the provision of modest IMET funds for Morocco, Tunisia, and Algeria.
- Maintain the U.S. commitment to peacekeeping through the Multilateral Force and Observers in the Sinai.

**JUSTIFICATION:**

In FY 1996, the Administration aims to preserve aid to Israel and Egypt in recognition of the vital role this assistance plays in bolstering regional stability and security, and in promoting peace.

- The commitment of this Administration to Israel's security is well-known and unshakable. Funding under this title is designed to strengthen a free and democratic Israel as well as support our peace process goals.

*NEAR EAST*

- Our assistance to Egypt supports its moderating influence in the region and helps it play an invaluable role as a go-between in the region and in the bilateral negotiations.

The U.S. pledge of assistance to the Palestinians plays a key role in building the political, economic and institutional infrastructure necessary for Palestinian self-government. Bilateral funding for the West Bank and Gaza will focus on projects to support the September 13, 1993 Declaration of Principles and subsequent Israel-PLO implementing agreements.

Bilateral assistance to Jordan and Lebanon helps those countries undertake stability-oriented economic and political reforms enhancing their ability to take risks necessary to participate in and advance the peace process. Debt forgiveness for Jordan is being sought to meet the Administration's commitment.

Regional programs, such as the MERC and Multilateral Working Groups, promote economic integration and cooperation through scientific exchanges and dialogues to address regional problems such as water and refugees.

We propose modest military training assistance to Oman, Bahrain, Morocco, Tunisia, and Algeria to support U.S. goals toward regional peace and security in the Persian Gulf and North Africa.

The U.S. supports the MFO to continue to monitor security arrangements between Israel and Egypt and provide a framework for peacekeeping in the region.

**EFFECTIVENESS MEASUREMENT:**

Programs supported under this title support regional peace and security in the Middle East. In general, success will be measured by accelerating progress in the peace process, the continued security and well-being of Israel, and regional stability in the Persian Gulf. Specifically, benchmarks may include:

- Implementation of agreements between Israel and the Palestinians:
  - Assumption of authority by Palestinians in Gaza and Jericho and the development of self-government institutions.
  - Assumption of early empowerment responsibilities by the Palestinian Authority for education, health, social welfare, direct taxation, and tourism in the West Bank.
  - Holding of elections for Palestinian leadership positions.
  - Israeli/Palestinian negotiations on final status issues in accord with the schedule established by the Declaration of Principles.

## NEAR EAST

- The consolidation of peaceful relations between Jordan and Israel subsequent to their peace treaty of October 1994:
  - Evidence of greater cooperation, particularly in the sphere of economic coordination
- The conclusion of peace treaties by Syria and Lebanon with Israel.
- Progress in achieving the peace process benchmarks will be linked to enhanced Israeli security and continuation of its role as a model democracy in the region.
- Enhanced cooperation, increased exercise capabilities, and continued access to facilities for the U.S. military with Oman and Bahrain.
- Improved joint exercise capabilities for Tunisia, enhanced cooperation and continued access to facilities for the U.S. military with Morocco, and increased respect for professionalism in the Algerian armed forces.
- The continued success of the MFO is evidenced by the continued absence of border incidents on the Israeli/Egyptian border.

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.056	0.075	0.075

## OBJECTIVES:

- Promote regional peace and security by encouraging Algeria's support of the Middle East peace process.
- Promote professionalism in the Algerian armed forces, advance the Algerian military's interoperability with U.S. and NATO armed forces, and encourage acceptance of U.S. values, such as civilian control of the military.

## JUSTIFICATION:

Algeria continues to face profound political crisis. Exploiting widespread political and economic discontent, an Islamic fundamentalist party swept the first round of legislative elections in late 1991. The army then took over, canceling the second round of balloting, and cracked down on Islamic opponents. Since then, the government has been locked in a battle against mounting Islamic insurgent violence. U.S. efforts have been focused on encouraging the Algerian government to enter into substantive dialogue with a broader base of political parties provided those parties reject terror as a means of obtaining or maintaining power.

Our IMET program gives the U.S. a measure of influence to encourage Algerian government reforms and their continued cooperation with U.S. policy on the Middle East peace process and relations with Libya. IMET funds advance our larger foreign policy considerations in that they explicitly aim to promote a greater understanding of democracy and democratic institutions in Algeria.

## EFFECTIVENESS MEASUREMENT:

- Notable progress towards enhancing the professionalism of the Algerian armed forces, and encouraging its acceptance of U.S. values, such as civilian oversight of the military.
- An increase in interoperability capability between the Algerian military and U.S. and NATO armed forces.

NEAR EAST

## BAHRAIN

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
IMET	0.056	0.075	0.100

## OBJECTIVES:

- Support regional security, and promote Bahraini understanding of U.S. security perspectives in the region.
- Promote professionalism in the Bahraini armed forces, advance interoperability between Bahraini and U.S. armed forces, and encourage acceptance of U.S. values, such as civilian control of the military.

## JUSTIFICATION:

The U.S. and Bahrain have enjoyed close bilateral relations for nearly fifty years. Our mutually shared objectives include maintaining access to critical oil and gas reserves under free market conditions, ensuring freedom of navigation in the Gulf, and supporting the stability of friendly countries in the region. Bahrain has also been supportive of U.S. regional political objectives and hosted the Environmental Working Group of the Middle East multilateral peace process last fall.

Bahrain's readiness to host NAVCENT and its predecessor organizations since the end of World War II has been a valuable and substantial component of our security presence in the region. IMET will support Bahrain in professionalizing its armed forces, strengthening an important regional ally, and enhancing cooperation with the U.S. This training will advance interoperability with U.S. armed forces in the event of joint or coalition operations in the region.

## EFFECTIVENESS MEASUREMENT:

- Enhanced professionalism of the Bahraini armed forces, and greater acceptance of U.S. values, including civilian control of the military and military justice.
- Increased interoperability between the Bahraini and U.S. armed forces.

## NEAR EAST

## EGYPT

**PROGRAM DESCRIPTION AND BUDGET REQUEST:**

DESCRIPTION: Provide FMF grants to support Egyptian self-defense, long-term military modernization and interoperability with U.S. forces, and provide IMET for Egyptian military and civilian officials. Additionally, provide ESF in support of economic reforms and private sector development.

**PROGRAM SUMMARY***(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
ESF	814.930	815.000	815.000
FMF	1,300.000	1,300.000	1,300.000
IMET	0.800	1.000	1.000

**OBJECTIVES:**

- Promote regional peace and security by encouraging Egypt's continued participation and leadership in the Middle East peace process.
- Support Egypt's critical political and military role as a moderating influence in the region and as a contributor to peacekeeping operations.
- Promote market-oriented economic development and policy reform.
- Provide professional military education and training to Egyptian officers to enhance professionalism and modernize Egypt's armed forces, and encourage acceptance of U.S. values, such as civilian control of the military.

**JUSTIFICATION:**

Supporting the continuing modernization program of the Egyptian armed forces will help ensure that Egypt remains a key player in the region's pursuit of peace and stability. The Egyptian armed forces are well into a long-term modernization program, aimed at replacing antiquated Soviet equipment with more up-to-date U.S. equipment. We propose maintaining this program to allow the GOE to continue four major programs (armor modernization, F-16 and Apache purchases, and leasing frigates), while upgrading its secondary systems and increasing its concentration on interoperability and sustainment.

Training in the U.S. for Egyptian military officers introduces them to the traditions of democracy, human rights and civilian control of a professional military, as well as U.S. training concepts. Any change in the funding at this time would cause delays in the modernization program and could reduce Egyptian ability to maintain interoperability with U.S.

*NEAR EAST*

armed forces. The IMET proposal supports improving the military's professionalism as well as enhancing interoperability with U.S. armed forces.

Our proposed ESF advances Egypt's multifaceted economic reform program. Policy reforms promote macroeconomic stability and structural change in the agriculture, trade, and financial sectors. Private sector investment and trade within a market-oriented framework would be broadened. Efforts to increase agricultural production and incomes will stress liberalizing market controls. These measures will enable Egypt to improve its economic position, thereby contributing to internal stability essential to the Middle East process.

**EFFECTIVENESS MEASUREMENT:**

- Continued strong Egyptian contributions to regional peace, Arab reconciliation with Israel, and close bilateral/security relations with the U.S.
- Completion of the final phases of the F-16 and armor modernization program by 1998.
- Implementation of our ESF programs, resulting in an increasing role for the private sector in the economy, reduced government controls over markets, enhanced job creation, and improved economic growth.
- Notable progress towards enhancing the professionalism of the Egyptian armed forces, and encouraging their acceptance of U.S. values, such as civilian control of the military.

## NEAR EAST

## ISRAEL

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: The President's FY 1996 budget will maintain current aid levels to Israel, including FMF grants to support regional security objectives and sustainable progress toward peace. The proposed ESF supports Israel's policy reforms and long-term economic growth.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	1,200.000	1,200.000	1,200.000
FMF	1,800.000	1,800.000	1,800.000

## OBJECTIVES:

- Promote regional peace and security with Israel's continuing participation in the Middle East Peace Process.
- Assist Israel in maintaining its qualitative edge through continued modernization and training.
- Encourage economic reform and increased private sector activity.

## JUSTIFICATION:

With \$3 billion in funding for Israel for FY 1996 (which equals current assistance levels for FY 1994 and 1995), the U.S. reaffirms its commitment to Israel's security and well-being and our interest in securing a just and comprehensive peace between Israel and its Arab neighbors. Our commitment to Israel's security has been a cornerstone of our Middle East policy since the creation of the state of Israel in 1948. This long-standing commitment is based on historic and cultural ties, as well as U.S. interest in the success of the peace process. In addition, we share with Israel concerns related to the security of the eastern Mediterranean. We have repeatedly emphasized that the security and legitimacy of Israel must not be in doubt if the ongoing bilateral and multilateral peace talks, co-sponsored by the U.S., are to succeed.

The historic accords between Israel and the Palestinians and between Israel and Jordan represent a unique opportunity for progress toward regional peace and security. Israel has taken significant risks for peace. These risks should be recognized and reinforced by the U.S. While the defeat of Iraq and recent dramatic progress toward peace have reduced the immediate threat to Israel, a longer-term threat remains from countries such as Iran, which continue to pursue the development and acquisition of weapons of mass destruction and their delivery systems. The U.S. is committed to maintaining Israel's qualitative edge against any likely combination of aggressors. Toward this end, FMF will allow Israel to continue cash-flow funding and follow-on support for major multi-year procurement programs such as new

*NEAR EAST*

fighter aircraft purchases, SAAR corvettes, and upgrades of Apache and Blackhawk helicopters.

While Israel's economy grew over 7% in 1994, and unemployment has dropped to 7.3% from 1992 levels of 11%, long-term growth is not assured. The government still faces economic challenges associated with absorbing more than 560,000 immigrants since 1989. Increased domestic demand associated with high immigration levels has contributed to a widening trade deficit and to 14.5% inflation (from an initial 8% target for 1994). Share prices on the Tel Aviv stock exchange declined 30% in 1994. This impeded progress in bank profitability and in the privatization program while offerings were delayed in the hope of a market turnaround. U.S. ESF provides Israel the funds it needs both to promote economic reforms and to carry out a domestic economic agenda that reinforces the government's peace process policy.

**EFFECTIVENESS MEASUREMENT:**

- Continued progress toward peace in the region and sufficient Israeli confidence to take further steps.
- Reformulating Israeli defense thinking, strategy and doctrine, moving forward on a number of long-term military initiatives, including the "Arrow" ATBM program and active missile defense, and the acquisition of advanced long-range U.S. F-15I fighter aircraft.
- Success of economic reforms, encouraging long-term growth; (e.g., steady progress by the government to privatize state enterprises; efforts to streamline the tax system and reduce trade barriers; and policies designed to decrease the budget deficit as a percentage of GDP).

## NEAR EAST

## JORDAN

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide ESF to increase foreign exchange earnings from light industry, agriculture and tourism and FMF to improve Jordan Armed Forces (JAF) capabilities to maintain adequate border security, internal stability and participate in UN peacekeeping missions. An IMET program will promote military professionalism. Support water conservation and quality improvement, contribute to more efficient and accountable governance, and improved health care management.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	9.000	7.200	7.200
FMF	9.000	7.300	30.000
IMET	0.800	1.000	1.200

## OBJECTIVES:

- Promote regional peace and security by encouraging Jordan's continued participation in the Middle East peace process.
- Promote Jordan's economic stability through debt forgiveness.
- Support economic development through projects to promote broad-based economic growth.
- Support the armed forces' ability to secure Jordan's borders by providing appropriate equipment and training; reinforce U.S. values, such as civilian control of the military.
- Enable Jordan's armed forces to modernize themselves while restructuring.
- Promote military professionalism.
- Improve water quality and conservation.
- Provide better family planning/health care facilities.

## JUSTIFICATION:

U.S. assistance, FMF, IMET and ESF, to Jordan promotes stability and prosperity, which in turn provides the Jordanian government flexibility to pursue policies crucial to U.S. objectives in the Middle East. U.S. aid supports Jordan as it pursues new areas of strategic and economic cooperation with Israel and enforces sanctions against Iraq. At this critical stage of the Middle East peace process, U.S. military assistance enhances Jordan's important role in contributing to

*NEAR EAST*

the peace and security of the still volatile region. Jordan's military training programs serve to educate officers and NCOs on the role of the armed forces in a democratic society.

In addition to our security assistance request for FY 1996, the Administration is requesting a supplemental appropriation for FY 1995 to forgive the remainder of Jordan's bilateral official debt to the U.S. The Congress has already authorized forgiveness of Jordan's official debt. In FY 1994, \$99 million was appropriated to forgive up to \$220 million of the debt. The Administration's \$275 million request to forgive the remaining debt demonstrates our recognition of Jordan's positive steps to formalize and consolidate diplomatic and economic relations with Israel. The Administration has urged and will continue to urge Jordan's other creditors to take similar actions.

The Jordanian democratization program (which in November 1993 led to Jordan's first multiparty parliamentary elections in recent history) is an Arab success story which the U.S. should support. Jordan and Israel signed a peace treaty on October 26, 1994 in a bold and historic bid to further peace in the region. The Administration's request for increased FMF grants for Jordan is based on a recognition of Jordan's vital role in supporting the Middle East Peace Process as well as an evaluation of Jordan's needs in the areas of military sustainment and readiness.

Jordan has been engaged in serious efforts to achieve long-term growth since its standby agreement with the IMF in February 1992. Despite the fact that Jordan has met or exceeded nearly all its standby targets, its economy continues to be hamstrung by enormous debt and a worsening foreign exchange situation. Standards of living have fallen steadily since 1988. Such problems could disrupt the government's efforts at structural reform, democratization and its crucial commitment to the Middle East peace. External assistance can help minimize potentially destabilizing economic factors. ESF-funded activities continue to be instrumental in encouraging policy reform to remove barriers to private trade and investment as well as assisting Jordan to develop a strong water conservation program, especially critical in light of Jordan's severe water shortage.

**EFFECTIVENESS MEASUREMENT:**

- Evidence of a greater degree of cooperation with Israel, particularly in the sphere of economic coordination and bilateral cooperation.
- Increased foreign direct investment and improvement in Jordan's balance of payments and foreign exchange reserve accounts.
- Enhanced readiness of a downsized military.
- Continued progress on the implementation of its structural adjustment program.
- Implementation of water conservation measures.
- Greater access to, and effectiveness of, family planning programs.

NEAR EAST

## LEBANON

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide ESF to rehabilitate housing and to reconstitute the ability of civil government agencies to provide needed public services. An IMET program will continue to enhance professionalism in the Lebanese armed forces.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	3.639	4.000	4.000
IMET	0.304	0.400	0.475

## OBJECTIVES:

- Support regional security by encouraging Lebanon's cooperation with the Middle East peace process.
- Enhance the stability of Lebanon through the reassertion of government control throughout its territory.
- Assist in rebuilding government institutions vital to restoring the government's ability to provide basic public services.
- Support enhancing the professionalism of the Lebanese armed forces, focusing on fostering respect for human rights.

## JUSTIFICATION:

Lebanon's plan for economic reconstruction and revitalization is critical to reestablishing stability and functional government institutions responsive to the needs of its citizens, after 17 years of civil war. Instability in Lebanon has proven consistently detrimental to the ongoing peace efforts. Our ESF program is designed to rehabilitate housing destroyed by fighting. It is also meant to train civilian administrators in providing useful services and reestablishing the citizenry's confidence in government capabilities and authority.

Training for Lebanese military officers has complemented our efforts to make available to the Lebanese Armed Forces the equipment it needs to assert central government authority and stability throughout Lebanese territory. In the aftermath of a bitter civil war, enhancing the professionalism of the armed forces is an essential step toward rebuilding one of the few national institutions commanding the respect and approval of the average Lebanese. IMET-funded training and education has afforded an opportunity to experience U.S. traditions of democracy, respect for human rights, and civilian control of a professional military.

*NEAR EAST***EFFECTIVENESS MEASUREMENT:**

- Increased willingness of the Lebanese government to support the peace process.
- Improved ability of civil servants to respond in a timely, adequate manner to routine requests for public assistance and services.
- Enhanced professionalism of the Lebanese military, including respect for human rights, democratic values, and proper military-civil roles in a democratic society.

## NEAR EAST

## MIDDLE EAST MULTILATERAL WORKING GROUPS

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: ESF funding will support activities of the five multilateral working groups of the Middle East Peace Process (MEPP): regional economic development, water, environment, refugees and arms control and regional security.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	1.000	3.000	5.000

## OBJECTIVES:

- Promote regional peace and security through the Middle East peace process.
- Provide a centralized source of support for U.S.-funded activities of the multilateral working groups of the MEPP.
- Advance the peace process in concrete ways, building links between Israel and Arab parties and thereby augmenting progress in the bilateral negotiations.

## JUSTIFICATION:

In January 1992, five multilateral working groups were established to address regional issues: water, environment, economic development, refugees, and arms control and regional security. The purpose of these groups is to promote discussion of regional issues among Israelis and Arabs and to bring to bear the expertise and resources of the international community to support these efforts. The U.S. and Russia assumed leading roles as co-sponsors of the peace process and chaired two groups; other extra-regional parties were given key roles as chairs of three of the groups: the EU, Japan and Canada. Participation now includes over 45 parties, including 15 from the Middle East.

Each group has undertaken an active program of seminars, workshops, feasibility studies, and concrete pilot projects. In recent meetings, the groups have begun to identify and implement projects involving a number of regional parties. The U.S. has helped to support these activities under the auspices of the MEPP. Projects the U.S. funded in FY 94 include a communications network among participants in the arms control and regional security group; designing and planning for wastewater facilities for small communities in Jordan, Israel and the West Bank/Gaza Strip for the environment group; financing a feasibility study by the U.S. Trade and Development Agency on regional air traffic and control systems for the economic development group; and establishing and upgrading regional data banks for the water group. These activities focus on concrete projects linked to the peace process; they complement but do not overlap with research-oriented activities undertaken in the Middle East Regional Cooperation (MERC) program.

*NEAR EAST*

The working groups help support the agreements reached between Israel and Arab parties in the course of the bilateral negotiations in the Madrid process, including the Palestinian Declaration of Principles of September 13, 1994, subsequent Israel-PLO implementing accords, and the Israel-Jordan Peace Treaty of October 26, 1994. In addition, the multilateral working groups provide a vital forum to promote contacts between Israel and a wider group of Arab parties in the Gulf and Maghreb. For example, working groups meetings have now been held with Israeli participation in six Arab states: Tunisia, Morocco, Egypt, Bahrain, Oman and Qatar.

**EFFECTIVENESS MEASUREMENT:**

- Evidence of further steps towards peace agreements and normalization between Israel and Arab parties.
- Implementation of concrete projects linking Israel and Arab parties.
- Increased contact between Israeli and Arab experts in technical meetings.

NEAR EAST

## MIDDLE EAST REGIONAL COOPERATION

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
ESF	5.000	7.000	7.000

**OBJECTIVES:**

- Promote regional peace and security through the Middle East peace process.
- Encourage Arab-Israeli cooperation through support for technical cooperation and collaborative scientific research.

**JUSTIFICATION:**

The Middle East Regional Cooperation (MERC) program promotes mutually beneficial cooperation between Israel and neighboring Arab states such as Egypt, Morocco, and Jordan. MERC-supported projects aim to promote and strengthen ties by demonstrating that peaceful cooperation can yield tangible benefits to those involved. MERC supports regional cooperation through technical and scientific collaboration, which complements ongoing multilateral peace talks on regional issues such as water, the environment and regional economic development

**EFFECTIVENESS MEASUREMENT:**

- This program will be considered successful if its cooperative research initiatives in agriculture, health, the environment, and technology transfer continue to benefit the region and buttress peace.

NEAR EAST

## MOROCCO

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	2.971	0.000	0.000
IMET	0.528	0.800	0.800

## OBJECTIVES:

- Support regional peace and security, and advance the Moroccan military's interoperability with U.S. and NATO armed forces.
- Emphasize training in human rights protection, defense resource management, and civilian control of the military.

## JUSTIFICATION:

The Kingdom of Morocco is a stable constitutional monarchy which values its close ties with Western as well as moderate Arab and African countries. Morocco has consistently championed U.S. efforts in the United Nations, supported the American-led multilateral forces in the Gulf War, and has provided significant assistance to the U.S. in brokering a lasting peace in the Middle East. In 1994, for example, Morocco hosted a meeting of the Middle East peace process Regional Economic Development Working Group and the Middle East-North Africa Economic Summit in Casablanca.

Morocco's readiness to uphold commitments to the U.S. under the 1982 Base Access and Transit Agreement underscore Morocco's importance as a trusted friend in the region. IMET helps preserve our relationship with the Moroccan defense community. As past Moroccan graduates of the IMET program have moved on to more senior military positions, they have displayed greater sensitivity to issues of resource management and civilian control of the military.

## EFFECTIVENESS MEASUREMENT:

- Progress towards enhancing professionalism of the Moroccan armed forces, including their continued support for U.S. initiatives and respect for the proper role of the military in a democratic society.
- Increased interoperability between Moroccan and U.S./NATO armed forces.

## NEAR EAST

## MULTINATIONAL FORCE AND OBSERVERS

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
PKO	16.7000	16.090	17.000

## OBJECTIVES:

- Permit Israel and Egypt to work toward progress in the peace process, secure in the knowledge that their common border is monitored by the MFO.
- Demonstrate that security arrangements and confidence building measures are a viable alternative to military occupation of strategic territory, thus serving as an example for the region.

## JUSTIFICATION:

The MFO was established by the governments of Egypt and Israel to monitor security arrangements stipulated in their 1979 peace treaty. The MFO is a critical component of the Israeli-Egyptian peace which serves as a model confidence building measure and security arrangement in the context of the ongoing talks between Israel and its other Arab neighbors. The beneficiaries of the MFO, Egypt and Israel, continue to provide the bulk of its operating expenses, each contributing one-third of the annual operating costs, while the United States has undertaken to provide the final one-third. A U.S. reduction of any magnitude would be seen as a weakening of our commitment to a successful Middle East security arrangement and confidence building measure and call into question the staying power of such measures. It could also create new tensions between Egypt and Israel.

The U.S. has a firm political commitment to finance one-third of the annual MFO costs. Subject to Congressional authorization and appropriations, the U.S. is committed to support the MFO's mission until the Parties to the agreement which created the MFO mutually agree that it is no longer necessary.

## EFFECTIVENESS MEASUREMENT:

- This program is effective if it continues to guarantee security along the Egyptian-Israeli border. At some future point, probably in the context of a comprehensive Middle Eastern peace, both Parties may be prepared to consider a timetable for ending the MFO.

NEAR EAST

## OMAN

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
IMET	0.054	0.110	0.110

## OBJECTIVES:

- Support regional security through enhanced interoperability with U.S. armed forces.
- Provide basic and advanced training for mid-level Omani officers to enhance professionalism.
- Enhance U.S.-Omani security cooperation in support of important shared objectives.

## JUSTIFICATION:

Oman maintains a small but effective defense force which is undergoing a concentrated program of modernization and an accompanying decline in influence of expatriate elements. IMET will support Oman in this process, strengthen an important regional ally, and improve cooperation with the U.S. This training will support enhanced interoperability with U.S. forces in the event of joint operations in the region.

Oman was one of the first Middle East countries to cooperate closely with the U.S. on security issues, and we must continue to sustain those close ties. Oman also has been supportive of U.S. regional political objectives, including being the first GCC country to host a multilateral working group of the Middle East peace process.

## EFFECTIVENESS MEASUREMENT:

- Notable progress towards enhancing the professionalism of the Omani military.
- An increase in the Omani military's interoperability with U.S. armed forces.

## NEAR EAST

## TUNISIA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	1994 Actual	1995 Estimate	1996 Request
ESF	0.985	0.000	0.000
IMET	0.500	0.800	0.800

## OBJECTIVES:

- Provide training in the operation and maintenance of U.S.-origin equipment.
- Advance interoperability between U.S and Tunisian armed forces as our joint exercises become increasingly larger and more sophisticated.
- Cultivate an understanding of human rights, defense resource management, and proper military-civilian roles in a democratic society.

## JUSTIFICATION:

Tunisia has demonstrated strong support for the Middle East peace process. In October 1993, it was the first country in the region to host a multilateral working group meeting. Tunisia followed up its commitment by providing the venue for the multilateral Steering Group meeting in July 1994 and hosting the Arms Control and Regional Security Plenary in December 1994.

Wedged strategically between the erratic Libya and unstable Algeria, Tunisia is an important moderating force in the region and a source of support for sanctions against Libya and Iraq. The military plays a major role in society and the Tunisian army's extensive involvement in national development projects helps aid civil-military relations.

IMET will strengthen an important friend of the U.S. The planned training will enhance interoperability with U.S. forces in joint military exercises and in international peacekeeping operations. Tunisia has sent troops to Somalia as part of the UNOSOM force, and more recently deployed soldiers to Rwanda to take part in UNAMIR operations.

## EFFECTIVENESS MEASUREMENT:

- Notable progress towards enhancing the professionalism of the Tunisian military, focusing on respect for human rights, improved defense resource management, and respect for military-civil roles in a democratic society.
- An increase in the Tunisian military's interoperability with U.S. armed forces.

## NEAR EAST

## WEST BANK AND GAZA

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide ESF to the West Bank and Gaza as part of the U.S. five-year pledge to support the Palestinians as they implement peace agreements with Israel.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	1994 Actual	1995 Estimate	1996 Request
ESF	27.500	75.000	75.000

## OBJECTIVES:

- Promote regional peace and security through the Middle East peace process.
- Provide timely and well-targeted assistance to ensure that the Palestinians in West Bank and Gaza realize tangible benefit from the new political realities made possible by the Declaration of Principles and the subsequent Israel-PLO implementing accords.
- Build a capacity for self-governance and sustainable economic development.
- Promote market-oriented economic development and policy reform, with special emphasis on private sector growth.
- Lay the groundwork for long-term economic stability, as the best guarantee for the viability of the new Palestinian entity in the West Bank and Gaza Strip.
- Promote the efficient management and operation of municipal institutions.

## JUSTIFICATION:

A stable economy is the best guarantee for the viability of new political structures. The Palestinians need extensive ESF to help them create effective institutions of self-government and to translate the Gaza-Jericho Agreement into real and lasting changes on the ground. Without this change, progress in the peace process may be jeopardized. The economies of the West Bank and Gaza are severely depressed, with the situation in Gaza especially bleak: unemployment rates hovering near 50% and a population growth rate of 3.1%. 15-20% of the population of the West Bank and almost 33% in Gaza live below the poverty line. Combined GDP for both areas is estimated at \$3.2 billion in 1993.

To address urgent economic needs, U.S. assistance will focus on effecting immediate and visible improvements in the standard of living. To provide a stable foundation for long-term prosperity and self-governance, we will stress economic development based on private sector activity and regional economic cooperation. AID programs are therefore designed to focus on job creation activities, improving the quality and sustainable use of existing water resources;

*NEAR EAST*

providing health services which promote both the public and private sectors; providing housing for low and moderate income groups (again, through both public and private sector initiatives); promoting sustained production of goods and services by Palestinian producers; and providing technical assistance on development of effective, independent administrative structures.

**EFFECTIVENESS MEASUREMENT:**

- Significant contribution to the effectiveness of Palestinian political and economic capabilities, thereby encouraging continued engagement in the peace process.
- Establishment of independent and democratic policy-making institutions.
- Creation of new jobs, acting as a catalyst for new trade and investment, especially in the private sector.
- Improvement of living conditions for the people of the West Bank and Gaza, especially by providing new housing, better water quality and improved health care.
- Decline in current population growth rates.

*SOUTH ASIA***SOUTH ASIA****OBJECTIVES:**

- Enhance the professionalism and effectiveness of the armed services through training and education.
- Support participation in global peacekeeping efforts.
- Enhance the capability to effectively deal with regional problems, such as disaster relief.
- Maintain and expand military cooperation with the U.S.

**JUSTIFICATION:**

Training facilities within some regional states are limited. Consequently, the effectiveness of some defense establishments is hindered by a shortage of adequately trained personnel. A significant number of current military leaders are past recipients of training provided by the U.S. under the old IMET program. Continued opportunities for U.S. training will enhance the ability of the armed services to train their own personnel.

The IMET program will also include training foreign civilian and military officials in managing and administering military establishments and budgets; creating and maintaining effective judicial systems and military codes of conduct, including the observance of internationally recognized human rights; and fostering greater respect for the principle of civilian control of the military.

Good U.S. relations with the defense establishments of the region strengthen political relations and directly or indirectly advance many U.S. objectives, including non-proliferation, regional stability, and respect for human rights.

**EFFECTIVENESS MEASUREMENT:**

- Promotion of U.S.-trained officers to positions of command and technical responsibility.
- Greater professionalism in the military, including respect for civilian control and human rights.
- Continued support of U.N. peacekeeping operations.
- Quick and efficient disaster relief.

## SOUTH ASIA

## BANGLADESH

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.182	0.175	0.258

## OBJECTIVES:

- Enhance the professionalism of the Bangladeshi military, promoting respect for the proper role of the military and human rights.
- Maintain and expand the cooperative relationship between the U.S. and Bangladeshi military.
- Support Bangladeshi participation in multilateral programs of drug control efforts and drug treatment training sessions.

## JUSTIFICATION:

Since the restoration of multi-party democracy in 1991, the Government of Bangladesh has made steady progress in democratization, moving toward a free market economy, and expanding the private sector. Relations with the U.S. are excellent. The Bangladeshi military, which has repeatedly intervened in Bangladeshi politics in the past, has supported the return to democracy and is increasingly inclined to stay out of government. A high percentage of the military's current leaders are graduates of IMET programs, giving us excellent access to the Bangladeshi military. Recent U.S.-Bangladeshi military cooperation has included joint exercises, training, visits by U.S. forces, and exchange visits by senior military officials.

The proposed IMET program will provide professional military education and training, emphasizing attendance at mid-level command and staff college programs and senior level management courses, including programs at the Naval Post Graduate School, the Command and General Staff College, and the Air Command and General Staff College. The FY 1996 program will also provide training targeted at civil-military relations and human rights issues.

The proposed support of counternarcotics efforts will be provided through the U.S. contributions to the Colombo Plan which will continue to sponsor regional drug treatment seminars and will organize coalitions of drug prevention NGOs in SAARC countries.

## EFFECTIVENESS MEASUREMENT:

- Enhanced professionalism of the Bangladeshi military, resulting in a larger cadre of democratically-oriented military leaders and continued support for democratization and respect for human rights.
- Decrease in the level of domestic drug abuse.

## SOUTH ASIA

## INDIA

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide IMET and Counternarcotics Assistance (INC) for India.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.152	0.200	0.364

## OBJECTIVES:

- Enhance interoperability between U.S. and Indian defense forces which will allow greater coordination in joint exercises.
- Support Indian participation in international peacekeeping operations.
- Support Indian participation in multilateral programs of drug control efforts and drug treatment training sessions.

## JUSTIFICATION:

U.S.-Indo relations have changed dramatically since the end of the Cold War, when the collapse of the Soviet Union and the subsequent Indian economic crisis in the spring of 1991 forced the GOI to pursue economic policy reforms and prompted India to seek closer ties with the U.S. The Government of India continues to address the changed global economic and political realities by rethinking domestic and foreign policies. Prime Minister Rao's visit to the U.S. in May 1994, set against the backdrop of heated domestic debate over U.S. opposition to Indian missile development, underscores the GOI's commitment to improved Indo-U.S. relations. Widely hailed here as a success because it accentuated economic potential without becoming ensnared in nuclear proliferation and human rights issues, the visit has greatly improved our bilateral relations. Despite the sometimes hysterical Indian domestic political climate, U.S.-Indo relations have in fact never been better at broad economic, political and military levels.

U.S.-Indo military relations began to revive in 1990 when both governments saw it as a practical way to strengthen the broader political relationship. Military relations directly or indirectly advance key U.S. objectives in South Asia, such as regional stability, nonproliferation, the free flow of commerce, and the improved observance of human rights. Interoperability is a top priority, especially between the navy and army units since significant Indian and U.S. military assets operate in the Indian ocean and our ground forces work together in peacekeeping operations. Somalia was an excellent example of the convergence of Indian and U.S. peacekeeping interests.

*SOUTH ASIA*

India has a well established democratic system, and the concept of military subordination to the civilian government is generally well established. Human rights abuses by the military and security forces, though, have been a concern in some areas where they have been called upon to combat insurgencies. Accountability is another area of concern. Shortly after becoming Army Chief of Staff in June 1993, General Joshi established a human rights cell in army headquarters and publicly stated the importance of respecting the civil rights of citizens. Indian soldiers in Kashmir, for example, now carry a laminated list of the "Ten Commandments" for the treatment of civilians.

The military justice mobile training team project will provide training for Indian justice officials, both civilian and military. This will enable them to understand how civilian and military justice systems interact in the U.S. and to assess the effectiveness of their own systems. Recent actions by the military suggest that this is a timely program.

The proposed support of counternarcotics efforts will be provided through the U.S. contributions to the Colombo Plan which will continue to sponsor regional drug treatment seminars and will organize coalitions of drug prevention NGOs in SAARC countries.

**EFFECTIVENESS MEASUREMENT:**

- India's continued support of U.N. peacekeeping efforts.
- A higher level of joint and combined military exercises demonstrating India's increased interoperability with Western armed forces.
- Increased willingness by the military to hold accountable personnel guilty of human rights abuses.
- Decrease in the level of domestic drug abuse.

## SOUTH ASIA

## MALDIVES

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.000	0.050	0.080

## OBJECTIVES:

- Enhance the self-defense and internal security capabilities of Maldives.
- Enhance the relationship between the Maldives and the U.S.
- Promote increased awareness of human rights among the National Security Service (NSS).

## JUSTIFICATION:

Maldives' small National Security Service (NSS) combines the functions of police, army, navy, air force and coast guard. Its effectiveness is impeded by a severe shortage of trained manpower. Training facilities within Maldives are small and limited in capacity and few NSS personnel have been trained to Western standards. We have observed that standards within the NSS and the Maldives defense establishment have significantly improved as a direct result of U.S. training.

U.S. interests in Maldives rest primarily on that country's strategic location in the Indian Ocean and its role as a moderate Muslim voice in international fora. The government of the Republic of Maldives has been helpful in ensuring access for U.S. Navy ship visits and in allowing aircraft transit rights in Maldivian airspace. Although the government of the Republic of Maldives has both an elected president and legislature, its democratic institutions need strengthening. The paramilitary NSS, combining both the functions of police and military, and is allowed significant latitude in enforcing presidential decrees.

Management training will be provided to members of the NSS, alongside participants from neighboring Sri Lanka. This course will emphasize human rights training, and would encourage the sharing of this training with the rest of the NSS.

## EFFECTIVENESS MEASUREMENT:

- Continued internal stability and police and military support for democratic institutions.
- Continued respect by the NSS for civilian control of the defense establishment and continued inclusion of human rights concerns as part of basic military training.
-

## SOUTH ASIA

## NEPAL

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide IMET and Counternarcotics Assistance (INC) for Nepal.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.106	0.100	0.138

## OBJECTIVES:

- Encourage Nepal's continued support for, and participation in, UN peacekeeping operations.
- Improve the effectiveness of the Nepalese defense force in peacekeeping missions, through training and education.
- Support Nepal's participation in multilateral programs of drug control efforts and drug treatment training sessions.

## JUSTIFICATION:

Nepal has been an active and willing participant in UN peacekeeping operations since 1958 and could serve as an excellent model for small nation participation in a reformed UN peacekeeping system. It has stayed the course in difficult situations such as a period of extended isolation in Iraq and loss of life in Somalia. Royal Nepalese Army officers that have received U.S. professional military training in the past have found it extremely valuable when they have served on peacekeeping missions, and such training should continue to enhance the effectiveness of Nepalese armed forces in future peacekeeping missions.

The proposed support of counternarcotics efforts will be provided through the U.S. contributions to the Colombo Plan which will continue to sponsor regional drug treatment seminars and will organize coalitions of drug prevention NGOs in SAARC countries.

## EFFECTIVENESS MEASUREMENT:

- Continued effective participation by Nepalese forces in UN peacekeeping missions.
- Decrease in the level of domestic drug abuse.

## SOUTH ASIA

## PAKISTAN

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide Counternarcotics Assistance (INC) to Pakistan.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS)

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
INC	2.500	2.500	2.500

## OBJECTIVES:

- Upgrade GOP commitment to pass effective counternarcotics legislation and engage in counternarcotics efforts.
- Eliminate heroin laboratories in Pakistan, expand the poppy cultivation ban, provide alternative development assistance, prosecute or extradite major traffickers.
- Help build support for action to deal with Pakistan's domestic drug problem, including Pakistani participation in multilateral programs of drug control efforts and drug treatment training sessions.

## JUSTIFICATION:

Pakistan is both a major producer and an important transit country for opiates destined for the international drug market, including approximately one-fifth of the heroin consumed in the United States. Opium cultivation is insufficient to supply domestic demand but neighboring Afghanistan provides Pakistan's heroin labs, operating illegally in the Northwest Frontier Province (NWFP), with enough raw material both to make up this shortfall and to export heroin abroad. The United States seeks to increase high-level Pakistani Government attention to the narcotics problem by pressing for passage of effective counternarcotics legislation, development of vigorous law enforcement institutions, elimination of corruption and implementation of a coordinated enforcement policy.

The major areas of Pakistani opium cultivation and heroin laboratories are the remote, politically autonomous tribal areas of the NWFP, along the largely unpoliced border with Afghanistan. The Pakistani program has three project elements, which we are seeking to incorporate into a single large project. These project elements support counternarcotics law enforcement agencies, fund development assistance in connection with the expansion of the ban on cultivation of opium poppy, and support demand reduction activities.

The **Law Enforcement** element aims at strengthening the Pakistani Government's counternarcotics enforcement institutions, supplementing their resources to permit more

*SOUTH ASIA*

vigorous counternarcotics enforcement efforts. The FY 1996 program will continue to support efforts of the Counternarcotics Force through training and operational support, a change from the commodity emphasis in earlier years. This program is also working closely with Pakistani Customs to provide a country-wide Customs Counternarcotics strategy.

**Economic Development** -- mainly road construction and other infrastructure projects -- seeks to open up politically inaccessible tribal areas of the NWFP to facilitate the expansion of the opium poppy ban and the elimination of heroin labs. These roads fulfill several functions: they permit authorities to intervene in force when necessary; they force tribesmen to assume some responsibility for security by raising militia forces to protect the road; and they make alternative crops economically viable by opening growing areas to transportation. The FY 1996 development assistance project is aimed primarily at expansion of government control in the Khyber Agency, where most of Pakistan's heroin labs are located.

**Demand Reduction** aims at increasing public awareness of Pakistan's domestic drug problem and at building support for action to deal with it. The FY1996 funding request anticipates increased drug demand efforts (both governmental and private sector) as a result of earlier drug awareness campaigns, and that these institutions will benefit from a continued training and awareness events. Additionally support of counternarcotics efforts will be provided through the U.S. contributions to the UNDCP and to the Colombo Plan which will continue to sponsor regional drug treatment seminars and will organize coalitions of drug prevention NGOs in SAARC countries.

**Program Development and Support** funds will provide for salaries benefits and allowances of U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring, and evaluation.

**EFFECTIVENESS MEASUREMENT:**

- Extradition of major traffickers; interdiction, arrest and prosecution of major traffickers in Pakistani courts; destruction of heroin manufacturing laboratories; and arrest and prosecution of their operators.
- Expanded enforcement of the opium poppy cultivation ban in the Northwest Frontier Province (NWFP).
- Improved public awareness of the personal and societal costs of the serious drug problems in Pakistan.
- Decrease in the level of domestic drug abuse.

## SOUTH ASIA

## SRI LANKA

## PROGRAM SUMMARY

*(DOLLARS IN MILLIONS)*

	FY 1994 Actual	FY 1995 Estimate	FY 1996 Request
IMET	0.100	0.100	0.175

**OBJECTIVES:**

- Advance the professionalism and training capabilities of the Sri Lankan armed forces, and their understanding and acceptance of democratic values and human rights.
- Increase U.S. access to the Sri Lankan military.

**JUSTIFICATION:**

The proposed training would improve the professionalism of the defense forces, enhance their ability to train their own personnel, and provide assistance in long-term defense resource management. The Sri Lankan Security Forces have no facility to train the officer corps at the rank of major and above; a significant portion of junior officers are trained abroad and no training is done at the battalion level or above. Sri Lankans are enthusiastic about opportunities to train in the U.S. In fact, most of the top leadership are IMET graduates. Sri Lanka was helpful during Operation Desert Storm by allowing access to its airfields and deep water ports.

Sri Lanka was the first country in South Asia to institute universal suffrage, and for 47 years its democratically elected governments have succeeded one another smoothly and peacefully. Despite its well-established democratic institutions, Sri Lanka has been racked by two violent insurgencies within the past decade. One of these, the decade-long battle against Tamil separatist insurgents in the north and east, still continues. In the past, official efforts to contain the war have led to serious violations of human rights by the government and security forces. The incidence of such violations poses a grave threat to the stability of Sri Lanka's long-standing democratic tradition. Despite a marked decline in recorded abuses over the past two years, certain shortfalls still exist.

Human rights training with a strong component on civil/military relations will be necessary, as an increasing number of areas formerly held by the insurgents are turned back to government control. IMET training for key members of the security forces will emphasize human rights training, respect for human rights and civilian control of the military and encourage them to continue Sri Lanka's recent progress in protecting human rights.

**EFFECTIVENESS MEASUREMENT:**

- More sensible procurement decisions which factor in enough time to train necessary personnel on new and complex equipment.
- A decline in human rights violations.

## GLOBAL PROGRAMS

## ADMINISTRATION OF JUSTICE/ICITAP

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

**DESCRIPTION:** Provide ESF to support the improvement of justice institutions.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
ESF	5.845	10.000	10.000

## OBJECTIVE:

- Development of an effective and accessible, independent legal system operating under the rule of law, as measured by an increase in the use of the courts to decide allegations of human rights abuses or abuses of government authority.

## JUSTIFICATION:

Legal reform assistance is a major focus of the Administration's efforts to foster democratic change and improve human rights. An efficient and effective legal system, from the police on the streets to an independent judiciary, is essential to establish a democratic government based on the rule of law. A democratic legal system can hold a government accountable for its actions and provides protection for individual human rights.

This program furthers U.S. interest in democratic change by supporting the development of effective criminal investigative functions and promoting judicial reform -- key ingredients in an effective legal system. Under this program, U.S. assistance will be provided to help police develop a respect for human rights and the rule of law, improve the delivery of investigative services, strengthen the curricula of police academies and management of police forces, and improve the performance of prosecutors and judiciaries.

## FY 1996 Program:

This program will provide assistance to justice institutions around the world. The objective of this program is to build and consolidate the institutions of a democratic legal system, in particular, to develop an effective criminal investigatory capability to assist prosecutors and the courts.

The program will provide targeted technical assistance on specific reform topics. Judicial reform assistance will focus on such topics as supporting an independent judiciary, delay reduction in courts and alternative dispute resolution.

Assistance to police forces, including training in investigative techniques, will be carried out through the Department of Justice's International Criminal Investigative Training Assistance Program (ICITAP). Courses and programs will include: crime analysis capability,

*GLOBAL PROGRAMS*

management and organizational development, establishment of police misconduct investigatory capability, development of forensic capabilities and instructor development.

The AOJ/ICITAP programs will be coordinated with law enforcement training and technical assistance programs provided by the Bureau of International Narcotics and Law Enforcement. Coordination will take place in a subgroup of the IWG on Democracy and Human Rights chaired by the State Department.

**EFFECTIVENESS MEASUREMENT:**

In general, progress under the Administration of Justice/ICITAP program will be evaluated by the emergence of more professional and accessible justice institutions, in particular, politically neutral police forces. In Latin America and the Caribbean and in other regions where AOJ and ICITAP programs are concurrent and coordinated, progress should be assessed in conjunction with bilateral Administration of Justice projects which this program complements. Among the criteria for progress are:

- Increase in the number of countries utilizing modern investigative techniques, including forensics, to develop evidence for court.
- Increase in the number of police forces with effective, internal systems for investigating police misconduct (as measured by an increase in prosecutions for such misconduct or decrease in such misconduct).
- Increase in number and effectiveness of judicial reform activities that are initiated in countries receiving assistance.
- Increase in the number of countries with basic training curricula appropriate to a civilian police force.

## GLOBAL PROGRAMS

## DEMINEING

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Provide FMF for the global demining assistance program.

**PROGRAM SUMMARY**  
(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
FMF	2.500	5.000	10.000
UNOCHA	(0.500)	(1.000)	
OAS	(0.350)	(0.200)	
Cambodia	(0.750)	(1.300)	
Eritrea	(0.200)	(0.460)	
Ethiopia	(0.300)	(0.300)	
Mozambique	(0.400)	(0.000)	
Namibia	(0.000)	(0.270)	
Rwanda	(0.000)	(0.300)	
Unallocated		(1.170)	

## OBJECTIVES:

Promote national and regional security, political stability, and economic development by reducing civilian landmine casualties and their tragic human, social, and economic costs. Restore national infrastructure which has been rendered unusable by landmines, and return mined areas, including farmland, to productive use. The specific objectives are to:

- Develop an indigenous mine awareness training program capable of training selected host nation personnel to provide mine awareness education to local populations at risk of encountering landmines.
- Develop an indigenous landmine clearance training program capable of training selected host nation personnel to conduct, supervise, and teach landmine clearance operations.
- Develop the institutional capacity necessary to manage and administer the program locally, including identification and training of host nation personnel for program leadership.
- Encourage cooperation between governments, international organizations, and other agencies involved in addressing local landmine problems.

## JUSTIFICATION:

The Demining Program is designed to help landmine-infested countries address their mine problem. The goal of the program is to establish indigenous, sustainable mine awareness and mine clearance training programs in countries that are experiencing adverse humanitarian effects from landmines. The program assists the host country to develop all aspects of mine

*GLOBAL PROGRAMS*

awareness and mine clearance training programs, with the caveat that no U.S. personnel will physically clear landmines or enter active mine fields.

With some 100 million uncleared landmines world-wide, including as many as 10 million each in Afghanistan, Cambodia, and Angola, landmines are a large-scale problem which require long-term solutions. The U.S. program is designed to give indigenous personnel the skills to remove the landmine threat, as well as the expertise to administer the program over time. Local populations will benefit directly from cleared fields for crops, cleared roads for travel, and cleared infrastructure for critical restorations. They will also gain confidence in their governments, which are actively solving the landmine problem. This increases local stability and complements U.S. foreign policy initiatives.

FMF has played a critical role in the implementation of USG demining assistance programs. We have designed programs wherein FMF funds for demining are used primarily to provide equipment to complement comprehensive demining training programs funded by DOD Operations and Maintenance (O&M) funds for humanitarian assistance. These two funding sources have been closely coordinated through the Interagency Working Group for Demining.

Recent FMF allocations for demining assistance have been made to Cambodia, Eritrea, Ethiopia, Mozambique, Namibia, and Rwanda, as well as to the UN Office for the Coordination of Humanitarian Assistance to Afghanistan (UNOCHA) to assist with their mine clearance and mine awareness programs and to the Organization of American States to assist with their demining programs in Central America. We also expect to soon begin a comprehensive demining assistance program in Angola, perhaps the most densely mined country in the world.

We estimate that landmines globally cause approximately 500 casualties per week, mostly among innocent civilians, particularly farmers and children. While mine awareness education campaigns help, tremendous population pressures in many of these countries force countless civilians to live and farm in areas that are known to contain landmines. If demining is not accomplished by indigenous deminers trained and equipped through this program, many of these mines will only be cleared one arm and one leg at a time.

**EFFECTIVENESS MEASUREMENT:**

The success of USG demining assistance programs is not based on the number of mines cleared in a given country. (U.S. personnel will not actively be involved in mine clearance operations.) Country programs will be considered successful upon:

- Development of indigenous mine awareness and clearance capability through the graduation of local instructors.
- Effective use of equipment transferred for local mine awareness and clearance programs.
- Hand-off of the program to the host government (or other local entity such as a United Nations peacekeeping force) for program management and administration.

## GLOBAL PROGRAMS

## LAW ENFORCEMENT AFFAIRS

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: The Office of International Criminal Justice (ICJ) was mandated by the Secretary of State Department's to fund, coordinate and provide policy guidance for international crime matters. This includes law enforcement training programs and procurement of equipment in this category. This mandate includes providing assistance to those countries in which international criminal activity arises.

**PROGRAM SUMMARY**  
(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
ESF	0.000	4.756	12.000

## OBJECTIVES:

- To combat the growing threat to our national security posed by international organized crime.
- To help emerging democracies strengthen their national law enforcement institutions.
- To provide training and technical assistance to foreign civilian law enforcement agencies as an element of peace-keeping operations.
- To strengthen efforts by the United Nations and other international organizations to assist member states in combating international criminal activity.

## JUSTIFICATION:

The Office of International Criminal Justice (ICJ) is one of two elements reporting to the Assistant Secretary for the Bureau of International Narcotics and Law Enforcement Affairs.

## FY 1996 Program.

## NIS, Russia, Eastern Europe

Russia and the NIS. ICJ will fund training programs to strengthen the capacity of law enforcement agencies in of Russia and the other NIS states to combat the activities of organized crime, including financial crimes and illegal trafficking. Drawing on FREEDOM Support Act resources, ICJ will fund the second year of training and technical assistance programs in Russia and the NIS carried out by the FBI, Secret Service, Customs, IRS and other U.S. federal law enforcement agencies. The focus of assistance will be organized crime, financial crimes, nuclear smuggling and drug trafficking.

**GLOBAL PROGRAMS**

Eastern Europe. Drawing on Support for East European Democracy (SEED) Act resources, ICJ also would fund the second year of law enforcement training and technical assistance programs in Eastern Europe. ICJ will continue the advanced technical assistance programs begun in Poland, the Baltics, and Hungary. Training in investigations of organized crime and financial crimes will begin elsewhere in the region.

**Latin America**

Stolen Cars. ICJ will fund the second phase of the program to negotiate bilateral agreements with regional governments to provide standard procedures for the recovery and return from Central America of stolen U.S. vehicles and to provide training through the International Criminal Investigative Training Assistance Program (ICITAP) for law enforcement agencies to reduce the several \$100 million yearly loss in car-theft from the United States. This program is strongly supported by the U.S. insurance industry.

**Africa and East Asia**

Africa. Law enforcement training and technical assistance in newly-emerging democracies will promote respect for human rights. ICJ also will provide technical assistance to law enforcement agencies in South Africa responsible for preventing illegal trafficking in nuclear materials and weapons.

East Asia. ICJ will provide law enforcement training to prevent money laundering and to combat organized crime groups involved in alien smuggling.

**Multilateral Organizations/Other**

ICITAP. ICITAP law enforcement and forensics training will be provided for countries in transition from civil strife or military rule to democratic rule as an element of peacekeeping. (e.g. Haiti, Rwanda, Bosnia, and West Bank/Gaza).

Multilateral Organizations and Initiatives. Funding for the UN's Crime Prevention and Criminal Justice Branch and other multilateral organizations will be provided to undertake training and technical assistance programs.

Financial Action Task Force (FATF). Contributions to key research activities and meetings of the FATF not otherwise funded by the U.S. government, international organizations, or operational expenses of the office will aid in addressing money-laundering crimes.

**EFFECTIVENESS MEASUREMENT:**

- Formulation of policies and coordination of U.S efforts to combat international organized crime – international financial and economic crimes, particularly money-laundering, and international illegal trafficking, particularly alien smuggling.
- Coordination of law enforcement training programs with Rule of Law/Administration of Justice program in order to strengthen the ability of emerging democracies to deal with the challenges of organized crime groups.

*GLOBAL PROGRAMS*

- Implementation of law enforcement training programs, particularly in the NIS, Eastern Europe, East Asia, and Latin America, to eliminate organized criminal groups, illegal trafficking, and financial and economic crimes.
- Development of assistance programs to improve the law enforcement capability of member states of the United Nations Commission on Crime Prevention and Criminal Justice and the increased effectiveness of that body.

## GLOBAL PROGRAMS

**INTERNATIONAL CRIMINAL  
JUSTICE  
FY 1996 BUDGET  
(\$000)**

	<u>FY 1995</u>	<u>FY 1996</u>
<b>Criminal Justice Programs</b>	<i>1/</i>	<i>2/</i>
NIS/Russia/E. Eur (AID/Freedom Support, SEED Act and ESF) (USLETC Budapest)	19,665	--
Crime Initiatives: Money Laundering, Financial Crime etc.	1,200	2,500
Alien Smuggling, Training, Technical and Operations Support	1,000	3,000
U.S. Stolen Cars Initiatives and Technical Assistance	1,000	2,000
Anti-Contraband Initiative	500	3,000
Program Development Support	300	1,500
NIS Participant Support (Held by USAID Training Office)	1,500	--
<b>TOTAL</b>	<i>1/</i> <b>25,165</b>	<b>12,000</b>

<sup>1</sup> In FY 1995, a total of \$23.665 mil was transferred to INL for implementation of ICJ programs \$13.665 FSA, \$5 mil SEED and \$5 mil ESF. \$1.5 mil was held by USAID for foreign participant support cost.

<sup>2</sup> In FY 1996, \$12 mil reflected for ICJ in the INL budget will be included in the FY 1996 ESF budget request. Additional FSA and SEED ACT funding for ICJ programs will be included in the appropriate budget requests.

## GLOBAL PROGRAMS

## SANCTIONS ASSISTANCE MONITORING

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

DESCRIPTION: Establish, train and equip a cadre of Sanctions Assistance Monitors (SAMs). Funding will also be used for technical assistance to and training costs for host country governments.

## PROGRAM SUMMARY

(DOLLARS IN MILLIONS):

	1994 Actual	1995 Estimate	1996 Request
PKO	16.800	21.400	23.000

## OBJECTIVE:

- Assist front line states in enforcement implementation and monitoring of multilateral economic sanctions.

## JUSTIFICATION:

Multilateral economic sanctions are increasingly a tool of choice in foreign policy. During 1994, the Department of State managed U.S. sanctions policies against Serbia-Montenegro, Haiti, Iraq, Iran, Cuba, UNITA (Angola), North Korea, and Libya. In the case of Serbia-Montenegro, managing the sanctions enforcement program has required coordination and funding of a sizable multilateral enforcement effort. Under UN and CSCE auspices, the United States has provided commodities and services related to sanctions enforcement. We anticipate a continuing need for sanctions enforcement funding.

In FY 93 and FY 94, the Department of State funded sanctions enforcement efforts against Serbia-Montenegro from reprogrammed Peacekeeping Operations Account funds. The Department of the Treasury has funded a significant portion of these expenses. We must regularize funding to ensure that the goals of this program are executed efficiently. Enforcement of economic sanctions will continue to be an important component of U.S. foreign policy. Maintaining a separate source of funding for this purpose is essential, since excess funds will not be available from other sources.

## EFFECTIVENESS MEASUREMENT:

- The program will be considered successful if it leads to better enforcement of sanctions by front line states, and fewer sanctions violations on the sanctioned state's borders.

*OTHER SUPPORTING INFORMATION***ARMS CONTROL CONSIDERATIONS**

Despite the end of the Cold War, security assistance continues to be an indispensable U.S. policy instrument for exerting constructive leadership in advancing international peace and security, and increasing the number of states with democratic political institutions and free market economies. Judiciously used, arms transfers can deter aggression, foster internal and regional stability, strengthen and revitalize mutual security relationships, and demonstrate enduring interest in the security of friends and allies. New and creative uses of security assistance, such as the worldwide Nonproliferation and Disarmament Fund, promote bilateral and multilateral efforts to control the spread of missiles, nuclear and chemical/biological weapons, and destabilizing conventional arms transfers. These mutually reinforcing approaches to international security promote regional and global stability by enhancing the deterrent and defense capabilities of our friends and allies, and actively advancing U.S. nonproliferation and arms control objectives.

Our security assistance program complements U.S. arms control policy of promoting international security through the negotiation of equitable and verifiable agreements, and assuring compliance with existing agreements. It also enhances our ability to limit the proliferation of potentially destabilizing weapons, especially in regions of tension and conflict, by giving countries other means for insuring their security. As the President's nonproliferation and export control policy states, the United States will actively seek greater transparency in the area of arms transfers and promote regional confidence-building measures to encourage restraint on such transfers to regions of instability. Carefully structured security assistance programs support our arms control policy of allowing transfers which enhance stability, and our nonproliferation objectives of curbing the spread of weapons of mass destruction and their delivery systems.

The President's nonproliferation and export control policy requires the careful, case-by-case evaluation of each request for arms in terms of its contributions to enhanced deterrence and defense. The arms control implications of each transfer are essential elements of this evaluation, and each transfer is specifically reviewed for its impact upon U.S. arms control and nonproliferation objectives.

Such a review considers, *inter alia*, whether a proposed transfer is consistent with U.S. interests in maintaining or enhancing stability within the region; whether the proposed transfer can be absorbed without overburdening the recipient's military support system or financial resources; whether the proposed transfer adds or detracts from fulfilling our nonproliferation goals; and whether possible adverse effects of the transfer are offset by positive contributions to U.S. regional interests and objectives.

The Arms Control and Disarmament Agency (ACDA) exercises statutory authority for evaluating the arms control and nonproliferation implications of arms transfer proposals. As required by the Arms Export Control Act and the Foreign Assistance Act of 1961, ACDA assesses whether proposed military sales and assistance and commercial arms exports might contribute to an arms race; support international terrorism; increase the possibility of outbreak or escalation of conflict; prejudice the development or negotiation of bilateral or multilateral arms control arrangements; or adversely affect the arms control policy of the U.S.

*OTHER SUPPORTING INFORMATION*

ACDA also takes into account factors such as regional stability and the military balance; legitimate defense needs relative to threats; the military force structure, strategy and doctrine of the proposed recipient and its neighbors; whether the transfer would constitute a "new", offensive, power-projection, or destabilizing capability; and its proliferation implications.

ACDA is an active participant in the U.S. arms transfer and security assistance decision-making process. The Agency participates in the inter-agency security assistance program development process in order to ensure that arms control and proliferation implications are considered in the development of all programs contained in the annual security assistance budget request. ACDA continues to play an active role in the development and support of major Administration arms transfer and weapons nonproliferation initiatives, and participated in and contributed to, the comprehensive review of conventional arms transfer policy directed by the President. The agency is also playing a major role in the Administration's efforts to promote wider acceptance of the October 1991 London Guidelines on Conventional Arms Transfers, secure a global moratorium on antipersonnel landmine exports, and develop a post-COCOM regime to control conventional arms and dual-use technologies to regions of tension.

These efforts will accelerate as the focus of arms control adapts to the post-Cold War world, where regional instability and the proliferation of weapons of mass destruction increasingly pose the most dangerous threats to world peace. Recent initiatives to promote regional arms control arrangements and control the proliferation of weapons of mass destruction, their delivery systems, and destabilizing conventional weapons will intensify as we now share many common objectives with former adversaries.

At the same time, programs like the Nonproliferation and Disarmament Fund permit the use of security assistance funds for activities such as technical assistance in support of defense industry conversions or dismantlements, regional arms control arrangements and nonproliferation objectives. The United States remains committed to helping its friends and allies maintain and enhance their security through prudent arms transfers and nonproliferation initiatives which promote regional stability and world peace.

*OTHER SUPPORTING INFORMATION***ESTIMATING FOREIGN MILITARY SALES**

Foreign Military Sales (FMS) policies derive from U.S. statutes, Presidential directives, and policies of the Departments of State and Defense. The U.S. offers to sell defense articles and services (including training) under FMS procedures only in response to specific requests from authorized representatives of foreign governments or eligible international organizations.

The following table is in two parts. The first part shows the total dollar value by country of government-to-government FMS Letters of Offer and Acceptance (LOA's) signed in FY 1994, regardless of when the articles and services were or will be delivered.

The second part shows the estimated dollar values projected for FY 1995 and FY 1996. These estimates are derived through an analysis of each country under conditions of extreme uncertainty. Projections are based on: analysis of expectations of interests by potential purchasers which may not result in official requests; judgments of which requests may be approved and which may result in actual sales offers after completion of a thorough, and often lengthy, U.S. government review process; and a judgment not only of how essential the military equipment or defense service is to the country's defense needs, but also of whether the purchase will be approved during the purchasing country's budget process. Projections include an estimate of potential requests for major increases in scope (amendments) to prior-year cases. These amendments are reflected as a sale in the current fiscal year. In some instances, training, publications, maps, medical supplies, technical assistance, and some spare parts are not included in these figures. (Further information is provided in the classified annex to this document.)

Each phase of the request/offer/acceptance process has many variables which make it difficult to determine exactly when -- or even if -- a particular sale may occur. Variance of one day in a purchasing country's acceptance of a single significant sales agreement could shift the recording of the transaction from one fiscal year to the next. In addition, U.S. agreements cannot always be segregated on a cash or financing basis when Letters of Acceptances are concluded by purchasing countries. Also, for countries eligible for U.S. financing, it is not always possible to determine until full payment has been made how much of that payment was U.S.-financed.

*OTHER SUPPORTING INFORMATION***FOREIGN MILITARY SALES ADMINISTRATIVE COSTS**

The Foreign Military Sales (FMS) program is implemented, for the most part, by the same Department of Defense personnel who work in the military departments and defense agency procurement, logistic support and administrative organizations established to carry out DoD's requirements for procurement and support of weapons, equipment, supplies and services needed by our Army, Navy, Air Force and Marines. A small number of fully dedicated security assistance organizations and personnel are also employed by the military departments and defense agencies in accomplishing the FMS mission. This integration of FMS provides organizational efficiencies and procurement cost economies to both the U.S. and the FMS customer countries.

The Arms Export Control Act (AECA) requires that the costs of implementing FMS be paid by FMS customer countries. To satisfy this requirement, an "administrative surcharge" of 3-percent is applied to most FMS cases. A 5-percent rate is applied to non-standard articles and services and supply support arrangements. In addition, a "logistics support charge" of 3.1 percent is also applied on certain deliveries of spare parts, equipment modifications, secondary support equipment and supplies. These administrative funds, collected from the FMS customer, are made available to the military departments and defense agencies to pay for their FMS administrative costs related to such functions as FMS case preparation (including preparation of price and availability estimates/information), sales negotiations, case implementation, procurement, program control, ADP operations, accounting, budgeting and other financial and program management. A majority of the operating costs of overseas Security Assistance Organizations (SAOs) are also financed from FMS administrative funds. DSAA administers an annual budget process to develop estimated funding requirements and establish approved administrative funding levels.

The Foreign Operations, Export Financing and Related Programs Appropriations Act, 1995, P.L. 103-306, included, for FY 1995 only, a limitation of \$335 million on obligations of FMS administrative funds. All FMS administrative budget obligations and expenditures are from FMS customers' funds which have been collected into the U.S. Treasury in the Foreign Military Sales Trust Fund account. There is no net outlay impact on the U.S. budget from the operations of the FMS administrative budget.

In FY 1996, a higher level of FMS administrative budget funding is necessary to finance additional workyears required to execute the large sales which were made during the FY 1991 through the FY 1994 time period, as well as pay raises, inflation, an increase in Defense Business Operations Fund (DBOF) charges and a technical budget adjustment which has shifted personnel costs from the DBOF back into the FMS administrative budget.

The table which follows shows FMS administrative budget amounts for fiscal years 1994 through 1996.

**FMS ADMINISTRATIVE COSTS/WORKYEARS**  
(Dollars in Millions)

	Actual FY 1994		Estimated FY 1995 a/		Proposed FY 1996	
	Dollars	Workyears	Dollars	Workyears	Dollars	Workyears
Military Departments	246.3	4,134	262.1	4,397	267.0	4,337
Other Defense Activities	63.1	926	65.7	901	67.0	866
SAOs (Net)	22.7	479	23.2	483	21.0	411
Total	332.1	5,539	351.0	5,781	355.0	5,614

a/ Includes an additional \$16.0 million above the FY 1995 FMS Administrative Obligation ceiling established by P.L. 103-306. Congressional notification was provided on February 24, 1995.

## OTHER SUPPORTING INFORMATION

**COMMERCIAL EXPORTS LICENSED OR APPROVED  
UNDER THE ARMS EXPORT CONTROL ACT**

The Office of Defense Trade Controls (DTC), Bureau of Political-Military Affairs, Department of State, administers the United States Government's program to control commercial exports of defense articles, services and technical data. DTC implements the Arms Export Control Act (AECA) through the International Traffic in Arms Regulations (ITAR), which includes the United States Munitions List (USML). DTC reviews all requests for licenses and other approvals to export defense articles, services or technical data; establishes licensing policies and procedures; and enforces compliance with the ITAR.

The data in the following chart on commercial arms sales are compiled by DTC based on information as of September 1994. The chart is in two parts. The first column, entitled "Actual Deliveries (Preliminary)", shows the preliminary dollar value totals by destination of exports during fiscal year 1994. These export totals are compiled from expired or completed licenses returned to DTC by the U.S. Customs Service, unless a more comprehensive method is available. The totals are preliminary because DTC licenses are approved for four calendar years, thereby allowing shipments to span five fiscal years, and are not returned by the U.S. Customs Service until the license is completed or expired. In some instances, training and technical assistance are not included in these figures. For further information, see also the classified annex to this document.

The second and third columns in the chart show the estimated dollar value totals by destination of possible deliveries in fiscal years 1995 and 1996. These estimates are based primarily on the dollar value of licenses approved for each destination during the prior two fiscal years (the dollar values of the authorized licenses are not shown). Not all approved licenses result in signed contracts and actual exports. Factors which affect the final export value include the availability of the licensed item for shipping, and how quickly the license will be returned to DTC. (See also the classified annex.) Other factors which cannot be quantified are economic and security conditions at the destination, and changing U.S. foreign policy and national security considerations. Countries for whom there were no actual deliveries in fiscal year 1994 and which had no authorized licenses for fiscal years 1993 and 1994 do not appear in this report.

The procedures for estimating defense commercial sales for out years (fiscal years 1995 and 1996) were revised for the 1995 CPD. Previous procedures for such estimates called for extrapolating exports for the first out year at forty percent of the actual dollar value of licenses approved in the previous two fiscal years. The second out year's exports would have been estimated at sixty percent of that two year total.

An analysis of preliminary worldwide exports for fiscal years 1988-1992 showed, however, exports ranging from an average of 4.3 percent to 21.18 percent of the total dollar value of approvals for the previous two years. It further showed that actual shipments for some countries have ranged from zero to values in excess of previous years' approvals, owing to changing economic and security conditions or acquisition of major defense systems. Based on this historical data, DTC now estimates exports for the first out year (fiscal year 1995) to be 10 percent of the total dollar value of approved licenses for the previous two years (fiscal years 1993 and 1994). The exports for the second out year (fiscal year 1996) are estimated to be fifty percent of those for fiscal year 1995.

\* These countries comprise the Eastern Caribbean. See Eastern Caribbean narrative for a discussion of specific country programs.

\*\* Less than \$500.

a/ Approvals for Croatia and Slovenia reflected in actual or estimated deliveries are either for use by UNPROFOR or judged not to violate the arms embargo.

b/ Approvals for Somalia reflected in actual or estimated deliveries are either for USG or UN operations in Somalia.

*OTHER SUPPORTING INFORMATION***OVERSEAS MILITARY PROGRAM MANAGEMENT**

U.S. military personnel are assigned to Security Assistance Organizations (SAOs) overseas to ensure effective planning and management of host country security assistance programs. These individuals serve under the direction and supervision of the Chiefs of U.S. Diplomatic Missions. The SAO provides liaison among the Mission, the Department of Defense, and the host country defense establishment in security assistance matters.

SAO personnel work closely with members of the host country defense establishment to develop and execute training programs and to accomplish realistic and effective procurement actions. These efforts are key to the development of a defense infrastructure capable of integrating weapons and support systems into the existing force structure. Professional exchanges and cooperative planning contribute to effective and efficient country security assistance programs.

The Department of Defense reviews staffing authorizations in coordination with the Department of State, the Chiefs of U.S. Diplomatic Missions, and the regional area military Commanders-in-Chief to ensure that SAOs are properly staffed to conduct their missions efficiently. These reviews have resulted in a reduction of U.S. military personnel authorizations from the 450 justified in last year's Congressional presentation materials to 428 for FY 1995.

In FY 1995, separate SAOs will be assigned to fifty-four countries. In twenty-four additional countries, programs will be administered by augmentation personnel assigned to carry out security assistance management functions under the supervision of the Defense Attache. In other countries with which the U.S. maintains a security assistance relationship, Defense Attaches and other Mission personnel manage the programs without augmentation personnel.

The following tables identify the security assistance authorized staffing levels and associated costs at the conclusion of FY 1994 and the estimated levels for FY 1995 and FY 1996. Actual assigned strengths for FY 1995 and FY 1996 may be less than the authorized levels shown. Staffing requirements may change as individual country programs develop.

## OTHER SUPPORTING INFORMATION

## U.S. SECURITY ASSISTANCE ORGANIZATIONS

DSA	- Defense Supply Advisor (India)
JUSMAG	- Joint U.S. Military Advisory Group (Philippines, Thailand)
JUSMAG-K	- Joint U.S. Military Advisory Group - Korea
KUSLO	- Kenya - U.S. Liaison Office
LIBMISH	- U.S. Military Mission, Liberia*
MAAG	- Military Assistance Advisory Group (Peru, Portugal)
MAP	- Military Assistance Program (Jordan)
MDAO	- Mutual Defense Assistance Office (Japan)
MILGP	- Military Group (Argentina, Bolivia, Chile, Colombia, Ecuador, El Salvador, Guatemala, Honduras, Venezuela)
MLO	- Military Liaison Office (Belize, Brazil, Eastern Caribbean, Haiti, Jamaica, Trinidad and Tobago)
ODC	- Office of Defense Cooperation (Belgium, Botswana, Denmark, France, Germany, Greece, Italy, Morocco, Netherlands, Niger, Norway, Paraguay, Portugal, Spain, Tunisia, Turkey, United Kingdom, Uruguay)
ODR	- Office of Defense Representative (Costa Rica)
ODRP	- Office of the Defense Representative - Pakistan
OMC	- Office of Military Cooperation (Bahrain, Egypt, Oman, Yemen*)
OMC-K	- Office of Military Cooperation - Kuwait
USDRO	- U.S. Defense Representative Office (Panama)
USLO	- U.S. Liaison Office (Djibouti, Qatar, United Arab Emirates)
USMTM	- U.S. Military Training Mission (Saudi Arabia)

\*NOTE: Though personnel authorizations exist for these positions, they are currently not staffed.

- a/ Personnel authorized to assist the DAO with security assistance management functions.  
 b/ Manages programs for Eastern Caribbean countries.  
 c/ Although personnel authorizations exist for these positions, they are currently not staffed.

*OTHER SUPPORTING INFORMATION***EXCESS DEFENSE ARTICLES (EDA)**

Defense articles no longer needed by the U.S. armed forces are referred to collectively as Excess Defense Articles (EDA), and may be either sold to eligible countries under the Foreign Military Sales (FMS) program, or transferred under the provisions of Sections 516, 517, 518, 519, or 520 of the Foreign Assistance Act of 1961 (FAA), as amended. EDA does not apply to articles provided previously under Military Assistance Program (MAP) grants or those articles sold from stock to foreign governments through normal FMS procedures.

In determining which defense articles are excess, the definition from Section 644(g) of the FAA applies:

"Excess defense articles means the quantity of defense articles (other than construction equipment, including tractors, scrapers, loaders, graders, bulldozers, dump trucks, generators and compressors) owned by the United States Government, and not procured in anticipation of military assistance or sales requirements, or pursuant to a military assistance or sales order, which is in excess of the Approved Force Acquisition Objective and Approved Force Retention Stock of all Department of Defense Components at the time such articles are dropped from inventory by the supplying agency for delivery to countries or international organizations under this Act."

Items transferred under Sections 516, 517, 518, 519, and 520 of the FAA as grants are not priced per se. Except for specific exceptions authorized by Sections 518, 519, and 520 of the FAA, charges are levied for related services such as packing, crating, handling and transportation. However, current value of the material and the original acquisition value are provided to Congress as part of the notification procedure. EDA articles sold through FMS procedures are priced on the basis of condition as described in DoD 7000.14-R, and range from a high of 50 percent of original acquisition value for new equipment to a low of 5 percent for equipment in need of repair. Because the U.S. Government does not intend to replace these articles, they are exempt from Section 21(a)(2) of the Arms Export Control Act (AECA), which requires that the purchaser pay the replacement cost of defense articles purchased.

Section 31(d) of the AECA limits the annual acquisition value of EDA that may be provided to foreign governments by sales (except those reported as AECA Section 36(b) sales) and grants under Section 517 of the FAA. The limit applicable to FY 1995 is \$250 million of acquisition value. The transfer, in accordance with law, of ships, their on-board stores and supplies, are also excluded from the ceiling.

## LEASED DEFENSE ARTICLES

The United States Government normally makes defense articles available to foreign governments through Foreign Military Sales (FMS) under the Arms Export Control Act (AECA). However, there may be exceptional instances in which a lease agreement would be the most appropriate method whereby U.S. defense articles can be made available to eligible foreign countries or international organizations. Such arrangements are authorized under the AECA, Chapter 6, when it is determined that there are compelling foreign policy and national security reasons for providing such articles on a lease rather than a sales basis and the articles are not for the time needed for public use.

Leases are concluded for a fixed duration of time not to exceed five years and provide that, at any time during the lease, the U.S. may terminate the lease and require the immediate return of the defense articles.

Lease terms require the lessee to pay the cost of restoration or replacement less any depreciation during the term of the lease if the articles are damaged, lost, or destroyed while leases.

The lessee country or international organization must pay in U.S. dollars all costs incurred by the U.S. Government in leasing the articles, including a rental payment which is equal to the depreciation of the articles while leased.

Chapter 6, AECA, provides for the waiver of both replacement charges and rental payments for leases entered into for purposes of cooperative research or development, military exercises, or communications or electronics interface projects, or to any defense article which has passed three quarters of its normal service life. Such waivers are made before the implementation of the lease agreement.

*OTHER SUPPORTING INFORMATION***STOCKPILING OF DEFENSE ARTICLES FOR FOREIGN COUNTRIES**

Section 514(b) of the Foreign Assistance Act of 1961 (FAA), as amended, establishes annual ceilings on the value of additions of defense articles located abroad that may be set aside, reserved, or otherwise earmarked from U.S. military inventories for use as war reserve stocks by allies (WRSA) or other foreign countries (other than NATO). For FY 1996, the administration proposes a ceiling of \$50 million. Most defense articles added to stockpiles under this ceiling will come from existing stocks.

As the term "war reserves" implies, these stocks are intended for use only in emergencies. For FY 1996, \$40 million of the proposed ceiling on the value of additions to worldwide stockpiles would be set aside for the Republic of Korea and \$10 million would be set aside for Thailand. In all cases, title to and control of the additions remain with the U.S. government. Pursuant to Section 514(a) of the FAA, any transfer to an allied or friendly country must be in accordance with the provisions of the security assistance legislation prevailing at the time.

Some additions in FY 1996 may consist of overseas U.S. defense stocks currently identified as war reserves for U.S. armed forces. These reserves would be identified in FY 1996 as war reserves to be held for emergency use under the terms of Section 514 of the FAA. While some of these additions may not be wholly relocated within the territory of the intended recipient in FY 1996, their value will not be counted a second time, when eventually relocated against the limitation in Section 514(b) of the FAA.

Net Outlays	0	3,406	13,727

NOTE: The Military Debt Reduction Financing account shows the financial transactions involved in providing debt relief for military loans owed by the poorest countries in the context of Paris Club debt rescheduling. We expect to obtain agreement in the Paris Club for reduction of non-concessional debt by two thirds, with a larger reduction for democracies or countries making significant progress toward democracy. In FY 1995, this is expected to include military debt of about \$4.5 million in Niger, with a budget cost of \$67 thousand, and \$8.6 million in Senegal, with a budget cost of \$979 thousand.

NOTE: Military Assistance Program included Foreign Military Sales Financing program prior to FY 1969.

a/ Includes \$500,000 thousand for Israel authorized by P.L. 91-441 and appropriated by P.L. 91-665.

b/ CRA limitation.

c/ Includes \$2,200,000 thousand for Emergency Security Assistance requested, authorized and appropriated for Israel.

d/ Includes transitional quarter (FY 1977).

e/ Includes \$2,200,000 thousand supplemental program for Israel and a \$1,500,000 supplemental program for Egypt.

f/ Includes a \$10,000 thousand amendment for Sudan and \$15,000 thousand for Oman.

g/ Includes \$200,000 thousand proposed budget amendment for Egypt.

h/ Reflects the amended budget request but not the supplemental budget request for program increase of \$525,000 thousand for guarantee loans.

i/ Authorization waived in Continuing Resolution Authority (P.L. 98-473 for FY 1985, and P.L. 99-500 for FY 1987).

j/ Reflects amounts appropriated under P.L. 99-190 (final CRA). Pursuant to P.L. 99-177 (Gramm-Rudman-Hollings), \$223,170 thousand not available for obligation.

k/ Includes a supplemental request of \$200,000 thousand.

l/ Includes \$4,040,441 thousand authorized by P.L. 99-500 CRA limitation and \$13,000 thousand authorized by P.L. 100-71.

m/ Authorization waived in Continuing Resolution (P.L. 100-202).

n/ P.L. 100-202 appropriated \$4,049,000 thousand for FY 1988. Also included in the law was a \$32,000 thousand rescission applicable to the FY 1985 and FY 1986 appropriation resulting in an adjusted appropriation of \$4,017,000 thousand, as shown in the FY 1989 President's Budget.

o/ Authorization waived in P.L. 100-461.

LEGISLATIVE HISTORY OF AUTHORIZATIONS & APPROPRIATIONS  
(Dollars in Thousands)

## FOREIGN MILITARY FINANCING PROGRAM (Continued)

- p/ Authorization waived in P.L. 101-167.
- q/ Congress appropriated \$4,828,403 thousand which was reduced by .43% for use in the control of illicit drugs. In addition, \$20,000 thousand was transferred into the FMF account from the DOD budget (P.L. 101-165) resulting in \$4,827,641 thousand available to the FMF program.
- r/ Authorization waived in P.L. 101-513.
- s/ P.L. 101-513 appropriated \$5,066,921 thousand for FY 1991. Section 401(a) of P.L. 102-27 subsequently reduced that amount to \$4,663,421 thousand.
- t/ Authorization waived in P.L. 102-109, P.L. 102-145, and P.L. 102-266.
- u/ P.L. 102-266 appropriated \$4,100,000 thousand for FY 1992, reduced the amount appropriated by \$60,602 thousand and provided for the transfer of \$63,750 thousand of funds appropriated to the Demobilization and Transition Fund. P.L. 102-298 rescinded an additional \$47,100 thousand of the FY 1992 appropriation for a net appropriation of \$3,928,548 thousand.
- v/ Authorization waived in P.L. 102-391.
- w/ P.L. 102-391 appropriated \$3,300,000 thousand for FY 1993, rescinded \$25,586 thousand of prior year balance, and provided for the transfer of \$29,000 thousand to the Demobilization and Transition Fund for a net budget authority of \$3,245,414 thousand.
- x/ P.L. 103-87 appropriated \$3,149,279 thousand, including deobligation/reobligation authority. The Authorization was waived. During FY 1994, an Emergency Supplemental Appropriations Act was passed (P.L. 103-211) and it rescinded \$91,282 thousand of FY 1993 and prior year balances. Subsequently, an additional \$5,600 thousand was transferred to the IMET and Economic Support Fund accounts leaving a net appropriation of \$3,052,397 thousand.
- y/ P.L. 103-306 appropriated \$3,151,279 thousand. The Authorization was waived.

NOTE: (1) The Military Assistance Program included International Military Education and Training Program prior to FY 1976.

(2) The Administration has not proposed Military Assistance Programs subsequent to FY 1990.

- a/ The Mutual Security Act of 1959, P.L. 86-108, approved July 24, 1959, states "There is hereby authorized to be appropriated to the President for the fiscal year 1961 and 1962 such sums as may be necessary from time to time to carry out the purpose of this chapter, which sums shall remain available until expended."
- b/ Foreign Assistance Act of 1961 authorized \$1,700,000 thousand; no executive branch request for authorization was required.
- c/ Does not include MAP drawdowns of \$75,000 thousand in FY 1965 and \$300,000 thousand in FY 1966, or Section 506(a) drawdowns of \$1,000 thousand in FY 1980; \$26,000 thousand in FY 1981; \$55,000 thousand in FY 1982; \$25,000 thousand in FY 1983; \$40,000 thousand in FY 1986; and \$25,000 thousand in FY 1987.
- d/ CRA limitation.
- e/ Includes funds requested separately for proposed International Military Education and Training Program finally authorized and appropriated as part of the Military Assistance Program. Does not include \$2,500,000 thousand for Section 506 drawdown authority.
- f/ Includes \$5,000 thousand transferred to AID.
- g/ Does not include \$75,000 thousand for Section 506 drawdown authority.
- h/ Includes transitional quarter (FY 1977).
- i/ Does not include \$275,000 thousand for Section 506 drawdown authority.
- j/ Includes \$40,200 thousand subsequently rescinded.
- k/ Includes a \$50,000 thousand supplemental for Turkey.
- l/ Includes a \$1,700 thousand Senate supplemental for Sudan.
- m/ Does not include \$7,100 thousand reimbursement for Section 506 drawdown authority.
- n/ Reflects the amended budget request but not the \$187,000 thousand supplemental budget request.
- o/ Reflects initial budget request; excludes \$1,000 thousand supplemental request.
- p/ Reflects initial budget request; excludes \$259,050 thousand supplemental request for Central America.
- q/ Includes supplemental appropriation of \$201,750 thousand for Central America.

LEGISLATIVE HISTORY OF AUTHORIZATIONS & APPROPRIATIONS (Continued)  
(Dollars in Thousands)

MILITARY ASSISTANCE PROGRAM AND INTERNATIONAL MILITARY EDUCATION  
& TRAINING PROGRAM (Continued)

- r/ Authorization waived in Continuing Resolution (P.L. 98-473).
- s/ Reflects amounts appropriated under P.L. 99-190 (final CRA). Pursuant to P.L. 99-177 (Gramm-Rudman-Hollings) \$33,626 thousand of MAP and \$2,343 thousand of IMET are not available for obligation.
- t/ Includes supplemental appropriation of \$50,000 thousand for the Republic of the Philippines.
- u/ Includes a supplemental request of \$261,000 thousand.
- v/ Authorization waived in Continuing Resolution (P.L. 100-202).
- w/ Authorization waived in P.L. 100-461.
- x/ P.L. 101-45 transferred \$2,000 thousand to contributions for international peacekeeping activities (Budget Account 19-9-1124).
- y/ Authorization waived in P.L. 101-167.
- z/ Administrative costs formerly designated as MAP General Costs (1080 account) are included in the Foreign Military Financing Appropriation (1082 account) effective 1 October 1989.
- A/ Congress appropriated \$47,400 thousand which was reduced by .43% for use in the control of illicit drugs, resulting in \$47,196 thousand available to the IMET program.
- B/ Authorization waived in P.L. 101-513.
- C/ Authorization waived in P.L. 102-109 and P.L. 102-145.
- D/ P.L. 102-298 rescinded \$6,750 thousand of prior year balances and \$5,760 thousand of previously disbursed amounts.
- E/ P.L. 102-298 rescinded \$20,164 thousand of prior year balances.
- F/ During FY 1994, P.L. 103-211, the FY 1994 Emergency Supplemental Appropriations Act, rescinded \$439 thousand of prior year appropriations.
- G/ P.L. 102-266 appropriated \$47,196 thousand for FY 1992. P.L. 102-298 rescinded \$1,925 thousand and P.L. 102-381 reduced it an additional \$698 thousand for a net availability of \$44,573 thousand.
- H/ Authorization waived in P.L. 102-391.
- I/ P.L. 102-391 appropriated \$42,500 thousand for FY 1993.
- J/ P.L. 103-87 appropriated \$21,250 thousand for FY 1994. The Authorization was waived. During FY 1994, an additional \$1,000 thousand was transferred into IMET from FMF making a total of \$22,250 thousand of appropriated funds available.
- K/ P.L. 103-306 appropriated \$25,500 thousand for FY 1995. The Authorization was waived. Subsequent to the release of the President's FY 1996 Budget, \$850 thousand was transferred out of the PKO account and into the IMET account (\$350 thousand for Botswana and \$500 thousand for Senegal) to enhance PKO training.

- a/ CRA level - \$618,000 thousand. There was no authorization level in FY 1973.  
b/ Section 506 of the International Security Assistance and Arms Control Act of 1976, P.L. 94-329, quarter not to exceed one-fourth of the total amount authorized in that Act for FY 1976.  
c/ Includes \$300,000 thousand for Portugal; also \$20,000 thousand for Lebanon, authorized as Disaster Assistance, but appropriated in the Security Support Assistance (SSA) account.  
d/ Includes a \$300,000 thousand supplemental for Egypt and \$100,000 thousand for Turkey.  
e/ Executive Branch request included ESF and PKO in one account--Security Supporting Assistance (SSA).  
f/ Includes an \$80,000 thousand supplemental for Central America.  
g/ CRA limitation.  
h/ Reflects initial budget request. Does not include the \$294,500 thousand supplemental budget request.  
i/ Reflects initial budget request. Does not include the \$340,500 thousand supplemental appropriation for Central America or the \$10,000 thousand for Poland.  
j/ Includes supplemental appropriation (P.L. 98-332).  
k/ Authorization waived in Continuing Resolution Authority (P.L. 98-473 for FY 1985, and P.L. 99-500 for FY 1987).

LEGISLATIVE HISTORY OF AUTHORIZATIONS & APPROPRIATIONS (Continued)  
(Dollars in Thousands)

## ECONOMIC SUPPORT FUND (Continued)

- l/ Includes FY 1985 Supplemental of \$2,258,000 thousand.
- m/ Reflects amounts appropriated under P.L. 99-190 (final CRA). Pursuant to P.L. 99-177 (Gramm-Rudman-Hollings), \$159,358 thousand not available for obligation.
- n/ Includes \$100,000 thousand supplemental for the Republic of the Philippines.
- o/ Includes a supplemental request of \$297,000 thousand.
- p/ The International Development and Security Act of 1985 (P.L. 99-83) authorized \$3,800,000 thousand for both FY 1986 and FY 1987.
- q/ Includes \$50,000 thousand deobligation/reobligation reappropriation.
- r/ Includes \$12,500 thousand deobligation reobligation reappropriation estimate.
- s/ Includes \$18,000 thousand deobligation/reobligation reappropriation estimate and a \$500,000 thousand supplemental for Panama.
- t/ Includes \$20,000 thousand for Ireland (less \$145 thousand sequestration pursuant to P.L. 99-177), minus \$50,000 thousand pursuant to P.L. 101-167 and \$755,000 thousand supplemental (P.L. 101-302) for Panama, Nicaragua, Namibia and South Africa.
- u/ Includes \$14,000 thousand reappropriation estimate.
- v/ Includes \$14,000 thousand reappropriation estimate and \$30,200 thousand transferred to other accounts. Includes \$20,000 thousand for Ireland.
- w/ Includes \$12,000 thousand reappropriation estimate.  
proposed for rescission.
- x/ Includes \$11,000 thousand reappropriation estimate.
- y/ Executive Branch did not request Economic Support Funds in the President's Budget for FY 1995. The FY 1996 President's Budget includes a supplemental FY 1995 request of \$82,300 thousand.

## AIR BASE CONSTRUCTION IN ISRAEL

Fiscal Year	Executive Branch Request	Authorized	Appropriated
1979	800,000	800,000	800,000

LEGISLATIVE HISTORY OF AUTHORIZATIONS & APPROPRIATIONS (Continued)  
(Dollars in Thousands)

PEACEKEEPING OPERATIONS, FOREIGN MILITARY LOAN LIQUIDATING ACCOUNT  
AND AIR BASE CONSTRUCTION IN ISRAEL (Continued)

- a/ Executive Branch request included ESF and PKO in one account--Security Supporting Assistance (SSA).
- b/ CRA limitation (P.L. 96-123).
- c/ CRA limitation.
- d/ In addition, \$125,000 thousand appropriated under CRA (P.L. 97-51) and authorized by P.L. 97-132 for the Multinational Force and Observers.
- e/ Authorization waived in Continuing Resolution (P.L. 98-473).
- f/ Reflects amount appropriated under P.L. 99-190 (final CRA). Pursuant to P.L. 99-177 (Gramm-Rudman-Hollings), \$1.462 million of this amount is not available for obligation.
- g/ Includes \$10 million transfer from DOD allocated to Department of State pursuant to P.L. 101-45 used for UN mineclearing operations in Afghanistan.
- h/ Reflects an amendment to the FY 1992 budget to provide the United States' share to initiate UN peacekeeping activities in Cambodia and El Salvador, and for other peacekeeping requirements.
- i/ Includes appropriation of \$75,623 thousand plus \$6,812 thousand transferred from other accounts.
- j/ The President's FY 1996 Budget shows PKO Budget Authority of \$75,000 thousand in FY 1995. Subsequent to the release of the President's Budget, \$850 thousand was transferred out of the PKO account and into the IMET account (\$350 thousand for Botswana and \$500 thousand for Senegal) to enhance PKO training.
- k/ Use of borrowing from U.S. Treasury under authority of P.L. 100-202 in FY 1989, P.L. 101-167 in FY 1990, and P.L. 101-513 in FY 1991. Use of permanent indefinite appropriation authority in FY 1993 and FY 1994, and estimated use of the permanent indefinite appropriation authority in FY 1995 and FY 1996.

LEGISLATIVE HISTORY OF AUTHORIZATIONS & APPROPRIATIONS (Continued)  
(Dollars in Thousands)

MILITARY-TO-MILITARY CONTACT PROGRAM

Fiscal Year	Executive Branch Request	Authorized	Appropriated
1995	46,300 a/	46,300 a/	12,000 a/

a/ \$46,300 thousand was requested for the Military-to-Military Contact Program in the Department of Defense budget and was authorized by P.L. 103-337, National Defense Authorization Act. However, no funds were appropriated for this program in the DoD Appropriations Act. Instead, P.L. 103-306, Foreign Operations, Export Financing and Related Programs Appropriations Act, appropriated \$12,000 thousand for the Military-to-Military Contact Program.

**INTERNATIONAL NARCOTICS AND LAW ENFORCEMENT AFFAIRS**  
**FY 1996 CONGRESSIONAL PRESENTATION**  
**PROGRAM OVERVIEW**

The spread of international narcotics trafficking and organized crime constitutes persistent and serious challenges to America's foreign and domestic interests in the post-Cold War era. The effects of these challenges tear at the very fabric of society, jeopardize emerging and established democracies, slow economic development, and threaten the environment. While narcotics and organized crime are distinctly different threats, requiring individually tailored programs, they share the need for a coordinated international response and the development of strong democratic judicial institutions to combat them.

The international narcotics trade is one of the most pervasive and insidious problems we face. From drug producer to user, tens of millions of people on virtually every continent are directly involved. Global narcotics trafficking generates an enormously disruptive illicit economy of hundreds of billions of dollars annually, spawns widespread corruption and intimidation, and condemns countless drug abusers to painful, sick, and unproductive lives. From Panama, where traffickers once held influence at the highest levels of government, to Italy, where traffickers tried unsuccessfully to cow the judiciary by systematically assassinating senior prosecutors, no country is immune. Driven by both supply and demand forces, the threat must be fought through an integrated global response of enforcement, public awareness/demand reduction, and economic support initiatives.

The end of the Cold War is also leaving American interests increasingly threatened by new and traditional international organized crime powers. Rich, violent, and predatory international crime syndicates are quick to exploit political, economic, and social vacuums created by countries in transition. As we are witnessing in the former Soviet republics, old criminal networks are growing more powerful and new groups are emerging faster than authorities can keep pace. Such groups threaten the consolidation of democracy from Eastern Europe and Russia, to Africa and Asia. There is a direct cost to the United States as well. Organized crime threatens the operations and personal safety of U.S. businessmen abroad, contributes to an escalation in serious crime, and reduces the effectiveness of U.S. assistance programs. They decay the very institutions upon which we depend to do fair and honest business.

The Department of State has formed the Bureau of International Narcotics and Law Enforcement Affairs (INL) to meet the challenges posed by narcotics trafficking and international organized crime. INL responsibilities include: developing, implementing and monitoring U.S. international counternarcotics strategies and programs in support of the President's National Drug Control Strategy; building greater cooperation among nations to enhance law enforcement institutions in newly emerging democracies; and improving international efforts to combat organized crime. INL functions also include foreign policy formulation and coordination, and diplomatic initiatives.

**INTERNATIONAL NARCOTICS CONTROL (\$213,000,000)**

On November 3, 1993, the President signed a directive that identified international narcotics control as a major U.S. foreign policy objective. Internationally, drug production and trafficking activities endanger democracy, economic development, and the global environment. The Department of State and other agencies responded with a new national drug control strategy that shifted the focus to source countries where the drug trade and trafficking organizations are more confined and vulnerable.

The FY 1996 program is designed to continue implementation of the strategy, including greater stress on multilateral efforts to strengthen democratic institutions, making them more effective in fighting international trafficking organizations. The program reflects our most extensive effort yet to integrate counternarcotics police and military law enforcement activities, drug awareness and demand reduction programs and training, and sustainable economic growth into comprehensive regional and country counternarcotics programs.

The proposed FY 1996 funding seeks to get key drug countries to shoulder more of the drug control burden and resist the destructive forces of narco-corruption and intimidation. It is directed at strengthening the rule of law, economic and social development, and anti-drug institutions in countries that are committed to narcotics control. We expect our material, training, and other assistance to lead to more professional and competent judicial and enforcement agencies, greater drug crop eradication and reduced production, and more vigorous law enforcement operations against major drug trafficking organizations. Our work with multilateral organizations, such as the UN and various international financial institutions, as well as enhanced coordination with U.S. bilateral economic assistance agencies, will increase because they can complement our efforts and operate where our access is limited.

The international narcotics control program represents a long-term commitment to reduce the level of illicit drug production, trafficking, and abuse on a global basis. By addressing all elements of the international grower-to-user chain, the program seeks not only to reduce the supply of narcotics entering the United States, but also to provide critical assistance and technical expertise to other nations committed to controlling their own drug problems. This program complements the efforts of individual countries.

The FY 1996 budget request for Latin America continues to focus on the major drug source countries of **Bolivia, Peru, and Colombia**. The budget increase for FY 1996 implements the President's decision to consolidate counternarcotics economic and military assistance programs into the State Department's international narcotics control budget.

The FY 1996 request will support narcotics control programs in **The Bahamas, Brazil, Ecuador, Guatemala, Jamaica, and Venezuela**, including moderate increases in commodities, drug awareness and demand reduction programs, training, and operational support.

The **Latin America Regional Cooperation** budget supports smaller bilateral counternarcotics efforts in the **Caribbean, Central America, Mexico** and the **Southern Cone**. The FY 1996 request seeks to address increasing drug trafficker activities involving drug shipments and money laundering activities in the region.

International narcotics control programs in Asia continue to support programs to reduce heroin production. The FY 1996 budget request sustains U.S. assistance to **Laos, Pakistan, Thailand** and **Turkey** for commodities, operational support, drug awareness and demand reduction, and U.S. administrative costs.

The **NIS/East Europe Regional Cooperation** account will be established in FY 1996 to assist countries in the region to develop and implement narcotics control programs. The FY 1996 budget builds on counternarcotics projects and training assistance already provided to the region and funds the State Department's Narcotics Affairs Section scheduled to open in Moscow in FY 1995.

The **Asia/Africa/Europe Regional Cooperation** budget will provide counternarcotics training, commodities, and public awareness projects for countries in the region, and continue funding of the Narcotics Affairs Liaison Office function.

The FY 1996 budget request for the **Interregional Aviation Support** program will continue to provide aviation services in support of host government counternarcotics law enforcement efforts in South and Central America and the Caribbean. This program assists crop control, interdiction, and aviation institution building activities.

The **International Organizations** will support expanded multilateral drug control operations, programs, and policy objectives of the United Nations International Drug Control Program, the Organization of American States Inter-American Drug Abuse Control Commission, the Colombo Plan, and the World Health Organization Program on Substance Abuse.

In FY 1996 request for **Narcotics Law Enforcement Training and Drug Awareness and Demand Reduction** increases training programs to create integrated systems in such areas as money laundering, chemical controls, and judicial programs. The FY 1996 request also addresses the emerging problem of heroin abuse and trafficking in Central Asia, Cambodia, Vietnam, and countries of the former Soviet Union. Additionally, the FY 1996 request will fund an increase in Drug Awareness and Demand Reduction efforts and will focus on comprehensive programs to strengthen public and private pressure against the drug trade.

**INTERNATIONAL CRIMINAL JUSTICE PROGRAMS (\$12,000,000)**

The Office of International Criminal Justice (ICJ) addresses the growing threat to our national security interests posed by international criminal activity, by building greater cooperation among nations to eliminate organized criminal groups, strengthening national law enforcement institutions in newly emerging democracies, and creating organizations which will aid in combatting organized crime. Key benefits of the ICJ program will include deterring alien smuggling at its source, increasing international cooperation to combat money laundering, supporting the United Nations program to reestablish the Somali national police and judicial system, and improving coordination of U.S. positions and programs in the field.

The FY 1996 **International Criminal Justice** programs will fund technical assistance and operational support initiatives to address money laundering, financial crime, alien smuggling, U.S. stolen cars, and anti-contraband.

## THE BAHAMAS

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
.700	.700	.700

## OBJECTIVES:

- Preclude use of Bahamian territory and territorial waters for the movement of cocaine or other illicit drugs;
- Arrest and prosecute drug traffickers to the fullest extent of the law;
- Control money laundering; and
- Discourage drug abuse by supporting local drug abuse control, prevention and education programs.

## JUSTIFICATION:

The International Narcotics Control program provides assistance to the Royal Bahamas Police Force (RBPF), the Royal Bahamas Defense Force (RBDF), and other Government of the Commonwealth of The Bahamas (GCOB) agencies, the U.S. and GCOB carry out effective combined drug law enforcement operations. The counternarcotics program also supports judicial enhancement activities to increase the efficiency and effectiveness of Bahamian courts in bringing drug law violators to justice. Support for drug abuse control reduces drug use and increases intolerance of drug trafficking.

Strategically located near Florida, The Bahamas is a major cocaine transit and a significant money laundering country. On the basis of seizure levels, it appears that effective interdiction efforts and local law enforcement and prosecutions, combined with other international narcotics control efforts, have made inroads in reducing the amount of U.S.-destined cocaine passing through The Bahamas. Cocaine seizures in The Bahamas and adjacent international waters in 1993 totalled 1.9 metric tons, dropping year by year from the 1987 high of 12.6 metric tons.

Drug interdiction cooperation between the United States and The Bahamas is excellent and hopefully will remain so. Bilateral cooperation has permitted establishment of a significant interdiction and investigation infrastructure in The Bahamas, involving U.S. aircraft, ships, radar, and personnel. U.S. Coast Guard and Army helicopters assigned to joint interdiction bases in Nassau, George Town, Great Inagua, and elsewhere support Operation Bahamas, Turks and Caicos (OPBAT), an effort by The Bahamas and Turks and Caicos Islands police and DEA to intercept loads of cocaine and conduct investigations.

The narcotics assistance program seeks to strengthen Bahamian agencies engaged in counternarcotics activities, including the RBPF and the GCOB judicial system. It includes support for OPBAT bases, a Joint Information Collection Center (JICC), training and materiel for Bahamian narcotics enforcement personnel, improvements in the judicial system, and public awareness and education efforts.

Through the **Narcotics Law Enforcement** projects, minimal support will continue for OPBAT bases which are manned by both Bahamian and U.S. personnel. This support will include base operating costs such as electricity, equipment repair and maintenance, air conditioning, runway resurfacing, and other support costs. We will encourage the GCOB to assume increased responsibility in OPBAT.

The program will fund training and equipment for the Drug Enforcement Unit of the RBPF, the principal drug law enforcement and investigation force of The Bahamas. JICC equipment will be upgraded and operations expanded through advanced training. Other RBPF elements will also receive assistance, including the Canine Squad, the Internal Security Division, and the Corruption and Investigation Unit, which is responsible for asset-forfeiture investigations. The GCOB will be encouraged to take action on tightening money laundering controls.

The **Judicial Reform Project**, which started late in FY 1991, seeks to help the GCOB modernize the Bahamian judicial system. It includes assistance to the Attorney General's office and to the courts. Activities include training for members of the judiciary, prosecutors, staff, police and other officers of the court, a court reporter training program, and computer equipment to make case handling more efficient.

The **Drug Awareness and Demand Reduction** project will support GCOB activities to keep the public aware of the dangers of drug abuse and highlight the damage to Bahamian society that drug trafficking causes. The focus of this project will continue to be drug education and related programs for Bahamian children and high-risk young people. The increase in training for FY 1995 will help existing organizations such as school- and community-based drug prevention programs, private business, religious organizations, law enforcement agencies, academies, parent groups, civic organizations, and the media, to form a community action partnership for drug abuse prevention. This coalition-building model provides training experiences designed to encourage community building, strengthen comprehensive and long-range planning skills, improve community prevention strategies, support team building; and assist training for drug treatment professionals.

**Program Development and Support** funds will provide for salaries, benefits and allowances of permanently assigned U.S. and foreign national personnel, short-term TDY personnel, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

**EFFECTIVENESS MEASUREMENT:**

- Increase the effectiveness of the combined counternarcotics operations of the U.S., The Bahamas, and Turks and Caicos Islands (OPBAT);
- Improve the capabilities of the Bahamian law enforcement agencies and increase the efficiency and effectiveness of criminal justice institutions;
- Enhance money laundering controls; and
- Reduce drug abuse and increase intolerance of drug trafficking.

## BOLIVIA

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
44.067	25.829	60.000

## OBJECTIVES:

- Promote strong, cohesive democratic institutions of government capable of stopping narcotics production and trafficking in Bolivia;
- Establish and encourage sustained economic growth and reduce the effects of the drug trade on the economy of Bolivia; and
- Strengthen and improve the efficiency of the Bolivian criminal justice system.

## JUSTIFICATION:

Bolivia is the world's second largest producer of illicit coca and the second largest producer of refined cocaine. Coca cultivation rose by four percent in 1993 from the previous year after three years of steady decline. An estimated 47,200 hectares were cultivated in 1993, as compared with 45,500 hectares in 1992. Most cultivation is in the Chapare Region.

The Bolivia program is based on the premise that to achieve long term narcotics control, the economy must be developed and sustained, the illegal drug trade must be eliminated, and democracy must be nurtured to its full capacity. These factors are interrelated: neither a stronger democracy nor a stable, growing economy is possible under the pervasive threats of drug related crime and violence, corruption, domestic drug abuse and environmental damage caused by illegal narcotics production and trafficking. Likewise, long term drug control can be sustained only in a stable political and economic environment.

The proposed budget will support improvements in ground, air, and riverine law enforcement operations; support chemical control efforts; enhance investigations and prosecutions of major drug traffickers; improve intelligence gathering and dissemination; control the transport and marketing of legal coca; and reduce coca cultivation and processing. The program is designed to strengthen the Bolivian judicial system and develop economic alternatives to the coca industry. It expands economic possibilities in the Cochabamba-Chapare region and elsewhere in Bolivia and helps the GOB to meet its international financial obligations and to stabilize its economy as a necessary condition for sustained growth.

The **Narcotics Law Enforcement** projects strengthens the civilian police units which conduct counterdrug law enforcement operations and the military units which support them. Most funding within this project targets agencies of the Ministry of Government and special units under the Ministry of Defense which support efforts of the police. The primary counternarcotics law enforcement entity is the Special Force for the Fight Against Narcotics Trafficking (FELCN), with its uniformed interdiction force, the Police Rural Mobile Patrol Units (UMOPAR), and the investigative branch, the urban narcotics police. Special prosecutors of controlled substances are assigned to the units. In coca control, DIRECO performs coca eradication and DINACO monitors coca considered legal under Bolivian law. The Bolivian military provides transport to the police by air, land, and river. Three Bolivian Air Force units, including the Red Devils Task Force helicopter unit, provide air transport for joint UMOPAR/DEA interdiction operations. The Bolivian Navy has four task groups, known as the Blue Devils Task Force, which monitor riverine traffic for drugs and chemicals in coordination with UMOPAR. The Army Green Devils Task Force provides ground mobility and logistical support to the police.

**FY 1996 Program.** This budget, as last year, consolidates international counternarcotics law enforcement, economic and military funds into a single account. The counternarcotics law enforcement program for FY 1996 is designed to expand GOB responsibility for directing and financing counternarcotics efforts. The program will sustain UMOPAR and assist counternarcotics police units operating on the frontiers and in strategic cities. A primary objective of law enforcement operations is to disrupt the transport and sale of illegal coca leaf for a sustained period, resulting in devalued and unstable coca leaf prices. This then encourages farmers to move from coca cultivation to other income opportunities afforded by the sustainable development project.

The successful institution-building efforts of the waterways law enforcement program will continue. The Bolivian Navy now has four task groups developed, equipped, and trained with USG counternarcotics funds, located in Trinidad, Puerto Villarroel, Riberalta, and Guayaramerin. The waterways program has increased the Navy's operational tempo while developing a Bolivian-sustainable training academy.

In coca control, program funds will be used to help DIRECO carry out the ongoing eradication program conducted primarily by seeking out coca growers to enroll in the program for voluntary, GOB-compensated eradication of coca. We will assist DINACO in continuing its road checkpoints throughout the Chapare, as well as joint night patrols with UMOPAR to disrupt the transport of illicit coca. DINACO will continue to work towards a system to identify and track shipments of coca which are legal under Bolivian law.

The **Sustainable Development Project** seeks to promote counternarcotics-related development opportunities in the Chapare coca-growing area, in Cochabamba, and elsewhere in Bolivia. The project goal is to support a shift from the dependence on coca cultivation by providing

incentives for the development of income-earning alternatives for coca farmers. It includes subprojects to expand electrical service to parts of the Chapare region, promote Bolivian exports, and support macroeconomic balance-of-payment obligations through cash transfer to the GOB. Local currency generated through cash transfer supports GOB participation in sustainable development.

For FY 1996, the sustainable development program will continue to promote broad-based economic growth led by the private sector by creating an attractive climate for foreign trade and investment. Alternative development projects will continue, such as the development of alternative crops and improved farm practices, and the construction or upgrading of farm-to-market roads. A subproject of electrification for alternative development will develop the Bolivian capability to plan, construct and sustain electrification projects for rural areas.

The **Drug Awareness and Demand Reduction Project** educates Bolivians about the dangers of coca cultivation, cocaine production, and drug trafficking and generates public support for strong, effective counternarcotics programs. In 1996, education efforts will continue to support educational fora for Bolivian prevention and treatment professionals.

The **Judicial Reform Project** is designed to promote an efficient and fair judicial system in Bolivia as a fundamental element of a strong democracy. For 1996, one subproject will continue the process of strengthening investigative, prosecutorial, and judicial human resources, and improving case tracking and administrative management. A second subproject will continue to enhance the effectiveness of Bolivian drug prosecutors by providing training and equipment to them.

The **Program Development and Support Project** provides administrative support and salaries for 19 direct-hire and contract personnel in the Embassy's Narcotics Affairs Section.

#### **EFFECTIVENESS MEASUREMENT:**

- Eradicate coca in Bolivia beyond that authorized for legal use while helping create viable, licit income-earning alternatives for coca producers;
- Arrest and prosecute major drug traffickers;
- Interdict and seize cocaine and other illicit coca derivatives, precursor materials, and assets of the coca trade;
- Increase the Bolivian population's awareness of the dangers of drug abuse and trafficking to Bolivia's economy and society.

## BRAZIL

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
.400	.600	1.000

## OBJECTIVES:

- Improve the institutional capabilities of the Federal Police to disrupt the activities of major trafficking organizations, interdict illegal drugs and control precursor chemicals;
- Improve the effectiveness of Brazilian organizations working to reduce drug abuse and decrease the domestic demand for drugs; and
- Develop political support for narcotics control in Brazil by political leaders, decision makers, and key public figures.

## JUSTIFICATION:

Brazil is a significant transit country for cocaine en route from Bolivia, Peru, and Colombia to the U.S. and Europe. It manufactures and imports large amounts of the chemicals used in cocaine production, and these chemicals are being diverted illegally to the Andean countries. Colombian and Bolivian traffickers appear to be making more use of Brazilian transit routes and are establishing cocaine refineries there. Coca is cultivated in remote, inaccessible areas of the Amazon Basin. Most of the large amount of marijuana grown in Brazil is consumed locally, and no export to the U.S. has been noted. Domestic drug abuse is increasing.

The Brazilian narcotics control program seeks to disrupt major trafficking organizations, stem illegal chemical diversion, and decrease domestic demand for drugs. Most counternarcotics funds provide equipment and training for the Brazilian Federal Police (DPF), which has primary responsibility for drug law enforcement. The GOB will assume responsibility for funding the DPF operational costs, such as fuel, supplies, and per diem. The GOB is being encouraged to take a more aggressive stance on drug trafficking and consumption. This year the U.S. and other missions in Brasilia that are members of an informal consultative group of donors called the Dublin Group, worked more closely to coordinate assistance and diplomatic initiatives.

Assistance to the Brazilian Customs Service helps to upgrade interdiction of drugs passing through exit/entry points. The detector dog program will be supported in FY 1995 with prior year funds.

The **Narcotics Law Enforcement Project** will assist the DPF in implementing the following programs: riverine interdiction, kingpin investigations, chemical control, narcotics detector dogs, and the Amazon survey. FY 1996 funds will be used primarily to provide law enforcement equipment, which includes not only law enforcement field equipment, but also to expand an initiative begun in FY 1994 to establish a computerized drug intelligence network.

The **Drug Awareness and Demand Reduction Project** seeks to reach key segments of the population regarding the increasing drug threat. FY 1996 funds will be used to support local demand reduction projects throughout the country. This assistance is channeled through CONFEN, the national drug council.

**Program Development and Support** funds will provide for salaries, benefits, and allowances of permanently assigned U.S. personnel and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation and public diplomacy.

#### **EFFECTIVENESS MEASUREMENT:**

- Successful Federal Police investigations of major cartel operations, interdiction of cocaine shipments and arrest and prosecution of drug traffickers;
- Review and funding for project proposals submitted by local demand reduction organizations through the National Drug Council (CONFEN); and
- Greater GOB political will by continuing to encourage bilateral and multilateral counternarcotics discussions.

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
28.700	29.000	35.000

## OBJECTIVE(S):

- Strengthen host nation capabilities to disrupt and ultimately dismantle major drug trafficking organizations;
- Destroy the cocaine processing industry and stop the diversion of licit chemicals into illicit channels; and
- Eliminate the cultivation of opium poppy, coca leaf and marijuana.

## JUSTIFICATION:

The United States provides assistance to Colombia to counter the drug trafficking threat to its security, political system and economy; and to disrupt the cocaine trafficking infrastructure through investigation, evidence-gathering, arrest, prosecution, asset seizure, and other law enforcement actions. This budget continues implementation of the President's decision to consolidate international counternarcotics law enforcement and military funds into a single account.

In FY 1996, counternarcotics assistance will continue for the Directorate of Anti-Narcotics (DIRAN) and other Colombian National Police (CNP) elements, as well as military units supporting DIRAN efforts, to sustain and improve investigative capabilities, take action against trafficking organizations, and destroy illicit crops. As a comprehensive counternarcotics law enforcement program, emphasis will be placed on enhancing the planning and tactical capabilities of the CNP and other security units. Project activities will include judicial protection, enhancement of military counternarcotics actions, assistance to the Department of Administrative Security, infrastructure support, and public awareness and education.

The primary goal in Colombia is to eliminate the drug cartels. Advances toward that goal have been made with the virtual elimination of the Medellin cartel. Continued GOC raids on trafficker operations have given authorities valuable information from which to further attack Cali cartel activities which have supplanted those of the Medellin cartel since 1993. The DIRAN has

seized over 225 metric tons of cocaine products since 1990 and arrested or killed many drug traffickers. The DIRAN has eradicated approximately 23,000 hectares of opium poppy since February 1992. In FY 1996, the DIRAN will continue a broad scale coca eradication program.

Support to the CNP and military counternarcotics units are subproject activities of the **Narcotics Law Enforcement Project**. The CNP will remain the principal GOC recipient of our counternarcotics assistance to Colombia. By FY 1996, the DIRAN, an independent brigade-sized narcotics intelligence gathering and interdiction force, will be increased to over 3,000 personnel. This will include a small DAN headquarters staff, 18 interdiction companies, 20 intelligence groups, and an aviation service of 68 aircraft.

The GOC plans to increase aviation support for the CNP aviation branch in FY 1996. The expected increase in flight hours, maintenance, and other operational and support costs will meet the continued demands on aviation resources to sustain the successful opium poppy eradication program and the coca eradication program initiated in FY 1994. Aviation support will also assist cocaine interdiction operations.

In FY 1996, the GOC will continue a strategy to establish four DIRAN geographical zones, each with three to five companies and dedicated aircraft. Each regional zone commander will have the authority to deploy units and direct airlift and support equipment without obtaining approvals from headquarters in Bogota. Improving existing forward operating bases and adding new locations will increase security and operational effectiveness. As a result of the GOC's increased capabilities to collect intelligence data, heliports will be strategically placed throughout the country to enable timely heliborne deployments against narcotics targets. This project will also fund avionics, flight gear, vehicles and maintenance, night vision equipment, field gear, intelligence equipment, and aviation and other training.

Assistance to military units will be directed to those activities supporting the CNP's counternarcotics efforts. The Colombian Air Force will receive helicopter support and training as well as parts and maintenance for its fleet of 25 UH-1H helicopters. Additional support will be given to the Air Force's fixed wing C-130 units and OV-10 and A-37 aircraft that support counternarcotics operations, primarily in isolated and unsecure areas of the country. The Colombian Navy and its Marine branch will continue a counternarcotics campaign on the rivers and the coast. To sustain the important military contribution to the counternarcotics effort, equipment and training will be provided to the Colombian riverine and Coast Guard Harbor Patrol programs. Commodities include patrol boats for the Coast Guard and boats and spares for Marine riverine units. Spare parts, maintenance packages, and training for members of the Coast Guard and Marines will be provided. The Army will receive much-needed communications and global positioning equipment as well as vehicles.

The **Department of Administrative Security (DAS) Project** will help the GOC to attack the cocaine trafficking infrastructure by providing computer and data collection equipment used in drug and money laundering investigations.

The DAS, Colombia's equivalent to the FBI, Secret Service, and INS, monitors movements of aliens, controls personnel movement through ports of entry, and is the GOC host agency for Interpol. It also has investigative authority for drug and money laundering cases. We will provide modest support for the DAS's Interpol office and its asset seizure office.

The **Infrastructure Support Project**, created in 1992, enhances the GOC's public profile on implementation of a vigorous anti-drug campaign. The GOC established a counternarcotics policy board, the National Council of Dangerous Drugs (NCDD), comprising key cabinet ministers such as defense and justice, the directors of the DAS and the CNP, and others. A permanent NCDD research staff issues and recommends, coordinates and monitors counternarcotics policy. NCDD is also the GOC's point of contact for the international donor community. In FY 1994, the NCDD was instrumental in acquiring full GOC approval to use herbicides to aerially eradicate coca cultivations.

The NCDD will receive basic support, including personnel, communications upgrades, information management systems, and help for council and staff members to attend and sponsor international meetings to foster contact with counterparts in donor and trafficking/producing countries. This project will also support other infrastructure development activities in the offices of the Attorney General and the Prosecutor General and surveys on improvements in customs and port security.

The **Judicial Protection Project** will provide training for security personnel, armored vehicles, and communications equipment to enhance security for the judges involved in prosecuting alleged narcotics violators in the five public order courts.

The **Drug Awareness and Demand Reduction Project** will help the Colombian government and private organizations assess drug abuse through periodic surveys and share this information at seminars and other meetings. This project will publicize to government officials, opinion makers and the general public the threat of illegal drugs to Colombian society. It will also communicate the national interest benefits to a populace that confronts and maintains pressure on traffickers and other lawbreakers. Activities include forming public awareness campaigns using all media, collecting and disseminating substance abuse data, publishing and distributing educational literature, and sponsoring key Colombian figures to attend national and international conferences.

**Program Development and Support** funds will provide for salaries, benefits and allowances of permanently assigned U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

#### **EFFECTIVENESS MEASUREMENT:**

- Increased operational effectiveness of the Colombian National Police Anti-Narcotics Directorate;

- Improved eradication of drug crops in Colombia (in priority order: opium poppy, coca and cannabis) using herbicides applied aerially (e.g. for coca and opium poppy);
- Strengthened Colombian judicial system to overcome corruption and intimidation and expedite proceedings/trials against drug traffickers;
- Seized assets of, and disrupted money laundering by, major traffickers; and
- Increased government and public awareness of how drug production, trafficking and abuse damages Colombian society.

## ECUADOR

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
.500	.500	.850

## OBJECTIVE(S):

- Develop institutional capabilities to interdict illegal drugs and precursor chemicals, prosecute traffickers, seize drug assets, and reduce money laundering;
- Improve intelligence collection, processing, and dissemination against major trafficking organizations; and
- Promote public awareness and education.

## JUSTIFICATION:

Ecuador is a significant transit country for drugs and essential chemicals and a locus for drug money laundering. Ecuador eradicated most coca cultivation in the 1980's and has no tradition of coca use. Narcotics kingpins appear to be trafficking approximately 30 metric tons of cocaine per year through loosely-monitored Ecuadoran ports and road networks. Drug traffickers also take advantage of weak banking laws to launder and protect their illicit proceeds. The recent ambush and massacre of a national police riverine patrol by a guerrilla group, allegedly involved in drug trafficking, on the Colombian border has stimulated a comprehensive Government of Ecuador (GOE) review of how to address the threat posed by the drug trade to the people, economy, and sovereignty of Ecuador.

The GOE has centralized drug enforcement in the Narcotics Police; established a police intelligence center, a financial investigations unit and chemicals unit; and legislated a drug control role for the military. To build on police successes in dismantling several narcotics trafficking groups tied to Colombian drug kingpins and to improve regional cooperation, the Ecuadoran military has agreed to relocate a radar site to cover a key air corridor in the Oriente favored by drug traffickers transiting Ecuadoran air space. Information on suspected drug trafficker air traffic in the corridor would be provided to Colombian authorities.

The GOE through its National Drug Council (CONSEP) has developed a national drug strategy; passed laws to criminalize and control trafficking in illicit drug plants, drugs, and chemicals; conducted (with USG assistance) a money laundering threat assessment; and developed procedures between the Superintendency of Banks and the police, which enable the police to conduct more effective money laundering investigations. CONSEP, with U.S. assistance, is conducting a study to determine the extent of licit and illicit use of precursor chemicals in Ecuador and how to control such chemical trafficking.

The Customs Police have completed training and consolidated two dog programs into a unified detector dog program in which dogs and guides conduct more effective mobile roadblock operations.

Ecuador signed an asset sharing agreement in 1994 and received \$330,000 for cooperating with Switzerland and the U.S. in the prosecution of Jorge Hugo Reyes-Torres, a major narcotics trafficking kingpin tied to the Colombian Cali Cartel. The GOE is striving to make further progress in the Reyes-Torres case. When the GOE makes such progress, cooperating authorities will likely be willing to share such assets again.

In FY 1996, the U.S. will continue to work closely with the GOE to develop a greater emphasis on **Narcotics Law Enforcement** projects. Support will be given to the Attorney General's office through the national police, customs, military, and the national drug council.

The **National Police Project** will focus on strengthening the Interpol Police law enforcement capability, continue to improve police skills and performance, and support a police counternarcotics training center. The center will provide counternarcotics training for police anti-drug personnel, and fund courses and seminars for military counternarcotics personnel and other public agencies. Police counternarcotics units will also receive field equipment, international training opportunities, and technical guidance from mobile training teams. Customs activities will focus on acquiring additional detector dogs and training for guides, as well as sophisticated search equipment to employ in air and seaports and along border areas.

The GOE, through the Attorney General's Office initiative, will receive anti-corruption training for judges, particularly those located in outlying provinces, and training in prosecution techniques.

The **National Drug Council Project** will emphasize ministerial-level drug coordination efforts, including money laundering efforts; asset seizure and storage; control and monitoring of precursor and essential chemicals; and drafting of related counternarcotics laws and procedures. Funding for a database to track information, training, conferences and seminars, as well as office equipment, will help the council address these many tasks.

The **Drug Awareness and Demand Reduction Project** will be increased to complement USAID, USIS, and UNDCP drug prevention and education programs by offering travel, conference and seminar support, research, and other assistance to ensure that the public remains aware of the dangers of drug abuse.

**Program Development and Support** funds will provide salaries, benefits and allowances of U.S. and foreign national personnel, short-term TDY assistance, and other administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

**EFFECTIVENESS MEASUREMENT:**

- Enhancement of Ecuadoran counternarcotics law enforcement capabilities, develop a precursor chemical control program, enhanced effectiveness of prosecutors, and establishment of procedures to control money laundering;
- Establishment of a police intelligence training program and intelligence center; and
- Establishment of community-based drug abuse prevention programs and increase Ecuadoran public awareness of the dangers of drug abuse.

## GUATEMALA

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
2.000	2.500	2.550

## OBJECTIVE(S):

- Reduce cocaine trafficking from and through Guatemala to the U.S.;
- Reduce opium production and discourage cultivators from renewing opium production;
- Develop an effective civilian narcotics law enforcement agency;
- Improve judicial handling of narcotics cases; and
- Increase public awareness of the dangers of drug production and abuse.

## JUSTIFICATION:

The two major narcotics threats in Guatemala are cocaine transshipments to the U.S. and opium production. Substantial amounts of cocaine transit Guatemala en route to the U.S. At dozens of uncontrolled airfields in Guatemala traffickers refuel their aircraft on their journey north or offload cocaine to U.S.-bound vessels, aircraft, or trucks. The Government of Guatemala (GOG) and the U.S. cooperate on a variety of counternarcotics activities, including law enforcement, crop eradication, and demand reduction.

The GOG does not possess a radar system able to track trafficker aircraft nor the means to intercept them. Nevertheless, with assistance from the U.S. the GOG seized or control-delivered seven metric tons of cocaine in 1993. Combined USG-GOG air and ground operations eradicated most of the opium poppy cultivation in Guatemala during 1992 and 1993. Growers planted new fields in the 1993-1994 growing season.

A joint USG-GOG law enforcement/interdiction effort, called Operation Cadence, began in July 1991. Its goals are to sharply increase interdiction of cocaine transiting Guatemala, dismantle trafficking organizations, and arrest traffickers.

The **Cocaine Interdiction Project** supports Operation Cadence and other law enforcement efforts by Guatemalan authorities. From summer 1993 through summer 1994, Cadence attained a 100 percent interdiction rate against aircraft suspected of smuggling drugs.

Most of the opium poppy in Guatemala is cultivated in small plots hidden in steep, narrow, high-mountain valleys near the Mexican border. Using air assets in tandem with the cocaine interdiction project, the **Aerial and Manual Eradication Project** supports U.S.-owned and operated aircraft which aerially eradicate large amounts of opium poppy and smaller amounts of marijuana cultivated in remote areas. In addition, the project assists manual eradication efforts by the GOG. In 1993, 426 hectares of opium poppy and 200 hectares of marijuana were eradicated using three T-65 Thrush spray planes, four helicopters, and one Caravan transport aircraft. Guatemalan Treasury Police officers provide security and search-and-rescue.

The **Narcotics Law Enforcement Project**, initiated in 1991, has sponsored the organization, training, and equipping of new narcotics control units in the Guatemalan Treasury Police. These units carry out missions in the areas of: manual eradication; airmobile interdiction (as part of Operation Cadence); port control; investigations; riverine operations; and roadblocks/land interdiction and inspection. This project also supports development of the Joint Intelligence Coordination Center (JICC), the canine unit with eight dogs at the Guatemala City International Airport, and the chemical control office.

The **Drug Awareness and Demand Reduction Project** uses various media to show that narcotics cultivation, trafficking and drug abuse harm Guatemalan society as well as the health of Guatemalan citizens.

**FY 1996 Program.** The key to a successful counternarcotics policy is the flexibility to take the initiative against the traffickers who respond with considerable resources and ingenuity. The **Narcotics Law Enforcement Project** will help the GOG upgrade existing counternarcotics units and organize, train, and equip other Treasury Police units for interdiction and eradication responsibilities. The GOG will provide continued training and support to units engaged in riverine/coastal patrol, airmobile support and interdiction, roadblocks and land interdiction, and inspection units (including canine-equipped) at ports and airports. The project will also help the GOG improve the headquarters section, expand the activities of both the public relations office and the new narcotics investigation squad, and continue operations of the JICC and chemical control office.

The program in Guatemala has been highly successful in recent years in eradicating opium poppy cultivation. From a peak of 2,000 hectares planted in 1990, cultivation in 1993 was down to negligible levels. The **Aerial and Manual Eradication Project**, which is funded jointly with the Cocaine Interdiction Project, will provide fuel for the U.S. aircraft engaged in eradication (the Bell-212s as well as the T-65 Thrush and Cessna Caravan) and other operational costs such as herbicide, ground support equipment, field rations, and communications and photographic equipment.

The **Cocaine Interdiction Project** will maintain a credible response to trafficking threats, despite some retrenchment due to FY 1994 budget cuts. To support Operation Cadence, four or five U.S. Bell 212 helicopters carry GOG Treasury Police and U.S. law enforcement advisors to suspected trafficking sites; the same aircraft will perform opium eradication missions. The project will fund operational support, such as fuel and other operating costs for the aircraft and crews.

**Drug Awareness and Demand Reduction** activities will focus on various media publications and presentations to inform Guatemalan citizens how drug trafficking and abuse harm their society. These activities also promote better implementation of effective narcotics legislation.

**Program Development and Support** funds will provide salaries, benefits and allowances of U.S. and foreign national personnel, short-term TDY assistance, and other administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

#### **EFFECTIVENESS MEASUREMENT:**

- Increased institutional capability within the Treasury Police, the GOG's lead counternarcotics law enforcement agency for cocaine interdiction, opium poppy eradication, and prosecution of drug traffickers; and
- Enhanced degree of drug awareness, demand reduction, and counternarcotics expertise developed among prosecutors, public health, media, and educational institutions.

## JAMAICA

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
.600	.600	1.000

## OBJECTIVES:

- Conduct a full range of drug law enforcement operations throughout Jamaica;
- Arrest and prosecute major Jamaican traffickers; and
- Inform Jamaicans about the dangers of drugs and the threat narcotics trafficking poses to their country.

## JUSTIFICATION:

Through assistance to the Jamaican Constabulary Force (JCF), the Jamaica Defense Force (JDF), and other Government of Jamaica (GOJ) agencies, the USG assists the GOJ to carry out effective drug law enforcement operations. We also support the GOJ drug awareness program. USAID is beginning the fourth year of a five-year Administration of Justice program aimed at improving the justice system, and the Department of Justice provides training and curriculum development help to increase professional capabilities in the JCF through the International Criminal Investigative Training Assistance Program.

Jamaica, favorably situated for cocaine trafficking from South America to the U.S., is also a traditional source of marijuana for U.S. markets. Jamaica's airstrips, ports and offshore waters offer many opportunities for traffickers. Intelligence indicates that cocaine traffickers are using Jamaica's well-established marijuana networks to ship cocaine. Money laundering does not appear to be a major problem, although removal of foreign exchange controls in September 1991 could tempt money launderers. Production and transit of essential chemicals in Jamaica are negligible.

An enhanced extradition treaty between the U.S. and Jamaica, which entered into force in July 1991, has greatly increased the number of Jamaicans extradited to the U.S., to the point where Jamaica is now one of our most active extradition partners in the region. By late 1993, seven extradition cases were active and twenty more pending, including several for drug traffickers. We are seeking Jamaican ratification and implementation of a mutual legal assistance

treaty ratified by the U.S. in 1992. In 1994, Jamaica passed asset seizure and forfeiture legislation. We are now encouraging GOJ passage of money laundering laws and ratification of the 1988 UN Convention.

The JCF Narcotics Unit, the major Jamaican counterdrug law enforcement group, cooperates with DEA and other law enforcement agencies. The U.S. has provided extensive training and equipment to the JCF Narcotics Unit, the Contraband Enforcement Team, and the Port Security Corps, including an innovative program of integrity training for customs personnel. Jamaica's Joint Information Coordination Center (JICC), established with USG funding, is the keystone of the GOJ's anti-narcotics data collection and analysis effort. In 1993, JICC information was responsible for seizures of 1,553 kilograms of marijuana in Jamaica, and 4,950 kilograms of hash oil and 405 kilograms of cocaine in the U.S. Also as a result of JICC-Kingston data, 120 persons were arrested on drug charges, and 3 more on murder charges. In 1993, total drug seizures by the GOJ included 160 kilograms of cocaine, 69 metric tons of marijuana, and 177 kilograms of hash oil. It arrested 73 suspected drug traffickers, of whom 61 percent were Class I or II violators by DEA criteria.

**FY 1996 Program.** The **Narcotics Law Enforcement Project** has two aspects: support GOJ efforts to adopt and implement narcotics control legislation and to ratify and implement the 1988 UN convention and our bilateral Mutual Legal Assistance Treaty; and provide assistance to Jamaican drug law enforcement activities. Training for law enforcement and judicial personnel is a major aspect of the project. Material assistance to GOJ law enforcement activities will consist mainly of spare parts, maintenance, operational support, and some replacements for equipment previously provided. We will support expansion of JICC operations, including provision of upgraded equipment and advanced training. Continuance in FY 1996 of a substantial funding level will permit the GOJ to undertake the intensity of drug law enforcement activities necessary to permit sustainable development in this struggling economy.

The Jamaican public is poorly informed about drug abuse and its consequences, about what their government is doing about drugs and why, and about the international dimensions of the narcotics problem. We will work with the GOJ to increase awareness through the **Drug Awareness and Demand Reduction Project**. USG-funded survey results will be used to concentrate resources on the groups most vulnerable to drug abuse. The GOJ, the National Council on Drug Abuse, the Jamaica Information Service, and community action organizations will conduct activities to increase public awareness of the overall drug problem in Jamaica and its effects on the country. They will also build political support for a more assertive GOJ counternarcotics policy.

**Program Development and Support** funds will provide for salaries, benefits, and allowances of permanently assigned U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

**EFFECTIVENESS MEASUREMENT:**

- Increased capability of Jamaican drug law enforcement and judicial personnel and expanded bases of operation to additional sites around the country;
- Increased number of major Jamaican traffickers arrested and brought to justice; and
- Enhanced degree of awareness in Jamaica about the dangers of drug use and the threat narcotics trafficking poses to the country.

## PERU

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
17.800	16.000	42.000

## OBJECTIVES:

- Build host nation capabilities in order to foster institutionalization of Peruvian policy-making and coordination and to Peruvianize all aspects of counternarcotics law enforcement;
- Reduce and ultimately eliminate the cultivation of coca and interdict trafficking of cocaine and cocaine base from Peru;
- Support Peruvian economic reforms that eliminate the illicit coca cultivation economy.

## JUSTIFICATION:

Nearly two-thirds of the world's cocaine supply originates from coca leaf grown in Peru. The Government of Peru (GOP) has demonstrated the political will to act against cocaine trafficking, but its ability to make an impact on the narcotics trade is limited by institutional weaknesses, corruption and a lack of resources. Sustainable long-term reduction in the amount of coca raw material for drug production is only possible by integrating enforcement measures that disrupt the cocaine export industry with economic development activities leading to coca eradication by or with the consent of producers. Inefficiencies and defects in the judicial process also hamper the Peruvian justice system, and make prosecution of narcotics traffickers difficult. The USG must help develop GOP institutional capabilities to implement a long-term comprehensive narcotics strategy.

The goal of the U.S. counternarcotics strategy in Peru is to reduce, and ultimately to eliminate, production of refined coca products for export to the U.S. or elsewhere, or for domestic abuse. This goal will be attained by helping the GOP develop an institutional capability to carry out an integrated counternarcotics program including law enforcement, sustainable alternative development, coca eradication, and public awareness/demand reduction.

The counternarcotics program provides commodities, services, and advice to Peruvian government agencies engaged in developing or implementing counternarcotics-related programs, including enforcement

programs to disrupt coca cultivation, wholesale purchase, industrial-scale processing, and export of refined coca products; judicial reform programs to improve Peruvian judicial process and training; and economic assistance programs aimed at both economic restructuring and sustainable development in coca-related areas. All specific projects are aimed at institutionalizing all aspects of the Peruvian counternarcotics effort.

Specific programs include: training and equipping counternarcotics law enforcement air and ground units; developing local municipalities; strengthening the judicial system; supporting microenterprises and local economies, as well as infrastructure and agricultural activities in coca-growing areas; supporting broad-based economic growth to establish a stable market economy; establishing mobile air operations at forward locations for law enforcement operations against major Peruvian traffickers; controlling precursor chemicals at ports of entry and in the interior; developing actionable law enforcement intelligence; supporting Peruvian air force, navy and police efforts to intercept trafficking aircraft and control municipal airfields; and supporting government demand reduction efforts nationally and locally.

The FY 1996 budget will implement the President's decision to consolidate international counternarcotics law enforcement, economic and military funds into a single account.

**The Coca Eradication and Sustainable Development Projects:** Coca eradication is currently limited to the eradication of coca seedbeds through the use of Peruvian laborers (CORAH). Mature coca eradication was terminated in 1990. The 1996 program envisions initiating a mature coca eradication program in coordination with coca-growing communities receiving projectized development assistance and related broader based economic growth activities. Small-scale community projects which were implemented by the USG in coca-growing areas between 1990 and 1993 had a discernible impact on participating communities, providing alternatives to illicit coca cultivation and resulting in at least two local voluntary coca eradication agreements. Budget reductions ended these test projects in 1993. Plans to redesign and implement revised project designs in these areas will be in the early stages of implementation in FY 1995. Small-scale community projects will reinforce USG counternarcotics and democracy development goals by providing agricultural assistance, road-building, community development projects and long-term technical assistance to municipalities. These projects will serve as the basis for international financial institution and other donor assistance affecting the illicit coca economy.

Efforts will be focused also on ensuring that the Government of Peru implements comprehensive macroeconomic policy reforms to establish a stable market-oriented system through the provision of technical advice and coordination of the international donor community. Without a complementary effort to initiate structural reforms at the national level, community-level development efforts will fail for lack of a long-term drive to reform the Peruvian market economy.

Counternarcotics law enforcement efforts are based on a mobile-basing concept which allows police and helicopters to conduct operations against major trafficking facilities from a variety of secure locations, using the Ucayali town of Pucallpa as the rear area logistical and maintenance depot.

Major helicopter maintenance and USG support for the Peruvian police base at Santa Lucia in the Huallaga Valley have been terminated due both to budgetary constraints and a shift in trafficking patterns, although Peruvian counternarcotics police continue some activities from there.

The Anti-Drug Directorate (DIRANDO) of the PNP is responsible for counternarcotics law enforcement, including illegal trafficking in essential chemicals. Headquartered in Lima, it has operating units in several key narcotics trafficking areas, a training base at Mazamari, and investigators in major urban areas. The narcotics field support subproject provides essentially all costs for training, equipping, and operating DIRANDO units and personnel, except for salaries, including units which investigate trafficking, financial crimes, chemicals trafficking, and a major violators unit.

The National Police Aviation Division (DIVPA) provides general aviation support for the entire PNP. It provides pilots, aircrews, and support personnel for 10-12 Department of State-owned UH-1H helicopters which support mobile law enforcement actions in the field. The aviation support funds these counternarcotics operations, providing fuel, maintenance, hangaring and warehousing, aircraft rental when needed, and operational support for DIVPA personnel.

In FY 1996, the Narcotics Field Support and Aviation Support projects cover operating and maintenance costs for police mobile basing operations, as well as construction and incidental support (fuel, parts, training) required by the Peruvian Air Force and Navy to carry out their legally mandated counternarcotics missions, including support for police enforcement activities.

The chemicals needed to make cocaine are not produced in quantity in Peru, and have few legitimate uses in the rural coca growing areas where most coca processing takes place. Most of the needed chemicals are diverted after commercial importation, and moved by road to the UHV. The Ministry of Commerce and Industry is responsible for licensing and regulating the importation, sale, and use of these chemicals, while DIRANDO is responsible for investigating diversion or illegal trafficking of controlled chemicals. The **Chemicals Control Project** will provide support to enhance the ability of the Ministry of Commerce and Industry to carry out its duties, and fund training and operational support for other agencies involved in chemicals control.

The Peruvian Customs Service cooperates with DEA, including sharing intelligence. The **Customs Project** is a narcotics interdiction activity to provide limited logistic support for the Customs Service, e.g., vehicles, investigative and communications equipment, training, and operational support.

The **Judicial Reform Project** will support the implementation of an accusatory criminal legal system, with due regard for the rights of the accused, replacing Peru's inquisitorial system, which has been ineffective in providing a fair and efficient system through which to prosecute key narcotics traffickers. The project will include training for prosecutors under the new legal system, implementation of a delay reduction case tracking system for the courts, fiscal management training for justice sector personnel, technical assistance for professional training academies for prosecutors and judges, as well as resources to upgrade the physical security of personnel and courts that handle narcotics cases.

**Drug Awareness and Demand Reduction Project** activities will be enhanced to concentrate on providing the Peruvian public with information about the harmful personal and societal effects of cocaine production and abuse, conducting surveys on drug abuse to identify groups requiring assistance, and supporting educational fora for Peruvian prevention and treatment professionals.

**Program Development and Support** funds will fund salaries, benefits and allowances of U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

**EFFECTIVENESS MEASUREMENT:**

- Immobilization of Peruvian cocaine production and transportation organizations;
- Reforms in the Peruvian justice system;
- Development of viable alternatives to the illegal coca economy, including implementation of comprehensive macroeconomic policy reforms and projects in and outside of coca-growing areas;
- Decreased flow of essential chemicals into and through Peru;
- Increase in the Peruvian population's awareness of the dangers of drug abuse and drug trafficking to Peru's economy and society.

## VENEZUELA

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
.400	.500	.500

## OBJECTIVES:

- Improve Government of Venezuela's institutional capabilities to interdict drug shipments transiting Venezuela, reduce illicit drug production, and conduct effective drug investigations.

## JUSTIFICATION:

An estimated 100 to 200 metric tons of cocaine transit Venezuela annually, primarily concealed in large containers loaded onto commercial and private ocean vessels and aircraft. Narcotics seizures by the Government of Venezuela (GOV) law enforcement agencies declined in 1993. Seizures of cocaine transshipped through Venezuela totaled about 10 metric tons, discovered in shipments of legitimate cargo.

The counternarcotics program in Venezuela will help improve GOV institutional ability to detect and interdict drug and chemical shipments by enhancing enforcement operations at land, air and water ports, and to target outbound containerized shipments.

The **Narcotics Law Enforcement Project** will provide training and commodities to improve GOV drug information-sharing capabilities and facilitate increased interdiction. The National Guard (GN) and Judicial Technical Police (PTJ) will receive such assistance as detection and interdiction training, computers, and radios. It will also support crop control activities. FY 1996 activities will include:

- A narcotics crop control project designed to gather more complete information on the extent of narcotics cultivation in Venezuela and to sustain bilateral eradication efforts;
- The drug analysis facilities project to strengthen the investigative and forensic skills of the PTJ and the GN, which have been assigned greater responsibility for toxicological investigations by the new GOV drug law. This project provides training in forensics and advanced chemical analysis to GN laboratory specialists. Three new laboratory facilities, with upgraded equipment, will be established in outlying regions of Venezuela;
- The national guard detector dog school project will maintain normal operating expenses and complete improvements on the

water supply equipment for this widely-recognized regional training center. With U.S. assistance, the school hosts multiagency conferences for officials with detector dog responsibilities from the Caribbean, Central America, and other Latin American nations; and

- A waterways interdiction project to provide boats, investigative and other equipment, maritime and riverine interdiction training, and operational support to strengthen the Venezuelan Coast Guard and Venezuelan Marines interdiction capability along the Caribbean Coast and extensive river systems. The Maritime interdiction initiative will concentrate on patrolling known eastern Caribbean narcotics trafficking routes; the Riverine initiative will concentrate on monitoring, intercepting, and seizing illicit narcotics and precursor/essential chemical shipments on the Orinoco River System. We will continue developing a cooperative relationship between the Venezuelan Coast Guard, the Marines and GN, and seek to establish mechanisms to share intelligence. Also key to successful GOV waterways interdiction is completion of two Caribbean Basin Radar Network (CBRN) sites and repair of the air defense radar system.

The **Money Laundering Project** will develop the capabilities of the PTJ and GN to investigate and dismantle money laundering operations. Funding will assist the PTJ in the development of a computer database on suspected money launderers and financial transactions. The PTJ, with USG assistance, will also develop an effective multiagency financial crimes task force.

The **Drug Awareness and Demand Reduction Project** will focus on engaging the new Venezuelan administration, which took office in February 1994, on narcotics issues, particularly the need to increase public support for counternarcotics programs. Other initiatives include a comprehensive national drug abuse survey, an epidemiological study, training workshops with local NGOs and sports-based drug prevention training programs with U.S. Major League Baseball.

The **Program Development and Support Project** funds will provide for salaries, benefits and allowances of permanently assigned U.S. personnel in Venezuela, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

#### **EFFECTIVENESS MEASUREMENT:**

- Strengthen Venezuela's waterways operational effectiveness;
- Establish a counternarcotics coordination mechanism in the Government of Venezuela;
- Improve controls on precursor chemicals and money laundering legislation;
- Identify illicit drug cultivation, develop an eradication capability, and eradicate coca and opium poppy; and
- Promote drug awareness in Venezuela's public and private sectors.

## LATIN AMERICA REGIONAL COOPERATION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

## PROGRAM SUMMARY

(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
4.735	4.000	7.000

## OBJECTIVES:

- Adopt and implement strong narcotics control legislation, improve the efficiency and effectiveness of judicial institutions to bring drug offenders to justice, and develop bilateral and multilateral mutual legal assistance cooperation;
- Improve counternarcotics law enforcement in Central America, the Caribbean, and South America by assisting and strengthening narcotics enforcement and interdiction agencies;
- Interdict shipments of drugs and precursor materials, seize assets of drug traffickers, and reduce money laundering;
- Develop government and non-government organizations' institutional and resource bases to control the growth of drug abuse in the region; and
- Eradicate illegal drug cultivation by providing commodities and technical support.

## JUSTIFICATION:

As drug control efforts in several Latin American program countries have become more effective, traffickers have sought new routes in the Caribbean, Central America and southern South America, and they have developed new methods of transportation through major transit points such as Mexico. These areas are of increasing importance for the transshipment of cocaine, and to a lesser extent opium and marijuana production. Governments in most of these countries lack resources, strong infrastructures, and adequately trained personnel to meet the challenges. Many of the countries covered in this account are known heavy laundering centers or are emerging as such.

Latin America regional funds support programs in countries that may not have the infrastructure to support large country programs or where the threat does not warrant large programs but are used increasingly by traffickers and money launderers to finance and sell their illegal products. Regional assistance is used to improve host government capabilities in all aspects of narcotics control, including

infrastructure development of law enforcement and judicial institutions engaged in drug control, and training. To assist in meeting the challenges of attacking the drug problem at the source, equipment and supplies will be provided to help develop programs to detect illicit cultivations for eradication, reduce drug trafficking, destroy narcotics processing and storage facilities, and assist in drug investigations, arrests and prosecution. Additionally, this program will provide public information/awareness materials to educate the public about the dangers of drug consumption and trafficking.

In FY 1996, the program will seek to strengthen these countries' abilities to address more effectively the ever changing conduct of drug producers and traffickers. The contract Regional Telecommunications Adviser will also continue to serve the entire area. Support for Joint Intelligence Coordination Centers (JICC) will continue. Regional Narcotics Affairs Officers in Miami, Barbados, Panama, and Guatemala will help manage multi-country programs in their areas of responsibility.

**Caribbean.** The program will strengthen countries' law enforcement and judicial institutions by providing training and equipment. The program seeks to encourage regional counternarcotics cooperation and continue to support activities to combat narcotics trafficking through the Caribbean islands and waters of the Lesser Antilles, the Guianas, the Dominican Republic, and other countries. The Department of State and U.S. law enforcement agencies actively encourage and support many Caribbean nations that cooperate in joint drug interdiction operations. The program will expand countries' drug investigative capabilities by providing existing Joint Information Coordination Centers (JICCs) with upgraded equipment and advanced training. New JICCs will be established where appropriate. We will provide training to develop local community action partnerships for drug abuse prevention and to improve the effectiveness of drug treatment professionals. The budgets for Jamaica and the Bahamas appear as separate requests.

**Central America.** A full range of activities to assist Belize, Costa Rica, El Salvador, Honduras, and Panama disrupt trafficking and strengthen indigenous law enforcement infrastructures will continue in FY 1996. A small allocation will also support prevention education in Nicaragua. The Guatemala program appears as a separate request.

Support for interdiction operations will be maintained in Central America. In Panama, program activities will assist strengthening police and coast guard capabilities to interdict drug and chemical traffic and reduce money laundering. Eradication programs will continue as needs in the region dictate, particularly building on the 1993 successful coca eradication mission in Panama.

In FY 1993, the Government of Mexico (GOM) assumed responsibility for funding the aviation maintenance contract and other field support activities previously funded by the USG (reaching \$20 million by FY 1992). The GOM decision was very much in keeping with our objective of greater host government counternarcotics independence and self-sufficiency. In response to this fundamental change, traditional

programmatic activities are being phased out. FY 1996 funds will provide training and technical support as requested by, and/or reimbursed by, the GOM during this transition period, as well as to enhance bilateral and multilateral counternarcotics cooperation.

**South America.** Drug trafficking in the Southern Cone countries of South America is increasing alarmingly. Paraguay, Chile, Uruguay, and especially Argentina are used as transit points for cocaine originating in Bolivia. The FY 1996 plan includes continued support to Argentina to strengthen its capacity to disrupt trafficking and investigate money laundering and chemical diversion. In Paraguay and Chile, programs will assist the police to investigate and prosecute traffickers and train those in charge of enforcing money laundering legislation (now pending). In Uruguay, equipment and training will be provided to develop the enforcement capabilities of the new narcotics police force, urge ratification of the Vienna Convention, and legislation of strong money laundering laws.

#### **EFFECTIVENESS MEASUREMENT:**

- Increased arrests and prosecutions of major drug traffickers and money launderers;
- Increased capabilities of regional counternarcotics law enforcement agencies as demonstrated by larger quantities of drugs interdicted;
- Disruption of trafficker networks;
- A decrease in drug abuse and an increase in intolerance of drug trafficking in the region; and
- A decrease in the amount of drugs produced in the region.

## LAOS

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

## PROGRAM SUMMARY

(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
2.000	2.200	2.000

## OBJECTIVES:

- Reduce opium produced to make heroin for international markets;
- Disrupt production, distribution, and trafficking of heroin; and
- Combat opium and heroin abuse in Laos.

## JUSTIFICATION:

While Laos remains a major opium producer, estimated potential opium production has dropped more than 50 percent since U.S. and United Nations alternative development/opium crop reduction programs began in 1989. The Government of Laos (GOL) stresses its commitment to suppressing opium production, reflected in four consecutive years of declining estimated opium production, but economic underdevelopment and the limited rural infrastructure pose serious obstacles to continued progress. The Lao government recently unveiled a comprehensive drug control plan through the year 2000.

The U.S. financed Houaphan Opium Crop Control Project includes infrastructure development, agricultural and health training, and extension services. Road-building to open remote areas to markets is continuing, as is construction of three small dams to irrigate 460 hectares of new rice paddy land, making the two districts nearly self-sufficient. The project also offers modern agricultural techniques to grow and market such alternative crops as soybeans, coffee and livestock, and will help start other income-producing activities such as weaving. Health centers are being expanded to provide better services and treat opium addicts.

The recently created police counternarcotics unit is now housed in its own quarters and equipment is being supplied. It is expected that the initial core unit will be trained and functioning by the end of the year. This initial unit is envisioned as the cadre which will enable expansion of the unit into other areas of the country. However, Laos' mountainous borders with Burma,

Thailand, Vietnam, Cambodia, and China are ideal for smuggling heroin and other contraband, while police and customs officers are poorly paid, trained and equipped. The **Narcotics Law Enforcement Project** will increase Lao capability to fulfill its counternarcotics responsibilities through provision of training, equipment, and supplies. The project will also assist the Lao Customs anti-smuggling unit, established in 1991, to improve its counternarcotics capability.

The FY 1996 **Alternative Crop Development Project** will focus on dam construction, while sustaining agricultural extension, health and community development programs. Completion of the dams are essential to increase paddy lands, which provide an alternative food and income source to opium farmers. FY 1996 funding is necessary to complete the original project after discovery of unexploded ordnance at all three dam sites.

The **Law Enforcement Project** will continue in FY 1996 with procurement of needed equipment and training.

**Program Development and Support** funds will provide salaries, benefits and allowances for U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation. A direct-hire NAS position was established in FY 1993.

#### **EFFECTIVENESS MEASUREMENT:**

- Completion of dam construction for the Houaphan Project; and
- Activation of the police counternarcotics unit, and provision of equipment and training.

## PAKISTAN

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
2.500	2.500	2.500

## OBJECTIVES:

- Upgrade GOP commitment to pass effective anti-narcotics legislation and engage in counternarcotics efforts;
- Eliminate heroin laboratories in Pakistan, expand the poppy cultivation ban, provide alternative development assistance, prosecute or extradite major traffickers; and
- Help build support for action to deal with Pakistan's domestic drug problem.

## JUSTIFICATION:

Pakistan is both a major producer and an important transit country for opiates destined for the international drug market, including approximately one-fifth of the heroin consumed in the United States. Opium cultivation is insufficient to supply domestic demand but neighboring Afghanistan provides Pakistan's heroin labs, operating illegally in the Northwest Frontier Province (NWFP), with enough raw material both to make up this shortfall and to export heroin abroad. The United States seeks to increase high-level Pakistani Government attention to the narcotics problem by pressing for passage of effective anti-narcotics legislation, development of vigorous law enforcement institutions, elimination of corruption and implementation of a coordinated enforcement policy.

The major areas of Pakistani opium cultivation and heroin laboratories are the remote, politically autonomous tribal areas of the NWFP, along the largely unpoliced border with Afghanistan. The Pakistani program has three project elements, which we are seeking to incorporate into a single large project. These project elements support anti-narcotics law enforcement agencies, fund development assistance in connection with the expansion of the ban on cultivation of opium poppy, and support demand reduction activities.

The **Law Enforcement** element aims at strengthening the Pakistani Government's anti-narcotics enforcement institutions, supplementing their resources to permit more vigorous anti-narcotics enforcement efforts. The FY 1996 program will continue to support efforts of the Anti-Narcotics Force through training and operational support, a change from the commodity emphasis in earlier years. This program is also working closely with Pakistani Customs to provide a country-wide Customs Anti-Narcotics strategy.

**Development Assistance** -- mainly road construction and other infrastructure projects -- seeks to open up politically inaccessible tribal areas of the NWFP to facilitate the expansion of the opium poppy ban and the elimination of heroin labs. These roads fulfill several functions: they permit authorities to intervene in force when necessary; they force tribesmen to assume some responsibility for security by raising militia forces to protect the road; and they make alternative crops economically viable by opening growing areas to transportation. The FY 1996 development assistance project is aimed primarily at expansion of government control in the Khyber Agency, where most of Pakistan's heroin labs are located.

**Demand Reduction** aims at increasing public awareness of Pakistan's domestic drug problem and at building support for action to deal with it. The FY 1996 funding request anticipates increased drug demand efforts (both governmental and private sector) as a result of earlier drug awareness campaigns, and that these institutions will benefit from a continued training and awareness events.

Additional support of counternarcotics efforts will be provided through the U.S. contributions to the UNDCP and to the Colombo Plan which will continue to sponsor regional drug treatment seminars and will organize coalitions of drug prevention NGO's in SAARC countries.

**Program Development and Support** funds will provide for salaries benefits and allowances of U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring, and evaluation.

#### **EFFECTIVENESS MEASUREMENT:**

- Extradition of major traffickers; interdiction, arrest and prosecution of major traffickers in Pakistani courts; destruction of heroin manufacturing laboratories; and arrest and prosecution of their operators;
- Expanded enforcement of the opium poppy cultivation ban in the Northwest Frontier Province (NWFP); and
- Improved public awareness of the personal and societal costs of the serious drug problems in Pakistan.

## THAILAND

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
3.000	1.250	1.500

## OBJECTIVES:

- Enhance Thai commitment to counternarcotics efforts;
- Support efforts to target major kingpins, arrest traffickers and provide for improvements to Thai enforcement institutions;
- Reduce domestic planting of opium poppy and marijuana; and
- Increase public and leadership awareness of the domestic impact of illegal drug use and trafficking.

## JUSTIFICATION:

Thailand is the single largest source of heroin. Decades of economic development and an annual eradication campaign have greatly reduced Thai opium production.

Narcotics enforcement efforts in Burma, the main source of Golden Triangle heroin, virtually ended after domestic political turmoil led to the military seizing power in 1988. Although Thailand produces less than two percent of the region's opium, heroin refining near the Thai-Burma border and Thailand's superior transportation and communications infrastructures make it the trafficker's route of choice for heroin destined to the United States.

Thai opium production has decreased from perhaps 150 tons 15 years ago to approximately 40 tons today. The U.S.-funded Thai Army opium eradication program, one of the most cost-effective programs in the world, serves to speed the transition to licit crop cultivation by diminishing the likelihood of a successful opium harvest. The Thai crop control effort also serves as a regional model of what can be done when there is political commitment to counternarcotics programs.

Because of Thailand's rapid economic development and increasing per capita gross domestic product (GDP), its own counternarcotics expenditures have increased substantially over the past ten years. This also changes the nature of the U.S. counternarcotics role in Thailand, and permits budget reductions as Thailand funds more of its own counternarcotics responsibilities.

To implement the heroin strategy, U.S. programs in Thailand support Thai narcotics control activities in three areas: **Narcotics Law Enforcement, Crop Control, and Drug Awareness and Demand Reduction.**

The **Narcotics Law Enforcement Project** will provide carefully targeted equipment and assistance to police and other law enforcement units with counternarcotics functions. A principal interagency counternarcotics effort is assisting the Thai police restructure, consolidate and centralize their counternarcotics functions, previously splintered into several agencies. FY 1996 funds will support the northern Counternarcotics Task Force project, to include a Task Force Center in Bangkok. Support will be closely coordinated with DEA, and based on demonstrated effectiveness in counternarcotics law enforcement. Continued training may also be necessary for officials enforcing the asset forfeiture and conspiracy laws, and to encourage passage of money laundering legislation.

The **Crop Control Project** funds will be reduced to a minimal level in FY 1996, reflecting a reduced budget and increased expectations of Thai responsibility to fund this program. Any remaining funds will be focused on development assistance, drug awareness and demand reduction, and treatment to help hill tribes redirect their income sources and deal with increasing heroin use.

The **Drug Awareness and Demand Reduction Program** will help improve drug abuse prevention efforts, and seek to build public opinion and thereby political will against drug production and trafficking.

**Program Development and Support** funds will provide salaries, benefits and allowances for U.S. and foreign national personnel, short-term TDY assistance, and other general administrative and operating expenses for program planning, design, implementation, monitoring and evaluation.

#### **EFFECTIVENESS MEASUREMENT:**

- Increased RTG responsibility for crop control; and
- Increased RTG efforts to improve institutional capabilities of the police and other law enforcement units.

## TURKEY

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
.400	.400	.400

## OBJECTIVES:

- Upgrade GOT commitment to engage in counternarcotics efforts;
- Interrupt the flow of illicit drugs through Turkey, eliminate heroin laboratories in Turkey, prosecute major traffickers; and
- Help Turkey develop an accurate picture of the dimensions of its domestic drug abuse problem, and strategies (such as a public awareness campaign) to address it.

## JUSTIFICATION:

Turkey -- forming a natural land bridge for Southwest Asian heroin destined for Europe and America -- faces a rising tide of narcotics trafficking and domestic drug abuse. In a telling sign of Turkey's importance in the trafficking trade, almost three-quarters of all drug seizures and arrests in Europe involve Turkish traffickers and narcotics coming through Turkey. Heroin laboratories have begun to appear in areas surrounding Istanbul and in more isolated parts of the country. The Turkish government is keenly aware of its role as a narcotics gateway to Europe, and is working aggressively to diminish both the heroin passing through and that which is processed in country. The Turkish government has made particularly effective use of equipment provided to it in the past.

U.S. assistance focuses on enhancing Turkey's investigation and interdiction efforts with training and equipment. More broadly, the U.S. continues to urge Turkey to ratify the 1988 UN Convention, with accompanying laws on money laundering, asset seizure, and controlled transfer. The Turkish National Police and the Customs are the prime narcotics enforcement agencies. The Police often lack even the most basic equipment needed for drug interdiction. Equipment provided to date only begins to meet demands in the largest cities. Equipment provided thus far has resulted in some of the largest seizures of heroin recorded anywhere. Turkish Customs officials need both training and equipment to strengthen Turkey's porous borders with Syria, Iran and Georgia. The first comprehensive survey of Turkey's domestic drug abuse problem will be funded in this program as well as a public awareness program aimed at schools, newspapers, TV and radio.

In FY 1996 the **Turkish National Police Project** will continue its efforts to provide intelligence gathering equipment to law enforcement personnel throughout Turkey. The Turkish Government's ultimate objective is to establish separate and specially-dedicated narcotics units in each of Turkey's more than 70 provincial capitals. Equipment requests will expand the number of Turkish units with access intelligence intercept equipment.

In FY 1996 the **Turkish Customs** will continue their multi-year program to improve the quality of their force through training by DEA and U.S. Customs. This project will provide necessary equipment and facilities for tightened interdiction activities at customs gates.

#### **EFFECTIVENESS MEASUREMENT:**

- Increase in the quantity of heroin seized by both Turkish National Police and Customs officials as a result of actionable intelligence; and
- Increase in the awareness of drug abuse as a domestic problem in Turkey as well as the societal costs of narcotics trafficking.

## ASIA/AFRICA/EUROPE REGIONAL COOPERATION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
.900	1.450	1.500

## OBJECTIVES:

- The Asia/Africa/Europe Regional Program helps cooperating countries in the region address international narcotics control issues and reduce narcotics production and trafficking.

## JUSTIFICATION:

The program is designed to help governments begin establishing counternarcotics law enforcement units, obtain training or equipment, and conduct demand reduction/public awareness campaigns. The intent is not to establish permanent programs, but to provide seed money for countries to help themselves and to complement United Nations International Drug Control Program (UNDCP) and other donor programs.

Illicit drug production in Southeast and Southwest Asia has soared as Burma and Afghanistan have increased opium poppy cultivation. Trafficking patterns continue to expand exponentially through South and East Asia and into the Middle East and Africa as local drug trafficking organizations prosper and develop into worldwide networks. Weak governments with poorly developed and financed law enforcement infrastructures provide fertile environments in which trafficking organizations have flourished. The transnational character of illicit narcotics trafficking requires a regional approach to multilateral and bilateral programs.

**FY 1996 Program.** Further evidence of growing heroin shipments to, and addiction in the United States demands augmented resources applied with maximum flexibility over half the globe. This regional account complements U.S. drug control funding through international organizations such as UNDCP.

**Afghanistan.** Narcotics control is one of our highest national interests with Afghanistan. FY 1996 funds will build upon small cross-border crop control and agricultural outreach projects designed to encourage farmers to substitute food and cash crops for opium poppy. At the same time, law enforcement assistance will be provided when national law enforcement forces are established and devoted to narcotics control. All assistance will continue to be coordinated with the United Nations and other donors.

**Other Countries.** FY 1996 funds will provide equipment to law enforcement organizations in the region, demand reduction materials and other counternarcotics programs in Africa, Asian and European countries.

**U.S. Personnel.** This account supports an European Liaison Office in Brussels, which works with governments of the developed countries in Europe, as well as Japan and Australia, to increase their financial support for counternarcotics efforts and involvement in multilateral drug control programs. In FY 1995, the Department of State will open a new Narcotics Affairs Section (NAS) in Moscow.

**EFFECTIVENESS MEASUREMENT:**

- Increased institutional capacities in key counternarcotics countries in the region; and
- Increased public drug awareness and decreased market demand for drugs in host countries.

## NIS/EAST EUROPE REGIONAL COOPERATION

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
-	-	4.000

## OBJECTIVES:

- The Newly Independent (NIS)/East Europe (EE) regional program assists cooperating countries in addressing international narcotics control issues and reducing narcotics production and trafficking. The program is designed to bring about enhanced cooperation by regional governments with U.S. counternarcotics efforts.

## JUSTIFICATION:

This new regional program will support cooperating countries in developing and implementing narcotics control programs.

The increased incidence of NIS/EE narcotics-related organized crime elements attempting to extend their operations to the U.S. poses a direct threat to our national security. The corrupting presence of thriving drug trafficking organizations in these countries also constitutes a hindrance to the establishment of democratic institutions, and lessens the potential for stable economic growth. This new regional account will provide a much broader capability to counter the debilitating influence of the narcotics trade in this critically important area of the world.

Counternarcotics assistance already provided to the region in Fiscal Years 1993 and 1994, includes:

- Over \$1 million of our UNDCP contribution earmarked for projects in NIS/EE;
- \$700,000 in bilateral enforcement, customs, and demand reduction training to Eastern Europe and the NIS; and
- Travel of an interagency team to Central Asia in May 1993 to assess the drug problem and evaluate the capabilities of local authorities.

Bilateral training has focussed on promoting a regional response. In light of the serious drug-related problems facing the NIS, most, if not all, of the governments in the region have a critical need for additional individualized advice and support. Funds from this new regional account will be used principally to provide bilateral commodity and technical assistance, which will bolster initiatives already underway from counternarcotics training and international organization accounts.

Law enforcement organizations in the region are working with the U.S. to target international drug operations, but lack basic equipment and expertise to track and prosecute cases. In Bulgaria, for instance, the Central Service for Combatting Organized Crime and Narcotics is developing a national data base to improve investigation of drug cases throughout Bulgaria. Counternarcotics funds were used to provide the Central Service with personal computers and other office equipment to develop this data base and improve communication between the Central Service offices and DEA Athens. Similar projects will be developed in most of the countries of the region.

Many regional police organizations have been successful in making numerous small-scale drug seizures and some larger ones, but capabilities have often been limited by a lack of basic equipment. Items such as handcuffs, radios, forensic equipment and drug testing kits are a top priority. Funds from the regional account will be used to address these procurement issues as well.

Many governments have requested assistance to bring their national legislation into line with the requirements of the 1988 UN Vienna Convention, and others have solicited specific advice on drafting legislation on money laundering, anti-racketeering, anti-organized crime, asset forfeiture and seizure, and other related areas. FY 1996 funds will finance the travel, per diem, interpretation, translation and other administrative costs associated with providing such assistance. U.S. experts will work with their counterparts involved in drafting legislation, and offer seminars geared for policy-level people from a range of interested ministries and other bodies. The focus will be on legislation and sensitizing policy makers. U.S. experts will also be utilized to assist governments in elaborating national drug control strategies, and in articulating a systematic approach to meeting training and equipment needs.

The new Narcotics Affairs Section (NAS) in Moscow, scheduled to be opened in FY 1995, will be funded by this regional account.

#### **EFFECTIVENESS MEASUREMENT:**

- Better exchange of information with U.S. law enforcement agencies, resulting in enhanced cooperation on operations and investigations;
- Increased cooperating country counternarcotics institutional capacities; and
- Increased public drug awareness and decreased market demand for drugs.

## INTERREGIONAL AVIATION

### PROGRAM DESCRIPTION AND BUDGET REQUEST:

#### PROGRAM SUMMARY (Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
19.000	24.000	21.000

#### OBJECTIVES:

- Aerially eradicate drug crops with pesticides and/or transport workers for manual destruction of drug crops;
- Support institution building of cooperating host governments' aviation programs;
- Destroy cocaine and heroin processing laboratories and interdict drug trafficking activities by aerial transport of host government law enforcement agencies;
- Conduct aerial reconnaissance to locate drug drops and production facilities and verify eradication program results.

#### JUSTIFICATION:

The interregional aviation program supports governments in South and Central America and the Caribbean to eradicate drug crops, interdict drug trafficking activities, and to develop their own institutional counternarcotics aviation capabilities.

The Administration's strategy shifts counterdrug program emphasis from transit trafficking countries to crop control efforts and source countries. Since nearly all drugs are produced in remote, underdeveloped, inaccessible regions where both infrastructure and law enforcement are minimal, aircraft are required to eradicate drug crops and to move personnel and equipment. In response to host government requests for assistance, the interregional aviation program provides eradication aircraft and aviation support services.

• **Accomplishments.** Aerial eradication programs are underway now in most South American drug producing countries. U.S.-funded institution-building assistance is making important progress throughout Latin America, leading to enhanced local capabilities and reduced American contractor staffing. In Bolivia, all missions are flown by Bolivian Air Force (BAF) pilots, including those requiring night vision goggles, and an increasing share of maintenance and logistics support is performed by the BAF. In Peru, all missions are flown by Peruvian National Police (PNP) pilots and the PNP is pursuing an aggressive maintenance training program. The Colombian

National Police (CNP) is utilizing U.S. assistance in pursuing aggressive two-pronged efforts against opium and coca cultivation and cocaine smuggling.

Interregional aviation activities play a vital role in implementing the President's decision to shift the emphasis of U.S.-funded international counternarcotics interdiction activities from the drug transit zone to drug producing countries. Under a new mobile basing strategy in Peru, U.S.-owned helicopters transport PNP personnel and U.S. law enforcement advisors on counternarcotics operations throughout eastern Peru. In Bolivia, U.S.-owned helicopters enable the Bolivian government to project authority over vast areas where drug traffickers previously operated with impunity. While some support for interdiction projects in Central American drug transit countries is being reduced; we are retaining the capability to intercept drug smuggling aircraft, day or night.

In FY 1995, the interregional aviation program will continue to: respond to aerial eradication requests from Latin American countries; assist eradication programs in Guatemala, Belize, Panama, Colombia, and Venezuela; and support for helicopter operations in Colombia, Peru, and Bolivia.

**FY 1996 Program.** Interregional aviation activities will continue to focus on key programs in Colombia, Bolivia, Peru, and Guatemala, with temporary deployments of aircraft and personnel elsewhere in the Andean region and Central America. Progress will continue in reaching self-sufficiency status for our aircraft maintenance and training programs in Bolivia and Peru. Further emphasis will be made on aerial eradication of drug crops in South American countries.

**Operations Support** includes funding for the administrative costs associated with our Inter-Service Support Agreement (ISSA) with Patrick Air Force Base which provides hangar space, utilities, refuse collection, etc. and funding support for DOD officers assigned as Interregional aviation staff and other direct-hire personnel.

#### **EFFECTIVENESS MEASUREMENT:**

- Eradication of drug crops with aeriially-applied pesticides;
- Enhanced host governments' institutional capabilities to undertake counternarcotics air operations safely and effectively;
- Continued transport personnel, conduct resupply activities, and provide other logistics support for field activities;
- Aerial reconnaissance missions to pinpoint drug production areas and facilities and verification of eradication.

## INTERNATIONAL ORGANIZATIONS

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
5.000	6.500	11.500

## OBJECTIVES:

- Maintain strategic leadership in guiding the international drug control effort; and
- Involve UNDCP and other international organizations to plan and execute programs which expand multilateral cooperation.

## JUSTIFICATION:

This program provides the U.S. contributions to counternarcotics programs of international organizations, including the United Nations International Drug Control Program (UNDCP), the Organization of American States (OAS) Inter-American Drug Abuse Control Commission (CICAD), the Colombo Plan, and the World Health Organization Program on Substance Abuse (WHO/PSA).

U.S. contributions to UNDCP have had significant impact on the operations and expansion of UN counternarcotics programs and policy. Furthermore, the level of U.S. contributions has also led to increased commitment from European donors, whose primary vehicle for international drug control efforts continues to be the UN. Recent U.S. contributions to UNDCP have led to:

- Establishing the first sub-regional projects between Thailand-Burma and China-Burma to eliminate opium poppy and increase interdiction efforts;
- Reducing opium poppy in the UNDCP project area of Dir, Pakistan, and developing a project to reach more remote and larger growing areas in the region;
- Expanding UNDCP activities to provide chemical control and money laundering investigative training;
- A regional training project in the Caribbean for prosecutors and judges working on narcotics-related cases;
- Coordinating bilateral and multilateral assistance to Eastern Europe and the Newly Independent States (NIS), and providing advice and legal expertise to the NIS to implement the 1988 UN Convention; and

- Supporting the implementation of the SWAP by convening an international meeting in Islamabad, Pakistan, that included multilateral and bilateral donors. This meeting resulted in agreement on integrating a drug dimension in the work of the UN agencies involved in the rehabilitation of Afghanistan.

**OAS/CICAD.** U.S. pledges to OAS/CICAD have produced concrete results as well as stimulating increased anti-drug aid from other donors. Results include:

- Model regulations on the control of precursor and essential chemicals and control of money laundering;
- Assisting governments and non-governmental organizations to develop public awareness/drug abuse prevention campaigns and provide demand reduction training and community mobilization;
- A legal development program in Central America to assist countries to improve their legal infrastructures and to promote harmonization of drug laws within that region; and
- Networking of organizations dedicated to assisting street children in the Andean countries and introducing drug abuse prevention activities to their programs. Models will be developed and shared with other regions.

**FY 1996 Program.** Funds will support expanded multilateral drug control objectives:

**UNDCP.** U.S. financial contributions will enhance UNDCP ability to:

- Develop a demand reduction strategy and expand demand reduction activity.
- Implement projects in key heroin-producing areas where the U.S. has limited access.
  - Subregional projects in Southeast Asia in Burma, China, Thailand, and Laos, and possibly in new areas including Cambodia and Vietnam.
  - The political changes in Afghanistan have prompted projects that target poppy growing and demand reduction.
  - In the NIS, UNDCP is designing projects to strengthen institutions that can target the drug trade. A UNDCP regional office based in Tashkent, Uzbekistan, will support these efforts.
  - UNDCP has begun to establish contacts in Lebanon and has planned a project that targets poppy growing and heroin production.
  - In Pakistan, UNDCP will need additional funds to continue projects that target the largest and most remote poppy growing areas of the Dir region.

- Provide assistance to support strengthening host government institutions involved in the investigation, prosecution, and confinement of major drug traffickers.
- Support implementation of the UN drug conventions, such as providing legal advice, training for money laundering investigations, assistance for implementing chemical control regimes, and establishing a maritime working group to help increase maritime interdiction activities.

**OAS/CICAD** is working on a broad range of projects, including:

- Further action on control of precursor chemicals and money laundering;
- A drug abuse prevention program for Street Children in the Andes;
- Expanding the Central American Legal Development project and initiating a Judicial Development project for the Andean region;
- Developing a communications strategy, demand reduction and public awareness programs, and expanding treatment training;
- Coordinating international law enforcement training;
- Establishing demand reduction projects in the Caribbean and establishing a regional training center with UNDCP in Argentina;
- Holding arms trafficking workshops to enhance international cooperation in stopping the illegal movements of weapons in the hemisphere;
- An initiative to enhance the central drug coordinating bodies in the region; and
- Establishing an Experts Group on Alternative Development.

**COLOMBO PLAN.** The U.S. has traditionally provided funding to the Colombo Plan, the only regional organization responsible for both SAARC and ASEAN countries.

- As a result of the Colombo Plan-sponsored regional drug treatment training sessions in Southwest and Southeast Asia, Pakistan, India, Nepal, and Bangladesh have developed treatment programs in community and prison settings. Similar training sessions in Southeast Asia are the foundation for treatment programs in China, Malaysia, and Thailand.
- The Colombo Plan recently organized a coalition of drug prevention NGOs in Southeast Asia.
- FY 1996 funds will be used to continue regional treatment seminars in Southeast and Southwest Asia and to organize coalitions of NGOs in SAARC countries.

**EFFECTIVENESS MEASUREMENT:**

- Increase institutional infrastructure of cooperating countries to reduce the production and trafficking of drugs;
- Ratification of the 1988 UN Convention;
- Provision of law enforcement and demand reduction training, encourage maritime interdiction cooperation, and pursue control of precursor chemicals and money laundering;
- Expansion of UNDCP (and OAS) chemical control assistance activities; and
- Progress on implementation of the Global Program of Action and the System Wide Action Plan (SWAP) to make drug control an integral part of UN programs.

**NARCOTICS LAW ENFORCEMENT TRAINING,  
DRUG AWARENESS AND DEMAND REDUCTION**

**PROGRAM DESCRIPTION AND BUDGET REQUEST:**

**PROGRAM SUMMARY**  
(Dollars in Millions)

<b>ACTUAL FY 1994</b>	<b>ESTIMATED FY 1995</b>	<b>REQUEST FY 1996</b>
8.000	7.000	11.500

**OBJECTIVES:**

**Narcotics Law Enforcement Training:**

- Contribute to the basic infrastructure for carrying out counternarcotics law enforcement activities in cooperating countries;
- Improve technical skills of drug law enforcement personnel in cooperating countries; and
- Increase cooperation between U.S. and foreign law enforcement officials.

**Drug Awareness and Demand Reduction:**

- Strengthen the ability of host nations to conduct more effective demand reduction efforts on their own;
- Encourage drug producing and transit countries to invest resources in drug awareness, demand reduction, and training to build public support and political will for implementing counternarcotics programs; and
- Improve coordination of and cooperation in international drug awareness and demand reduction issues involving the U.S., donor countries, and international organizations.

**JUSTIFICATION:**

This program category includes two discrete functional activities. Law Enforcement Training is designed to assist cooperating countries in creating effective national organizations for investigating drug trafficking and interdicting illegal narcotics. Drug Awareness and Demand Reduction seeks to reduce the worldwide demand for illicit drugs through stimulating foreign governments and institutions to give increased attention to the negative effects of drug abuse upon societies.

### Law Enforcement Training:

International counternarcotics law enforcement training is managed and funded by the Department of State, and implemented by DEA, the U.S. Customs Service, and the U.S. Coast Guard.

Since 1971, USG agencies have trained more than 55,700 foreign narcotics law enforcement officers with approximately \$99.5 million. Training offered in the U.S. is tailored to senior policy and management-level officials and programs offered overseas are designed for operational personnel.

**Accomplishments.** FY 1994 narcotics law enforcement training promoted counternarcotics institutional development in cooperating nations. Training, recognized as a key element in developing political will to take action on narcotics problems, has contributed to successful interdiction campaigns, investigations, and development of infrastructure for self-training of enforcement officers. Basic instruction programs are being provided only in countries having limited experience with anti-narcotics activities. Most of the training scheduled is in such areas as executive and management development, asset forfeiture and financial investigations, use of special enforcement teams, counternarcotics security measures, and instruction techniques. Institution-building activities are key elements of the programs offered in FY 1994:

- DEA created a new one-week course designed to bring together top career drug law enforcement officials in different geographic regions, to discuss the latest trends in management of drug enforcement programs. DEA initiated several projects to provide intensive assistance to national drug enforcement units, most notably in Mexico, where program costs are being underwritten entirely by the Government of Mexico.
- U.S. Customs developed and started a course on internal controls and anti-corruption issues. The Customs training is heavily oriented toward developing local institutions.
- The U.S. Coast Guard broadened its involvement in providing assistance on port security, and scheduled a number of programs dealing with instruction techniques and management of interdiction programs.

**FY 1996 Program.** U.S.-funded training will continue to support host governments' ability to eliminate drug production and trafficking, particularly in areas being used as production and transit points for drugs reaching the U.S.

Law enforcement training will focus on the emerging problem of heroin abuse and trafficking. Programming has already taken place for countries involved in opium production and trafficking where USG access has improved recently (e.g., Central Asia, Cambodia and Vietnam), and efforts will continue to expand programs which target the heroin problem. Another area of focus will be countries of the former Soviet Union. During the last two fiscal years, a limited amount of such counternarcotics law enforcement training has been made available, but the region still has pressing needs for assistance which have not been met.

The increase in law enforcement training for FY 1996 goes beyond the traditional areas of basic investigations and interdiction to create integrated systems for narcotics law enforcement in such areas as money laundering, chemical controls, and judicial programs.

#### **Drug Awareness and Demand Reduction:**

**Accomplishments.** Because of U.S.-funded training and technical assistance, host governments have been able to engage their own national institutions, communities and resources to reduce the demand for illicit drugs. The U.S. has encouraged donor countries and international organizations to provide support to international demand reduction programs.

Significant demand reduction accomplishments include the following:

- Countries in Latin America and South Asia developed and staffed their own drug treatment/prevention programs.
- Countries implemented their own national level drug awareness campaigns in the Caribbean and Central America, and conducted their own national level epidemiological surveys in South America.
- Countries in South America and Asia developed regional training centers for demand reduction.
- The European Community, UNDCP, OAS, PAHO, Colombo Plan, and host governments co-sponsored with the U.S. regional training events in Latin America and South Asia, and the development of specialized drug prevention projects for high-risk youth in Latin America.

**FY 1996 Program.** U.S.-funded training will continue to strengthen host nation counternarcotics institutions so they can conduct more effective demand reduction and public awareness programs on their own. The program will give particular attention to cocaine producing and transit countries in Latin America and address the emerging heroin threat from South Asia. Another area of focus will be in countries of Eastern Europe and the former Soviet Union. The program will also increase collaborative multilateral projects with other donor countries and international organizations as reflected in the Administration's new National Drug Control Strategy.

The increase in training and technical assistance in FY 1996 goes beyond the traditional emphasis on treatment, prevention, education, and public awareness. While training will be increased in these four areas, the program will expand its focus to include the development of national, regional, and international coalitions of public/private sector organizations to strengthen international cooperation and actions against the drug trade.

The public awareness program will enhance the ability of host countries to build public support and strengthen the political will for implementing counternarcotics programs. Training will focus on the development of national-level drug awareness campaigns that demonstrate connections between the drug trade and other concerns such as economic growth, democracy, and the environment. Technical assistance will focus on helping host governments conduct sustained drug awareness campaigns by developing linkages between the corporate sector and the mass media. The public awareness program will also help develop regional and international coalitions of non-government organizations (NGOs) to mobilize international opinion against the drug trade and encourage governments to develop and implement strong counternarcotics policies and programs.

The demand reduction program will work at the policy and grassroots levels to build a public/private base to sustain pressure against the drug trade. At the policy level, the program will focus assistance on building national-level counternarcotics institutions with the capacity to develop comprehensive demand reduction policies, programs, and strategies. At the grassroots level, the program will help establish and sustain community partnerships among businesses, schools, religious groups, law enforcement, and the media. A goal of strong community-based partnerships is to establish demand reduction programs which address drug-related crime and violence and support national policies.

#### **EFFECTIVENESS MEASUREMENT:**

##### **Law Enforcement Training:**

- Appropriate foreign personnel receive professional training and are subsequently utilized to carry out counternarcotics activities;
- Over time, host nations become less dependent on U.S. assistance, and are able to deliver a wide range of anti-narcotics training on their own; and
- Training results in closer cooperation with U.S. enforcement agencies, leading to enforcement actions which are disruptive to the illicit drug trade.

##### **Drug Awareness and Demand Reduction:**

- Number of community partnerships and coalitions established;
- Number of treatment and prevention programs established;
- Number of public awareness campaigns initiated;
- Number of epidemiology/drug consumption surveys initiated; and
- Collaborative projects with other donor countries and international organizations.

<b>ACTUAL FY 1994</b>	<b>ESTIMATED FY 1995</b>	<b>REQUEST FY 1996</b>
6.000	6.300	6.500

**OBJECTIVES:**

- Develop and manage narcotics control activities of the Department of State, coordinates with other U.S. Government agencies, and provides program, financial, procurement, administrative guidance and assistance for the programs world-wide.

**JUSTIFICATION:**

Program development and support (PD&S) funds provide program-wide policy, technical, and administrative support for the Department of State, Bureau of International Narcotics and Law Enforcement Affairs (INL). PD&S funds are managed by Washington-based personnel for program planning, design and evaluation, special studies, and short-term technical assistance.

The Department of State is responsible for developing plans and a broad range of initiatives to achieve international counternarcotics foreign policy objectives. The Assistant Secretary for INL provides policy direction and interagency coordination to implement the President's National Drug Control Strategy. The INL bureau maintains a cadre of program and technical experts to meet overseas and domestic requirements and support field needs.

The PD&S budget for FY 1996 will provide salaries and expenses for 69 full-time employees, reimbursable administrative services from other State Department bureaus, and reimbursable support from other agencies. Seven other direct-hire employees and two reimbursable are assigned to support the interregional aviation program.

The Assistant Secretary for INL is responsible for an increasingly complex counternarcotics program. Washington headquarters staff activities include: guiding, evaluating, and backstopping programs overseas; conducting periodic visits to embassy narcotics affairs sections to review, analyze, and make recommendations on programs; developing or sponsoring management control seminars for overseas staff; developing training programs for new personnel; coordinating liaison functions with other agencies and governments; and other program management functions. PD&S funds also support short-term evaluations, special public affairs materials, and administrative support for the INL bureau.

Headquarters staff provided administrative support to personnel working in international criminal justice functions of the INL Bureau. Salaries and expenses for the Office of International Criminal Justice (ICJ) is supported by the Department's Salary and Expense (S&E) account.

The increase in the FY 1996 PD&S budget corresponds to funding 123 positions, the annual government-wide cost of living adjustment approved by Congress, justified promotions and in-grade step increases, employee transfer costs, and inflation.

**PROGRAM DEVELOPMENT AND SUPPORT**  
**INL BUDGET**  
**(\$000)**

	FY 1994	FY 1995	FY 1996

Administrative services	325	375	400
Computer equipment upgrading	25	100	100
Special studies and evaluations	75	150	200
<b>TOTAL</b>	<b>6,000</b>	<b>6,300</b>	<b>6,500</b>

**FY 1996  
DIRECT HIRE STAFFING**

**FY 1996 Staffing.** The programs of the Bureau of International Narcotics and Law Enforcement Affairs (INL) will be administered from Washington by the Assistant Secretary, whose salary is paid by the Department of State's Salaries and Expenses appropriation, and a staff of 78 domestic employees, six reimbursable support personnel assigned to other bureaus, and three reimbursable support positions from other agencies.

A total of 26 direct-hire American field positions and 18 direct-hire foreign national positions are financed from INL country program funds to implement the Bureau's narcotics efforts overseas.

Excluding the Assistant Secretary position and 6 International Criminal Justice positions funded by the Department of State Salary and Expenses account, INL funds 103 full-time American direct-hire positions and 18 foreign national positions to manage its narcotics programs, distributed as follows:

		American -----	Local -----	Total -----

1/ These amounts do not include 6 personnel assigned to the Office of Criminal Justice and funded from the Department of State Salary and Expense account.

## INTERNATIONAL CRIMINAL JUSTICE

## PROGRAM DESCRIPTION AND BUDGET REQUEST:

PROGRAM SUMMARY  
(Dollars in Millions)

ACTUAL FY 1994	ESTIMATED FY 1995	REQUEST FY 1996
-	25.165	12.000

## OBJECTIVES:

- To combat the growing threat to our national security posed by international organized crime;
- To help emerging democracies strengthen their national judicial and law enforcement institutions;
- To provide training and technical assistance to foreign civilian law enforcement agencies as an element of peace-keeping operations; and
- To strengthen efforts by the United Nations and other international organizations to assist member states in combating international criminal activity.

## JUSTIFICATION:

The Office of International Criminal Justice (ICJ) was mandated by the Secretary of State to fund, coordinate and provide policy guidance for international crime matters. This includes law enforcement training assistance and procurement of equipment for those countries in which international criminal activity arises.

**FY 1996 Program.** The budget request reflects the decision to consolidate management of law enforcement and police training programs under INL. INL/ICJ will use the International Criminal Investigative Assistance Program (ICITAP) and other organizations to provide training programs and technical assistance to the New Independent States, Russia, Eastern Europe, Latin America, Africa, and East Asia.

**NIS, Russia, Eastern Europe**

Russia and the NIS. ICJ will fund training programs to strengthen the capacity of the governments of Russia and the other NIS states to combat the activities of organized crime, including financial crimes and illegal trafficking. ICJ will fund the second year of training and technical assistance programs in Russia and the NIS carried out by the FBI, Secret Service, Customs, IRS and other U.S. federal law enforcement agencies. The focus of assistance will be organized crime, financial crimes, nuclear smuggling and drug trafficking.

Eastern Europe. ICJ also would fund the second year of law enforcement training and technical assistance programs in Eastern Europe. ICJ will continue the advanced technical assistance programs begun in Poland, Czech Republic, and Hungary. Training in investigations of organized crime and financial crimes will begin in the Baltics and Slovakia.

**Latin America**

Law Enforcement Training. ICJ will support civilian law enforcement training programs in the Latin American region.

Stolen Cars. ICJ will fund the second phase of the program to negotiate bilateral agreements with regional governments to provide standard procedures for the recovery and return from Central America of stolen U.S. vehicles and to provide training (ICITAP) for law enforcement agencies to reduce the several \$100 million yearly loss in car-theft from the United States. This program is strongly supported by the U.S. insurance industry.

**Africa and East Asia**

Africa. Law enforcement training and technical assistance in newly-emerging democracies will promote respect for human rights. ICJ also will provide technical assistance to law enforcement agencies in South Africa responsible for preventing illegal trafficking in nuclear materials and weapons.

East Asia. ICJ will provide law enforcement training to prevent money laundering and to combat organized crime groups involved in alien smuggling.

**Multilateral Organizations/Other**

ICITAP. ICITAP law enforcement and forensics training will be provided for countries in transition from civil strife or military rule to democratic rule (e.g. Haiti, Rwanda, Bosnia, and West Bank/Gaza).

Multilateral Organizations and Initiatives. Funding for the UN's Crime Prevention and Criminal Justice Branch and other multilateral organizations will be provided to undertake training and technical assistance programs.

Financial Action Task Force (FATF). Contributions to key research activities and meetings of the FATF not otherwise funded by the U.S. government, international organizations, or operational expenses of the office will aid in addressing money-laundering crimes.

**EFFECTIVENESS MEASUREMENT:**

- Formulation of policies and coordination of U.S efforts to combat international organized crime -- international financial and economic crimes, particularly money-laundering, and international illegal trafficking, particularly alien smuggling;
- Coordination of law enforcement training programs and Rule of Law/Administration of Justice program in order to strengthen the ability of emerging democracies to deal with the challenges of organized crime groups;
- Implementation of law enforcement training programs, particularly in the NIS, Eastern Europe, East Asia, and Latin America, to eliminate organized criminal groups, illegal trafficking, and financial and economic crimes; and
- Development of assistance programs to improve the law enforcement capability of member states of the United Nations Commission on Crime Prevention and Criminal Justice and the increased effectiveness of that body.

**INTERNATIONAL CRIMINAL JUSTICE**  
**FY 1996 BUDGET**  
(\$000)

	FY 1995	FY 1996
	-----	-----
<b>Criminal Justice Programs</b>	1/	2/
NIS/Russia/E. Eur (AID/Freedom Support, SEED Act and ESF) (USLETC Budapest)	19,665	--
Crime Initiatives: Money Laundering, Financial Crime etc.	1,200	2,500
Alien Smuggling, Training, Technical and Operations Support	1,000	3,000
U.S. Stolen Cars Initiatives and Technical Assistance	1,000	2,000
Anti-Contraband Initiative	500	3,000
Program Development Support	300	1,500
NIS Participant Support (Held by USAID Training Office)	1,500	--
<b>TOTAL</b>	1/ <b>25,165</b>	2/ <b>12,000</b>

1 In FY 1995, a total of \$23.665 mil was transferred to INL for implementation of ICJ programs \$13.665 FSA, \$5 mil SEED and \$5 mil ESF. \$1.5 mil was held by USAID for foreign participant support cost.

2 In FY 1996, \$12 mil reflected for ICJ in the INL budget will be included in the FY 1996 ESF budget request. Additional FSA and SEED ACT funding for ICJ programs will be included in the appropriate budget requests.

# PEACE CORPS

March 1, 1995

The Honorable Sonny Callahan  
 Chairman, Subcommittee on Foreign Operations  
 Committee on Appropriations  
 House of Representatives  
 Washington, D.C. 20515

Dear Mr. Chairman:

I am pleased to provide you with Peace Corps' FY 1996 Congressional Budget Presentation.

The Administration's budget request for Peace Corps for the coming fiscal year is \$234 million. These funds will provide direct and indirect support for approximately 7,100 American Volunteers serving in 94 countries. In this era of budgetary constraints, when every government agency is being asked to reduce the costs of its operations and increase its efficiency, I am proud to report that Peace Corps is meeting this important challenge while remaining true to our central mission: sending committed Volunteers to do the hard work of development at the grassroots level in needy communities around the world.

Over the last year, Peace Corps has undertaken a series of important steps that have reduced the cost of recruiting, training and placing Volunteers overseas. By the end of FY 1995, we will send more Volunteers into the field at roughly the same budget level as last year. In addition, Peace Corps also plans to close its operations in four countries by the end of this fiscal year.

Even as we take these fiscally responsible steps, Peace Corps is maintaining the high quality of our programs and meeting the new challenges of the 1990s. Volunteers around the world are still teaching tens of thousands of students, conducting child immunization and pre-natal health care programs, and introducing modern farming techniques in poor rural communities. But Volunteers are also teaching small business skills to entrepreneurs in Eastern and Central Europe and the new republics of the former Soviet Union. They are working with municipal governments and non-governmental organizations to develop environmental restoration and protection plans. Perhaps most importantly, Volunteers are helping individuals in every region take more control over, and responsibility for, their own development.

Just as the developing world benefits from Peace Corps programs, so does America. When Volunteers return home from their two-year tours overseas, they bring back a wealth of experience about other countries and cultures that strengthens America's ability to compete in the international economy. Many Volunteers, after serving in the Peace Corps, continue their work in education, health, and economic development, directly benefiting communities across the United States.

Because Peace Corps has a long tradition as a government agency that works both at home and abroad, it has enjoyed strong bipartisan support in Congress and among the American people. I look forward to working with you to continue this tradition.

Sincerely,

Carol Bellamy  
 Director

1990 K Street, N.W.  
 Washington, D.C. 20526

Printed on Recycled Paper

**Appropriations Language**

For expenses necessary to carry out the provisions of the Peace Corps Act (75 Stat. 612), \$234,000,000 including the purchase of not to exceed five passenger motor vehicles for administrative purposes for use outside of the United States: Provided, That none of the funds appropriated under this heading shall be used to pay for abortions: Provided further, That funds appropriated under this heading shall remain available until September 30, 1997.

Peace Corps' FY 1996 budget request is \$234 million. This is an increase of 1% above the Agency's FY 1995 budget, which totaled \$231.3 million (\$219.7 in direct appropriations and \$11.6 million in funds transferred to Peace Corps from the New Independent States account).

In response to continuing budget constraints, Peace Corps has implemented a number of operational changes to improve the cost-effectiveness of its operations so that funds could be redirected to support the maximum number of Volunteers. During FY 1995, Peace Corps consolidated recruiting efforts and closed three regional recruiting offices. The country program in Argentina was also closed. These actions, in addition to other administrative improvements, have enabled Peace Corps to decrease the annual cost of supporting a Volunteer by some \$3,000 without compromising the quality of volunteer programs or support. As a result, despite a continuing real decline in budgetary resources, Peace Corps will support approximately 7,100 Volunteers and trainees by the end of FY 1995 — a twenty year high.

In planning for the future, Peace Corps recognizes that if the Agency is to avoid significant reductions in the number of Volunteers, it must implement new methods of managing and carrying out its business operations. Modernization of software, hardware, and communications technologies is a case in point. The major investments the Agency is currently making in these areas will reap considerable financial savings in future years.

Despite these operational improvements, it will be a much greater challenge in FY 1996 to limit the impact of budget constraints on the number of Volunteers in the field. Peace Corps will make further reductions in domestic operations, but since 85% of the Agency's budget is devoted to Volunteer recruitment, training and support, additional reductions in international operations will also be necessary. To operate at \$234 million in FY 1996, Peace Corps is planning to close four country programs including those in Nigeria, the Seychelles and Cook Islands. Several other programs, most likely Costa Rica, Thailand, Hungary and Cameroon will be reduced.

Even as Peace Corps takes these actions, the Agency will continue to explore every option for savings so that a reduction in Volunteers is always the choice of last resort.

## Notes:

- 1/ Includes program reductions still to be identified: closing of 1 additional country program in FY 1995 and reduction by 59 and 97 trainees input to ongoing country programs in FY 1995 and 1996, respectively.
- 2/ On 5/15/94 Planning and Policy Analysis was transferred from the Office of Management to Policy and Direction.
- 3/ On 6/26/94 Marketing Resources was transferred from Volunteer Recruitment and Selection to Policy and Direction.
- 4/ Private Sector Relations was a part of the Office of Volunteer Support from 11/1/93 through 9/30/94 on-y. Otherwise it has been a part of Policy and Direction. Resources for all fiscal years are displayed in Policy and Direction on this chart.
- 5/ The Office of Volunteer Support (OVS) was created on November 1, 1993. All resources for FY 1994 for OVS's component offices are shown in this chart in OVS. In FY 1994 through 10/31/93, Medical Services, Volunteer Services, and FECA were part of the Office of Management. During the same time period, Domestic Programs were part of Policy and Direction.
- 6/ Starting on 4/3/94 salaries and benefits for the Office of Medical Services have been charged to that office and no longer to the Office of Volunteer Services.
- 7/ FY 1994 unobligated balance estimated.

## BUDGET ACTIVITIES

### International Operations

Peace Corps' International Operations are divided into four regions: Africa, Asia and the Pacific, Europe, Central Asia and Mediterranean, and Inter-America.

Resources for each of the International Regions are divided into the following major activities. Each activity includes costs borne both overseas and at headquarters.

#### Program Support:

Program Support costs include the costs of regional staff salaries, benefits, travel (for both American and host country staff), rents, utilities, equipment, supplies, and contractual costs related to the administration of our overseas program.

#### Direct Volunteer Support:

This includes the costs required for direct support to Volunteers overseas. Among these costs are:

- **Travel:** For Volunteers from their home to their country assignment and return travel at the end of their two-year tour.
- **Living Allowance:** The monthly stipend provided directly to Volunteers for their subsistence.
- **Settling-in Allowance:** Assists Volunteers in setting up their new households.
- **Readjustment Allowance:** An allowance of \$200 per month of service provided to Volunteers upon completion of Peace Corps Service to assist them in their re-entry to life in the United States. The level of the readjustment allowance was last increased in January of 1988.
- **Medical Costs:** Direct costs related to supporting the medical needs of Volunteers including the costs of in-country medical contractors, medical supplies, and medical equipment.

#### In-Service Training:

Training is conducted during the Volunteer's service to increase the job effectiveness and job satisfaction of each Volunteer in the field. These programs are designed to address the needs of specific Volunteer assignments and may include language and technical skill training, and safety and security issues.

#### Pre-Service Training:

Volunteers receive training before beginning their actual Volunteer Service through Staging and Pre-Service Training instruction.

- **Staging:** Before leaving for their overseas assignments, Volunteers participate in a thorough orientation program, where essential administrative, medical, and training activities are conducted.
- **Pre-Service Training:** Before qualifying to serve as a Volunteer, trainees must participate in pre-service training, which includes intensive language instruction, cultural information, technical skill enhancement, and training in personal health and safety. This training lasts, on the average, ten to twelve weeks. Upon completion, Volunteers must demonstrate their ability to participate effectively in their assigned projects.

## Other Volunteer Support

### Policy and Direction:

This program includes costs which support the decision and policy making arm of the Peace Corps. Resources support, among others, the Office of the Director, General Counsel, Congressional Relations, Communications, Equal Employment Opportunity, Private Sector Relations, and Planning, Policy, and Analysis.

### Volunteer Recruitment and Selection:

The Office of Volunteer Recruitment and Selection develops and executes Peace Corps' recruitment campaigns that are responsible for attracting and placing Volunteers overseas. This office reviews the technical and personal skills of applicants to carefully assess and match the most qualified persons to specific Volunteer assignments. Applicants go through a multi-faceted screening process that includes being interviewed, evaluated, having references checked, and being placed in assignments addressing specific host country needs.

### Training and Program Support:

The Office of Training and Program Support (OTAPS) provides Volunteers with guidance in planning and achieving their specific program goals. OTAPS also ensures that Volunteers have the latest technical information available to assist them in their assignments. OTAPS administers the United Nations Volunteer program.

### Volunteer Support:

The Office of Volunteer Support includes medical and special services for Volunteers. Returned Volunteer Services, Peace Corps Fellows/USA Program, and World Wise Schools are also supervised by this Office.

### Management:

Peace Corps' Office of Management provides administrative support for headquarters, field, and international operations. Through its offices of Human Resource Management, Administrative Services, Information Resources Management, and Contracts and Procurement, the Office of Management ensures that equipment, vehicles, supplies, and other necessary services (such as travel arrangements, passports, and visas for staff and Volunteers) are provided where needed.

### Planning, Budget, and Finance:

The Office of Planning, Budget, and Finance maintains the financial planning and internal controls necessary to ensure that Peace Corps operates in a fiscally sound manner.

### Inspector General:

The Office of the Inspector General is charged with reviewing Peace Corps' processes and procedures to ensure their economy, effectiveness, and efficiency.

1/24/95

**GENERAL STATEMENT****COUNTRIES SERVED**

By the end of FY95, approximately 7,100 Peace Corps Volunteers and trainees will be serving in 94 countries in Asia, the Pacific, Africa, the Middle East, Central and South America, the Caribbean, Central and Eastern Europe and the former Soviet Union.

**International Operations—FY 1995 (\$000)****Average Number of Volunteers FY 1995**

(does not include United Nations Volunteers)

## GENERAL STATEMENT

## VOLUNTEER ACTIVITIES

The primary focus of Peace Corps has always been the Volunteers and their work in the field. Volunteers around the world are providing direct, people-to-people assistance at the grassroots level. They work on problems identified by the host countries and design their individual workplans in cooperation with the local community.

**Agriculture**

Rapid population growth and declines in crop production due to environmental and man-made problems are placing continuing pressures on food supplies in many parts of the developing world. Most people in developing countries, however, still practice subsistence farming, and often employ "slash and burn" techniques that harm the environment and curtail future production capabilities. Peace Corps Volunteers are working with thousands of farmers in every region to advance new, sustainable farming techniques that will increase food production and avoid environmental degradation.

Number of Volunteers & Trainees	307	349	12	73	741
Number of Peace Corps Posts	15	9	1	6	31
Number of Projects	18	21	1	11	51

**Economic Development**

Although Peace Corps Volunteers have long been part of international efforts to encourage economic development in the world's poorest countries, they are assuming an even larger role in promoting the development of small businesses as one path to economic growth. Working with entrepreneurs, trade associations, community leaders, and local governments, Volunteers are providing advice and training in business management, marketing, credit analysis, privatization, and commercial banking to support free market policies in the countries where they serve.

Number of Projects	12	16	15	12	55

## VOLUNTEER ACTIVITIES

## GENERAL STATEMENT

**Education**

One of Peace Corps' fundamental tenets is that education is critical to successful development. Some 40% of all Volunteers work in education, and they provide important education services at every level of society. Peace Corps Volunteers make up the world's largest source of teachers of English as a foreign language. They teach mathematics, science, and business education in many countries where students would otherwise be unable to learn these important skills. Volunteers also work in special, vocational and non-formal education activities for adults, and they play a vital role in training teachers in new methodologies and curricula. Finally, many Volunteers have succeeded in helping community schools acquire modern teaching materials for classrooms and books for new libraries.

(End of FY 1994)	Africa	Inter-America	ECAM	AsiaPacific	Total
Number of Volunteers & Trainees	960	305	796	558	2,619
Number of Peace Corps Posts	26	9	20	14	69
Number of Projects	44	31	23	35	133

**Environment**

In recent years, Peace Corps Volunteers have assumed an important role supporting national and community-based efforts to protect fragile environmental regions, conserve natural resources, and expand environmental education. Peace Corps' 1,000 Volunteers working on environmental projects around the world constitute one of the largest environmental work forces of any international development organization. Volunteers are also providing developing countries and new governments in the former Soviet Union with advice and expertise in overcoming years of environmental neglect and resource depletion.

(End of FY 1994)	Africa	Inter-America	ECAM	AsiaPacific	Total

Number of Peace Corps Posts	20	16	5	5	46
Number of Projects	23	24	7	8	62

## GENERAL STATEMENT

## VOLUNTEER ACTIVITIES

## Health

Peace Corps Volunteers continue to provide a wide range of primary health care services to many of the world's poorest communities, where regular access to health care is often inadequate or non-existent. Volunteers serve as health care specialists in a variety of critical fields, such as prenatal and postnatal care for infants and mothers, nutrition, child immunization, Guinea worm eradication, HIV/AIDS education and prevention, and sanitation projects.

(End of FY 1994)	Africa	Inter-America	ECAM	AsiaPacific	Total

Number of Peace Corps Posts	24	10	2	6	42
Number of Projects	31	22	3	15	71

## Urban Development

Many developing countries face mounting challenges associated with rapid urbanization, such as increasing demands for basic services, sanitation, pollution, drainage control, and housing for new residents. Volunteers lend much needed expertise on these and other urban development issues.

**Areas of Special Emphasis: Women in Development and Youth Development**

Throughout its history in the developing world, Peace Corps has recognized the critical role that women play in economic production and family support. The integration of women into the development process remains a high priority for Peace Corps, and is a constant theme in the Agency's project planning and implementation. Volunteers actively work to promote the integration of women into the economic and social development processes of their own countries.

More than 50% of the developing world's population is under the age of 24. The social, economic, and political implications of this demographic are staggering for many countries where Volunteers serve. While Peace Corps projects in education, child survival, and agriculture have been of direct benefit to young people throughout the developing world, the Agency decided in 1991 to initiate three pilot projects targeted specifically at youth development. In Belize, Namibia, and Tunisia, Volunteers are helping government and non-governmental organizations develop programs for job training, sports, health, and community service for youth at risk. These pilot projects will eventually serve as models for Volunteers working in other countries.

## GENERAL STATEMENT

**Partnerships With Other Agencies**

Peace Corps enters into partnerships with other federal agencies and private voluntary organizations, when appropriate, to help ensure that foreign assistance funds are used in the most efficient manner and reach the maximum number of people at the grassroots level. With their language skills, two-year commitment, and personal ties to the communities they serve, Volunteers can help maximize the financial and technical impact of other development organizations.

Peace Corps and the *Agency for International Development* (A.I.D.) have collaborated on a series of beneficial environment, health, and economic development projects around the world. These projects have been conducted at the community, national, and regional levels. A.I.D. support has also been critical to Volunteers who provide specific technical training to large numbers of individuals in countries where they serve.

The *National Park Service*, the *U.S. Forest Service* and the *Environmental Protection Agency* have provided technical support to Peace Corps on a variety of environmental projects. The *Centers for Disease Control* also has given Peace Corps technical advice on child survival, maternal health, and immunization projects.

Peace Corps and the Farmer to Farmer program have a long-standing relationship that has proved very beneficial to Volunteer projects designed to improve agricultural economies. Experts in the Farmer to Farmer program have advised Volunteers and their communities on a range of agricultural issues, including livestock management, modernization of irrigation systems, and agribusiness development.

In recent years, requests for Peace Corps' assistance in disaster relief work have increased. In collaboration with A.I.D.'s Office of Foreign Disaster Assistance, Volunteers worked to alleviate problems caused by devastating drought in southern Africa in 1992. They helped communities in Lesotho, Malawi, and Swaziland build water catchment systems and provided technical and logistical assistance to Namibia's Water Service Department. In the aftermath of the humanitarian disaster in Rwanda in 1994, a small group of third year Volunteers worked under the auspices of the *International Rescue Committee* (IRC) to help Rwandan refugees in Tanzania. Volunteers provided advice and assistance on health education, water systems construction and maintenance and basic environmental protection practices like tree planting. Peace Corps and the IRC have now signed a Memorandum of Understanding that provides a framework for continued cooperation on refugee relief.

### How America Benefits from Peace Corps

While the Peace Corps experience is primarily identified with Volunteers serving in communities overseas, America also reaps important benefits when Volunteers return home. Since 1961, more than 140,000 Americans have served as Volunteers in 128 countries. These returned Volunteers bring back a wealth of knowledge and expertise about foreign countries and cultures, as well as language and cross cultural skills that are increasingly important to American prosperity in the expanding global marketplace. Returned Volunteers also have assumed leadership roles in every level of government, private business and industry, education, and the arts, while strengthening America's understanding of other countries and cultures in their own communities. The Office of Domestic Programs coordinates the programs that allow Peace Corps Volunteers to maximize the dividends they bring to America.

### Peace Corps Fellows

The Peace Corps Fellows program is a unique public-private partnership that brings together the talents and resources of returned Volunteers, institutions of higher education, local governments, community agencies, foundations, and corporate supporters. Its purpose is to allow Volunteers to build upon their service overseas in ways that directly benefit the American people.

Twenty-six universities across the United States currently offer scholarships or reduced tuition, financed by the private sector, to more than 300 Peace Corps Fellows—returned Volunteers who are enrolled in a variety of master's degree programs. In return, the Peace Corps Fellows make two-year commitments to teach in hard-to-staff schools or work in business development, social work, public health, or community development programs while they complete their university studies.

About 700 returned Peace Corps Volunteers have directly served over 50,000 students and community members since the program began in 1985. Participating universities strengthen their involvement with needy communities and enhance the quality of their education programs by enrolling returned Volunteers who bring new and enriching perspectives to their studies.

Local school districts, housing authorities, health clinics, and other agencies that employ Peace Corps Fellows fill demanding positions that require the special qualities returned Volunteers can offer—adaptability, resourcefulness, dedication to service, language, and cross-cultural skills. Corporations, foundations and other private sector supporters are supporting an efficient program which creates a better prepared workforce and improves the quality of life for their local communities.

### World Wise Schools

Since its creation in 1989, Peace Corps' World Wise Schools program has made important contributions to the education of young American students about geography and other cultures, while providing them with positive adult role models who are actively engaged in community service overseas.

Like many successful Peace Corps programs, the basic concept is simple and cost-effective: during their overseas service, Volunteers share their experiences in other countries directly with students in classrooms here in the United States through exchanges of letters. The educational value of the student/Volunteer correspondence is further enhanced by videotapes and study guides on the geography and culture of countries in which Volunteers serve, and by classroom visits of returned Volunteers.

Over the last five years, nearly 300,000 students in 50 states have communicated directly with Volunteers serving in nearly 100 countries around the world. Countless other students have also benefited from the program through the broadcast of World Wise School videotapes by educational television networks and the Learning Channel. More than 6,000 returned Volunteers are also now enrolled in the program to contribute their time and energy through classroom presentations.

The World Wise Schools program intends to strengthen its contribution to America's classrooms by introducing an electronic bulletin board service that provides information about Peace Corps and the countries where Volunteers work, and which will be accessible to any school with on-line capabilities.

### Returned Volunteer Services

Returned Volunteer Services provides assistance, advice, and support to Volunteers when they return to the United States from their overseas service. Peace Corps' headquarters in Washington maintains a career information center and publishes a job bulletin which helps to establish contacts between American employers and skilled, experienced returned Volunteers.

Returned Volunteer Services is also Peace Corps' permanent link to the growing community of former Volunteers. Working with the National Peace Corps Association and many local returned Volunteer organizations, Peace Corps strives to maintain close connections with former Volunteers and draw upon their energy and expertise to benefit communities across the country.

### Office of Private Sector Relations

Through programs managed by the Office of Private Sector Relations, American citizens have an opportunity to provide charitable assistance to overseas communities in which Peace Corps Volunteers serve. By linking with Volunteers in the field, donors have the satisfaction of knowing that their help gets directly to the communities that need it.

In FY 1994, over 350 donor groups supported the projects of some 1,500 Volunteers in 82 countries. Donations come in a variety of shapes and sizes. They include corporate donations of computers and textbooks for business programs in the former Soviet Union, church group donations to support well construction in Asia, scout troop contributions for school construction projects in Africa, and assistance from deaf university students to produce the first Mongolian sign language dictionary. Private sector donors are also the principal source of support for the Peace Corps Fellows program which offers tuition benefits to former Volunteers in return for service in needy communities here at home.

## Regional Overview

Perhaps no other region in the world faces more problems, but holds as many opportunities for its people, than sub-Saharan Africa. Drained by decades of civil war, economic mismanagement, ethnic strife, dictatorship, and exploitation, the nations and people of sub-Saharan Africa are long overdue for a social, political, and economic renaissance.

Events and changing conditions throughout Africa in recent years give cause for hope. Multi-party elections are spreading slowly across the continent. New democracies are struggling to take hold in South Africa, Ethiopia, Eritrea, Cote d'Ivoire, Zambia, and Malawi. The deadly civil war in Mozambique has ended, and 88% of its people—many of whom had to cross minefields to reach polling booths—cast ballots in the country's first free and fair elections in October 1994.

Some 30 African nations are now pursuing free market policies. Ghana, Zambia, and Zimbabwe are showing signs that often painful economic reforms can lead to economic growth. Many governments are decentralizing, reducing their bureaucracies, and handing over more responsibility to individuals and non-governmental organizations. These are important steps that lay the foundation for strengthening democratic institutions and

*Melanie Kwan, a Volunteer in Senegal, teaches local children about the importance of boiling their drinking water.*

allowing ordinary Africans across the continent to take charge of their own development and local affairs.

Although these changes hold great promise for the people of Africa, the continent still faces unparalleled challenges. Most Africans today are poorer than they were 30 years ago. The continent is burdened by \$180 billion in debt. More than a dozen African countries are plagued by some form of civil conflict. Six million refugees, 17 million displaced persons, and a rapidly expanding population are placing intolerable strains on already over-burdened governments.

Moreover, only a small percentage of Africans have access to basic health care. Thousands of children die each year from diseases or conditions, such as diarrhea, malaria, and malnutrition, that are easily curable or preventable. HIV/AIDS cases have reached epidemic proportions in more than a dozen countries. Environmental degradation, desertification, and drought threaten to destroy many of southern Africa's agricultural capacities.

Peace Corps has a long and positive history in Africa, and remains dedicated to alleviating, at the grassroots level, many of the social and economic problems that Africans still confront. Peace Corps' presence is strongly supported by each of the 33 African countries where Volunteers will serve in FY 1996.

## Sector Summaries

### Agriculture

Increasing Africa's agricultural output is one of the continent's biggest challenges. Volunteers are working with thousands of farmers in more than two dozen countries in Africa to promote sustainable farming practices and a greater degree of self-sufficiency in food production. In Mali and Niger, Volunteers are actively participating in the region's Africa Food Systems Initiative. They work closely with individual farmers, village groups, and local institutions to implement an integrated approach to agriculture that focuses on water resource development, gardening, animal husbandry, agro-forestry, and rural cooperative projects.

Volunteers in Gabon, Cameroon, and the Congo are teaching farmers how to increase their family incomes and produce animal protein for dietary intake through small-scale, intensive, freshwater fish farming. In the Central African Republic, The Gambia, and Guinea Bissau, Volunteers are working with local residents to improve small animal raising techniques, educate primary school students about gardening, decrease the negative effects of farming on the environment, and increase the quality and quantity of available foods.

### Economic Development

Volunteers are working to expand the small business sector in 11 African countries. The majority of Volunteers work at the micro-enterprise level, offering business advisory services to individual entrepreneurs, as well as to financial institutions and small business support agencies. This assistance often includes training in credit management and basic business and accounting skills to both individuals and organizational staff. In addition, some Volunteers assess credit availability and develop credit unions and/or revolving loan funds for small entrepreneurs. With Volunteer assistance and support, more African women are participating in, and benefiting from, small enterprise development projects. For example, a Volunteer in Mauritania has organized a women's cooperative that is producing and marketing fencing on a sustained and profitable basis.

### Education

Education remains the Africa region's largest programming sector, accounting for almost 40% of the region's Volunteers. Many African countries are seeking to expand English education programs for students and entrepreneurs in order to compete in the international marketplace. "Peace Corps" efforts to improve the quality of, and access to, education in Africa is playing a critical role in the continent's future.

Last year, Volunteers taught English, math, and science to thousands of young African students. They play crucial roles in strengthening local education institutions and introducing modern teaching techniques to African teachers and administrators. Volunteers continue to collaborate with local and national governments on projects aimed at strengthening programs in special education and industrial arts, as well as promoting quality teaching and educational equity for girls and women. Volunteers are achieving these important goals through direct classroom instruction, primary and secondary school teacher training, professional collaboration, and development and acquisition of educational materials.

In The Gambia, Uganda, Mali, and Lesotho, Volunteers are establishing teacher training resource centers and developing training programs. Volunteers in Guinea Bissau worked with the Ministry of Education to design a secondary English curriculum and have produced a new textbook for the secondary school system. In Cameroon, Volunteers and their local counterparts are evaluating a new syllabus in English for teaching HIV/AIDS prevention. In Gabon, Volunteers and representatives from the Department for the Advancement of Women have set up a scholarship program for girls.

## Environment

Protecting fragile environments, preserving biodiversity, and supporting local efforts to attract tourists are some of the major goals of Peace Corps' environmental projects in Africa. Volunteers are participating in a range of activities to strengthen community conservation efforts, reforestation, and land reclamation, as well as in the establishment of tree seedling nurseries and watershed resource development. Volunteers in Malawi, Uganda, and Madagascar teach management skills to workers in national parks, game reserves, and nurseries. In Botswana, Volunteers will work with park ranger counterparts over the next four years to develop interpretive facilities, exhibits, and displays in seven reserves throughout the country.

Across Africa, Volunteers are introducing new techniques to farmers and community groups that are less damaging to the environment. Volunteer activities in environmental education are expanding and becoming increasingly integrated in all sector projects. Math and science Volunteer teachers in Benin are incorporating environmental problem-solving into their lesson plans. In the Comoros Islands, Volunteers have assisted in the organization of a local network of environmental action clubs.

## Health

Expanding access to basic health care for the continent's poorest citizens has been one of Peace Corps' most important contributions in Africa. Volunteers conduct child immunization programs, offer pre-natal care and advice to mothers, and promote improvements in the nutritional content of local diets. Child survival projects focus on growth monitoring, oral rehydration therapy, and malnutrition. Since 1990, Volunteers have been participating in Guinea worm eradication activities in 11 African countries where the disease is endemic. They conduct case studies, improve water sources, develop new water and sanitation projects, and promote community health education.

Peace Corps is joining other international efforts to stem the spread of HIV / AIDS in Africa, one of the continent's most serious public health concerns. In Malawi, for example, Volunteers help train health workers in health education techniques and counseling skills to increase the number of HIV / AIDS education programs in health care facilities, communities, and schools.

## Urban Development

Security problems in large urban areas continue to hinder Peace Corps' programming efforts in many of Africa's major cities. Therefore, the Africa region is meeting host country requests to address the problems of the urban poor by assigning Volunteers to work in projects based in secondary cities and towns. In Kenya, Malawi, and Cote d'Ivoire, Volunteers are providing technical assistance and training in municipal management and planning for local governments. Their activities include establishing neighborhood-based potable water supply and waste management systems, improving waste collection services, increasing access to health and social services for low-income urban residents and those living in squatter areas, and developing community programs for at-risk youth. Influenced by the Cote d'Ivoire model project, Volunteers in Chad and Cape Verde will soon undertake similar activities to improve municipal management and planning as well as water and sanitation in urban areas.

## AFRICA

## BENIN

Population: 5,194,000  
 Annual Per Capita Income: \$420  
 Number of Years Peace Corps in Country: 28

**Peace Corps Country Overview:**

Although Benin has recently experienced a peaceful transition to democratic rule and modest economic development, it continues to face numerous challenges and hardships in a number of important areas. Sixty-five percent of the rural population lives in absolute poverty. Only 25% of all adults are literate. There are 1.5 million Beninese without access to basic health services; and 70% of the population relies on deteriorating land for their agricultural production and subsequent income. Volunteers work with their communities to address these health, education and environmental issues, placing special emphasis on women, children and disadvantaged people.

**Resources:**

Benin	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	32	39	39
Average # of Volunteers	73	73	72
Program Funds (\$000)	1,848	1,581	1,621

**Peace Corps Program by Sector:****Economic Development**

Volunteers in this project are assigned to social centers throughout Benin. They work closely with their Beninese counterparts to promote maternal and child health care activities as well as agriculture, technology development, and income generation projects. One Volunteer conducted a nutrition and hygiene training session for 27 village women who were responsible for preparing school lunches for local primary and secondary schools. As a result of this training, women serving over 60 students are now alleviating malnutrition in the area by preparing well-balanced meals and by teaching proper nutrition to other members of their communities. Another Volunteer initiated and helped organize a National Special Olympics Committee and the first Special Olympics. Over 30 mentally handicapped children and parents participated in this successful project.

**Education**

Volunteers in this project teach math and physics at the secondary level throughout Benin. A Volunteer math teacher developed a set of math lesson plans for the 11th and 12th grades, while teaching over 450 students. A physics and chemistry teacher designed, built and distributed written plans for electronic experiments made entirely from local materials. Volunteers are also active in other secondary education projects such as school gardening and coaching team sports.

**Environment**

Volunteers establish tree nurseries, monitor village wood lots, and teach land management and forestry techniques to local organizations. With the assistance of a Volunteer, 50 farmers planted superior quality cashew seeds. As a result of these efforts, their cashew plantation is expected to start producing a significant source of income over the next three years.

**Health**

In collaboration with UNICEF and A.I.D., Volunteers work in rural villages to establish local health committees and promote primary health education and sanitation. Eleven Volunteers worked in over 1,700 villages in Benin training more than 400 village and district-level citizens to monitor and educate their peers in Guinea worm eradication. As a result of these training programs, Guinea worm cases were reduced in 1994 by 64% in areas where Volunteers served.

## AFRICA

## BOTSWANA

Population: 1,402,000  
 Annual Per Capita Income: \$2,590  
 Number of Years Peace Corps in Country: 28

**Peace Corps Country Overview:**

Although Botswana has achieved considerable economic growth in recent years, it has not alleviated the structural poverty that is particularly evident in the country's rural areas. To address these problems, Botswana's national development strategy incorporates economic diversification, increased income-generating opportunities, job creation, work force training, and improved educational opportunities at the secondary level. Volunteers are working to support these and other private economic development activities.

**Resources:**

Botswana	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	61	80	81
Average # of Volunteers	81	136	139
Program Funds (\$000)	2,770	3,166	3,363

**Peace Corps Program by Sector:****Economic Development**

Volunteers, working as business advisors, assist small and microenterprises in developing accounting systems, marketing strategies and product lines. Other Volunteers provide advisory services to business and vocational training centers, which are part of the government's strategy to develop skills and business opportunities in rural communities. One Volunteer has trained two Botswanans to conduct and facilitate "Training of Trainers" workshops. As a team, they trained ten extension officers who will, in turn, train interested entrepreneurs in business management skills. Another Volunteer has developed a tannery located in a remote village in the Kalahari Desert. This new project collects and treats animal skins to generate income for the local community.

**Education**

Since 1967, Botswana's national education system has grown rapidly from only nine secondary schools to 195 secondary schools. Volunteers are filling a serious shortage of teaching staff and are providing instruction in English, mathematics, art, design and technology, agriculture, business, and general science. Volunteers are also responsible for establishing and enhancing long-term, school-based projects designed to improve the quality of education. During 1994, 35 school enhancement projects were completed. These projects included the development of libraries, poultry houses, computer laboratories, and HIV/AIDS prevention programs. One Volunteer secured funding for a workshop improvement project at a local school and was able to purchase \$7,000 worth of machinery and tools for the community's use. A second Volunteer organized a library, trained student librarians, established an English resource center, chaired a new guidance and counseling program, and provided computer training to students and teachers.

**Environment**

Botswana's national parks lack sufficient infrastructure, education and exchange programs for visitors, and park management expertise. Volunteers assist in developing park infrastructure that is designed to increase revenues while local counterparts are being trained. Volunteers also work with community leaders to conduct environmental education workshops for secondary schools. One Volunteer developed a visitor center, demarcated nature trails, taught co-workers how to conduct park tours, and successfully developed an environmental education program at the Maun Educational Reserve. Another Volunteer designed an interpretive plan for Chobe National Park and assisted in the preparation of employee job descriptions.

## AFRICA

## BURKINA FASO

Population: 9,830,000

Annual Per Capita Income: \$300

Number of Years Peace Corps in Country: Re-entry FY1995

### Peace Corps Country Overview:

Due to political turmoil, Peace Corps departed Burkina Faso in 1987. It is estimated that only 20% of the population has access to clean drinking water. Health care remains poor (there is only one doctor for every 33,000 Burkinabé). Malaria and malnutrition are endemic in Burkina and is estimated that 86.6% of Burkinabé over the age of 15 are illiterate. Due to past successes and the favorable development climate there, Peace Corps is prepared to re-enter Burkina Faso in 1995.

### Resources:

Burkina Faso	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	0	29	29
Average # of Volunteers	0	8	27
Program Funds (\$000)	0	1,050	1,548

### Peace Corps Program by Sector:

#### Health

The Peace Corps project design team has proposed a Community Health Development Project to support the efforts of the Burkinabé in meeting their basic health needs. Volunteers will work in district areas to strengthen local health management committees and conduct health promotion programs on priority health problems such as childhood communicable diseases, maternal and child health, malaria, HIV/AIDS education, and Guinea worm eradication. Volunteers will develop the planning, budgeting, implementation and evaluation of skills of chief nurses, who will work in local health centers. This will enable these nurses to better organize, manage and support existing village-based health management committees and establish new committees where they do not exist.

Other Volunteers will be working toward equipping members of these committees with the necessary skills to perform health outreach programs in their communities. This will include completing health needs assessments, identifying priority problems, and producing a plan to encourage health promotion activities.

Population: 12,611,000  
 Annual Per Capita Income: \$770  
 Number of Years Peace Corps in Country: 33

### Peace Corps Country Overview

Due to the country's petroleum reserves and diverse agricultural base, Cameroon experienced strong economic growth from 1960 until 1985. But with the drop in world oil prices in 1986, Cameroon's economic development has slowed dramatically. Peace Corps has tailored its programs to meet the priority needs of the country: Education of its youth, environmentally-sound agricultural practices, health promotion, and general improvement in quality of life for rural citizens.

#### Resources:

Cameroon	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	59	74	42
Average # of Volunteers	129	125	100
Program Funds (\$000)	3,268	2,713	1,970

### Peace Corps Program by Sector:

#### Agriculture

Fourteen Volunteers are working with small-scale Cameroonian farmers to promote the intensive production of tilapia, a freshwater fish. The project's long-term goal is to increase the availability of fish in the local diet, to improve the farm-management skills of farmers, and to develop farmer associations that can maintain fish production without assistance. The project integrates aquaculture with other agricultural activities that farmers are already pursuing and relies on appropriate technology.

#### Economic Development

This program addresses the need for communities to organize themselves to solve local problems and thereby improve the quality of life in rural areas. As group-activity coordinators, Volunteers promote community self-help projects which will help increase incomes, improve health care, and increase the capacity of the members to assess and implement solutions to their communities' problems independently. Twenty-seven villagers and community development agents were trained in leadership skills, project design and management.

#### Education

Volunteers teach math, physics, chemistry, and biology to Cameroonian secondary students. Approximately 12,000 students benefit from improved math and science skills annually. The success of Volunteers in this sector can be seen by the increased number of students (about 500) qualifying for higher education every year. The yearly pass rate of students has been improving steadily by about 10%. Moreover, approximately 5% of students taught by Volunteers are pursuing math and science education as a future career. Similarly, about 40

Cameroonian educators learn improved teaching methods and techniques yearly through workshops organized by Volunteers, improved student instructional units, and Volunteer-developed teachers' guides.

Volunteers also focus on improving secondary students' English skills, enhancing Cameroonian educators' teaching skills through seminars and in-service training, and developing teaching materials to meet the particular needs and cultural values of Cameroonian communities. In addition, education Volunteers are involved in other secondary projects such as health education, pre-natal care and nutrition. In some cases, Volunteers have improved their schools' infrastructures by establishing libraries and building additional classrooms. With the cooperation of their Cameroonian counterparts and community leaders, Volunteers identify and carry out complementary development projects in areas such as health and sanitation, environmental education, agriculture and income generation.

Five people in every 100 in Cameroon are HIV positive and many contracted the infection between the ages of 15 and 24. Volunteers and their Cameroonian co-workers have developed a manual in English language classes for teaching HIV/AIDS prevention which is currently being implemented in 20 secondary schools. As a result, 5,000 students are receiving information on how to prevent the spread of HIV/AIDS.

### Environment

Twenty-six Volunteers in agroforestry work in collaboration with local farmers and staff from two Cameroonian ministries in an effort to strengthen the link between agroforestry research and extension. Volunteers train farmers in farm research, nursery establishment, erosion prevention, and soil-fertility management. They also help farmers make the transition from "slash-and-burn" agriculture to more modern, but intensive, farming techniques. This is helping to protect Cameroon's rich bio-diversity and forest resources.

### Health

Since 1989, approximately 70 Volunteers have worked with the Ministry of Public Health Services to improve the health of mothers and children in Cameroon by strengthening the health care system. The project now focuses on community participation in health promotion and health education, with particular emphasis on women's and children's health care. Approximately 1,200 community members have participated in health talks and demonstrations given by Volunteers and their counterparts.

Population: 398,000  
 Annual Per Capita Income: \$870  
 Number of Years Peace Corps in Country: 7

### Peace Corps Country Overview:

Since becoming an independent nation in 1975, Cape Verde has been developing a national infrastructure to deal with a myriad of economic and social problems. Cape Verde lacks a number of important natural resources, including fresh water supplies on the islands of Sal, Maio, and Boa Vista. Because of drought, agricultural production has fallen below present needs, causing increases in migration from rural to urban communities. The unemployment rate, estimated at 50%, puts further strains on the country's ability to deliver basic social services, housing, and sanitation facilities. In both rural and urban areas, people suffer from malnutrition, poor hygiene, and unhealthy environmental conditions. Volunteers are working with community leaders to improve water and sanitation services, urban and small business development, agriculture, and education.

### Resources:

Cape Verde	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	12	19	19
Average # of Volunteers	23	27	29
Program Funds (\$000)	1,030	1,103	1,154

### Peace Corps Projects by Sector:

#### Agriculture

Volunteers are working to transfer development skills to rural extension agents and rural villagers as a means to carry out small-scale community development projects. Examples of these projects include small animal husbandry (poultry production), small business (development of a local bakery), and other agricultural and small business projects designed to improve the standard of living of rural people. Volunteers are working in the Urban Extension Project to help improve the quality of life in the newer, unplanned neighborhoods of the two largest cities in Cape Verde (Praia and Mindelo). Volunteers are working with their Cape Verdean counterparts to improve water and sanitation facilities, urban infrastructure, and small business development.

#### Education

The supply of Cape Verdean teachers trained to teach English in the nation's secondary school system is unable to meet the expanding need. This shortage is caused by increasing pupil enrollment in secondary education, increased construction and opening of secondary schools, other employment opportunities, and a lack of in-country training systems. This shortage of qualified teachers has led to the poor quality of English instruction, insufficient availability of instruction, and relatively low student achievement. Volunteers are working with the people of Cape Verde to develop a qualified corps of English teachers by strengthening instruction training programs. They also improve student achievement by assisting in the introduction of appropriate curricula and instructional materials into the secondary school system.

### Health

The lack of safe water and modern sanitation systems, combined with a low level of community understanding, is the principal reason for the spread of diarrheal and water-borne diseases, which continue to be the predominant cause of infant mortality in Cape Verde. In 1992, Volunteers joined with a successful UNICEF project aimed at improving the quality and quantity of water available to rural communities. Volunteers assist in developing health education materials for local people by setting up water quality testing laboratories and coordinating the technical and educational components of the project with the community.

Population: 3,249,000  
 Annual Per Capita Income: \$390  
 Number of Years Peace Corps in Country: 23

### Peace Corps Country Overview:

The Central African Republic (CAR) faces a number of development challenges to meet the most basic needs of its people. The country has a limited economic base, and its economic system is faltering. The country also suffers from the spread of HIV/AIDS, lack of modern agricultural practices, and a shortage of qualified math and science teachers. Peace Corps has tailored its programs in the CAR to meet these and other basic needs.

### Resources:

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Central African Republic			
Trainees	45	38	38
Average # of Volunteers	35	60	63
Program Funds (\$000)	1,810	1,679	1,850

### Peace Corps Projects by Sector:

#### Agriculture

Volunteers serve as extension agents and teach local farmers modern agricultural practices such as crop rotation, inter-cropping, and farm management. Since the CAR has no steady source of seed supplies, Volunteers work with local farmers to establish seed banks throughout the country for both vegetables and trees. The products from the small plots of land lead to both improved nutrition and economic development for the local economies.

#### Education

Volunteers are conducting math and science education programs in secondary schools. They also provide instruction in English teaching techniques to Central African educators who work in secondary schools. Over 200 English teachers have been taught by Volunteers in this project. With approximately 12% of the population affected by HIV, Central African teachers are also using a manual developed by Volunteers which provides information on preventing HIV/AIDS.

#### Environment

This project focuses on the Dzanga-Sangha Reserve in the Southern Central African Republic. In collaboration with the World Wildlife Fund, Volunteers promote environmental education and focus on the development needs of the population surrounding the newly created reserve. One Volunteer has worked closely with the Pygmy and Bantu populations in this area to introduce new farming techniques and education on the importance of preserving their environment.

### Health

Volunteers work with their CAR counterparts in rural communities to encourage local citizens to take control of their own health care systems by strengthening preventive and curative activities. Volunteers work with town and village leaders to establish community health committees, build village pharmacies, control malaria, promote maternal and child health care, and strengthen sanitation projects.

Two Volunteers in the health sector are assigned to the HIV/AIDS education project and are involved in a wide range of activities to prevent the spread of these and other diseases. The Volunteers focus primarily on health education, and work with a variety of counterparts including young men and women, village elders and social affairs agents.

Population: 6,131,000  
 Annual Per Capita Income: \$200  
 Number of Years Peace Corps in Country: 21

### Peace Corps Country Overview:

Less than 30% of the population has access to potable water and 70% of Chad's population is illiterate. Volunteers help rural villages increase their access to safe drinking water and improve sanitation methods, train local health personnel in preventive health practices, and teach mathematics and English in secondary schools and at the university level.

### Resources:

Chad	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	31	29	29
Average # of Volunteers	42	53	55
Program Funds (\$000)	1,603	1,382	1,488

### Peace Corps Program by Sector:

#### Education

Volunteers are teaching English and math to some 3,000 students in Chad. Some Volunteers are working with local officials and educators to finalize teaching guides for English and math instruction in secondary schools. Others are working to develop library facilities in both secondary and high schools. Volunteers are also leading teacher training courses at two of Chad's major universities.

#### Health

Ten Volunteers have helped organize 15 village health education groups in Chad. With Volunteers assistance, these small groups of Chadian educators have delivered health education programs to more than 7,500 people within their communities. Topics taught by the village health groups include immunization, malaria prevention, control of diarrheal diseases, nutrition, water and sanitation. Volunteer efforts focus on transferring planning management, health information, education, and communication skills to these groups as a means of increasing their capacity to make sustainable changes in their health care programs. Three Volunteers are working with village health education groups to provide instruction on nutrition to mothers at growth-monitoring clinics. The Volunteers are also developing local recipes, cooking demonstrations and cooperative gardens to complement their education sessions.

Peace Corps has a long history of efforts to improve the water supply in Chad, where potable water is often scarce. Volunteers have assisted with the installation and maintenance of 865 wells and pumps. Volunteers in the rural water and sanitation project work with water committees in villages to install and repair wells and pumps, establish a maintenance fund and conduct health education on water and sanitation. More than 180 rural committees have been established with Volunteer assistance. Urban water and sanitation Volunteers assigned to the capital city, N' djamena, have worked with 16 neighborhood groups to construct public latrines and establish waste disposal and drainage systems. Private sector water supply Volunteers are responsible for training entrepreneurs to construct and install water pumps, as well as how to start and manage a small business.

Population: 528,000  
 Annual Per Capita Income: \$520  
 Number of Years Peace Corps in Country: 7

### Peace Corps Country Overview:

Comoros, classified by the World Bank as one of the world's least developed countries, has a Gross Domestic Product (GDP) that is increasing by a rate of 1% per year. The public education system has also been plagued by teacher and student strikes during the past four years. The degradation of Comoros' natural resources has accelerated at an alarming rate. The rates of maternal, child and infant mortality have remained high, with the leading cause of infant and child death being from diseases that are easily preventable.

Although Peace Corps' program in Comoros is still relatively new, Volunteers have made significant contributions towards development in both Teaching English as a Foreign Language (TEFL) and environmental education.

### Resources:

Comoros	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	17	16	16
Average # of Volunteers	18	23	28
Program Funds (\$000)	777	622	735

### Peace Corps Projects by Sector:

#### Education

Since 1988, over 15,000 students have learned English and 150 teachers have improved their teaching methodologies as a result of Volunteers' efforts. TEFL Volunteers recently completed a draft of an English teacher's training guide introducing environmental themes for English education. However, due to the continuing strikes and school closings, Peace Corps Comoros has recently suspended its TEFL project. Volunteers also have become involved in overall school repairs and construction. One Volunteer secured funding to construct a two-room school building in a rural community which was badly in need of assistance.

#### Environment

Volunteers work with environmental associations and media groups developing ways to preserve the deteriorating environment and improve the use of existing natural resources. In one community, Volunteers will be working with a local radio station to produce a series of environmental education programs to be played on the six national radio stations. An environmental educational curriculum guide in French will soon be published to assist Comorian science teachers and other environmental Volunteers to better educate Comorian youth.

**Health**

In 1994, Volunteers introduced a Rural Health Education Project to help promote health education throughout the country and mobilize village groups in implementing community-based health projects. Volunteers are currently performing Knowledge, Attitude and Practice Surveys in approximately 20 communities to assess basic health and nutrition needs. Following this, they will then begin to develop health education strategies.

Population: 2,508,000  
 Annual Per Capita Income: \$920  
 Number of Years Peace Corps in Country: 5

### Peace Corps Country Overview:

The Republic of Congo suffers from one of the highest per capita debts in the world and is struggling to diversify its economy. The country currently imports more than 70% of its food requirements. Water-borne diseases remain one of the Congo's most serious health problems, resulting in high mortality rates, particularly among children under the age of five. Only 7% of the rural population have access to potable water, and only 9% have access to proper sanitation facilities. Volunteers work to improve fish production, community health, and resource conservation.

### Resources:

Congo	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	27	24	24
Average # of Volunteers	7	27	39
Program Funds (\$000)	847	878	1,088

### Peace Corps Projects by Sector:

#### Agriculture

Twenty Volunteers are using locally available resources and appropriate technologies to assist 400 rural Congolese families in increasing their income and production of animal protein by promoting long-term, sustainable management of fish pond systems. Since 1991, Volunteers have helped fish farmers construct and manage over 800 ponds. In collaboration with Volunteers, project farmers harvested 800 kilograms of fish during FY94. Technical assistance provided by a Volunteer working with fish farmers in Abala resulted in an eight fold increase in fish production. Through a rural radio program in Mossenjo, one Volunteer is working to increase public awareness about the benefits of fish farming.

#### Environment

A high priority has been accorded to conserving the Congo's abundant natural resources. Volunteers have worked on long term biological monitoring, park infrastructure development and conservation education. Peace Corps is now exploring possibilities for future collaboration with the A.I.D. Central African Regional Program for the Environment project.

#### Health

Volunteers are working to improve health conditions in rural Congo by developing access to potable water supplies and sanitary facilities. Volunteer activities include the construction of model odor- and fly-free latrines at public institutions, such as health centers, schools and markets. Volunteers also hold demonstrations to teach the technical aspects of water sanitation, such as spring capping and well/cistern construction. Volunteers meet with community members to illustrate the relationship between hygienic water production and health. More than 100 demonstrations with over 1,000 participants have been held. Long-term Volunteer goals are to improve access to potable water for 40,000 rural Congolese.

Population: 13,358,000  
 Annual Per Capita Income: \$630  
 Number of Years Peace Corps in Country: 25

### Peace Corps Country Overview:

Despite economic progress in a number of areas, the people of Cote d'Ivoire continue to face many serious social and economic problems. Health indicators show a high infant mortality rate of 121 per 1,000 live births, and continued prevalence of infectious and parasitic diseases. Regional disparities also exist: some areas have far better access than others to potable water, waste disposal, adequate housing, a nutritious diet and employment. Urban waste disposal is especially problematic, with systematic trash collection minimal and few organized services at the municipal level. Volunteers work in both preventive health care and water and sanitation.

### Resources:

Cote D'Ivoire	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	0	48	48
Average # of Volunteers	55	66	85
Program Funds (\$000)	1,250	1,564	1,823

### Peace Corps Program by Sector:

#### Environment

Volunteers work with local officials to design and implement improved urban waste-management techniques, and to increase the capability of local government Technical Services Divisions to provide services. Volunteers also work with community groups to improve sanitation practices and increase the supply of potable water. With Volunteer support, 22 cities have undertaken new activities to alleviate waste disposal problems. Volunteers have assisted five cities with tree planting for erosion control and six cities with construction of school latrines and soak-away pit construction. One Volunteer in Agnibilékrou, in cooperation with the Mayor's office, organized a trash service for several neighborhoods, serving a total of 200 families. Two other Volunteers, working with two primary schools in Seguela, constructed and refurbished latrines which will improve sanitary conditions for 2,000 students. One Volunteer developed a guide for teaching hygiene in elementary schools, including model lesson plans, sample tests and animated images.

A new Water/Sanitation Project will begin in 1995. Volunteers will contribute to improvement of water/sanitation practices and will focus on community development, health, hygiene and sanitation education, and water supply issues. One major aspect of this project will be to work with village committees that are responsible for maintaining community hand-pumps.

#### Health

In collaboration with the Ministry of Health, Volunteers are working as part of health teams to promote preventive health care. Volunteers work with nurses, teachers, and local leaders to examine major health problems in communities and to develop demonstration projects that address these problems through education and training. During the past year, one Volunteer worked with UNICEF to coordinate the installation of "pharmacy boxes" containing medicines at local health centers throughout the Adzopé region. Another

## AFRICA

## COTE D'IVOIRE

Volunteer and her Ivorian colleague formed a village theater group to address subjects such as Guinea worm, hygiene, alcohol, smoking and other health-related issues. The group has performed in approximately five villages for 4,000 viewers.

Two other Volunteers initiated a Growth Monitoring Training Project to prevent malnutrition among children by encouraging activities such as weaning food demonstration centers, home visits and programs for nutrition monitoring of seriously malnourished children. This training has empowered 50 community health workers in 26 communities to run growth-monitoring activities.

Population: N/A

Annual Per Capita Income: N/A

Number of Years Peace Corps in Country: Entry FY95

### Peace Corps Country Overview:

Most of Eritrea's population lives on non-arable land, even though nearly 80% of Eritreans derive their livelihoods from subsistence farming, livestock and fishing. But Eritreans are now in the process of rebuilding their nation's economy, infrastructure and local institutions. A large number of government officials, including the President, the Minister of Foreign Affairs, the Minister of Agriculture, and the President of the University, were trained by Peace Corps Volunteers. They view education as a key to their prospects for successfully rebuilding the country. Peace Corps' opening project, English Education, will start in June 1995 with a trainee input of 25.

### Resources:

Eritrea	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	0	19	19
Average # of Volunteers	0	5	16
Program Funds (\$000)	277	1,004	1,215

### Peace Corps Projects by Sector:

#### Education

In recent years, the student population has been increasing due to a number of factors, particularly the return of Eritrean refugees from neighboring countries. Due to the current shortage of trained teachers in Eritrea, many schools remain inoperable despite a large student population. Less than one-sixth of Eritrea's 5,300 teachers have a college degree, and less than one-half have had teacher training. Peace Corps' education project is designed to strengthen the country's education system by improving the English language capabilities of both students and teachers, as well as to upgrade technical skills throughout the system.

Population: 53,297,000

Annual Per Capita Income: \$100

Number of Years Peace Corps in Country: Re-entry FY95

### Peace Corps Country Overview:

Years of war, political turbulence and periodic droughts have left Ethiopia and its 55 million people in difficult circumstances. The country suffers from extreme deficiencies in educational and health services, employment opportunities, food production, access to potable water, and adequate roads. Soil and vegetal resources are being progressively depleted, and 85% of the population lives in rural areas.

Peace Corps will re-enter Ethiopia after an 18-year absence with an opening project in education.

### Resources:

Ethiopia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	0	19	19
Average # of Volunteers	0	5	16
Program Funds (\$000)	0	978	1,385

### Peace Corps Projects by Sector:

#### Education

Ethiopia faces the challenge of providing its rural population with basic education that will provide the nation with skilled workers and promote economic development. Decentralization and reform of Ethiopia's education system are redefining the roles and responsibilities of educators. Volunteers have designed an education project plan which establishes small teams of Volunteers to provide opportunities for professional support and development. One Volunteer will be assigned to prepare Ethiopians to teach English in primary schools. Other Volunteer team members will be posted to under-served rural secondary schools.

Population: 1,235,000

Annual Per Capita Income: \$4,050

Number of Years Peace Corps in Country: 25

### Peace Corps Country Overview:

Since only about 1% of the total land area is under cultivation, Gabon must import most of its food. Rural areas are especially affected by poor living conditions and inadequate sources of nutrition. There also is a critical shortage of teachers at the secondary education level. Primary schools are overcrowded, poorly constructed, and ill-equipped. Major health problems include high rates of maternal and child morbidity and mortality. Volunteers are working directly with farmers, teachers, and villagers to improve living conditions for the people of Gabon.

### Resources:

Gabon	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	58	56	57
Average # of Volunteers	103	119	121
Program Funds (\$000)	3,377	2,953	3,053

### Peace Corps Projects by Sector:

#### Agriculture

Volunteers are involved in the promotion of a freshwater fish culture with an integrated animal husbandry and agricultural crops component in order to improve villagers' income-generating capacity and contribute protein to their diet. Volunteers have trained more than 150 fish farmers and helped construct 66 new fish ponds. Annual fish harvests of these ponds has grown to 1.6 metric tons, of which 41% is consumed by the farmers' family members.

#### Education

Volunteers construct rural primary schools and teach carpentry and masonry techniques to Gabonese villagers. The Volunteers and program participants have successfully constructed nine new classrooms, three directors' offices, nine teachers' houses, and 18 latrines. In 1994, Volunteers taught physical science and mathematics to more than 5,500 students, with almost 50% achieving passing grades. Volunteers also taught English to more than 4,800 students, and 60% achieved passing grades.

#### Health

Peace Corps' pilot health project will assist the people of Gabon in their efforts to reduce maternal, infant and child morbidity through health education in basic preventive health techniques. Volunteers have conducted nutrition surveys, public health classes at a nursing school, prenatal consultations and immunizations at local hospitals, HIV/AIDS education, and produced a health lessons booklet for future Volunteers.

Population: 1,019,000

Annual Per Capita Income: \$360

Number of Years Peace Corps in Country: 28

### Peace Corps Country Overview:

Numerous social, economic and environmental constraints pose significant problems for the people of The Gambia. These problems are exacerbated by migration from rural to urban areas. The country experiences high infant and maternal mortality rates, particularly in rural areas. A major shortfall of qualified math, science and English teachers exists at both the primary and secondary school levels. Textbooks, teaching aids, and instructional materials are scarce. Only 60% of eligible children are enrolled in primary school and, in some rural areas, less than half of eligible girls are enrolled. The Gambia is also facing rapid declines in its natural resource base and agricultural productivity.

### Resources:

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
The Gambia			
Trainees	39	37	37
Average # of Volunteers	66	74	70
Program Funds (\$000)	1,604	1,505	1,543

### Peace Corps Projects by Sector:

#### Education

Over the past 28 years, Volunteers have taught thousands of Gambian students in math, science and English, and established 12 school-based resource centers and libraries. Within the past few years especially, Volunteers have also conducted 20 teacher training programs for the design of teaching aids and introduction of new teaching methodologies. Volunteers have spearheaded school and community-based environmental education activities. One Volunteer and her Gambian counterparts implemented a resource center at a primary school that entailed the preparation of teaching aids using recycled materials, as well as the development of a system for the security, maintenance, and inventory of the materials. The resource materials are prepared for the subject areas of English, math, science, and social and environmental studies, and are used for child-centered learning activities and games.

Another Volunteer demonstrated the environmental and monetary advantages of using fuel-efficient cook stoves instead of traditional open fires. In doing so, the Volunteer taught math concepts to his 153 eighth-grade students and their families, all of whom worked together to construct the stoves. The school administration and teachers were also very active in their support of the cook stove project. Participants in the project have estimated that use of wood for stoves has been reduced by an average of 33%. Several schools have since replicated the project, and the Ministry of Education is encouraging the use of cook stoves for its school feeding program.

#### Environment

During the past year, Volunteers have trained 21 Gambian farmers in community level nursery management

and fruit tree grafting. They also have conducted 30 community workshops on soil fertility and erosion control, and implemented 14 community-based environmental education projects. One Volunteer worked with a Gambian counterpart to establish a nursery project comprised of a large demonstration garden and living-tree seed bank. The nursery includes a live fence, a windbreak, alley cropping, over 750 fruit trees, a composting demonstration site, and a wood lot. Recently, the Forestry Department and a non-governmental organization laid plans for the establishment of a community managed forest reserve. The reserve will require a firebreak comprised of a variety of trees which will be provided by both the community and the nursery project established by the Volunteer and his counterpart. Another Volunteer trained farmers in the establishment and maintenance of live-tree fences, which keep livestock out of gardens and eventually grow large enough to provide for fuel wood, construction material, and animal fodder.

### Health

This project will be launched in FY1996. Volunteers will be assigned to health centers, dispensaries or village health committees. Volunteers will develop and implement primary health care education activities, placing special emphasis on maternal and child health care.

## AFRICA

## GHANA

Population: 16,261,000  
 Annual Per Capita Income: \$430  
 Number of years Peace Corps in Country: 34

**Peace Corps Country Overview:**

Through educational reform and the implementation of an Economic Recovery Program initiated in 1983, Ghanaians have experienced marked economic growth of approximately 5% per year. Despite this promising growth, 70% of Ghana's population resides in rural communities, many of which do not have access to clean water sources and basic health care. Deforestation and soil erosion are taking place at an alarming rate. Many communities and individuals have difficulty obtaining access to credit to start small enterprises and economic development projects.

**Resources:**

Ghana	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	68	70	70
Average # of Volunteers	103	122	128
Program Funds (\$000)	2670	2605	2783

**Peace Corps Program by Sector:****Economic Development**

Volunteers are assigned to associations in the private sector, credit unions and government agencies to strengthen small business activities, including training in financial management, marketing, product development, and improving access to credit for small entrepreneurs. A group of 100 women and two Volunteers helped establish a women's center which operates a cooperative credit union and provides business classes and a vocational training center for young unemployed girls. One Volunteer helped a group of women add value to their fish products by drying and packaging the fish. After taking the new products on a marketing tour through Ghana, the women saw significant increases in their sales and income.

**Education**

Volunteers teach math, science, art, and technical subjects in Ghanaian schools to support significant education reforms that the government has initiated. Volunteers construct heat sources with tin cans and kerosene, build ecosystems in bottles, and simulate chemical bonding models in the classroom. Volunteers also transfer community organization and planning skills to Ghanaian educators by mobilizing such projects as building school latrines, wells, dormitories, libraries, and science labs. Volunteers also have organized math and science clubs, built kilns and an art workshop, assisted environmental clubs, and coached sports teams.

**Education/Youth Development**

Ghana recently initiated a new youth development project that is designed to reach adolescents and young adults who are not part of the formal education and employment systems. The project seeks to strengthen the capacities of local groups that work with Ghanaian youth, to upgrade the skills of trade masters in vocational training centers, and to train university students who are working with street children in Accra and Kumasi. Two Volunteers work in Accra shelters that provide street children with food and other basic essentials.

Volunteers are considering future projects which can help these children build their natural entrepreneurial skills into sustainable, income-generating activities.

### **Environment**

As part of the Collaborative Community Forestry Initiative, Volunteer tree nursery managers direct the planting and growth of over 1,000,000 seedlings each year. Their efforts help to slow the effects of environmental degradation in the arid Sahelian zone in the northern regions. Volunteers also train people in tree nursery management and planting techniques with the goal of rendering village tree nurseries financially self-sustaining. As part of Ghana's new national curriculum, several Volunteers teach environmental science to secondary school students.

### **Health**

Volunteers assist rural communities in building technically appropriate wells and latrines to reduce diseases caused by poor water quality and sanitation systems. They identify community health needs, provide education in basic primary health care, nutrition, and Guinea worm eradication. One Volunteer helped develop HIV/AIDS education materials and a primer which is used in Ghana by rural health teams and school teachers. With only limited resources, another senior Volunteer led a community project in building the village's first improved ventilation pit latrines. Another Volunteer and a team of three Ghanaian counterparts have led a health campaign in 28 villages to improve water sources. Local businesses and villagers together raised funds to drill deep bore holes where potable water is scarce.

## AFRICA

## GUINEA

Population: 6,269,000

Annual Per Capita Income: \$510

Number of Years Peace Corps in Country: 15

### Peace Corps Country Overview:

For much of the last 30 years, Guinea has remained near the bottom of the social and economic development scale. Guinea has a literacy rate of 25% for adult males and 15% for adult females. Less than a third of all eligible children attend any level of school; in rural areas, only six percent of eligible girls are enrolled. Life expectancy is only 45 years, and infant mortality in rural areas is among the highest in the world. Agricultural development has been minimal throughout the country and despite an abundance of natural resources, only a small percentage of arable land is being cultivated.

### Resources:

Guinea	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	55	52	51
Average # of Volunteers	70	90	84
Program Funds (\$000)	2,273	2,158	2,155

### Peace Corps Projects by Sector:

#### Education

In collaboration with Guinean educators, Volunteers serve as English teachers in secondary schools and help students develop critical thinking skills. One Volunteer teaches English to more than 300 students using a pilot version of a new Guinean curriculum, and awards certificates of merit to young girls to encourage them to stay in school. Another education Volunteer has procured funding for renovation of a village hospital and has assisted a local women's group to begin a tie-dye cooperative. Beginning in 1995, three Volunteers will begin teaching English courses at the University of Conakry.

Volunteers also provide math instruction to secondary school students to prepare them for entrance to the country's technical schools and universities. One Volunteer teaches advanced secondary school math to more than 150 students, and is writing, piloting, and editing lesson plans for use by future Volunteers and Guinean educators. This Volunteer was asked by the Ministry of Education to research and write two treatises on math topics for possible use in Guinea's schools.

#### Environment

Volunteers work with the A.I.D. Targeted Watershed Management Project in the mountainous Fouta Djallon region of Guinea to strengthen environmental education and small-scale agriculture projects. One Volunteer has introduced a new plant strain to villagers which provides food for livestock in the dry season and improves the soil. This Volunteer also conducts education sessions for villagers on proper maintenance and use of improved wells. Another Volunteer initiated a water catchment system for a women's garden project and collected plant samples for the Smithsonian Institution.

## Health

Volunteers work in public health education and outreach in small village communities. They collaborate with elected community councils to develop proposals for donor agencies to fund and implement small-scale community projects, such as the construction of schools, clinics, water sources, and latrines. One Volunteer teaches preventive health education to more than 200 primary students, over half of whom are girls, and has participated in vaccination tours which have inoculated more than 1,500 children. Another health Volunteer has received funding to form a youth theater group to encourage HIV/AIDS prevention. This theater group toured Guinea, appearing on Guinean television to highlight International AIDS Awareness Day.

## AFRICA

## GUINEA BISSAU

Population: 1,043,000  
 Annual Per Capita Income: \$220  
 Number of Years Peace Corps in Country: 7

**Peace Corps Country Overview:**

Guinea Bissau is listed by the World Bank as one of the ten poorest countries in the world. The health status of mothers and children is one of the bleakest in Africa: the mortality rate for children under five years is 246 per 1000 live births. Thirty-five percent of children in this age group suffer from malnutrition, with the principal causes of death being malaria, diarrheal disease and acute respiratory diseases. Less than 25% of the population has access to safe water. Opportunities for students and professionals to learn English are problematic due to a severe scarcity of English teachers and training materials.

**Resources:**

Guinea Bissau	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	22	19	19
Average # of Volunteers	35	38	32
Program Funds (\$000)	1,297	1,257	1,192

**Peace Corps Projects by Sector:****Agriculture**

Volunteers are working to improve rice-growing skills and increase rice yields on small farms through a rice extension project. The project has achieved wide support among local villagers, particularly with women rice farmers, who are now using better seed varieties, improving weed control methods, and constructing earthen dikes to better manage their water.

**Education**

Education Volunteers focus on three primary activities: teaching English at secondary schools where there is a lack of trained teachers; retraining current teachers; and developing relevant learning materials and curricula for teaching English. Out of 1,500 secondary school students who completed the third-year level of English, over 90% obtained a passing grade.

**Health**

Volunteers are focusing their efforts on training health workers at the village level and stressing preventive measures through non-formal education. Over the past year, Volunteers helped to establish monthly growth-monitoring and vaccination clinics in 20 villages. Volunteers and village health center staff served a population of almost 50,000, including 8,200 children under age four years and 1,300 pregnant women. In addition, Volunteers conducted 121 health education sessions on family planning, nutrition, prenatal care, basic hygiene, fever control, prevention of cholera, and HIV / AIDS for more than 3,700 women at seven health centers and 20 village health units.

Population: 25,376,000  
 Annual Per Capita Income: \$270  
 Number of Years Peace Corps in Country: 30

### Peace Corps Country Overview:

Currently over 80% of all Kenyans live in rural areas. Most of these citizens are small-scale agricultural farmers, pastoralists, and landless laborers. Approximately 47% of the urban population lives in or near slum areas. Kenya's education system faces a severe shortage of trained math and science teachers and the education of girls and young women is still a priority need. Environmentally, Kenya has lost about 50% of its forest cover over the last 30 years. If this trend continues, Kenya's forest will be largely depleted by the year 2000. Less than 50% of rural Kenyan households have access to safe water.

### Resources:

Kenya	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	75	83	83
Average # of Volunteers	161	161	140
Program Funds (\$000)	3,043	2,903	2,777

### Peace Corps Projects by Sector:

#### Economic Development

In 1994, more than 1,700 women were engaged in income-generating activities with assistance from Volunteers. Volunteers conducted 27 workshops on microenterprise development with 450 participants, including 240 women. Volunteers also taught business management classes to more than 250 young students. One Volunteer assisted artisans to improve product design and to develop outlets for their products. Another Volunteer developed an effective system to teach bookkeeping, marketing, and basic management to illiterate women.

#### Education

In 1994, Volunteers taught English, math and science to more than 5,000 Kenyan students. Additionally, 16 infrastructure improvement projects (such as libraries, laboratories, dining halls, and classrooms) have been completed. Volunteers are also involved in a wide variety of clubs including drama, wildlife, music, and sports. One Volunteer worked with a music and dance group in a very poor secondary school and led the group to a national championship. Another Volunteer worked with the school community and developed a proposal that brought electricity to two classroom blocks, the boys' and girls' dormitories, dining hall, and laboratory.

In 12 special education primary schools over the past year, 300 Kenyan teachers have received "on-the-job" training from Volunteers, and 1,250 assessments were conducted for hearing-impaired students. One Volunteer has worked with hearing-impaired school girls, teaching them baking and sewing skills. Another Volunteer is working with a local business community to provide job training for older boys who are hearing impaired.

**AFRICA****KENYA****Environment**

During the past year, Volunteers have worked with more than 400 individual farmers and almost 2,000 community members in adopting environmentally-based agroforestry and energy use techniques. Volunteers have helped start environmental education programs in 50 schools and tree nurseries in 140 schools. One Volunteer established environmental libraries in 23 schools.

**Health**

During the past year, water and sanitation Volunteers have assisted in the construction of more than 350 latrines and 100 water storage facilities that serve more than 9,500 urban and rural Kenyans. Almost 100 lessons in sanitary education were presented at primary and secondary schools. One Volunteer, in collaboration with health officials, improved a hospital's water facilities through the installation of new gutters on 32 buildings and the connection of a pump and pipeline to the existing storage tanks. Another Volunteer completed the construction of a water mainline and break pressure tanks for a large water project.

Population: 1,899,000  
 Annual Per Capita Income: \$660  
 Number of Years Peace Corps in Country: 28

### Peace Corps Country Overview:

The government of Lesotho faces serious challenges in providing basic social, health and education services. Increased unemployment due to recent changes in South Africa have caused a historically weak economy to become even weaker. Lesotho suffers from a growing unemployment rate, currently 30%, and a literacy rate of only 59%. Volunteers are working with small rural communities, schools, farmers, and local government officials to encourage social and economic development.

### Resources:

Lesotho	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	53	63	63
Average # of Volunteers	111	108	101
Program Funds (\$000)	2,659	2,593	2,641

### Peace Corps Program by Sector:

#### Agriculture

During the past year, Volunteers have established 30 garden groups and school gardens to improve village nutritional conditions. Additionally, six micronurseries for fruit trees have become operational, and are providing seedlings to 3,500 farmers who have been trained in improved methods and techniques for food production, preservation, and basic nutrition. Volunteers are also teaching marketing skills to farmers so that surplus products can be sold for cash for the rural economy. In 1994, Volunteers trained 140 village garden leaders who are now serving their communities, voluntarily, as agriculture and nutritional extension agents. Volunteers also have worked with local villagers and officials to improve access to safe drinking water for human consumption and livestock production.

#### Economic Development

Volunteers provide technical and managerial training to a growing number of small businesses, business support agencies, and local financial institutions in Lesotho. Through the teaching and training efforts of one Volunteer, a group of approximately 15 young entrepreneurs are now surveying the marketability of their business ventures in their respective communities. Another Volunteer has assisted a group of basket weavers by helping them develop marketing plans for their products.

#### Education

Education is Peace Corps' largest and oldest program sector in Lesotho. Located primarily in the remote mountain districts, Volunteers teach English, math, science, agriculture, computer science, home economics, and vocational education to some 7,400 students in over 35 disadvantaged secondary schools. Volunteers also participate in secondary projects, such as, building libraries, classrooms, water systems, health clinics, roads, and footbridges. During the past year, Volunteers assisted in the construction of more than 28 water collection

systems, which increased the availability of safe drinking water for an estimated 3,000 students and established 35 new school gardens at their sites.

### **Environment**

Environmental Volunteers are providing valuable assistance as extension agents and business and management advisors for the Ministry of Agriculture. Their projects focus on reversing environmental and land degradation, improving land management techniques and teaching modern livestock grazing plans. A total of 149 rain catchment systems, five spring catchments and two horizontal wells completed in the past two years now provide safe drinking water to approximately 32,000 people in the rural and mountain districts of Lesotho. During the past year, one Volunteer successfully designed and completed an ethno-botanic survey in four mountain range management areas. This study will assist the Ministry of Agriculture with the biological monitoring of non-forage resources and the evaluation of the effects of organized range management practices on mountain ecosystems.

Population: 12,728,000

Annual Per Capita Income: \$240

Number of Years Peace Corps in Country: 2

### Peace Corps Country Overview:

The education system in Madagascar experiences overcrowded classrooms, poorly trained teachers, lack of teaching materials, high student repetition and failure rates, and inadequate curricula. The natural resource base, upon which the majority of Malagasy directly depend, is seriously threatened by deforestation, loss of biological diversity, soil erosion and a decline in overall land productivity. Much of the population does not have access to basic social services. Economic recovery has been hampered by long-term development constraints, including high population growth, widespread poverty, and food insecurity.

Volunteer projects are based on requests for training English language teachers; natural resource management and community development; and the promotion of nutrition, health education, and child survival techniques.

### Resources:

Madagascar	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	22	23	23
Average # of Volunteers	8	33	39
Program Funds (\$000)	968	1,041	1,256

### Peace Corps Projects by Sector:

#### Education

Volunteers are working with 32 Malagasy junior high school English teachers to improve their English speaking ability and enhance their teaching methods and materials. Together with their Malagasy counterparts, Volunteers are conducting weekly or bi-weekly English lessons and teaching methodology classes. Their goal is to promote the use of English among the junior high students and faculty, as well as the general population. In support of this goal, Volunteers are establishing English language resource centers and implementing training seminars in their communities. In addition, Volunteers have worked with officials from the Ministry of Education to facilitate six in-service training sessions for approximately 100 teachers.

#### Environment

Twelve Volunteers will be working with, and providing training for, local community members and groups to improve the conservation of Madagascar's environmentally protected areas. They will be working to reduce the degradation of the natural resources in and around six of these areas; to develop the capacity of local individuals and institutions to manage sustainable, income-generating activities around these areas; and to enhance management capabilities of the government officials responsible for these areas.

#### Health

Starting in 1995, Volunteers will begin working on a project which will focus on child survival, health and nutrition education and malaria control.

Population: 9,303,000  
 Annual Per Capita Income: \$220  
 Number of Years Peace Corps in Country: 30

### Peace Corps Country Overview:

In 1994, the people of Malawi peacefully elected a new president and political leadership following 31 years of one-party, one-man rule. However, the gains in political and individual freedom have been tempered by continuing concerns about drought, hunger, disease, and environmental degradation.

Moreover, Malawi currently suffers from the rate of HIV infection: 12% of urban, middle-class adults between the ages of 15 and 44 are infected with HIV. Projections indicate that the number of children orphaned by this epidemic will reach 600,000 by 1998. These statistics, coupled with the growing demands for education and environmental rehabilitation, reinforce the important role that Volunteers play in Malawi's development.

### Resources:

Malawi	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	46	63	63
Average # of Volunteers	96	95	93
Program Funds (\$000)	1,852	1,857	2,008

### Peace Corps Program by Sector:

#### Education

Volunteers are assigned as mathematics and science teachers in rural, under-served secondary schools. Volunteers teach in classrooms with 30-150 students per class, using techniques designed to increase student participation. Volunteers who work in the Special Education Project focus on teacher training, curriculum development, and demonstration classrooms for mentally and physically handicapped students, pre-school children, and adults. One Volunteer introduced a paper-making project using recycled classroom paper. Now, men and women in the area are producing envelopes and stationery from recycled paper.

#### Environment

Volunteers in Malawi are serving as environmental educators, national park officers, and community coordinators. They work with local residents of National Parks and neighboring "protected areas" to relieve human pressures on the natural environment, increase food security, and create income-generating activities for local residents.

#### Health

Volunteers work in rural communities as educators and counselors, teaching HIV/AIDS prevention strategies and counseling techniques to Malawi counterparts, co-workers, patients, students, and community groups. Volunteers also instruct families in childhood disease prevention, while physical and occupational therapist Volunteers work with patients, local health personnel, and Malawi health professionals to treat disabled patients. One Volunteer has been instrumental in developing a District HIV/AIDS Education and Counseling Center

where a group of 40 female volunteers from local churches regularly visit HIV/AIDS patients and conduct prevention activities in their neighborhoods.

### **Urban Development**

Volunteers work in teams to address the myriad of problems caused by rapid urbanization in Malawi. The teams, which are made up of architects, engineers, accountants, and community development workers, are posted in each of Malawi's major cities. In Lilongwe, Volunteers are working to implement city statutes that enable low-income residents to improve their housing. One Volunteer works with local architects and engineers to design low-cost housing and plan subdivisions in areas scheduled for development. In Zomba, two Volunteers were instrumental in organizing local community efforts to obtain piped potable water for a village.

Population: 9,234,000  
 Annual Per Capita Income: \$300  
 Number of Years Peace Corps in Country: 24

### Peace Corps Country Overview:

Although most of the nine million inhabitants are engaged in an agriculturally based livelihood, Mali has yet to achieve food self-sufficiency and faces a number of other development problems that require long-term solutions. Peace Corps' primary objective in Mali is to assist its people in promoting socioeconomic development and addressing the most basic development needs of the Malian people: food production, water availability, environmental conservation, basic education, and preventative health care.

### Resources:

Mali	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	95	92	92
Average # of Volunteers	137	179	163
Program Funds (\$000)	4,139	3,342	3,555

### Peace Corps Projects by Sector:

#### Agriculture

Volunteers are helping Malian farmers at the village level to produce enough nutritious food to supplement their diets and generate income by increasing and improving primary gardening activities, field crops, small animal raising, and food preservation and storage. Some of the techniques being promoted include composting, double digging, inter-cropping, and use of organic pesticides. Volunteers also introduce different kinds of vegetables, such as soybeans, and teach women how to use them in their everyday diets. Small animal husbandry Volunteers are working with farmers to introduce better techniques to raise chickens. These Volunteers advise farmers on improved chicken coop construction, feeding and watering, chick production, and better sanitation and health care. They also help introduce a sturdier variety of chickens to strengthen the local breed.

#### Economic Development

This project seeks to expand the small business sector in Mali by improving the management capacity of potential and existing small business entrepreneurs, and by increasing the financial and technical resources available to them. Volunteers are placed in both cities and rural towns. They work with businessmen and women instating new businesses or improving their management skills for existing small business projects. Feasibility studies, marketing surveys, inventory control, accounting, and pricing are some of the services and training that Volunteers provide.

Volunteers based in rural areas work with farmers and other community members teaching them the basics of profit making through simple value-adding techniques or better marketing. Urban-based Volunteers work to develop long-term plans for the creation of community owned and managed savings and credit institutions. One such Volunteer, with the assistance of his local counterpart, recently initiated the start-up of a village bank in Niono.

## Education

Volunteers work as technical advisors and catalysts to help primary school teachers make topics more practical for their students. Volunteers provide technical and pedagogical training to Malian teachers to integrate knowledge and practice in agriculture, animal husbandry, vocational education, and home economics into school curricula. This will result in making education more relevant to the needs of students who will not continue their studies, but will be farmers, artisans and parents. Volunteers are also coordinating technical exchanges between rural and town based teachers to promote diffusion of new methodologies and techniques throughout the country.

## Environment

Volunteer foresters help train the local population to better understand their environment, to use their natural resources more efficiently, and to conserve the bio-diversity in their communities. Soil conservation, tree conservation, and tree production are the primary concerns of this sector. Working with Volunteers, Malian farmers have learned to build rock lines to prevent soil erosion and to plant trees as live fencing in an effort to reduce deforestation. Volunteers also teach women how to make improved mud stoves which burn less wood than the traditional method. Promoting fruit tree planting is another focus of this sector, using grafting methods which increase fruit yield and lengthen the growing season. Environmental education, both formal and informal, is a new component of this sector whereby Volunteers work with primary schools and other organizations to incorporate environmental awareness into the curriculum.

Volunteers are also developing Mali's capacity to improve the management of limited water resources and sanitary conditions. They are working with local blacksmiths to construct low-cost water pumps, providing Malian farmers with an affordable alternative that can be manufactured and repaired locally. An important development in this area has been the formation of regional and local level interagency sanitation committees. Volunteers were the primary catalysts for the formation of these committees, marking the first time community leaders have joined with government and non-governmental organizations to solve sanitation problems.

## Health

The aim of the Health Education Project is to decrease the number of preventable deaths among children, to increase community awareness of health issues, to improve general health care practices among villagers, and to upgrade the skills of local health workers.

Volunteers also monitor child growth and teach their Malian counterparts how to develop and present health and nutrition education lessons to needy mothers. Health education themes include: proper weaning, breast feeding, diarrheal disease control, vaccinations, and HIV/AIDS prevention. Volunteers also promote attendance at prenatal consultations and help train and supervise traditional birth attendants. Some Volunteers work with primary school teachers to incorporate health topics into the curriculum. Three other Volunteers are currently developing theater groups to perform plays that promote HIV/AIDS prevention and other health-related topics.

## AFRICA

## MAURITANIA

Population: 2,137,000  
 Annual Per Capita Income: \$510  
 Number of Years Peace Corps in Country: 25

**Peace Corps Country Overview:**

Recurring drought and sparse natural resources make Mauritania one of the world's least-developed nations. Only 15% of the rural population of Mauritania has access to clean water and less than 1% of the land receives sufficient rainfall to sustain crop cultivation. Volunteers are working at the grass roots level to support the primary objectives of the country's economic plan: increased agricultural production and income generation from agriculture; promotion of reforestation and dune stabilization projects; implementation of preventive health care with an emphasis on providing clean water; and development of the formal and informal business sectors.

**Resources:**

Mauritania	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	22	19	19
Average # of Volunteers	49	42	32
Program Funds (\$000)	1,613	1,329	1,199

**Peace Corps Projects by Sector:****Agriculture**

Agroforestry Volunteers are part of an integrated development effort to implement improved agriculture and forestry practices throughout rural Mauritania. This strategy aims to slow the rate of desertification and environmental degradation, while at the same time increasing food production. A major emphasis of the Volunteers' work includes transferring technical expertise to Mauritanian farmers and villagers. An agriculture Volunteer worked with the Nere Walo Women's Cooperative to install a water irrigation system for their cooperative garden, as harsh weather conditions and local geography made water difficult to acquire. The existing well was deepened and a wind-powered pump, made from locally available and inexpensive material, was installed. Now the women are able to produce more vegetables to supplement their daily diets, while at the same time supplementing their household incomes.

**Economic Development**

The purpose of this project is to generate income and increase employment for small-scale entrepreneurs in Mauritania's informal economic sector. Volunteers work to improve general business management practices and to help create or expand new and existing businesses among individually- and cooperatively-owned enterprises. A Volunteer in Nouadhibou helped secure funding to expand and renovate the only tie-dyeing business in the central market.

**Health/Water Sanitation**

Volunteers are working to upgrade the health status of the rural population and improve the standard of living through the development of potable water sources, the development of sanitation facilities and the promotion of improved methods of treating water. One Volunteer working in the Kankossa area developed a pump made out of locally available materials which is simple to construct, operate and repair. He taught villagers, as well as other Volunteers, how to replicate this technology which has served to increase access to clean water in that region.

## AFRICA

## NAMIBIA

Population: 1,565,000  
 Annual Per Capita Income: \$1,660  
 Number of Years Peace Corps in Country: 4

**Peace Corps Country Overview:**

Before achieving independence in 1990, the quality of Namibia's education was uneven, as each ethnic authority ran the state schools in its area without adhering to an established state standard. It is estimated that 60% of Namibia's population is illiterate. The Ministry of Education and Culture estimates that only 40% of the country's students will complete the seventh grade. Volunteers are working to support the Ministry's efforts to improve and expand access to quality education.

**Resources:**

Namibia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	53	58	73
Average # of Volunteers	72	92	106
Program Funds (\$000)	2,239	2,265	2,631

**Peace Corps Program by Sector:****Education**

Volunteers teach English, mathematics, and science in secondary schools throughout the country and are involved in secondary projects designed to improve the conditions at their schools and in their communities. Volunteers also serve as instructors at three teacher training colleges providing instruction in methodology, English and child development. They establish teacher resource centers, build libraries, and secure books, supplies, and equipment for schools and teacher training colleges.

**Education/Youth Development**

Needs in this sector are tremendous, since there are no services for youth and structures for providing information, training or counseling did not exist prior to 1990. Youth in Namibia, which comprise 70% of the country's population, have had no experience in forming organizations or developing leadership structures. To address these problems, Volunteers work as regional youth officers, health and program officers at youth resource centers, and as management officers at youth skills training centers. They are establishing an infrastructure which provides services to young people in employment, job training and health in order to increase their participation in economic, social and civic development. Volunteers have assisted in establishing nine regional youth offices, one multi-purpose youth center with a drop-in health unit, an environmental education unit, a jobs information unit, and a youth skills training center which provides year long training courses in vocational, business management for youth at risk. The combined efforts of these programs provide services for approximately 100,000 Namibian young people each year.

Population: 8,440,000  
 Annual Per Capita Income: \$270  
 Number of Years Peace Corps in Country: 33

### Peace Corps Country Overview:

Niger is one of the poorest countries in the world. Efforts to develop the country's limited resources have been hindered by increasingly difficult environmental pressures and limited manpower. Periodic droughts throughout the 20th century have caused great social and economic dislocation among the rural population. Peace Corps implements a programming strategy which works to address such basic priorities as increased food self-sufficiency, malnutrition, math and science education, and natural resource sustainability.

### Resources:

Niger	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	68	69	69
Average # of Volunteers	109	132	128
Program Funds (\$000)	3,087	2,863	2,979

### Peace Corps Projects by Sector:

#### Agriculture

The goal of the Africa Food Systems Initiative (AFSI) project is to assist Niger's efforts to increase food self-sufficiency by promoting local problem-solving capacities. Volunteer efforts focus on improving food production, conservation and income-generating activities, as well as diversifying economic activities in general. Initiated in 1987, the project organizes Volunteers into multidisciplinary teams which focus development efforts in a given geographic area for eight to ten years. Volunteers work with village leaders and government officials to identify ways to improve families' food systems. Once methods and technologies are implemented, they are monitored to determine their effectiveness.

Training is a major focus of the AFSI project. In 1994, Volunteers planned two training projects for 60 gardeners to improve their gardening techniques. Upon returning to their villages, each participant held mini-training sessions to pass on what they had learned.

#### Education

Niger's education system suffers from a shortage of qualified and trained teachers. Over 72% of the population is illiterate. By providing math and science training for teachers, Volunteers are working to increase access to math and science education for 12,000 Nigerien students. Volunteers also assist their local schools in identifying ways to acquire math and science materials and improve the learning environment. Literacy training, begun in 1987, has led to the initiation of eight village libraries. In 1994, several literary clubs were initiated to provide a forum for advanced readers. Other events held in 1994 included a para-veterinarian training for five villages, literacy training for eight villages, tree nursery training for 25 villages, and soil conservation training for 20 villages.

## Environment

The environment in Niger is under heavy, long-term pressure due to climatic change and increasing use of natural resources. The purpose of this project is to assist local communities in reaching food and natural resource self-sufficiency by improving the management of their land. Volunteers work in rural communities in four regions of Niger and develop plans to encourage environmental conservation and rural development. Project activities include promoting the construction of woodless houses and wood-conserving stoves, planting new trees and improving the management of naturally regenerated trees.

Volunteers are leading a project which is designed to maintain the productive capacity of biologically diverse ecosystems in Niger. They are assisting communities in adopting conservation and sustainable management practices for the land and resources for present and future generations. Over the last three years, a team of Volunteers has been developing a management plan and community activities near the Kouré forest to help preserve the last troop of wild giraffes in West Africa. These Volunteers have made significant progress in documenting the population size, movements and behavior of the giraffes. They have also begun to collaborate with the Ministry of Tourism to provide further training and support to forest guides. These guides now earn income from tourists by escorting them to view the giraffes. The guides play an important role in minimizing disturbances to the animals and their habitat.

Environmental Volunteers are also working to increase and enhance environmental education in primary schools through the publication of journals and training of Nigerien primary school teachers.

## Health

The Nutrition Project is designed to assist the Ministry of Health's efforts to improve the nutritional status of children and pregnant and lactating women in rural Niger by educating mothers on methods to improve their feeding and dietary practices.

In the village of Dan Issa, a Volunteer nutritionist helped create a unique waste disposal system for the community. Using Small Project Assistance funds, she was able to recruit the service of four villagers to remove waste to a designated area using donkey and pull-carts. In a country where diarrheal diseases are the third most frequent cause of morbidity and where an average child suffers nearly seven episodes of diarrhea per year, effective waste disposal is vital to the health and well-being of the community. Villagers are continuing to implement this waste disposal system on their own initiative.

Population: 125,000  
 Annual Per Capita Income: \$330  
 Number of Years Peace Corps in Country: 5

### Peace Corps Country Overview:

Sao Tome and Principe is blessed with rich volcanic soils, adequate rainfall, and people who have experience in the production of food, cash crops and fishing. However, the majority of people suffer from a very low standard of living that is compounded by high rates of disease (such as malaria, intestinal parasites and gastro-intestinal infections) and a lack of basic services. These living conditions are especially acute among the rural population of the country, where many people do not have access to such services as health care, potable water, waste-disposal, and education.

Volunteers are currently helping villages in health education, water catchment, latrine construction, swamp drainage, and income generation. These projects are aimed at improving the standard of living of the people of Sao Tome and Principe by encouraging decision making at the local level.

### Resources:

Sao Tome and Principe	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	13	13	13
Average # of Volunteers	19	23	24
Program Funds (\$000)	841	818	901

### Peace Corps Projects by Sector:

#### Economic/Community Development

In 1994, Volunteers supported 18 community development projects that were initiated by local groups. Many Volunteers work as extension agents in the area of health. Volunteers are assisting with: the education of rural community residents and rural primary school children in the areas of nutrition, hygiene and primary health care; improving the general health care infrastructure by generating an understanding of the need for sanitary waste disposal and aiding in the construction of latrines, potable water systems, and school kitchens; and promoting small community development projects.

Other specific activities and projects that Volunteers have helped organize or create include: two community centers; one tailor shop which demonstrates how to manufacture clothes and generates income; three restaurants which focus on providing income-generating opportunities for rural and urban people; two day-care centers which care for children of working women; two canal renovations; a water pipe system for a fishing village; several latrines (in conjunction with UNICEF) which provide a better sanitary environment for villages; water catchment systems, which show people how to obtain and store clean drinking water; two centers providing health care and education classes, and a Women in Development project sponsored "Take our Daughters to Work Day."

In addition, 11 associations were developed with local people. Ten groups (including four women's groups and one youth group) are working on income generation activities. Three Volunteers are involved in environmental activities which include working with the only local environmental NGO, surveying sea turtles and their nesting sites, reforestation, and developing environmental education materials for schools, scouts, and nature clubs.

## AFRICA

## SENEGAL

Population: 8,054,000

Annual Per Capita Income: \$730

Number of Years Peace Corps in Country: 32

### Peace Corps Country Overview:

Despite many advances in Senegal in recent years, there remain numerous economic problems that have been aggravated by the steady decline in rainfall since the 1960s. Profits from the two main export crops, groundnuts and millet, are largely dependent on annual rainfall. In addition, much of the agricultural land in Senegal is in fragile condition due to a combination of soil depletion/degradation, deforestation, and desertification. Unemployment and underemployment are growing problems in Senegal, with only a small fraction of new entrants into the labor force able to find jobs. In the Health sector, while the Government of Senegal has decentralized health services, an under-sized staff of primary health care workers and limited basic health care resources impose considerable constraints. Maternal and childcare services remain limited. Consequently, Senegal has one of the highest infant and childhood mortality rates in the world.

### Resources:

Senegal	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	68	68	67
Average # of Volunteers	129	140	116
Program Funds (\$000)	3,119	2,851	2,739

### Peace Corps Program by Sector:

#### Agriculture

One of the major problems of the agriculture sector in Senegal is the misuse and mismanagement of Senegal's natural resources, which has led to a reduction in crop yields. Volunteers work with farmers on a variety of projects designed to improve soil fertility and increase the production of both traditional and non-traditional crops. These projects include promotion of vegetable crop production, composting, crop diversification, live fencing and integrated pest management.

More than three-fourths of Senegal's rice seed comes from imports. Volunteers work with women farmers in the southern part of the country to increase rice yields, encouraging greater self-sufficiency for this important crop. Volunteers have introduced improved varieties of rice and farming techniques better suited to local conditions, which has led to a significant increase in crop output. Reports of these production increases have led to numerous requests from other area farmers to participate in the project.

#### Economic Development

Volunteers in this project help to enhance the organizational and management capability of village and urban-based groups and individual microenterprises. Volunteers are working with woodworkers, leather workers, tailors, artisans and others to benefit from the increased demand for locally-produced goods. Since that many visitors were not aware of a local artisan center, one Volunteer worked with the artisans to design road signs. These strategically placed signs have increased visitors by 50%. The Volunteer also helps in the organization of the center and record-keeping to better manage the tourist market.

### Environment

Volunteers educate farmers and students about protection of the natural resource base to sustain agricultural production. This project currently encompasses 10 schools and 40 teachers in the Diourbel work zone. During the last school year, two Volunteers identified a core of motivated teachers who, under the leadership of their local counterparts, created an Environmental Education Steering Committee. In collaboration with committee members, these Volunteers prepared environmental education modules which were approved and will be used during the next school year.

Volunteers also work with local farmers on reforestation efforts at the village level. One Volunteer, after observing the success of local live fencing at a model farm, decided to replicate it in his village. With the assistance of the local forest service and other funding, he worked with 15 farmers to collect *Leuceana* seeds and plant them. More than 10,000 saplings have survived this planting.

### Health

Volunteers in this project assist in the planning, organization, and implementation of a primary health care program intended to reach the broadest possible segment of the population. Volunteers collaborate with nurses assigned to village health posts and with various community-based development groups, promoting such skills as how to conduct health education classes and promote community-based development projects. One Volunteer worked with a group of five women to hold health education classes for all women in the village. These classes were then offered to neighboring villages. Another Volunteer and her counterpart helped the people of Thiolum Fall build a maternal health center in their village with donations from former village residents.

Population: 888,000  
 Annual Per Capita Income: \$1,050  
 Number of Years Peace Corps in Country: 27

### Peace Corps Country Overview:

Although Peace Corps has been successful in increasing access to quality education for many citizens of Swaziland, the program continues to evolve to meet their changing development needs. Swaziland faces an acute shortage of mathematics and science teachers because they are often attracted to the private sector or to better-salaried positions offered in neighboring countries. Each year thousands of school graduates are unable to obtain a living wage due to a lack of technical skills.

Environmental degradation is another serious problem which threatens the potential success of public health and development initiatives in Swaziland. Poor solid waste management, limited access to clean drinking water, and rampant soil erosion are among the problems that the Swazis are attempting to address. Due to rapid urban growth in the past decade, 30% of the population now lives in towns and cities. Urban centers are overcrowded and lack the public services and facilities necessary to meet the demands of the rising population. A large segment of both rural and urban dwellers remain unaware of the sources of communicable diseases and malaria. Awareness of environmental issues is also just beginning in Swaziland and Volunteers will play an important role in increasing public knowledge and understanding of these issues.

### Resources:

Swaziland	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	28	31	31
Average # of Volunteers	67	59	49
Program Funds (\$000)	1,387	1,249	1,294

### Peace Corps Program by Sector:

#### Education

Each year Volunteers teach mathematics, science, and vocational skills to over 10,000 students in Swaziland. Volunteers play an important role in providing the quality instruction necessary for students to successfully compete on the national exams. Six Volunteers are working with parent committees to construct science labs for rural schools. Four Volunteers have established math or science clubs at their schools. Other Volunteers are working with primary school teachers to improve the quality of their classroom instruction. Over 1,000 primary school teachers have benefited from workshops led by Volunteers, which cover topics such as student assessment, teaching methodology, and the design of remedial learning activities. During the past year, vocational education Volunteers have taught basic skills in woodwork, metalwork and technical drawing to over 400 students. Volunteers encourage practical activities that not only allow students to practice their skills, but benefit the school as well. A carpentry Volunteer and his students repaired 125 desks at their school. Another Volunteer oversaw the construction of furniture for a laboratory and library at his rural school.

#### Environment

Volunteers work with government agencies to devise environment policies that address concerns about waste management, urban planning, natural resource management, and environmental education. Volunteers working

with the Ministry of Housing and Urban Development and local city councils focus on land use planning and zoning regulations within urban areas. One Volunteer has been instrumental in developing environmentally sound building codes.

Volunteers working in conjunction with local community organizations are participating in water and soil conservation projects that will benefit over 30,000 people in Swaziland. Other Volunteers produce programs with environmental themes at interpretative centers in nature reserves that reach over 2,500 students each year. One Volunteer helped to obtain funds to construct two centers that will provide environmental education opportunities for local schools and communities. Another Volunteer established an indigenous tree nursery to assist in the area of bio-diversity conservation.

**AFRICA****TANZANIA**

Population: 26,743,000  
 Annual Per Capita Income: \$100  
 Number of Years Peace Corps in Country: 22

**Peace Corps Country Overview:**

Although favored with abundant natural resources, Tanzania is still struggling to gain self sufficiency. In recent years the liberalization of the economy has encouraged the development of private enterprise. There remains, however, a high rate of unemployment and the majority of the people support themselves through small-scale agricultural activities. While there have been significant infrastructure improvements, especially in road construction, movement of goods within the country remains difficult and is a major deterrent to further economic development. Tanzania has placed science education and technology at the center of its development strategy. However, with perennial funding shortfalls, the Tanzanian teaching profession has not been able to attract, train or retain sufficient numbers of qualified math and science teachers to meet the country's needs. Peace Corps re-entered Tanzania in June 1991, and Volunteers have focused their efforts on improving the quality of, and access to, science and mathematics education in secondary schools.

**Resources:**

Tanzania	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	48	48	48
Average # of Volunteers	80	92	92
Program Funds (\$000)	2,135	2,072	2,175

**Peace Corps Program by Sector:****Education**

During the past year Volunteers have provided math and science education to over 12,000 secondary school students in Tanzania. Nearly every school where a Volunteer has been assigned has seen the students' academic performance increase on national exam scores. Examples of Volunteer impact can be seen at Shinyanga Commercial Secondary School, where advanced level economics students' scores ranked first in 1994. Similarly, physics students at a secondary school in Arusha who were taught by a Volunteer ranked first in 1994.

Volunteers are aiding in a multitude of secondary projects outside of the classroom, including building school and community libraries, designing HIV/AIDS education posters, assisting private entrepreneurs in improving business skills, and participating in Special Olympic events. Volunteers also provide computer education courses, teach English, help organize Girl Scout troops, organize trips for Tanzanian high school students to climb Mount Kilimanjaro, and assist in the production of a short film designed to raise awareness of women-in-development issues.

**Environment**

Although only a small number of Volunteers have been working in this sector, the impact has been impressive. One Volunteer working as a conservation law officer completed a report on all existing legislation pertaining to the environment. The report provides a historical overview of law and institutions pertaining to environmental management and summarizes the basic environmental problems facing Tanzania.

Another Volunteer works with an extracurricular club that provides environmental education to Tanzania's secondary school students. This Volunteer has visited over 50 schools in the past year giving environmental education lectures in Kiswahili to over 2,500 students. In addition, she has contributed articles to and helped produce the club's annual magazine, assisted in the production of four environment videos in English and Kiswahili, and assisted in writing a Wetlands Teacher's Training Kit.

### **Refugee Relief**

Three Volunteers in northwestern Tanzania have been assigned to provide relief assistance to one of the refugee camps with a population of 3,200 refugees. Within four months of their arrival, these Volunteers planted 15,000 wood fuel trees, built 300 fuel efficient stoves and trained local villagers in their use and maintenance. They also developed 240 home gardens, built a gravity-flow water system, provided health education classes for more than 130 community health workers, and wrote a syllabus for health procedures to be used at a local camp.

## AFRICA

## Togo

Population: 4,026,000  
 Annual Per Capita Income: \$330  
 Number of Years Peace Corps in Country: 33

**Peace Corps Country Overview:**

Togo is experiencing a long and difficult transition to democracy and struggling with the effects of the Structural Readjustment Program initiated in January 1993. It is estimated that more than 30% of the rural population lives in extreme poverty, and only 21% of Togo's people have access to adequate sanitation. Diseases such as tuberculosis, malaria and malnutrition are endemic in Togo. Current farming practices cannot meet the needs of the increasing population.

**Resources:**

Togo	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	48	43	43
Average # of Volunteers	44	66	68
Program Funds (\$000)	2,527	1,937	2,272

**Peace Corps Program by Sector:****Economic Development**

Since 1991, Volunteers have been working with officials at local credit unions to offer training and consulting to members who wish to improve their business skills. Workshops covering accounting, finance, marketing, feasibility studies, and other business advice are offered to groups of tailors, retailers and other small business people. Volunteers also provide post-course consulting services. The goal of this project is to improve basic business and entrepreneurial skills and foster opportunities for economic growth and job creation in Togo's large microenterprise sector.

Small business Volunteers have conducted accounting and management workshops for some 230 entrepreneurs. Some of the Volunteers have trained local assistants, who are now capable of conducting accounting classes and performing follow-up activities. Other Volunteers and their counterparts from the National Savings and Credit Organization have worked together to create a marketing training module and a training manual. Entrepreneurs in the town of Tsevie, with assistance from a Volunteer, organized a Chamber of Commerce with over 75 members. The Chamber meets bi-weekly to discuss issues such as transportation problems, marketing in neighboring towns, buying raw materials together in bulk, and advertising locally produced goods.

**Environment**

Heavy demographic pressure is straining Togo's agricultural systems and the regeneration of arable land. Traditional farming practices cannot meet the needs of the increasing population, nor do these practices address the problem of soil degradation. Togo's forests are being depleted as demand for tree products increases. Through Volunteer efforts, the use of nitrogen-fixing plants and trees has been adopted by over 100 farmers in 30 villages. Twenty-three target villages now have functional tree nurseries, 15 of which were able to fell enough trees to make a profit over the past year. In addition, more than 20 species of trees are being sold in nurseries. Sixteen villages were involved in informal environmental education programs and Volunteers are currently working in more than ten primary schools on environmental education projects.

## Health

Volunteers train rural health educators and assist communities in improving local health conditions. Project objectives include education on Guinea worm eradication, the prevention of communicable diseases and malaria, the importance of vaccinations and oral re-hydration therapy, as well as other health-related problems. Peace Corps' participation in this project will phase out in 1996, when the government of Togo takes over project activities. In June 1995, Peace Corps will start a new health project designed to address motherhood and child survival techniques.

Through technical assistance from Volunteers, approximately 1,100 village-based health workers are active in 967 villages with reported cases of Guinea worm. Volunteers trained 100 primary school teachers and 90 village monitors to assist with eradicating the Guinea worm. Approximately 65,000 filters were distributed and sold in endemic villages during the past year. As a result of this project, Guinea worm cases throughout Togo from 1993 to 1994 were reduced by an average of 62%.

## AFRICA

## UGANDA

Population: 18,026,000  
 Annual Per Capita Income: \$190  
 Number of Years Peace Corps in Country: 14

**Peace Corps Country Overview:**

Twenty years of civil strife and the more recent HIV/AIDS epidemic have had devastating impacts on Ugandan society. The education system is in disarray and needs massive reform. Uganda's natural resources have been neglected and mismanaged. Civil strife and social upheaval have brought local enterprise to a standstill, especially in the manufacture and delivery of goods and services. Peace Corps is an active partner in assisting people and institutions at the grass roots level in all of these areas. With increased stability, more personal freedom and a loosening of restrictive government controls and policies, a climate for sustained economic growth is being established.

Peace Corps' Programs focus on technical education, natural resource management, teacher training, women in microenterprise development, and community health nurse training. A new project in export agriculture is also under development.

**Resources:**

Uganda	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	26	43	43
Average # of Volunteers	34	49	55
Program Funds (\$000)	1,253	1,293	1,499

**Peace Corps Projects by Sector:****Economic Development**

In its first year, Volunteers are working on a project to provide women who are caring for orphans with the business skills necessary to increase household incomes. Volunteers work with a local non-government organization, the Ugandan Women's Efforts to Save Orphans, founded by First Lady Janet Museveni. Volunteers arrived in their communities September 1994. They are assessing the need for and potential of business training for women's groups and individuals who have on-going business ventures in their areas.

**Education**

Volunteers are helping to revitalize and improve technical education at colleges and institutes in Uganda. One Volunteer proved instrumental in the rehabilitation of the electronics laboratory at the premier technical college in Uganda by collaborating with students and faculty to renovate a lab room and rehabilitate existing equipment. Other Volunteers are working at primary teacher training colleges and provide assistance in such areas as needs assessments, training, monitoring, and evaluation. In an effort to improve teacher training, three Volunteers conducted over 200 classroom visits in FY1994. Another Volunteer has established a resource center featuring prototypes of instructional materials which can be made from locally available resources at the primary teacher college where she works.

### **Environment**

Volunteers on the Natural Resource Management Project work with Ugandan counterparts to assist the government in increasing the effective management and sustainable use of natural resources. Volunteers work in eight national parks and have trained 50 rangers and park guides in trail design and management, research techniques and management of gorilla and chimpanzee habits. In three parks, 70 kilometers of nature trails have been constructed. Volunteers organized an intensive interpretive training manual for guides from national parks and forest reserves. Volunteers work with schools, beekeepers and farmers to establish tree nurseries and introduce such appropriate technologies as fuel efficient stoves and solar energy projects.

### **Health**

Two Volunteers work as clinical instructors to support the development and introduction of a community-based health care system and provide in-service training for 50% of Uganda's nurses. Volunteer nurse trainers provide clinical instruction on community primary health care, supervise and coordinate student nurse clinical experience, and assist in community public health clinics.

Population: 8,527,000

Annual Per Capita Income: \$370

Number of Years Peace Corps in Country: 2

### Peace Corps Country Overview:

Although the country's first multi-party election was held in 1991, Zambia has suffered from numerous economic problems, including a gradual breakdown of its economic infrastructure. With one of the world's highest per capita rates of foreign debt (35%) and a majority of the population living in rural areas, Zambia faces serious challenges in delivering basic services such as education, health care, transportation, and safe water.

Peace Corps initiatives in the most neglected, rural areas of Zambia have focused on providing basic water and health needs of the communities they work in. This is being accomplished through small, community-based projects, health education, and training of the local work force.

### Resources:

Zambia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	12	21	21
Average # of Volunteers	6	21	30
Program Funds (\$000)	1,101	1,104	1,304

### Peace Corps Program by Sector:

#### Education

Through a collaborative effort between the Cornell University Law School, the University of Zambia and Peace Corps, two law lecturers will be assigned to the law school in Lusaka to teach courses in administrative law, international trade and investment, public international law, and constitutional law starting in February 1995.

#### Health

With the assistance of 12 Volunteers, 45 Ugandan communities have initiated Water Supply and Health Education Projects. These micro-projects include the construction and rehabilitation of traditional wells, capping of springs, construction of institutional latrines at schools and health centers, and the introduction of health education that emphasizes safe water and sanitary practices at seven secondary schools.

One key success has been the development of a community contract, developed by Volunteers and endorsed by provincial government officials, international donor agencies and local communities. This contract spells out the roles and responsibilities of outside development agents and, more critically, the communities involved in the project, thus making the community accountable for their own development. Volunteers find that project success rates are much higher when the community contract is used.

Population: 10,638,000  
 Annual Per Capita Income: \$540  
 Number of Years Peace Corps in Country: 4

### Peace Corps Country Overview:

Since achieving independence in 1980, the number of secondary schools in Zimbabwe has increased by 850%, but the country has been unable to fully staff them with qualified teachers. Zimbabwe only recently converted to a free market economy and is struggling to generate private sector jobs. Over the past four years, Volunteers have played an integral role in improving the education of the children of Zimbabwe. Volunteers provide basic business training to entrepreneurs and techniques on how to access technical assistance and credit. As a complement to efforts to increase business opportunities, Peace Corps has begun initiatives in youth development with programs designed to assist both rural and urban youth, school graduates and school dropouts.

### Resources:

Zimbabwe	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	23	38	38
Average # of Volunteers	45	64	74
Program Funds (\$000)	1,491	1,705	1,823

### Peace Corps Program by Sector:

#### Economic Development

Volunteers working in small business development provide business skills training to rural entrepreneurs and carry out business extension work in rural communities. During 1994, the first year of the project, two Volunteers developed a syllabus and implemented basic business training programs (including follow-up visits to participants) for more than 150 men and women in rural areas of Zimbabwe. Over 100 new small businesses were started as a result of their training program, creating new job opportunities for the local population.

#### Education

Since 1991, Volunteers have taught math, science, and vocational skills to over 14,000 students in rural Zimbabwe. Working together with their Zimbabwean counterparts, Volunteers have assisted rural secondary schools to set up libraries and obtain books and other educational materials from a variety of donor agencies and private individuals. Volunteers have helped in the redesign of the school curriculum by making topics more practical through the use of teaching aids developed from local resources. At Rimbi, in Southeastern Zimbabwe, one Volunteer helped two primary schools embark on profitable poultry projects that will help support school activities. Another Volunteer assisted his school in obtaining materials and financial support for the construction of both a block of science classrooms and a school library.

**Education/Youth Development**

Over the past 18 months, Volunteers have become increasingly active in projects pertaining to youth, particularly youth-at-risk. In Harare, a Volunteer played a key role in initiating a youth program called "Street Kids In Action," which has already benefited a number of the homeless children of the city. The program aims at removing children from the street by providing housing and education for 100 young adults in a half way house purchased by funds raised through local fundraising activities. Volunteers will help to increase youth activities through related projects in both rural and urban areas.

## Regional Overview

The countries of Asia/Pacific make up what is arguably the world's most economically vibrant region. Over the last three decades, a number of countries have experienced remarkable rates of economic growth and have assumed important roles in the international trading system.

But despite the region's growth, many countries in Asia/Pacific have yet to reach more advanced stages of development and face challenges similar to those in other parts of the developing world. Many countries in the region have low per capita incomes and are unable to provide economic opportunities for rapidly expanding youth populations.

Education systems lack modern facilities, and access to post-secondary education is often limited. A number of small countries in the region do not have adequate numbers of qualified math, science and English instructors, and resource shortages are particularly acute in many rural areas.

Environmental and health concerns vary within the region, but many hold potentially disastrous consequences. Rapid deforestation in some Asian/Pacific countries rivals the rate of destruction occurring in the South American rain forest. Many rural communities do not have access to basic health care, and some countries, such as Thailand, are experiencing severe problems with the spread of HIV/AIDS.

*In the Asia-Pacific region, a Volunteer helps a community build a system for piping in water.*

Volunteers are working to alleviate these problems in developing countries in the region. Peace Corps is the only U.S. presence in eight of the 13 countries where Volunteers are currently serving. While reaching a relatively small population, Peace Corps serves as a continuing indicator of American interest in supporting these island nations, which are increasingly at risk from a variety of development pressures.

## Programming Considerations

Each of Peace Corps' country programs in the Asia/Pacific region are carefully designed to meet the most pressing development issues: education, health, and environmental preservation account for approximately 75% of all Volunteer assignments. Education remains the largest sector, with Volunteers providing direct classroom instruction, teacher training, and community education.

The Asia/Pacific region emphasizes administrative policies which ensure that Volunteers receive thorough training and are placed in meaningful assignments that allow them to contribute solutions to the communities they serve. The Asia/Pacific region also places a high priority on ensuring that mechanisms and resources to support Volunteers and overseas staff are well-developed, and that program effectiveness is monitored to maximize the impact of Volunteer projects.

Finally, through an ongoing process begun in early 1994, the Asia/Pacific region is examining the changing needs of individual country programs and adjusting program size and composition to reflect current realities. The number of Volunteers in Thailand, which is presently the Asia/Pacific region's largest post, is expected to be reduced approximately 50% by 1998.

## Sector Summaries

### Agriculture

While Asia and the Pacific islands are not known for food shortages, inefficiencies in production and lack of adequate numbers of trained agricultural professionals remain important issues. Volunteers in this sector focus on increasing production by introducing modern production methods to increase yields and promote sustainable agricultural practices. Volunteers in Thailand, the Philippines, Micronesia, Fiji, and Nepal work on a variety of agricultural projects, including crop diversification, marketing, and agricultural research. In 1993, Volunteers worked on three fresh water fisheries projects in Thailand, Nepal, and Fiji, which resulted in a yield of over 160,000 kilograms of fresh fish, increased the incomes of project beneficiaries, and provided an important source of protein for local diets. Volunteers also planted over 100,000 animal fodder and food trees, diversified traditional crops in Thailand and Nepal, and conducted 600 workshops on sustainable agriculture. Innovative community development projects in the Philippines, Solomon Islands, and Papua New Guinea place Volunteers in isolated sites to improve agricultural self-sufficiency.

### Economic Development

Volunteers are actively engaged in projects designed to encourage the development of small business and microenterprises to bring economic growth and opportunity to some of the poorest communities in the Asia/Pacific region. Volunteers in Fiji, Tonga, Western Samoa, Micronesia and Palau, and Vanuatu work with development banks and other local institutions to train managers of small businesses through outreach services and apprenticeship programs. Peace Corps' projects in Western Samoa and Fiji focus on improving access to credit for women entrepreneurs. Volunteers in Tonga work with youth groups to develop income generating opportunities, while Volunteers in Mongolia are teaching English to entrepreneurs and government officials.

### Education

More than half of all Volunteers in the Asia/Pacific region serve in education projects, including math, science, English, vocational and community education. In 1993, Volunteers taught math and science to more than 6,000 students, and English to more than 9,000 students in the region. Volunteers also provided training in teaching methodologies to more than 5,000 teachers in the Asia/Pacific region.

### Environment

In addition to their efforts to strengthen environmental awareness through assignments in other sectors, Volunteers are working in nine projects in six different countries that are designed to address specific environmental problems. Volunteers in the Philippines and Thailand assist local agencies in the development and management of national parks and nature preserves. Peace Corps projects in Nepal and Thailand are improving the management and use of natural resources by supporting efforts to restore depleted forest areas, establish tree nurseries, and educate local populations about sustainable wood-cutting practices. Volunteers in the Philippines, Sri Lanka, and Micronesia promote technologies that protect and conserve fragile marine ecosystems and encourage sustainable livelihoods for coastal populations.

## Health

Volunteers serving in several Asia/Pacific countries are involved in a variety of health, nutrition, and sanitation projects. An HIV/AIDS education project that Peace Corps initiated in Thailand in 1991 has become a model for regional efforts to stem the spread of this disease. In 1994, Volunteers conducted more than 200 HIV/AIDS health and education workshops in Thailand. While Volunteers are encouraged through a regional initiative to participate in secondary activities that promote HIV/AIDS awareness, Peace Corps also respects local, national, and cultural sensitivities about this issue.

## Urban Development

Many countries in the Asia/Pacific region face mounting problems associated with rapid urbanization, population growth, and urban youth unemployment. Currently, Volunteers in Nepal are working in municipalities to help local officials develop programs in drainage control and sanitation, design land-use maps and town master plans, and identify locations for bus parks and other transportation hubs. Volunteers in the Philippines are helping provincial governments improve their development planning efforts. Volunteers in Nepal completed plans for 14 urban projects in 1993, including projects in drainage control and sanitation, public transport parks, and town master plans. In Fiji, Volunteers are working in a variety of capacities in government ministries to streamline operations and assist in strategic planning.

**ASIA PACIFIC****CHINA**

Population: 1,175,359,000  
 Annual Per Capita Income: \$490  
 Number of Years Peace Corps in Country: 2

**Peace Corps Country Overview:**

Peace Corps' pilot program in China began in June 1993. Volunteers are now teaching English in five colleges located in smaller cities of Sichuan province.

**Resources:**

China	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	0	17	0
Average # of Volunteers	17	17	16
Program Funds (\$000)	429	730	604

**Peace Corps Program by Sector:****Education**

The goal of this project is to increase the English speaking and writing language ability of Chinese in Sichuan Province. Volunteers are in the process of completing their second year of teaching English at three teachers colleges, a medical college, and an institute of animal husbandry and veterinary science. Volunteers are training future English instructors who will be teaching high school in rural areas of the province. A number of Volunteers are also involved in community-oriented projects, such as improving conditions at a local orphanage and a school for deaf children. Four Volunteers at Chengdu Teachers College organized activities for Earth Day, including lectures and discussions about environmental concerns and a student-led campus clean-up program.

Population: 759,000/9,100  
 Annual Per Capita Income: \$2,140/530  
 Number of Years Peace Corps in Country: 27

### Peace Corps Country Overview:

Increases in tourism and the production of sugar have contributed to Fiji's estimated annual growth rate of over 3% in 1994. While Fiji has a larger GNP per capita than all of its small-island neighbors, economic opportunity has not reached all of Fiji's 322 islands, particularly among the country's youth. Fiji continues to have a shortage of trained teachers in technical areas, and the quality of health care and education varies throughout the islands. While export markets for agricultural products are well-established, local market development is often deficient in rural areas. The urban population is expected to increase to 43% by the year 2000, placing new demands on municipal governments, infrastructure, and the environment. Additionally, training is often inadequate for management of rural, municipal, and provincial governments or projects for economic and social development.

The Peace Corps Fiji Office also administers the program in Tuvalu.

### Resources:

Fiji/Tuvalu	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	53	49	48
Average # of Volunteers	91	93	89
Program Funds (\$000)	1,910	1,882	1,800

### Peace Corps Program by Sector:

#### Agriculture

Volunteers work to develop and manage freshwater tilapia fish farms among rural populations for food and income generation. Their work involves pond construction and maintenance, spawning and harvesting fish, and market advising. The combined yield from fish farms where Volunteers work averaged over 9,500 kilograms each year for the last four years.

In Tuvalu, a Volunteer who serves as a Marine Fisheries Advisor is working with a local counterpart to restore local marine life and help the commercial fishing industry develop in an environmentally sound manner.

#### Economic Development

Through training and counseling services, Volunteers have provided business advice to more than 400 Fijian small business enterprises since 1993. Volunteers work with the Development Bank, Poverty Alleviation Unit, Junior Achievement, Ministry of Youth, and Department for Women and Culture to encourage economic development. One Volunteer in Vanua Levu advises women's groups on income generation activities. Another Volunteer and her counterpart have set up the Women's Social and Economic Development Program, providing credit and training for women in small business.

A Volunteer working in Tuvalu has helped in the completion of Tuvalu's airport and the construction of much needed housing on Tuvalu's main atoll.

**Education**

Volunteers taught math, science, accounting, and environment to more than 4,000 students over the last two years. Volunteers also serve as teacher trainers at the Fiji College of Advanced Education. A Volunteer biology teacher at a rural high school in Labasa constructed a sanitary facility for the school and has set up a study lab with donated computers.

**Health**

In August 1994, Volunteers began a series of health education and nutrition programs throughout the islands, and they travel to various villages as members of regional teams. One Volunteer works with Fiji's HIV/AIDS Task Force to encourage the prevention of HIV/AIDS, a growing problem in both urban and rural areas of Fiji.

**Urban Development**

To revitalize local-level public administration and strengthen the Fijians' management skills, Volunteers work as Management Planning Advisors. Volunteers travel within an assigned province organizing and facilitating management workshops, developing planning aids, and monitoring and evaluating management systems. One Volunteer works at the Ministry of Fijian Affairs training ministry staff in management practices. Another Volunteer, based at the Namosi Provincial Office, conducts urban development training programs with village leaders.

Population: 76,000  
 Annual Per Capita Income: \$710  
 Number of Years Peace Corps in Country: 22

### Peace Corps Country Overview:

The Republic of Kiribati has few natural resources, and those that exist are difficult to extract and export. People on the outer islands live a predominantly subsistence lifestyle. The poor resource base makes it difficult for the government to raise enough revenue for development programs, including education.

Although English is one of the nation's two official languages, it is not widely spoken or understood, particularly on the most remote islands, and many teachers are not familiar with English language instruction methods. Even the best primary school students who qualify to enter high school have generally poor English skills, which slows their progress throughout the rest of their education. Consequently, Kiribati finds it difficult to obtain the educated and trained work force necessary for economic development.

### Resources:

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Republic of Kiribati			
Trainees	13	14	15
Average # of Volunteers	23	22	23
Program Funds (\$000)	489	514	536

### Peace Corps Program by Sector:

#### Education

The Kiribati Ministry of Education, Science and Technology has asked Peace Corps to help improve English education in the country's rural primary schools. The Volunteers' principal objective is to improve the English teaching skills of their teacher counterparts. Volunteers are involved in curriculum development, lesson planning, and the development of appropriate classroom materials. Volunteers have also been asked to help address the significant education staff shortages in the secondary schools. They teach math, science, English, and social studies, as well as assist in staff development and training of their fellow educators.

One Volunteer teacher trainer on the island of Butaritari conducts regular workshops to upgrade the local teachers' English teaching skills. She also follows each seminar with lesson planning and co-teaching activities, which reinforce the topics taught. This Volunteer has also established the school's first library, which is stocked with books donated from the United States. She actively participates in Peace Corps' World Wise Schools program by organizing students who write letters to a "sister school" in the United States.

Another Volunteer is head of a high school Science Department and teaches a full complement of science classes. He has acquired science equipment for the school's laboratories, and is currently developing a science curriculum, teaching aids, and lesson plans. He is designing simple laboratory experiments that can be conducted using local materials to provide students with much-needed instruction in scientific theories. This year, he plans to conduct several science fairs at neighboring elementary schools.

Population: 53,000  
 Annual Per Capita Income: N/A  
 Number of Years Peace Corps in Country: 29

### Peace Corps Country Overview:

Compared to other Micronesian countries, the average education levels of Marshallese teachers is very low. Of the 348 elementary school teachers, only 49% percent have a degree, beyond a high school diploma, and most vocational education teachers lack advanced degrees. Peace Corps presence in the Marshall Islands plays an important role in upgrading the educational levels and general teaching skills of teachers in elementary and secondary schools.

### Resources:

Republic of The Marshall Islands	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	17	15	15
Average # of Volunteers	13	17	21
Program Funds (\$000)	667	798	883

### Peace Corps Program by Sector:

#### Education

Seventy-five percent of Volunteers in the Marshall Islands work in primary education, while the remainder serve as vocational instructors at the secondary level. The majority of Volunteers in the Primary Education English Enhancement Project serve as replacements for Marshallese teachers who are attending courses to obtain associate degrees. Other Volunteers work at the Ministry of Education, developing curricula, textbooks, and related materials. One Volunteer works at the College of the Marshall Islands and is developing a program for teacher education.

Volunteers are also involved in a Vocational Education Project. They work at the nation's two public high schools to increase the number of skilled trades people and reduce the country's reliance on expatriate workers. These Volunteers replace Marshallese vocational education teachers for two years while they attend courses toward their bachelor's degree at the University of Guam. In addition, Volunteers write education curricula, develop systems for purchasing and maintaining tool and material inventories, arrange apprenticeships, and work with their counterparts to upgrade teaching skills.

One Volunteer teaches her young students how to cook nutritious meals over a wood fire and how to use manual sewing machines that are more readily available on the outer islands. She has written into the curriculum a component which encourages the use of local resources for classroom equipment that can be easily replaced or repaired.

**FEDERATED STATES OF MICRONESIA  
AND REPUBLIC OF PALAU**

**ASIA PACIFIC**

Population: 110,000  
Annual Per Capita Income: N/A  
Number of Years Peace Corps in Country: 29

**Peace Corps Country Overview:**

The Federated States of Micronesia (FSM) and Palau operate under Compact Agreements of Free Association with the United States. Economic development has proceeded slowly, and residents of the islands are heavily dependent on imported foods. This has caused a significant drain on the economy and contributed to health and nutrition problems. Although more than 50% of the people are under the age of 18, the public school system has few resources. The challenges for the FSM will most likely become more critical as the year 2001 approaches when the Compact Agreement with the United States ends.

**Resources:**

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Micronesia and Palau			
Trainees	34	31	31
Average # of Volunteers	57	57	53
Program Funds (\$000)	1,885	1,822	1,813

**Peace Corps Program by Sector:**

**Agriculture**

Volunteers work with extension agents to develop and implement programs to combat problems of malnutrition and poor health caused by high consumption of imported foods of low nutritional value. More than 100 families have increased production of fresh meat and fruits, and approximately 600 children have benefited from a nutrition education program. A senior Volunteer works with 50 households to help them grow more of their own food. Another Volunteer has reached over 500 children through music and puppet shows teaching proper nutrition and conservation methods.

**Economic Development**

Volunteers train small business owners in management, accounting, marketing, and identifying resources for sustainable development. In Palau, Volunteers focus on entrepreneurial industries and the tourist trade. A senior Volunteer in Palau has conducted individual business counseling for over 50 entrepreneurs. Another Volunteer, in conjunction with the FSM Development Bank, holds workshops on basic bookkeeping for small business owners.

**Education**

Direct classroom teaching and teacher training in English, science, and math is Peace Corps' primary project in the FSM and the Palau. One Volunteer teaches primary English courses and has developed a physical fitness program for local students. A Volunteer on Yap trains five primary teachers as a component of their teaching internship for the University of Guam. She holds a weekly teaching seminar, focusing on classroom management and journal writing.

**Environment**

Volunteers work with local officials to demonstrate the viability of marine resource-based economic opportunities and providing training in business planning and operations. One Volunteer conducts reef surveys to track the impact of development on the reef and conducts searches for giant clam farms to increase general income for the local community. Another Volunteer works with three islanders to set up sponge farms.

Population: 2,372,000  
 Annual Per Capita Income: \$400  
 Number of Years Peace Corps in Country: 4

### Peace Corps Country Overview:

In 1989, Mongolia started the difficult transition to a market economy and has since experienced severe declines in its economic performance. Increasing educational opportunities, especially in English and business development, is a high priority for Mongolia. Peace Corps is addressing these development needs by placing Volunteers in the education and business sectors.

### Resources:

Mongolia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	18	24	24
Average # of Volunteers	39	31	37
Program Funds (\$000)	872	1,013	1,075

### Peace Corps Program by Sector:

#### Economic Development

Volunteers in this sector work with business educators and government organizations responsible for Mongolia's privatization efforts. More than 250 students, entrepreneurs, and employees of both public and private organizations have received training and assistance from Volunteers. One Volunteer, working with the Agricultural Bank of Mongolia, has helped to develop a computerized loan system, a loan policy manual, and conversion of the bank's balance sheets based on Western accounting standards.

Two Volunteers are assisting one of Mongolia's largest universities with plans to change its curricula to meet the needs of a market economy. They are retraining Mongolian business professors, reshaping course syllabi, developing new materials, and teaching students. With their counterparts, the Volunteers have been involved in the realignment of degree and course requirements making them similar to those used by many American universities.

#### Education

This project is focused on addressing the severe shortage of qualified teachers in Mongolia. Thirty Volunteers are teaching in higher education institutions in Mongolia. Approximately 140 Mongolian teachers have participated in teacher training with Volunteers, and many now conduct their own classes in English. Volunteers teach English directly to more than 2,500 students annually. About 1,700 entrepreneurs and bureaucrats have had direct English instruction from Volunteers since 1990.

Through a Peace Corps Partnership grant from Gallaudet University in Washington D.C., the American School in the United Arab Emirate and a Volunteer is in the process of producing the first Mongol Sign Language Dictionary for 8,000 hearing impaired Mongolians.

Another Volunteer is teaching English to future business managers at the Mongolian Business Institute. This institute offers training in the basics of market economies to help facilitate their communication and trade with

**ASIA PACIFIC****MONGOLIA**

the outside world. This Volunteer, together with the staff and students of the Institute, is developing the first Mongolian business English curriculum. The project is receiving funding assistance through the joint Peace Corps-A.I.D. Small Project Assistance Program.

Population: 20,390,000  
 Annual Per Capita Income: \$160  
 Number of Years Peace Corps in Country: 33

### Peace Corps Country Overview:

The population in Nepal has increased dramatically over the last three decades from nine to twenty million. Over two-thirds of Nepal's people now live in absolute poverty, and the country has been unable to meet critical needs in health care and education. Only 8% of the people in Nepal have access to sanitation facilities, and only 39% of rural dwellers have ready access to water. Twenty-seven percent of the country's babies are born underweight. Under these conditions, life expectancy in Nepal is 52 years, and the literacy rate is only 27%. While still mostly rural, the urban population has been growing at more than 8% annually, outstripping available infrastructure and placing new pressures on local governments. The result is unsafe water, extreme air pollution, and inadequate waste disposal. Volunteers help address these challenges with work in education, health, environment, urban development, and agriculture.

### Resources:

Nepal	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	73	78	77
Average # of Volunteers	132	141	128
Program Funds (\$000)	2,313	2,542	2,480

### Peace Corps Program by Sector:

#### Agriculture

Eighty-five percent of Nepalese live in rural areas and depend on agriculture for income. In the last few years, Volunteers have helped train thousands of crop farmers, 500 fish farmers, and established dozens of test plots to increase agricultural production. Two Volunteers have introduced a new crop to Nepal—coffee—and have encouraged 50 local farmers to consider raising coffee. Three Volunteer horticulturists have worked with many families that previously raised only rice, but who are now growing enough fruit and vegetables for their own use.

#### Education

Only one-third of Nepalese youth now attend school, and most teachers are under qualified. In 1994, Volunteers trained more than 500 Nepalese primary and secondary math, science, and English teachers. In addition, one Volunteer developed a model for teacher supervision to be field-tested in the up-coming government teacher training scheduled for 1995.

#### Environment

Deforestation is causing severe soil erosion in Nepal. Over the last few years, Volunteers have helped re-plant 500 hectares of forest, train 700 people in forestry management, and form hundreds of environmental cooperatives. Recently, three Volunteers were invited by the government of Nepal to draft text on community

participation for the new National Forestry Act. Five Volunteers organized and trained 25 community management groups to care for national forestry areas.

### Health

Last year, Volunteers helped 55,000 Nepalese develop safe water supplies and trained 700 Nepalese nursing students. Volunteers also have organized mother's health/nutrition clubs and are assisting families with child spacing plans. Six Volunteers organized communities in latrine building and spring protection. Two others are assisting orphanages with storm systems.

### Urban Development

Volunteers are working to address some of the pressures brought about by rapid population growth in Nepal's urban areas. In Biratnagar, a Volunteer has helped train three Nepalese planners to complete a design and begin construction of a four-kilometer storm water drainage system. Another Volunteer in Pokhara, working with Nepalese officials, produced a five-year plan for major infrastructure renovations.

Population: 4,148,000  
 Annual Per Capita Income \$1,120  
 Number of Years Peace Corps in Country: 14

### Peace Corps Country Overview:

One of the largest and most dynamic nations in the Pacific, Papua New Guinea (PNG) is undergoing tremendous changes associated with the transition from a traditional to a modern society. With Volunteer assistance, the government of PNG is trying to improve the country's education system. Currently, the adult literacy rate is 52%, and only 59% of first grade entrants complete the primary level of schooling. There is also a shortage of trained teachers, especially in science and mathematics. Volunteers focus on secondary education and rural community development.

### Resources:

Papua New Guinea	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	20	48	48
Average # of Volunteers	78	63	62
Program Funds (\$000)	1,852	1,955	1,946

### Peace Corps Program by Sector:

#### Economic Development

The purpose of this project is to assist interested rural communities in developing self-reliance and in formulating a development plan which best serves their needs. Volunteers help communities to improve their self-sufficiency skills, raise health and literacy levels, and produce vegetables and other food crops for market. They also promote community involvement in village-based development activities by cooperating with local organizations.

A Volunteer couple working in a remote village in the Highlands area of PNG assists the people of Hagahai village with a small jewelry business. The villagers create various jewelry items, earrings, and necklaces from natural materials such as beads and plant stems. The Volunteers assist them in quality control, distribution, and marketing of the jewelry. During the past few months "Hagahai Natural Jewelry" was displayed and sold by local vendors and major hotels. Through this small business project the people of Hagahai have developed an option to earn income without dramatically harming their environment.

#### Education

Volunteers are teaching core subjects to students at the 7th through 10th grade levels in Papua New Guinea for eight years. Subjects taught by Volunteers include math, science, English, social studies, vocational agriculture, and business. Volunteers are also incorporating environmental themes into lesson plans. Volunteers participate in secondary activities in a variety of areas depending on their interests and the need of their school. In the next few years, Peace Corps plans to assist in PNG's efforts to train qualified secondary education teachers. A senior Volunteer couple in the secondary education project are teachers at a Provincial High School in a rural, lower mountainous region of PNG. In addition to their classroom duties teaching science, math, English, and social studies, they are working with students and staff on improving computer skills. Using a computer, which the Volunteers acquired from the Provincial Education Department, students and staff are developing skills using spreadsheets and word processing, as well as general typing skills.

 Number of Years Peace Corps in Country: 33

### Peace Corps Country Overview:

Rapid population growth in the Philippines—expected to reach 75 million by the year 2000—is threatening the country's natural resources, upon which 57% of the rural population directly depend. Forty percent of people in the Philippines rely on agriculture for subsistence. Fifty-eight percent of the total population is below the poverty line, but the number reaches 63% in rural areas. Deforestation and illegal logging have denuded much of the forest cover, and the pressure on marine resources has had a devastating effect on fish yields, increasing the pressure on rural people to migrate to the cities. The urban population has reached nearly 50% of the overall population, seriously straining available resources, services, and infrastructure. Volunteers help address these challenges with work in the health, environment, and agriculture sectors.

### Resources:

Philippines	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	34	53	54
Average # of Volunteers	45	61	84
Program Funds (\$000)	1,280	1,804	1,872

### Peace Corps Program by Sector:

#### Agriculture

Volunteers are working on crop extension projects on six islands, and livestock management on six others. With their assistance, local farmers have been able to increase their productivity and income. On Busing Island, a Volunteer has inoculated more than 1,500 swine against hog cholera, a disease that traditionally causes 70% mortality among swine during the rainy season. It is estimated that this project will generate as much as \$110,000 in extra income for this island community. On the northern-most inhabited island of the Philippines, one Volunteer has developed a comprehensive irrigation project that has the potential to make the entire province self-sufficient in rice production.

#### Education

A new English Language Assistance project began in January 1995 at the request of the Department of Education, Culture and Sports. Volunteers will help the government upgrade the fluency and teaching skills of Filipino English teachers at the secondary level.

#### Environment

Volunteers are working at island sites, national parks, and marine sanctuaries to encourage conservation of coastal resources and to develop management plans. One environmental assessment, prepared largely by a Volunteer on Sibuyan Island, has been presented to President Ramos by the Secretary of the Department of Environment and Natural Resources. Other Volunteers have completed marine assessments of Masinloc and

Oyon Bay that a local government is using to assess the environmental impact of a coal power plant currently under construction.

### Health

Volunteers in the Philippines are working on nine islands to extend training in health and nutrition education, and they are working on ten other islands to build or refurbish water and sanitation systems. Three Volunteers have developed rural health centers in remote island locations. Volunteer physicians and nurses now staff these centers in areas where some people have previously never seen a trained health worker.

Population: 346,000  
 Annual Per Capita Income: \$750  
 Number of Years Peace Corps in Country: 24

### Peace Corps Country Overview:

Solomon Islands is a nation of 5,000 villages on 350 small, scattered islands in the South Pacific. It is rural, with 91% of the population living in the hinterlands. Nearly half of Solomon Islands' population is 15 years old or younger, and the population growth rate is a relatively high 3.3%. The adult literacy rate is 24%, one of the lowest among the various Pacific island-nations. In response to the efforts by the Solomon Islands government to improve the access to and quality of education and training programs, Peace Corps has focused its programming on formal and non-formal education.

### Resources:

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Solomon Islands			
Trainees	18	31	31
Average # of Volunteers	40	54	49
Program Funds (\$000)	1,074	1,341	1,239

### Peace Corps Program by Sector:

#### Education

In order to strengthen both formal and non-formal education, Volunteers help fill a shortage of qualified teachers and provide academic and vocational instruction to students in remote secondary schools. Subject areas include math, science, business studies, and environmental education. Volunteers are also assigned to vocational boarding schools designed for students who do not pass the examination necessary to advance to the secondary school level. The curriculum at these schools focuses on practical instruction in subjects such as small engine mechanics, woodworking, agriculture, crafts production, and small business management.

A Volunteer assigned to the Tasia Rural Training Center teaches first and second year English, business studies, and home economics. In addition to her teaching duties, the Volunteer conducts first aid courses, teaches weekly classes entitled "Women and Money" through the Mother's Union, works with the Buala Hospital on family planning workshops, and assists in adult literacy classes.

Volunteers also work with local governments and village residents on rural development problems: community development, water, sanitation, health, nutrition, small enterprise development, and community education. Volunteers are placed in government centers and rural sites to assist local leaders in the formulation and implementation of development plans that are culturally, economically, and environmentally sound. To allow for adaptation of project goals to unique community needs, the scope of this project is broad.

Two Volunteers assigned to this project have established a rural training center and are responsible for organizing and managing its use. The center is used for community classes and workshops including kindergarten classes, literacy classes, small business workshops, and women's club activities.

Population: 17,622,000  
 Annual Per Capita Income: \$600  
 Number of Years Peace Corps in Country: 17

### Peace Corps Country Overview:

Although Sri Lanka has experienced a rapid economic growth rate of 5% over the last several years, the country faces a number of important challenges. The population has nearly tripled—from six to seventeen million—in the last 45 years, and it may reach 20 million by the year 2000. One-third of all Sri Lankans are under the age of 15. This will have a major impact on future needs for infrastructure, education, and employment in Sri Lanka. Forty-nine percent of the population is employed in agriculture, and 80% still live in rural areas. Only 50% of Sri Lankans have access to sanitation, and 40% still lack access to safe drinking water. Volunteers help address these challenges with work in the education, environment, and agriculture sectors.

### Resources:

Sri Lanka	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	34	33	33
Average # of Volunteers	42	44	47
Program Funds (\$000)	904	1,010	1,050

### Peace Corps Program by Sector:

#### Agriculture

Volunteers currently work in 22 small communities around Sri Lanka, helping rural farmers become more self-reliant through community development and small business activities. Two Volunteers in Tangalle are teaching basic bookkeeping skills, organic gardening techniques, and the safe use of pesticides. With their assistance, villagers have repaired irrigation canals, started cash crops in cashews, chilies, and other vegetables, and have developed businesses in brick making and rope making. Volunteers in the Negombo area applied for and received a Farmer-to-Farmer consultant who trained local farmers in improved okra production. This has led to the start of a new cooperative to grow and market okra.

#### Education

English is important in Sri Lanka, not only as the language of international commerce, but also as a critical bridge between its two major ethnic communities. During the past 11 years, Volunteers have helped train 15,000 student-teachers in English. A recent survey indicates that over 80% of these Sri Lankans are still actively engaged in the field of education.

One Volunteer develops modern English teaching methods and, in collaboration with another teacher, has formed a local club for students to encourage English communication outside the class. In Anuradhapurna, where Volunteers interact with 175 future English teachers daily, one Volunteer conducted an English speech contest for the students. Approximately 98% of the students participated in the speech contest, which reflects the comfort that these future teachers have in their command of English.

### Environment

Peace Corps' efforts to assist in the Environment sector only began recently. Volunteers now work directly with the National Mangroves and Coastal Habitat Conservation fund, a non-governmental organization, to aid in the conservation of the mangrove habitats in Sri Lanka. Volunteers in the Iranawila area are setting up a central data collection station for mangroves and coastal habitats that will be the first of its kind in Sri Lanka. Volunteers are also working on public awareness campaigns to teach Sri Lankans about the fragility of the local marine ecology.

Population: 58,824,000  
 Annual Per Capita Income: \$2,040  
 Number of Years Peace Corps in Country: 33

### Peace Corps Country Overview:

Thailand's development record over the past decade has been impressive, but progress in poverty alleviation has been uneven. While the per capita annual income has doubled in the last decade, more than nine million people, primarily rural, remain poor. Of the current labor force, only 20% has more than a primary school education. Although numbers vary, current predictions are that by the year 2001 Thailand will have 125,000 HIV carriers, including 100,000 children, and nearly one million AIDS sufferers. It is expected that 75,000 children alone will die from HIV/AIDS-related illness in the next six years. Environmental issues have also become a primary focus for Thailand. In recent years deforestation, soil erosion, air pollution, coastal zone degradation, and contamination of water sources have worsened.

### Resources:

Thailand	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	92	72	36
Average # of Volunteers	171	163	147
Program Funds (\$000)	3,776	3,252	2,499

### Peace Corps Program by Sector:

#### Agriculture

Volunteers provide technical advice to farmers and villagers and assist in developing educational programs and wildlife research projects. Many of the projects in this sector encourage income generation at the village level and efficient use of natural resources. Last year, Volunteers provided various training projects in integrated pest management, aqua-culture, alley cropping, and park interpretation. Volunteers also facilitated construction of 72 nursery fish ponds, 24 spawning stations, as well as 23 tree nurseries that provided more than 85,000 tree seedlings to farmers.

#### Education

Volunteers serving in a "Teaching English/Crossover" project are assigned to small, rural junior high schools. Last year Volunteers taught English to more than 5,400 students, trained 135 Thai teachers of English, and "crossed-over" to other courses in the academic curriculum and community based projects in a variety of ways.

One Volunteer launched an "Eyeglass" project when he discovered that the slow response of several of his brightest students was a result of poor vision. He raised more than \$1,200 through private and corporate donations in Thailand, which made it possible for more than 20 students to receive eyeglasses. The efforts of another Volunteer have led to the creation of a baseball league for local students and donations of equipment from an American corporation.

### Health

In the health sector, Volunteers work to eradicate malnutrition, prevent the spread of HIV / AIDS, and control the spread of malaria and filariasis. Volunteers work closely with village level health workers who develop and deliver health-care programs to promote community participation in addressing these issues. Last year, more than 250 training sessions were conducted which focused on nutrition, HIV prevention, and mosquito borne infections. Volunteers also helped in the construction and furnishing of two child care centers, and initiated a number of school lunch programs.

A Volunteer working in the Loei District Hospital as a nutrition extensionist recently completed an "education/development room" to be used by children and their parents while waiting for appointments. Another Volunteer recently organized an HIV / AIDS education training program for primary school teachers.

Population: 93,000  
 Annual Per Capita Income: \$1,610  
 Number of Years Peace Corps in Country: 28

### Peace Corps Country Overview:

Although Tonga's gross domestic product has improved modestly in recent years due to increases in agriculture exports, construction, and tourism, the country still faces problems similar to those of other small island-nations. Industrial and agricultural development is depleting already limited natural resources and degrading topsoil, rain forests, coastal coral reefs, and fresh water supplies.

Education issues pose additional challenges. A chronic shortage of secondary teachers, especially in science, makes it difficult to prepare enough Tongans for positions in education, health care, and other technical fields. Tongans also must learn to speak English, which is the principal language in four of Tonga's top five trading partners, to compete in the South Pacific market. Tonga also faces a growing youth population—over half of the population is now under 18—with few educational and career opportunities.

### Resources:

Tonga	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	24	16	37
Average # of Volunteers	51	44	50
Program Funds (\$000)	1,022	935	1,060

### Peace Corps Program by Sector:

#### Economic Development

Several Volunteers work as small business advisors and accountants for the Tonga Development Bank (TDB), the Cooperatives Federation, and the Ministry of Labor, Commerce and Industries. Volunteers helped develop business plans, accounting systems, and marketing strategies for 150 businesses and 350 employees last year. One Volunteer is working on implementing audit recommendations for the TDB, while another established the first internal auditing section for any development bank in the South Pacific.

#### Education

Volunteers provided science instruction to more than 3,400 students in the last three years. Other Volunteers work as English teachers/trainers and are involved in implementing a new national primary literacy curriculum. Two trainers have developed a comprehensive course in methodologies for teaching English for primary teachers in Vava'u, the middle island group of Tonga. Volunteers in the other island groups have begun work on duplicating this course for more teachers.

#### Education/Youth Development

Peace Corps will begin a new youth development project in Tonga in FY96. Currently, one Volunteer works with the Longolongo Youth Department in Nuku'alofa organizing sporting events and coaching teams in rugby and other activities.

### Environment

Volunteers currently work as environmental officers with youth groups and associations. Last year, over 1,000 students participated in environmental activities conducted by Volunteers. An alternative energy Volunteer works in the planning unit, installing solar panels in Vava'u. Another Volunteer, assigned to the Tonga National Youth Congress, organized a series of environmental education workshops and events for 500 secondary students. One Volunteer has established the environmental education program for the Tonga National Bird Park in rural Tongatapu, which includes field trips to the park, competitions and other events, and fund-raising for preservation activities.

Population: 161,000  
 Annual Per Capita Income: \$1,230  
 Number of years Peace Corps in Country: 5

### Peace Corps Country Overview:

The Republic of Vanuatu is an archipelago of over 80 islands located in the South Pacific. Population is growing at a relatively high rate of 2.4% per year. There are insufficient educational opportunities for children and a shortage of trained teachers. Many youth lack the skills necessary to find employment, and many more are forced out of the educational system because of a shortage of spaces at the secondary and higher levels. Vanuatu is beginning to grapple with the problems associated with managing environmental resources, such as logging of rain forest areas, which cover 75% of its land area. In addition, 80% of the population lives in remote areas and lacks access to many basic health services.

Volunteers serving in Vanuatu work in secondary education and small business development. Plans are underway to begin forestry and health programs in 1996.

### Resources:

Vanuatu	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	9	15	15
Average # of Volunteers	13	21	29
Program Funds (\$000)	523	662	715

### Peace Corps Program By Sector:

#### Economic Development

In conjunction with the Development Bank of Vanuatu (DBV), Volunteers help local entrepreneurs develop and gain financing for micro-enterprise ventures and provide training in accounting and other business skills. They also deliver on-the-job training in project appraisal, supervision, and monitoring to DBV employees at branch offices. In 1994, the first Volunteer computer specialist was recruited for the DBV. She is working to upgrade the computer system of the Bank and to train the local staff in operating and maintaining the system.

#### Education

Vanuatu is experiencing a shortage of secondary school teachers in various subject areas. Volunteers serve as skilled educators in math, science, industrial arts, and business studies. As an alternative to secondary schools, Rural Training Centers (RTCs) were established in 1976 to address the problem of limited access for young people to higher educational opportunities. The purpose of the training centers is to provide basic practical skills to dropouts so they can improve their living standards after they return to their villages. Volunteers provide vocational training in subjects such as carpentry, plumbing, electrical wiring, and wood-working.

One Volunteer has been teaching business studies at Malepoa Senior Secondary School in Port Vila for the past year. To give her students practical experience, she has organized the creation of a student-run school canteen. Students are responsible for all aspects of operating the canteen, including contacting suppliers, negotiating prices, bookkeeping and accounts reconciliation, and coordinating work schedules. Proceeds from the store were used to purchase three new computers for the school computer lab.

A volunteer at Torgil Rural Training Center on the island of Ambae has undertaken a project to rebuild the carpentry workshop. This will allow the students to increase their practical experience in building furniture and other items that are sold in the local community. The profits go toward purchasing more wood, nails, paint, varnish and other items needed to keep the workshop going. The students are gaining valuable work experience and learning about marketing concepts while selling their hand-made items.

Population: 163,000  
 Annual Per Capita Income: \$980  
 Number of years Peace Corps in Country: 28

### Peace Corps Country Overview:

While Western Samoans have made significant improvements in recent years, over half of the rural population lives in poverty. Cyclones in 1990 and 1991 caused setbacks in agricultural, industrial, and infrastructure development. A recent taro blight has destroyed much of the country's staple food supply, as well as its second largest export (behind coconut oil). Western Samoans have difficulty maintaining a balanced diet, given the decrease in taro production, the lack of nutritional variety, and the increased consumption of prepared, imported foods.

While Western Samoa has a reported 98% literacy rate, educational opportunities remain limited in some areas, and there is a shortage of qualified teachers, especially in math and science. In Apia, student-teacher ratios can be 70-1. The lack of educational and employment opportunities, emigration of skilled Samoans, and a growing youth population has made youth development a major challenge.

Peace Corps Western Samoa also administers programs in Niue, Peace Corps' newest program in the Asia Pacific Region.

### Resources:

Western Samoa/Niue Cook Islands	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	26	22	19
Average # of Volunteers	54	60	48
Program Funds (\$000)	1,262	1,203	1,164

### Peace Corps Program by Sector:

#### Economic Development

Volunteers work with staff of Western Samoa's Development Bank to provide training and management advisory services to the managers of businesses. One Volunteer works with entrepreneurs in arrears to revitalize their businesses and repay their loans to banks. In addition to his daily business advisory work, another Volunteer uses his computer expertise to advise the bank in its computerization of systems. He also advises the Water Authority on its conversion to computers.

In Niue, Volunteers focus their efforts on strengthening the private sector and developing the island's infrastructure. Included in the first group of Volunteers, who arrived in November 1994, are an adviser to the newly established Development Bank of Niue, a trainer who teaches accounting skills to governmental departments, and a mechanic for heavy equipment at the Public Works Department.

### Education

Volunteers are now teaching over 1,100 students per year in science, including environmental education, and business studies at senior secondary schools. A teacher-training component has been added to develop Western Samoa's ability to provide qualified instructors, and last year over 100 teachers received training from Volunteers. Volunteers also teach skills in motor mechanics, metalwork, and woodworking to youth 15-25 years old. A Volunteer lecturer at the Teachers College has developed and taught an Educational Studies course for secondary level teacher trainees. Another Volunteer teaches welding and metal shop at the Don Bosco Youth and Technical Center in Apia.

### Health

The government of Western Samoa identified primary health care as one of its top priorities, and is beginning to focus resources on nutrition and dietary education. Volunteers are assigned to the Nutrition Center of the Health Department as Health Educators, and also maintain a large vegetable garden for distribution of produce and seeds. One Volunteer trains health professionals and offers free exercise classes to the public. Another Volunteer works at the Diabetes Center, providing counseling and training to patients.

### Non-Project Assignments

One Volunteer is assisting the Treasury Department in the privatization of state-owned enterprises. Another works as an agricultural educator at the University of the South Pacific. One Volunteer utilizes a computer to teach children with a variety of learning disabilities and special needs. Two Volunteers work as coordinators for Women-in-Development programs.

## Regional Overview

The countries that compose the Europe, Central Asia, and the Mediterranean (ECAM) region have become one of Peace Corps' most promising opportunities for strengthening economic and social development. Encompassing many of the former Soviet bloc countries, Tunisia, and Morocco, the ECAM region has initiated new programs in 18 countries since 1990. Over the last four years, Volunteers have come to play an important role in the continuing international efforts to sustain and support the difficult transition to democracy and free market economies.

Peace Corps' initial experience in the countries of the former Soviet bloc was not unlike those of other international development organizations and donor nations that sought to provide advice and assistance in the early months of 1990. Volunteers faced unfamiliar challenges in societies that had long been closed to Americans and were undergoing social, political, and economic upheavals. Peace Corps, however, has since taken steps to ensure that Volunteers are fully supported in these challenging assignments. Training, programming, and staff support have all been significantly improved.

To date, nearly 2,000 Volunteers have served in Eastern Europe, Russia, Ukraine and other former Soviet republics. These Volunteers have lived and worked in communities, learned languages, and provided assistance that has been of direct benefit to ordinary, struggling citizens. For instance, Volunteers have established more than 100 business centers that provide technical assistance and advice to hundreds of new entrepreneurs on how to run small businesses. Volunteers offer advice and assistance to local, regional and national governments on how to strengthen new banking, securities, and agricultural industries.

*In Russia, PCV Cheryl Hanlsey inspects bread coming off the line at the factory where she works as a business advisor.*

Peace Corps also played an important role in building new education systems in former Soviet bloc countries: ECAM Volunteers make up the largest number of Teachers of English as a Foreign Language program in this part of the world. Over the last 5 years, Volunteers have taught English—the language of international business and commerce—to more than 100,000 students in classrooms throughout Eastern and Central Europe and the former Soviet Union.

Many countries in Eastern and Central Europe and the former Soviet Union have been ravaged by environmental degradation. Environmental problems are posing obstacles to economic development that raise serious public health concerns. Volunteers are working with communities and new non-governmental organizations to strengthen the public's awareness of the importance of appropriate environmental protection programs, expand environmental research, and support efforts to restore those areas most affected by years of neglect.

Peace Corps programs in Tunisia and Morocco constitute one of the best sources of interaction between Americans and the Arab world. While they are more mature, our programs in North Africa mirror those in the rest of the region by addressing critical development problems. In Morocco and Tunisia, Volunteers focus on women's health, youth development, rural agriculture, and environmental protection.

### Programming Considerations

After careful consideration, Peace Corps believes that sufficient progress has been made in several ECAM countries that will allow Volunteers and resources can be diverted to more pressing needs in other countries in the future. Therefore, Peace Corps intends to phase out its program in the Czech Republic in 1998. Plans are also being developed to phase out Peace Corps' programs in Hungary and Estonia soon thereafter.

At the same time, Peace Corps shares the view that the transition to democracy and free market economies in many ECAM countries is by no means complete or assured. Volunteers are well-positioned to make continuing contributions at the grassroots level to the reform process in these countries.

### Sector Summaries

#### Agriculture

Volunteers in Tunisia and Morocco work mainly in two agricultural fields: animal husbandry and agricultural economics. Rural-based Volunteers teach farmers and ranchers new farming and herd management techniques that increase efficiency and protect the environment from overgrazing. In one of Peace Corps' newest endeavors, Volunteers are working in Morocco to establish a research and data collection system throughout the country to assess progress and problems in agricultural production and management. This project is designed to support Morocco's efforts under the GATT to increase the quality of its agricultural exports. Volunteers are directly engaged in carrying out field surveys as a means of introducing appropriate field survey and analysis techniques. In 1995, Agribusiness Volunteers in Saratov, Russia, and Armenia will be working with farmers as they establish newly privatized farming enterprises.

#### Economic Development

While highly educated and well motivated to pursue market development, the nations of Eastern and Central Europe and the former Soviet Union have lacked both the institutions and background to generate broad-based business development. To support the transition to free market economies, Volunteers are working in business centers throughout the region, providing badly needed information and advice to newly privatized businesses and individual entrepreneurs. They are helping banking industries to structure commercial credit services, and teach business and entrepreneur development courses in a variety of educational institutions. Volunteers are also working as municipal advisors to local governments in economic restructuring and strengthening the public sector institutions. In Poland, Volunteers provided significant assistance to the Ministry of Privatization in its national privatization effort. They also assisted large state industry plants with structural and organizational changes. Volunteers constitute a critical network throughout the region, linking local business and development institutions to outside sources of expertise and investment.

#### Education

Over the last five years, the demand for English language education has increased dramatically in the ECAM region. Peace Corps has placed over 1,000 Volunteers as English teachers in secondary schools throughout the region where they work closely with Ministries of Education to develop teaching methods and curricula for students and educators. With English becoming the language of international business and commerce, Volunteers are providing more advanced levels of English language programs for business entrepreneurs and government officials as they seek to expand their contact with the international community.

Volunteers also have introduced new teaching techniques, established libraries and resource centers for students, and participated in local community activities, such as English language radio and TV programs, and theater productions in orphanages. Volunteers are also working in teacher training colleges to help prepare future teachers of English.

## Environment

At the request of host countries, the ECAM region continues to expand its environmental protection and clean-up programs. Volunteers work with engineers, chemists and other technicians to address the consequences of years of environmental neglect. Volunteers are also continuing to work with new non-governmental organizations to conduct research, disseminate information, and enhance the public's awareness of environmental problems. Volunteers will begin a new program in Russia in 1995, that will focus on environmental education, reforestation, and other environmental issues. This year a new forestry program will begin in Albania where Volunteers will work with farmers to establish tree nurseries and develop plans to replenish Albania's depleted forests.

## Health

Maternal and child health remains a critical problem in the rural parts of North Africa. Peace Corps' role focuses on local health delivery systems and the training of practitioners. For example, Volunteers in Morocco work in local health clinics to educate health providers and mid-wives in pre-natal care, proper sanitation, and treatment of diarrhea and parasitic infections.

## Area of Special Emphasis: Youth Development

Volunteers work with local governments in Tunisia and Morocco to develop youth centers in urban and rural areas with large numbers of disaffected or unemployed youth. These centers, recently expanded to include mobile units that provide outreach activities for youth in less populated areas, provide educational and recreational services to draw the youth. In Romania, Volunteers are providing critical social work services to the country's efforts to address the large numbers of orphans and street children. This program, introduced in 1992, has now grown into a national strategy to redevelop the social work profession in Romania. Volunteers work with the national university system in curriculum development, teaching and implementing a field training system for undergraduate students. Working with nonprofit agencies, Volunteers are also helping working families with handicapped children. The strengthening of Romania's newly formed private social agencies is a major by-product of this field work.

### Peace Corps Country Overview:

Albania remains the most impoverished country in Eastern Europe. Approximately 60% of the population is involved in agricultural production. While most of the land has been privatized, many farmers cannot afford seeds, fertilizers or other inputs. Albania's poor economic infrastructure—transportation, communication, electricity—poses significant obstacles to economic and small business development.

### Resources:

Albania	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	28	40	40
Average # of Volunteers	28	36	59
Program Funds (\$000)	1,138	1,349	1,550

### Peace Corps Program by Sector:

#### Economic Development

Volunteers in this sector have worked almost exclusively in Regional Business Agencies, which are centers organized by the European Community to assist in the development of small and medium-sized enterprises in Albania. Volunteers are assisting in the establishment and management of these centers, and providing basic training to local entrepreneurs. In cooperation with other area institutions and organizations, Volunteers organize and conduct training programs on cash management, accounting, marketing, transportation, advertising, and tourism.

Recently, Volunteers have been assigned to work with Albania's Rural Commercial Bank to help reform the bank's operating, accounting, and credit practices. During the last year Volunteers assisted more than 700 businesses in Albania. Volunteers also started a Business Club and a Women's Business Association.

#### Education

Albania's new government has declared English the "official foreign language" and implemented experimental immersion programs in a number of elementary schools. Volunteers arrived over two years ago and have worked with more than 60 Albanian English teachers in 15 schools throughout the country, offering advice and instruction on lesson planning, textbook usage and student-centered methodology. Volunteers have organized English Teachers Associations, which have provided more than 115 Albanian English teachers with improved instruction methods. In addition, Volunteers have taught English to over 4,500 Albanian secondary level students. Volunteers have also initiated a number of alternative secondary projects, including establishing Albania's first private radio station, procuring over 2,200 books at four schools, and refurbishing classrooms.

#### Environment

An increase in the use of wood for fuel and construction has contributed to the degradation of local natural resources in some areas of Albania. Volunteers are conducting a project which focuses on building an agro-forestry extension capacity within the Albanian Forest Service, and teaching improved agro-forestry techniques to local farmers.

### Peace Corps Country Overview:

Armenia has embarked on an ambitious program to develop a free market economy and has begun the process of privatizing state-owned companies. Private sector activities are beginning to emerge, but many Armenian entrepreneurs need training in business marketing and management. Armenia is also struggling to strengthen English language programs in its education system, which is suffering from a lack of resources and teaching materials in secondary schools, vocational schools, and universities.

### Resources:

Armenia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	20	33	34
Average # of Volunteers	27	27	41
Program Funds (\$000)	1,060	1,213	1,382

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are working with local, regional, and central governments in three general areas: privatization of state industries, assistance to small farmers, and overall regional economic development. Their activities include developing policies to strengthen business opportunities and helping farmers develop small agro-business associations and co-ops. Two Volunteers helped establish the first independent radio station in Armenia. The station broadcasts news, music, and educational programming to a population of 1.5 million in the Yerevan area. Eleven Volunteers have trained students for Junior Achievement activities.

#### Education

Struggling with poor educational resources and a shortage of properly trained English teachers, the Armenian government has placed English education near the top of its development priorities. Volunteers have responded by providing Armenian secondary school teachers with seminars, small group training and team-teaching in the classroom. Volunteers also provide classroom instruction to Armenian secondary school students and helped coordinate Armenia's first English Language Teachers' Conference in June 1994.

Population: 8,459,000

 Number of Years Peace Corps in Country: 4

#### Peace Corps Country Overview:

The post-communist Bulgarian economy has encountered significant challenges since 1990. Former Soviet and Warsaw Pact markets—upon which the Bulgarian economy was dependent for both imports and exports—disappeared. Inflation and unemployment rose sharply, and shortages of food and fuel became widespread. In an effort at revitalization, the government declared its support for a transition to a market-oriented system and began a far-reaching program of denationalization, privatization, and improving the country's education system.

#### Resources:

Bulgaria	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	24	24	24
Average # of Volunteers	38	41	36
Program Funds (\$000)	1,167	1,196	1,053

#### Peace Corps Program by Sector:

##### Economic Development

Volunteers work with owners and entrepreneurs to provide business skills training and resource information. Most of the Volunteers are assigned to one of eleven Business Centers throughout the country. Each Volunteer works with a Bulgarian counterpart and one or more interns to facilitate communication between business people. During the past year, over 240 new clients were assisted by the Centers. A total of 1,500 customers, including repeat customers, were serviced this year. Volunteers also conducted 88 business administration seminars.

##### Education

During the past year, Volunteers taught English to over 3,000 Bulgarian students in 18 schools. A number of Volunteers have established English Clubs for students, which encourage a broader understanding of American culture through discussions, movies, sports events, and guest speakers. Volunteers are also responding to the need for modern education materials by developing and procuring new materials, texts and video and computer equipment. Volunteers have established 12 school resource centers.

##### Environment

Volunteers are starting a new environmental program in Bulgaria in 1995. They will be working in the municipal planning office or with local non-governmental organizations to provide local authorities and communities with advice on environmental management and education.

### Peace Corps Country Overview:

The Czech Republic's transition to a market economy has been rendered significantly more complex by its split with Slovakia. But the government remains committed to economic reforms and continues to solicit international assistance in its efforts to privatize and liberalize its economy. Due to the Czech Republic's impressive economic performance, the Peace Corps program is now scheduled to be phased out by the end of FY98.

### Resources:

Czech Republic	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	54	52	53
Average # of Volunteers	72	65	77
Program Funds (\$000)	1,915	1,644	1,659

### Peace Corps Program by Sector:

#### Economic Development

Volunteers serve as advisors to regional business centers, municipalities, and non-governmental organizations to assist in the development of an effective business support network throughout the Czech Republic. Volunteers conduct workshops and seminars on a range of business topics for students and business people, provide one-on-one consultancy to Czech entrepreneurs, and train Czech counterparts in Western supervisory, consulting, and training techniques.

Volunteers have worked with Junior Achievement, served as guest lecturers in secondary schools, and written a Czech supplement to the American-based economics textbook used by Czech high school students. Other Volunteers have utilized their own particular expertise and interests by working with an independent radio broadcasters' association and a business women's organization.

#### Education

Volunteers provide English language instruction in secondary schools, teacher training colleges and universities throughout the country. Volunteers at the college and university level often provide methodological guidance as well. They routinely carry out a variety of tasks, including developing of faculty members' linguistic competence, sponsoring English clubs, giving lectures on American culture, and establishing resource centers and libraries.

Volunteers are also involved in secondary projects. Among the most successful are a project which gave Czech nurses and doctors the opportunity to study in the United States, student exchanges with other European countries, and the development of an environmental curriculum which has been integrated into the national Czech English language curriculum.

**Environment**

Volunteers help promote environmental protection activities and public participation in decision-making. They assist non-governmental organizations and local agencies to develop long-range strategic plans, improve office efficiency, and increase employee productivity. Urban Planning Volunteers work in the most polluted areas of the Czech Republic, assisting in the development of local and regional-level recovery plans. Volunteers also provide assistance in environmental education, public relations, implementation of geographical information systems, and the preparation of management plans. Volunteers assist non-governmental organizations in management training, strategic planning, public participation campaigns, and in establishing information centers. One Volunteer authored a 120-page manual of environmental activities for use with non-native speakers of English. Another Volunteer designed an environmental recovery plan adopted by the regional government of northern Bohemia.

### Peace Corps Country Overview:

Although Estonia has undergone remarkable political and economic changes during the last several years, the country continues to face a number of critical challenges. As privatization of state enterprises and farms continues, rural areas of Estonia are experiencing dramatic increases in unemployment and a decline in their standard of living. Estonia is also working to improve and expand access to English language programs in its education system, which suffers from a lack of trained English teachers.

### Resources:

Estonia	FY 1994	FY 1995	FY 1996
	Actual	Estimates	Estimates
Trainees	19	28	29
Average # of Volunteers	34	35	38
Program Funds (\$000)	849	879	964

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are working to build small enterprise capacity in Estonia's rural areas by providing advice to newly-privatized businesses and entrepreneurs. They also provide planning assistance to economic development units of municipal governments and business advisory centers. One Volunteer helped the Estonian Timber Producers Union make overseas contacts in an effort to increase exports. As a result, three timber companies reached trade agreements with foreign companies.

#### Education

Volunteers are assisting the Ministry of Culture and Education's efforts to increase access to English language instruction in Estonia. They teach English to students at the secondary school level, work with Estonian teachers to enhance their English language proficiency and teaching skills, increase teaching resources, and promote community activities.

### Peace Corps Country Overview:

Hungary has initiated a program designed to accelerate privatization of the country's economy, control inflation, and fully convert the national currency. However, high levels of inflation and unemployment, as well as a large external debt, have forced Hungary into an austerity program that has caused sharp reductions in food and housing subsidies. Peace Corps is working to ease this transition by providing Volunteer assistance in economic development, education, and environment.

### Resources:

Hungary	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	47	47	23
Average # of Volunteers	108	98	90
Program Funds (\$000)	2,308	2,241	1,892

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are assisting the growth and development of small and medium enterprises by serving in Local Enterprise Agencies, municipal governments and local chambers of commerce. Volunteers help build the institutional capacity of staff and local entrepreneurs by conducting training and technical seminars on a variety of topics, such as basic business concepts, banking, trade and marketing, resource acquisition and management, business English, and development of networking and communications skills.

One Volunteer is working on a major project to open Hungary's borders to trade with Slovakia and Ukraine. Another Volunteer's business education classes were so successful that a local college created a separate Business Department to manage the growing demand among students to attend the classes.

#### Education

Volunteers teach English and train Hungarian teachers of English in primary, secondary and teacher training institutions. All Volunteers are involved in outreach programs to help teachers expand their conversational abilities and develop confidence and professional skills in English. Volunteers also initiate development projects in their schools or communities. One Volunteer serves as a primary-level English teacher and is one of the main organizers of the National Drama Festival, which brings together the talents of over 1,000 Hungarian students each year.

#### Environment

To address Hungary's serious environmental problems, Volunteers are helping municipal governments and non-governmental organizations throughout the country develop realistic goals and programs for environmental protection. One Volunteer helped establish a unique Hungarian quarterly publication devoted to issues of environment, minorities, economic development, and civil society in the Tisza River basin. Another Volunteer works in a mayor's office to implement environmental improvement projects, including hazardous waste management and a public participation campaign to clean up the local canal.

### Peace Corps Country Overview:

Kazakhstan is one of the former Soviet republics in Central Asia that is most dedicated to making the transition to a market economy. But with the loss of the rigid Soviet supply channel, the country has experienced a significant downturn in production. Kazakhstan has declared education to be a high priority to help the country integrate into the international economy. Most schools and institutions of higher learning, however, have inadequate teaching staff, outdated and often inappropriate textbooks, and very limited teacher resources to teach English. The country has also emphasized the importance of privatization, strengthening its small business sector, and addressing problems of environmental degradation and environmental protection.

### Resources:

Kazakhstan	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	54	75	77
Average # of Volunteers	49	86	120
Program Funds (\$000)	1,719	1,962	2,089

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are working to establish 13 Business Development Centers to assist Kazakhstan in its transition to a market economy. The Volunteers provide training and consulting in basic free-enterprise management practices, marketing skills, and internationally accepted accounting systems and have established E-mail at nine of the Business Development Centers. Volunteers have helped over 50 business entrepreneurs develop proposals and write up business plans. One Volunteer has been working with over 20 entrepreneurs in the Zhambyl Business Center since September 1993, helping them prepare business plans and submit loan applications. As a result, local business projects received over \$80,000 in loans. Another Volunteer, who works in the Atyrau Business Development Center, has created an employment data base to aid traveling business people and provides ongoing management consulting at the Geologic Research Institute.

#### Education

Volunteers are currently teaching English to more than 2,500 primary and secondary school students and 800 university students in Kazakhstan. Volunteers have also established 10 educational resource centers with over 1,500 books, as well as computers, printers, modems and copy machines. Volunteers use communicative methodology in their classrooms and design class activities to facilitate the development of critical thinking, problem solving, and decision making skills.

Volunteers are developing and conducting workshops to train teachers from the regional Institutes for the Advancement of Teachers, and are assisting in the development of English language resource centers. Volunteers have organized five English teacher organizations at five different sites and, together with local teachers'

associations, are working on organizing the first national English teacher's conference in October 1995.

Outside of the classroom, Volunteers continue their efforts to teach English through a variety of means. Five Volunteers host an English language radio program, two Volunteers write, direct, and act in a weekly educational TV program, and seven are developing English teaching resource materials. Another Volunteer organized a summer camp for the children victimized during the nuclear tests near Semipalatinsk, while another Volunteer donates her free time to an orphanage.

### **Environment**

Environmental organizations in Kazakhstan lack the access to technical information, mechanisms of international and inter-regional communication, funding sources and language training which will allow them to compete and work at the international level. Peace Corps initiated an environmental project in 1994 to increase the capacity of local environmental organizations to address local, regional, and national environmental problems. One Volunteer, working with the Karaganda non-governmental organization Eco-Center, is coordinating the establishment of a long-term radiation project among the north-eastern cities of Kazakhstan. Another Volunteer is using his 15-year experience as an environmental control officer in the Detroit steel industry to assist local industries in cleaning up their air pollution.

Population: 4,512,000

### Peace Corps Country Overview:

The Kyrgyz Republic is making its transition to a market economy. As it seeks to expand its participation in the international economy, the government has identified the need to expand its English language programs for students and workers at all levels of society. The country's education system faces a severe shortage of trained teachers of English, textbooks, and basic instruction materials.

### Resources:

Kyrgyz	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	31	33	34
Average # of Volunteers	23	43	52
Program Funds (\$000)	898	1,128	1,209

### Peace Corps Program by Sector:

#### Education

Volunteers teach English and communicative methodologies in secondary schools and institutes of higher education. They introduce cooperative learning strategies and work with students to develop critical thinking skills, including analysis, problem solving, and decision making. Volunteers and their Kyrgyz counterparts develop teacher training workshops and create English language resource centers.

Volunteers in the English for Professional Purposes Project teach English to three target populations: health care professionals, government agencies, and the business community. The Volunteers teach communication skills by introducing adult education techniques and cooperative learning strategies. Volunteers also develop teacher training workshops and create resource centers in health care facilities, businesses, and government agencies. Three medical English classrooms based in hospital schools are functioning, and two Business English Resource Centers have been established.

Secondary projects include the organization of a country-wide drama festival and English classes for adults. Three Regional Resource Centers are stocked with donated books, which are used for training teachers, enhancing English language skills, and developing materials. With the assistance of Peace Corps Volunteers, Little League Baseball was chartered and is now in full operation throughout the Republic, and an alliance with a professional American baseball team is being finalized. This included a large donation of equipment, which is being used by children in every region.

### Peace Corps Country Overview:

Since reclaiming its independence in 1991, Latvia has made considerable strides in economic and political reform, but still faces a number of important challenges in developing its small business industry. Latvia is also taking steps to strengthen its education system, particularly its English language programs. However, the country does not have adequate numbers of highly qualified English instructors, and the education system suffers from a lack of resources and training materials.

### Resources:

Latvia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	19	29	29
Average # of Volunteers	35	36	39
Program Funds (\$000)	849	881	964

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are working with Latvian counterparts to build small enterprise capacity in the country's rural areas. They provide farmers with training, basic business, and management skills. One Volunteer developed a seminar on alternative sources of farming supplies at the Tukums Farmers Consultation Center, while another Volunteer served as a consultant to the 1994 "International Agricultural Exhibition" in Riga, which focused on expanding agricultural exports.

#### Education

Volunteers are working with the Ministry of Education, Science and Culture to increase access to English language instruction in Latvia at the secondary school level. They provide training for Latvian teachers to enhance their English language proficiency and teaching skills, increase teaching resources, and promote community activities. One Volunteer has opened an English language resource center which is used by teachers, students and local residents of the community. Over 5,000 books, teaching materials, magazines and encyclopedias were obtained for the center. Another Volunteer has opened a Resource and Debate Center in a Latvian community with funds received through the Soros Foundation. At the Resource Center, students receive career counseling, and have access to books and periodicals about the United States and other countries. The Debate Center has involved approximately 65 students and teachers in debate tournaments.

Population: 3,747,000

 Number of Years Peace Corps in Country: 3

### Peace Corps Country Overview:

Lithuania's independence has coincided with a deepening economic crisis. The government of Lithuania is working to support the development of small and medium sized businesses, but entrepreneurs lack expertise in marketing and business management. Lithuania is also working to expand access to English language instruction in its secondary schools.

### Resources:

Lithuania	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	19	28	29
Average # of Volunteers	35	35	39
Program Funds (\$000)	849	879	964

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are assigned to Economic Development Units of local governments, Business Advisory Centers, and other organizations involved in economic development. They are teaching business management skills to entrepreneurs and working with local governments on economic development plans. Volunteers initiated, researched, and developed a proposal to start a multiple Volunteer consultant service site in Vilnius. The project was implemented in June 1994 with Lithuania's Junior Achievement as a sponsoring agency. One Volunteer helped establish a Tourism Information Center in Klaipeda and organized seminars for people working in tourism development.

#### Education

Volunteers are working with the Ministry of Education to increase access to English language instruction in Lithuania at the secondary school level. They provide training for Lithuanian teachers to enhance their English language proficiency and teaching skills, increase teaching resources, and promote community activities. Three Volunteers organized a "Professional Day for Women" for over 100 women to explore new career opportunities. One PCV helped support a Youth Community Center and facilitated Health Education Workshops in collaboration with the Soros Foundation.

Population: 4,356,000  
 Annual Per Capita Income: \$1,180  
 Number of Years Peace Corps in Country: 2

### Peace Corps Country Overview:

As Moldova continues to transform its economy, the country faces enormous problems. Prices which once were fixed have now risen so that many basic goods and services are no longer affordable to the average Moldovan. Because there is no modern industrial base, failure of the agricultural sector has led to a decline for the entire economy. Nevertheless, Moldova has the potential to compete in some sectors of the international economy and new industries are being formed. However, these new companies require guidance, expertise, and support as they prepare to compete in regional and world markets. While many Moldovans are eager to learn English in order to participate in the global economy, there is an acute absence of English language teachers and resources.

### Resources:

Moldova	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	28	33	34
Average # of Volunteers	21	39	50
Program Funds (\$000)	871	994	1,114

### Peace Corps Program by Sector:

#### Economic Development

Peace Corps is beginning an economic development program in Moldova in 1995. The first 10 Volunteers are being placed in Business Development Centers to provide advice on privatization of smaller public enterprises and hands-on technical assistance to local entrepreneurs. They also will organize and conduct training programs, and establish a library and data bank.

#### Education

Volunteers are teaching English and introducing communicative methodology to middle- and high-school level students at secondary schools, gymnasiums, lyceums, and pedagogical schools. Due to Volunteer leadership, three new English language newspapers were established last year in Moldova. In many schools there had been only one English dictionary for use by the entire school. Now, through the efforts of Volunteers, new education resources and materials are available at these schools. A group of 12 Volunteers established an English language immersion summer camp program. During the course of the two weeks, participants were required to use English at all times. These students were introduced to the American culture through participation in sports, health education, environmental awareness, drama, and debate. Volunteers trained local university students to manage the camp in future years.

Population: 26,721,000  
 Annual Per Capita Income: \$1,030  
 Number of years Peace Corps in Country: 32

### Peace Corps Country Overview:

Peace Corps Volunteers have encouraged many significant improvements in the quality of life in Morocco over the last 30 years, but Morocco faces a number of pressing development issues which continue to be addressed by our Volunteers. The maternal mortality rate is exceptionally high in rural areas at 362 per 100,000 births. Only 31% of the births in Morocco in 1992 were assisted by qualified health personnel. Forty percent of Morocco's population is employed in the agriculture and environment sectors. Problems associated with drought, overgrazing, and lack of veterinary services are being addressed to improve livestock production and management, and to develop small income-generating activities related to agricultural products. Morocco's population growth has also contributed to the drainage of wetlands, de-forestation of public forests, and erosion in national park areas. Since tourism is a major industry in Morocco, the management and protection of parks and environmental education has become a priority.

### Resources:

Morocco	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	67	73	75
Average # of Volunteers	102	121	124
Program Funds (\$000)	2,501	2,548	2,574

### Peace Corps Program by Sector:

#### Agriculture

Small rural farmers are an important part of Morocco's agricultural industry, yet they have only limited access to information and resources designed to improve productivity or increase income generating opportunities. Volunteers are working with farmers on sustainable agriculture and livestock production, development of income generating activities, extension education, and rural women's development. Volunteers are also supporting the government's efforts to increase the availability of agricultural market information for farmers. One Volunteer and several Moroccan women developed and implemented an integrated program on sheep care, feed management, and hoof trimming with 40 female participants.

#### Education

Volunteers and their Moroccan colleagues are working together to improve pedagogical techniques, expand educational resources, and design targeted technical English curricula. Volunteers are also expanding and developing departmental resource centers at Moroccan universities. In 1996, Volunteers will concentrate on the development of university libraries and information management systems. They are also teaching orientation and mobility skills at schools for the visually-impaired to prepare students for integration into the community. One Volunteer co-edited technical English television programs for the Department of Education, which were broadcast throughout the country. Another Volunteer is helping her community renovate an old Spanish church for use as an English resource center. The center will be used for English instruction and will house a community English language library.

### Environment

Morocco is in the process of developing a national strategy to improve its parks and ecological reserves, which officials hope will attract tourism and generate economic growth. Volunteers are developing management strategies for unique ecosystems in these parks, introducing solar ovens to communities, promoting eco-tourism development, and designing environmental education curricula. One Volunteer coordinated a tree planting activity for 180 children. Others designed and are implementing a study of shepherds' summer use of grazing lands within Toubkal National Park.

### Health

Volunteers work predominately in rural Moroccan communities, addressing maternal and child health care and increasing safe water supplies. Health education is a major component of their projects. Volunteers have implemented vaccination campaigns, trained nurses in communication and patient counseling, constructed water supply systems, and developed dental hygiene awareness campaigns. Two Volunteers and their Moroccan counterparts created a Hygiene Tent for the weekly market in their town where they present and discuss different health issues weekly. Volunteers carried out eight primary school dental hygiene awareness campaigns which reached over 3,000 students.

Population: 38,446,000

 Number of Years Peace Corps in Country: 5

### Peace Corps Country Overview

Since 1990, Poland has been making the difficult transition to democracy and a free market economy. While political changes were immediate and dramatic, Poland's economic changes have been slower and more painful. Goods appeared on the consumer market almost immediately, yet the standard of living for most Polish people has been ravaged by the effects of inflation. High unemployment, high interest rates, and problems in both the agricultural and educational sectors have inhibited investment. Poland is also working to overcome numerous environmental problems, and append access to English language instruction. Peace Corps is working to ease and consolidate this transition by providing Volunteer assistance in economic development and education.

#### Resources:

Poland	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	101	103	105
Average # of Volunteers	165	176	189
Program Funds (\$000)	3,566	3,595	3,605

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are providing assistance and advice to municipal organizations, business training programs, and privatization efforts. Municipal advisors help local government institutions and non-governmental organizations implement programs for local economic restructuring and development. Volunteers cooperate with Polish business training centers and business schools to offer training in accounting, marketing, promotion and advertising, international trade, finance, and banking. Volunteers also strengthen privatization efforts among regional development agencies, business incubators, foundations, and local chambers of commerce.

One Volunteer helped develop re-training programs for unemployed union members. At the same time, the Volunteer provided advisory services to Polish businesses as they developed and implemented business plans. Another Volunteer was directly involved in the development of a computer center that trains the visually-impaired in the use of computers for professional work.

#### Education

Volunteers in Poland play a prominent role in teaching English at secondary schools and teacher training colleges. Volunteers at the secondary level work not only to raise the overall standard of English language ability but also to heighten the cross-cultural awareness of Polish students. Volunteers provide English instruction, improve learning resources, develop school-based community outreach projects, and enhance the confidence, skills and knowledge of Polish counterpart teachers. Volunteers working in teacher training colleges teach Polish students to become competent teachers of English.

This past year, several Volunteers helped coordinate a Model United Nations program that attracted over 300 students from throughout Poland to learn about the democratic process in a large, international forum. Other Volunteers organized a Women in Development project that brought women together from the various regions of Poland to discuss issues affecting their communities and to learn how to develop future networking systems.

**Environment**

Volunteers are providing grass-roots assistance to Polish non-governmental agencies, local governments and municipalities in an effort to strengthen public awareness about environmental issues and improve organizational management and human resource development. Volunteers assist agencies in planning, funding, managing and evaluating environmental projects.

Recent projects include the production of an environmental publication which promotes information exchange and improvements in environmental education networking. Another Volunteer was instrumental in organizing conferences for teachers on environmental education opportunities in Poland's national parks.

Population: 22,761,000

### Peace Corps Country Overview:

Over the last five years, Romania has slowly been transforming its economy to one based on market principles. At the end of 1992, vouchers were issued that represented 30% of the asset value of the 6,200 enterprises slated for privatization. Production in the factories, however, has dropped, causing severe shortages of many consumer goods. The agricultural sector has also been severely affected. Unemployment and inflation also remain high, and the education system is struggling to modernize after years of neglect. Despite these obstacles, Romania is moving ahead with its reforms and toward greater cooperation with the West.

### Resources:

Romania	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	37	38	38
Average # of Volunteers	39	56	66
Program Funds (\$000)	1,331	1,362	1,391

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are assisting over 1,800 Romanian entrepreneurs with business planning, financial analysis, loan applications, marketing, and organizational issues. They are conducting over 30 seminars on such topics as finance and banking, exporting/importing techniques, tourism development, and legal issues. Case studies have been developed by Volunteers for use in seminars throughout the country. These case studies allow new entrepreneurs to learn from the experiences of other Romanian business professionals.

#### Education

Thirty-one Volunteers teach English to over 5,700 Romanian students in 33 middle or secondary schools in Romania. Peace Corps' participation has enabled several schools to initiate a new intensive English language curriculum. Volunteers work directly with more than 100 Romanian English teachers. In one case, a Volunteer organized a teacher's association which is exploring the possibilities of implementing standardized testing. Through Peace Corps' assistance, over 30,000 books have been received and distributed to schools and universities throughout Romania. Several Volunteers conducted environmental awareness camps which were used to raise students' understanding of environmental issues and to increase their English competency.

Twelve Volunteers are working as education developers, vocational counselors, and community service consultants to strengthen Romania's weak social service sector. Volunteers are assigned to universities to develop the curriculum for Romania's first School of Social Work. Other Volunteers are helping to build the institutional capacity of youth organizations. They also initiate and assist in projects such as providing assistance to or counseling street children, working with Maternal Health Centers, developing HIV/AIDS education materials, and working on the International Festival for Children with Handicaps. Vocational counselors work with Romanian staff to provide job training skills to handicapped youth.

Population: 148,537,000

Annual Per Capita Income: \$2,350

Number of Years Peace Corps in Country: 3

### Peace Corps Country Overview:

Russia faces enormous challenges in sustaining economic reform policies, and the domestic context in which new institutions are struggling to take hold remains uncertain. Moreover, Russia has only begun to address problems associated with environmental neglect and the need to modernize its educational system. Peace Corps Volunteers are making important contributions at the grassroots level to Russia's efforts to establish a free market economy and build new civic institutions. Volunteers have become valuable sources of advice and expertise for Russian entrepreneurs, business professionals, and local governments, as well as for other international development organizations.

Peace Corps' initial focus in Russia was to provide advice and expertise to the burgeoning small business community. In 1995, however, Volunteers will be broadening their activities. New programs for teaching English, training teachers and developing new curricula will begin later this year. In addition, Volunteers will work with local officials and non-governmental organizations to undertake a number of environmental and agribusiness projects. Volunteers are also an important referral source for the many international exchange and internship programs that are now taking place in Russia.

### Resources:

Russia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	49	66	67
Average # of Volunteers	67	68	99
Program Funds (\$000)	2,672	2,932	3,166

### Peace Corps Program by Sector:

#### Economic Development

In 1994, Volunteers conducted business seminars, workshops, and individual consultations for more than 1,000 individuals in Russia. They also helped plan and coordinate 11 conferences on banking, securities, international trade, regional development, real estate, and business opportunities for women. Volunteers have offered training in personnel management techniques, customer service, accounting methods, and marketing and distribution at seminars in three towns in the state of Primorsky. Volunteers have coordinated bank seminars with the University of Alaska to teach accounting methods to 45 banking professionals in Vladivostok and Khabarovsk. Two Volunteers in Saratov and Volgograd have opened Russian/American Cultural Information Centers with libraries.

#### Education

For many Russians, learning English is a key factor in their ability to compete economically: it is the language of international commerce, computers, and trade. Peace Corps is establishing new English language projects in Russia that are designed to develop English curricula for schools and train Russian English teachers. Volunteers also teach English to students and develop materials for teachers and help social and educational agencies gain access to resources. Volunteers will be placed in far eastern Russia in the summer of 1995 where they will teach English and introduce communicative methodology at secondary schools.

**Environment**

Peace Corps is currently establishing an Environment/Natural Resources Management program in Russia. Volunteers will teach natural resource conservation, develop teaching materials, and train Russian teachers in innovative environmental education techniques and classroom/non-classroom exercises. Volunteers have been asked to provide technical assistance with reforesting a 2 million hectare area that was ravaged by fire in 1976. Volunteers also will work with Russian specialists to develop a comprehensive management program for nature preserves.

Population: 5,345,000

 Number of years Peace Corps in Country: 5

### Peace Corps Country Overview:

Slovakia's separation from the Czech Republic has slowed the pace of reform significantly. Inflation and unemployment have risen, and industrial output has dropped. However, Slovakia is still actively engaged in soliciting western development assistance and trainings it makes the transition to a market economy.

### Resources:

Slovakia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	28	34	34
Average # of Volunteers	21	55	59
Program Funds (\$000)	1,004	1,251	1,270

### Peace Corps Program by Sector:

#### Economic Development

As members of Slovakia's newest Peace Corps project, economic development Volunteers have already made a significant impact by working with local advisory centers throughout the country. Volunteers placed in these centers work with the directors, host staff, and local consultants to formulate strategic plans and deliver technical assistance to Slovakian entrepreneurs. Volunteers are developing a business network at 12 business centers throughout the Slovak Republic. Centers are now working closer together on projects and are sharing information with other groups engaged in similar work. Six Volunteers are also working with the new Junior Achievement program for young people interested in pursuing business careers in the Slovak Republic.

#### Education

Slovak universities and teacher training colleges have almost universally replaced Russian instruction with English language training. With this change, Slovak teaching institutions have sought to fill the language void with English lecturers from various Western organizations. Volunteers are working in smaller cities and towns, areas which are exposed to very few native English speakers. Education Volunteers divide their time between direct classroom teaching, teacher training, and English conversation training. Classes in conversation and grammar at four university teaching facilities and over 100 secondary schools have been attended by almost 900 university students and 3,500 secondary students. Almost 200 Slovak English teachers and over 850 future teachers have increased their ability to communicate and teach English, and through the completion of almost 30 workshops, over 125 teachers are able to incorporate current English teaching methodologies into their curricula. A Volunteer teaching at a secondary school in Presov prepares and coaches his students for national English competitions. Due to his efforts, one student was sent to a summer program for gifted youth at the University of South Carolina.

**Environment**

Volunteers work in municipal environmental planning, development of non-governmental organizations, and administration of national parks. As advisors to local governments and national park authorities, Volunteers help design strategic plans, evaluation tools, and public participation campaigns. Volunteers helped five Slovak organizations design pilot projects for tourism promotion, computer networking among Slovak national parks, and environmental education. Other Volunteers helped organize Earth Day activities which focused on youth participation in nature protection and local cleanups.

Population: 8,609,000/356,000  
 Annual Per Capita Income: \$1,780/7,298  
 Number of years Peace Corps in Country: 32

### Peace Corps Country Overview:

Tunisia's economy has been affected by changes in the international price in petroleum, and there is a critical shortage of qualified English teachers at universities and institutes of higher education. Only a small portion of handicapped Tunisians receive education or assistance in basic skills. Over 60% of the Tunisian population is below 24 years of age, and Tunisian youth face a challenging future with an increasingly high unemployment rate. Many are moving from rural areas to urban areas to seek opportunities. These factors, coupled with a high population growth rate, have create serious housing shortages in Tunisian urban areas.

The Peace Corps Tunisia Office also administers the program in Malta.

### Resources:

Tunisia/Malta	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	50	47	50
Average # of Volunteers	61	78	82
Program Funds (\$000)	1,651	1,814	1,912

### Peace Corps Program by Sector:

#### Economic Development/Community Development

Peace Corps has placed Volunteers in communities to help people improve their basic living conditions and to enhance their ability to contribute to their own development. Volunteers provide both technical and management advice to help families secure loans, build homes, adapt to home ownership and develop strong communities. Each Volunteer builds a demonstration house during his or her first year of service as a tool of instruction. In 1994, 50 low-income families were assisted in the completion of houses with access to electricity and water.

A Volunteer in Malta with a background in environmental engineering is working with the Ministry for the Environment to develop modern methods for waste disposal and the construction of landfills.

#### Education

Volunteers work at schools and associations for the disabled to train Tunisian special educators in teaching techniques and curriculum development. Special Education Volunteers also work with Tunisian educators, students, and families to disseminate information on the care of disabled children and the potential of the disabled population within Tunisia. One Volunteer developed a curriculum on motor, cognitive, social, emotional and behavioral skills which has been translated into Arabic for use among special educators.

Over 800 Tunisian university students were taught by Volunteers in 1994. Volunteers provide dual functions as instructors at the university level and as teacher trainers for future secondary school English teachers. Volunteers conducted two workshops for 20 secondary school teachers and participated in a 26-hour seminar on comparative literature for 150 teachers and students.

In Malta, a Volunteer is currently working at the Maltese Institute of Agriculture to develop academic curricula

and an extension service to farmers. Another Volunteer is assigned to the Institute of Health Care to help her colleagues develop health policies and procedures and fill a shortage of trained instructors. Other Volunteers are training Maltese teachers in special education. In 1994, two Malta Volunteers and five Tunisia Volunteers presented a 60-hour training module of teaching methodology, behavior management, and art education at a conference attended by Maltese psychologists, therapists, social workers, and professors.

### **Youth Development**

Because such a large percentage of the population of Tunisia is under the age of 24, Peace Corps has initiated a pilot-program in collaboration with the Ministry of Youth and Childhood to improve the existing network of youth facilities, with a special emphasis on girls and unemployed males.

Population: 3,949,000

### Peace Corps Country Overview:

Turkmenistan's transition and integration into the international community has proved especially difficult since the country has virtually no history as an independent country, and its people have no experience with self-government. The government of Turkmenistan asked for Peace Corps' assistance in developing the English education program in the secondary schools, the pedagogical institutes, and universities throughout the country. The Ministry of Health has requested Volunteers to serve as nurses and health educators to assist the Turkmen medical community's efforts to modernize their profession.

### Resources:

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Turkmenistan			
Trainees	49	46	28
Average # of Volunteers	23	44	50
Program Funds (\$000)	1,268	1,231	1,232

### Peace Corps Program by Sector:

#### Education

Volunteers work in secondary schools and institutes of higher education teaching English as a Foreign Language and introducing communicative methodologies. The Volunteers introduce cooperative learning strategies and work with students to develop critical thinking skills, including analysis, problem solving, and decision making. Volunteers and their counterparts develop teacher training workshops and create English language resource centers. Secondary projects include establishing summer English camps, English clubs and English classes for adults. Over 1400 students have been taught. Volunteers also teach English at health care facilities and environmental organizations. The Volunteers teach oral communication skills by introducing adult education techniques and cooperative learning strategies using relevant content. Volunteers also develop teacher training workshops and create resource centers with particular emphasis on health care and the environment.

A Volunteer has been working at the Turkmenistan National Library and has been able to acquire 70 reference books in English. Another Volunteer is working at an historical museum translating signs, directions, and exhibit displays into English.

#### Health

Volunteers are working with nurses and doctors to develop practicum training and continuing education programs to assist in the modernization of nurses and midwives' clinical skills as well as their philosophical approaches to patient care. Volunteers also are introducing contemporary techniques in pre- and post-natal care, labor and delivery practices, infant and well baby care, sick child care, breast feeding, and nutritional practices. Volunteers also teach patient education skills, family planning techniques, and basic infection control.

Population: 52,141,000

Annual Per Capita Income: \$1,910

### Peace Corps Country Overview:

Lacking institutional and individual resources, Ukraine faces enormous challenges as it continues its transition to a free market. Ukrainian entrepreneurs need training and technical assistance in basic business skills, such as marketing, management, and accounting. Ukraine's education system also lacks resources and wide access to quality English language programs.

### Resources:

Ukraine	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	41	76	77
Average # of Volunteers	70	84	120
Program Funds (\$000)	1,766	2,277	2,439

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are providing training and advice in business skills, technical expertise and free market activities to Ukrainian entrepreneurs. One Volunteer helped create the most extensive guidebook to Kiev, which Ukrainian embassies and the national airline are both using regularly. Another Volunteer developed and implemented a Total Quality Management Reform Program for the Lviv City Administration and Mayor's Office.

#### Education

Volunteers are working to expand and improve the quality of English language instruction in Ukraine. Volunteers teach English in schools and provide Ukrainian educators with opportunities to improve their fluency and gain exposure to innovative teaching techniques. One group of Volunteers designed and published teachers resource manuals while teaching at the primary, secondary, and higher education level. Three Volunteers helped start a community English Resource Center in Ternopil and in Vinnytsa. Cherkassy Pedagogical Institute students have been working with one Volunteer to develop an English language newspaper. A teachers' manual containing procedures for language teaching techniques and activities was completed by a Volunteer at Dnipropetrovsk Pedagogical School.

Population: 21,969,000  
 Annual Per Capita Income: \$960  
 Number of years Peace Corps in Country: 3

### Peace Corps Country Overview:

Volunteers in Uzbekistan are working to support Uzbekistan's difficult transition to a free market economy and expand English language programs. A government priority in this process of renewal and redirection is the education system. Uzbekistan's per capita income ranks among the lowest of the former Soviet republics, with almost 50% of the population living at the official poverty level. Small businesses are hampered by a lack of progress on privatization legislation, changing laws that affect small business, lack of commercial credit, raw materials, supplies and equipment, and lack of information about and expertise in operating a business within a free market economy. Volunteers are working with the Uzbekistan Privatization Committee to help in these areas and with the privatization process.

### Resources:

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Uzbekistan			
Trainees	30	28	29
Average # of Volunteers	29	28	38
Program Funds (\$000)	1,135	1,132	1,199

### Peace Corps Program by Sector:

#### Economic Development

Volunteers are supporting Uzbekistan's transition to free market economic activities by advising and promoting small businesses at the micro level, while advising government officials on privatization activities at the macro level. Volunteers are helping Uzbekistan's privatization process and helping to organize auctions of state-owned companies. Other Volunteers are working with women's business organizations, advising the organizations as well as individual businesswomen.

#### Education

One of the goals of the English Education and Resource Development Program is to increase the availability of quality English language instruction to secondary schools and university students by providing modern teaching techniques and methodologies. Volunteers also assist the Ministries of Public and Higher Education in their efforts to develop language and technical skills, and in their acquisition and creation of pedagogical resources. Volunteers also assist colleges in creating and developing their own forums of networking and information exchange. These include a national Uzbek chapter of the professional organization of Teachers of English to Speakers of Other Languages and a newsletter with national distribution.

## Regional Overview

The signing of the Declaration of Principles and Plan of Action at the Summit of the Americas in December 1994 was the culmination of a watershed year in inter-American relations. For the first time, every government in the hemisphere, except Cuba, made a series of commitments that hold great promise for the people of the Americas:

- To preserve and strengthen the community of democracies in the Americas;
- To promote prosperity through economic integration and free trade;
- To eradicate poverty and discrimination in our hemisphere; and
- To guarantee sustainable development and conserve our natural environment for future generations.

President Clinton called upon his fellow heads of government at the Summit to join together to "create a partnership for prosperity where freedom and trade and economic opportunity become the common property of the people of the Americas." Peace Corps is poised to support this hemispheric effort and play an even greater role in helping the 23 nations in which Volunteers will serve.

## Programming Considerations

The 1990s have been a period of careful and selective growth for Peace Corps programs in the Inter-American region. Since 1990, Peace Corps has re-entered and remains in Bolivia, Chile, Uruguay, Nicaragua, Panama, and El Salvador, and intends to establish programs in Guyana and Suriname in 1995. During FY 1994, an average of 1,610 Volunteers were serving in the region.

*Education has long been the cornerstone of Peace Corps development projects, and senior Volunteers bring with them a lifetime's knowledge to share.*

Of the many lessons that Peace Corps has learned over the last three decades, perhaps the most basic is that development proceeds on its own schedule, and external assistance can only be as effective as a country's domestic context permits. But the spread of democratic institutions and the remarkable potential for economic growth as envisioned at the Summit of the Americas give Peace Corps the opportunity to make its most effective contribution yet to the hemisphere. With its long history in the region, Peace Corps is uniquely situated to help host countries address their development objectives by placing a large cadre of trained Volunteers at the grassroots level to live and work in rural and urban communities.

Volunteers work with these communities to help them respond to their needs in education, health, agriculture, environmental protection, small business development, and urban development. In the process, Volunteers

help the citizens of these communities build and strengthen the representative institutions through which they seek to improve their lives and participate in the development of their countries. At the same time, Volunteers play a crucial role in strengthening the people-to-people bonds that are one of the foundations of our hemispheric community, and which complement the economic ties that are built through our trade relationships.

Recognizing the scarcity of budget resources, the Inter-American region continues to manage each of its programs to ensure that Volunteers can respond to changing needs and realities in the most cost-effective manner. Peace Corps is reviewing its presence in every Inter-American country with a view toward possibly closing some that have reached relatively high levels of development and are able to meet the basic needs of their citizens on their own. One of the first steps was to close Peace Corps' program in Argentina at the end of FY 1994.

The Inter-American region is also carefully reviewing its country programming to ensure that existing projects are making lasting contributions to grassroots development, and are not proceeding merely out of inertia. Peace Corps expects that this will permit the elimination or consolidation of some program sectors in some countries, and lead to savings in staff and program costs. For example, Peace Corps is closing its education sector in Costa Rica since the country is able to support education on its own.

In addition, the Inter-American region is challenging every post to increase administrative efficiency. Finally, it is a priority of the Inter-American region to include women and youth in the design, implementation, and evaluation of all our projects.

## Sector Summaries

### Agriculture

Self-sufficiency in the production of food is essential to the basic economies of the region. Small farmers who are limited to subsistence production are still common in many Inter-American countries. Volunteers are working in a variety of agriculture projects that are designed to increase food production and family farm incomes, as well as to reduce malnutrition in local communities. Many of these activities relate directly to Peace Corps' efforts in the environment sector, and Volunteers often coordinate activities to enhance their impact.

### Economic Development

The emerging market economies of Latin America include many small and micro-businesses existing on the margins of the current economic growth in the region. They require assistance to develop, expand, and provide new sources of income and employment. Broad-based development of small business also helps to sustain and strengthen the fragile democratic political systems of the region. Volunteers provide a range of technical assistance to individual entrepreneurs and organizations that provide credit and training to small businesses. The overall target of their work is to increase access of small businesses to urban and foreign markets, and to increase income and job opportunities throughout the region.

### Education

Strengthening education systems as a means to encourage economic development remains one of Peace Corps' primary objectives in the region. Many Inter-American countries do not have sufficient numbers of teachers who are trained in advanced teaching methods, and rural schools often suffer from a lack of modern education materials and equipment. Volunteers are teaching English, science, and mathematics in individual classrooms, training teachers in new education methods, and improving the infrastructure of schools. They are also working to increase the quality of educational services for illiterate children and adults, students with learning disabilities, and the technically untrained.

### Environment

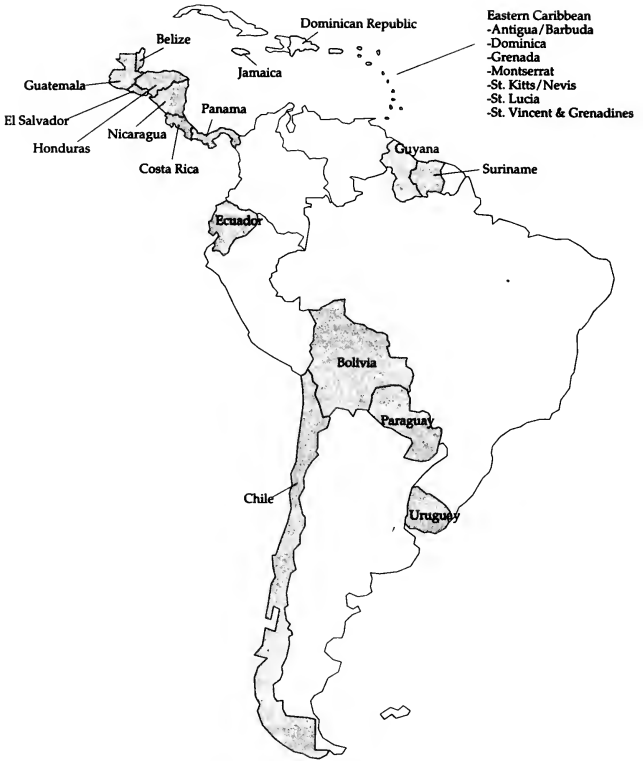

While protection of the environment is a global issue, it is of particular importance in the Inter-American region. Unfortunately, too many people in the region derive their daily sustenance from "slash-and-burn" agricultural practices, the misuse or overuse of pesticides, or the hunting of endangered species. Volunteers working in this sector strive to reduce environmental degradation and increase conservation of valuable land, rain forests, and water resources. Volunteers work to educate people about the impact that some economic and agricultural practices have on the environment, and how to alter those practices where possible to reap greater benefits for themselves and the environment.

### Health

Access to basic preventive health care remains a serious problem in many Inter-American countries, particularly in poor rural areas. Of particular concern throughout the region is the deterioration of water and sanitation services. Cholera, which has been absent from the region for years, is returning to some areas. Volunteer activities are also focusing on reducing infant mortality due to infectious and parasitic diseases.

### Urban Development

Due to the rapid growth of urban areas in many Inter-American countries, local governments are facing mounting pressures to expand and improve basic services for urban populations. Peace Corps has placed a new focus on this important issue: Volunteers are supporting community efforts to expand and improve urban services, such as access to housing, shelter, water, and sanitation, as well as to strengthen the ability of local governments to plan, implement, and manage these and other services.

### Peace Corps Country Overview:

Currently, 82% of the youth in Belize are defined as "at-risk," and 65% of the population lives in absolute poverty. With 65% of the population under 24 and only 18% of youth aged 10-19 enrolled in secondary institutions, there is a high number of unemployable youth. The rural primary school system in Belize also suffers from overcrowding or non-existent facilities and a lack of books and supplies. Only a small percentage of rural teachers have professional training, and many have little more than a high school education. An estimated 25,000 Hispanic immigrants, mainly landless farmers, have immigrated to Belize in the past ten years, placing new strains on Belizean communities and institutions.

Sixty percent of Belize's land is covered by a range of forest eco-systems that house many endangered species. In addition, there is a magnificent coastal and marine ecosystem, whose core is the barrier reef. Sound management will be required to maintain these natural resources.

### Resources:

Belize	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	32	33	37
Average # of Volunteers	41	45	53
Program Funds (\$000)	1,241	1,260	1,344

### Peace Corps Program by Sector:

#### Education/Youth Development

The youth enhancement services project is designed to improve the social and economic prospects of Belizean youth aged 12 to 24. The Center for Employment Training in Belize City was established in 1992 to increase the vocational employment of youth in urban cities and to supply relevant economic sectors with skilled labor. Volunteers provide training in a variety of subjects including auto-mechanics, construction, welding, hospitality management, and electronics. In 1994, 300 students completed courses and acquired entry-level competency in their trade area and over 50% of students completing their courses are currently employed in their specialty area.

More than 90% of Belizean schools do not have an organized physical education (PE) program. No established curricula is available, and teachers who lack training are often not motivated to teach. In addition, facilities and equipment are usually inadequate or non-existent. Sports for Youth Volunteers provide PE teacher training to primary and secondary school teachers and construction Volunteers assist with the building and reparation of schools.

A faculty exchange program was established between the Metro College in Omaha, NE and the Center for Employment Training in Belize City in 1994. To facilitate the development of PE programs in Belize, seven sports libraries equipped with materials and sports equipment were opened in 1994; one in each district. Due to close coordination between Peace Corps and the National Sports Council, and the equipment donations of

the Kellogg Foundation, these libraries are fully operational. Another Volunteer organized a week long "Hike and Bike for the Rainforest" Project which involved the participation of 18 youth-at-risk, including 6 girls.

To facilitate the integration of the nearly 35,000 Hispanic immigrants, Volunteers promote self-help activities including income generating projects, leadership training, and organizational development in newly settled communities. Volunteers also work to improve the quality of health and education available in communities affected by the arrival of immigrants. To address the problem of overcrowded schools and untrained teachers, Volunteers provide teacher training workshops to introduce teaching techniques and materials.

Two Volunteers working in a remote village assisted with the establishment of a 6,000 acre medicinal plant reserve "Terra Nova." One Volunteer provided the start-up seeds for a group of youth interested in planting. Their success resulted in the development of four roadside produce stands. Their stands have become "official" bus stops receiving the business of numerous travelers passing along that road.

### **Environment**

To protect Belize's natural resources, Volunteers promote organizational development, reinforce existing institutions, and improve environmental curricula in schools. Volunteers work with the Belize Audubon Society in the management of seven of the country's protected areas. Volunteers also assist in the monitoring of the protected areas and in developing plans for land use in visitors centers and National Parks.

In 1994, Volunteers staged a two-day environmental public awareness campaign highlighting the importance of safe pesticide use. The display was visited by about 1,000 people. Another Volunteer completed two manuals for young adults on the topics of endangered species and water resources.

Population: 7,064,000

Annual Per Capita Income: \$770

Number of Years Peace Corps in Country: 13

### Peace Corps Country Overview:

Bolivia bears the distinction of being one of the least developed countries in South America. Eighty-five percent of the rural population live in absolute poverty and are unable to satisfy their basic needs for a minimal living standard. Rural Bolivia suffers from the highest infant and under-five mortality rates in Latin America, and the average life expectancy at birth is among the lowest in South America. Agriculture, the economic mainstay of the average Bolivian family, remains labor-intensive. Haphazard conversion of forests to agriculture and cattle ranching, uncontrolled logging, and problems associated with rapid urban growth threaten the environment. More than half of the population is self-employed, mostly as members of family enterprises, and only 39% of the population is employed in the formal economy. Limited access to economic opportunities perpetuates poverty. Development throughout the country is hampered by a lack of mechanization, investment, and poor infrastructure. Peace Corps returned to Bolivia in 1990, following an almost 20 year absence. Volunteers are working with national agencies as well as with private volunteer organizations in projects in agriculture, water sanitation, forestry, small business development, and cooperative promotion.

### Resources:

Bolivia	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	48	67	66
Average # of Volunteers	85	75	98
Program Funds (\$000)	2,194	2,220	2,560

### Peace Corps Program by Sector:

#### Agriculture

Through training, technical assistance, and techniques aimed at increasing community participation, Volunteers assist small farmers and their families to improve agricultural production, enhance family nutrition, and increase income while taking into consideration the preservation of natural resources, such as land and water.

A first-year agriculture extension Volunteer is working with farmers in the community on demonstration plots to plant different varieties of corn and monitor their growth. Improved methods of production are shared with community members through a Spanish agriculture bulletin developed by the Volunteer.

#### Economic Development

Volunteers are working with their Bolivian counterparts to develop business management skills by improving production and services and strengthening marketing channels to create employment opportunities for low income people in both rural and urban areas. Volunteers have been assigned to rural agricultural associations, mothers' clubs, artisan groups, and youth development organizations. Through development of better business skills by the individuals and groups with whom Volunteers are working, microenterprises and cooperatives become more productive.

A Volunteer established a bakery workshop to teach young children living in an orphanage the skills needed to run a business. They learned not only how to bake bread but also received instruction in basic inventory and accounting. The children came to understand the importance of self-discipline in the workplace, while increasing their independence and self esteem. Eighty percent of the salaries they earn is being saved for when they leave the orphanage. Two Volunteers published a community training and credit manual for women. Some Bolivian artisans who have followed the techniques outlined in the manual for the marketing and sales of their products have returned to their communities to emphasize the importance of quality, timely production, and overall customer satisfaction.

### Environment

Soil conservation practices, watershed management, and youth education are the primary focus of this project. Volunteers provide an integrated approach to the sustainable use of Bolivia's soil and water resources. The project has been very effective in providing conservation awareness among Bolivian youth by introducing the importance of conservation and re-vegetation for community well being into school curricula. Volunteers have successfully motivated school children to start their own gardens.

One Volunteer, teaching environmental education in the primary school of a remote village, successfully solicited the help of her students' parents to build a fence around a tree planting project to protect the seedlings from stray animals. As a result of their involvement in the construction of the fence, families developed a sense of ownership and concern for the success of the project. Other Volunteers have taught farmers to make cement rings for use in well construction and developed six other types of wells using locally available materials.

### Health

Water is a scarce resource in the High Valley regions of Bolivia. Although government and donor organizations have financed projects for the construction of water systems, very little effort and money has been dedicated to train people to effectively manage systems after the project is completed. Volunteers are addressing this need by working with water committees to manage and administer water systems. They are also involved in the construction, maintenance, and operation of water systems and sanitary latrines.

A Volunteer helped one community design and construct a gravity-fed water system and trained community members to effectively address their water and sanitation needs. Another Volunteer developed a puppet show for the community to teach the basics of sanitary education and modern latrine construction. The method was well received by the community, and the Volunteer's Bolivian counterpart adopted the technique after learning the value of this interactive teaching method.

Population: 13,813,000  
 Annual Per Capita Income: \$3,070  
 Number of Years Peace Corps in Country: 24

### Peace Corps Country Overview:

Although Chile is recognized as an "advanced developing country," 40% of the population lives below the poverty line, and approximately 1.2 million people are living in absolute poverty. Reforms have brought a free market system, decreased the role of the government, and privatized key services such as electricity, communications, education, water supply, and health which were previously provided by the government. However, the lack of education and planning experience on the part of local officials, particularly those representing small, poor, and rural municipalities, are obstacles to meeting citizen expectations in the delivery of basic services. A rapid growth in the labor force has resulted in environmental problems, such as heavy air pollution, water contamination, uncontrolled solid waste dumping, and ecosystem degradation. While all of Chile's socioeconomic levels are effected by environmental degradation, the poor are especially impacted. Volunteers are working projects on environment, small business assistance, and municipal management to collaborate with the new government's top priorities for the elimination of absolute poverty, improvements in health and education, further decentralization of government, and continued economic growth.

### Resources:

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Chile

Average # of Volunteers	51	62	64
Program Funds (\$000)	1,741	1,898	2,056

### Peace Corps Program by Sector:

#### Economic Development

As many as 50% of Chilean workers are employed in enterprises with less than 10 employees. Many of these small businesses have low productivity, low managerial capacity, outdated technology, inadequate market penetration, and little access to credit. Volunteers work with government and private agencies to give technical assistance to small business entrepreneurs to improve their credit and beneficiary tracking systems, marketing design, credit management, productivity, and basic accounting.

One Volunteer, working with a non-governmental organization that helps local producers export their handicrafts, designed and implemented a program to register artisans, track purchase orders, maintain inventories, and manage individual accounts. The Volunteer also developed an extensive catalogue of crafts for distribution to potential clients. Sales increased by 400%, benefiting over 1,500 handicraft producers. Another Volunteer developed business courses to provide individual assistance in marketing, cost analysis, accounting, and business management to assist microenterprises assess their credit needs. Improved services and follow-up technical assistance to clients has resulted in more effective loan management and improved operation of the cooperative.

Because municipal governments are responsible for providing basic services to their citizens, Volunteers provide technical assistance and training in local economic development, environmental sanitation, administration of primary health care and education, public housing, and basic infrastructure. Working with a national program

that provides assistance to women who are heads of households, one Volunteer is involved with coordinating support and training to Chilean women on issues concerning health, employment, housing, adult education, and legal assistance.

### **Environment**

The increasing magnitude of environmental problems poses a serious threat to the health and quality of life in Chile. Among these problems are solid and liquid waste disposal, control of industrial waste, and protection of Chile's natural resources such as forests, marine life, water, and soil. Many of the government and private agencies with which Volunteers work lack the experienced personnel needed to address and resolve their country's problems. The main technical areas of this broad-based project are: teaching, research, environmental education, parks and wildlife, and environmental policy.

A Volunteer has implemented a training program that focuses on Chile's new environmental laws. This Volunteer helped organize and implement joint solid waste and recycling projects, in collaboration with the municipality, to improve environmental conditions. The Volunteer also helped design and implement environmental projects in local schools.

A Volunteer is working with the Chilean National Forest Service and the Ministry of Education to implement a training program aimed at developing environmental monitors among primary school teachers. These teachers receive training on incorporating environmental issues in the school curriculum at the primary level. This pilot project promotes student and community awareness to develop solutions to the region's environmental problems.

 Annual Per Capita Income: \$2,160  
 Number of Years Peace Corps in Country: 32

### Peace Corps Country Overview:

The development of new small businesses and the training of micro-entrepreneurs is a major priority for the Costa Rican Government. Of the more than 100,000 micro-entrepreneurs currently operating in Costa Rica, some 40% have been in business for less than five years and generally lack the skills and training to effectively compete. Major international environmental organizations have identified Costa Rica as a high-priority protection area because of its natural diversity. Despite the increase in environmental awareness within Costa Rica, some 30% of the country has been deforested during the past 25 years. Recent urban migration caused by industrial economic growth and tourism has led to urban overcrowding and the rapid expansion of slum zones around Costa Rica's largest cities and towns. The Costa Rican government recently estimated that some 350,000 children and adolescents under 16 years of age live below the poverty line in Costa Rica's urban areas. Volunteers have adapted their projects to address Costa Rica's most urgent developmental needs among its poorest urban and rural communities.

### Resources:

Costa Rica	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	73	76	47
Average # of Volunteers	119	109	120
Program Funds (\$000)	2,085	1,937	1,602

### Peace Corps Program by Sector:

#### Economic Development

Volunteers work directly with micro entrepreneurs, providing technical assistance in marketing, record keeping, financial planning and management, quality control, and the use of credit to increase small business opportunities and income. Volunteers also teach basic business concepts and skills to elementary and vocational school students. In some cases, Volunteers train inexperienced cooperative and non-governmental organization staffs in personnel management, credit management, marketing, budgeting, and provision of customer services to their small business clientele. As a result, last year almost 150 women began new income-generation projects, 450 grade school children participated in basic business education classes, and over 20 small business support organizations implemented new systems and services. In the fall of 1995, the project will be broadened to include a new basic business education component which will provide teacher training in business concepts to teachers at Costa Rica's technical high schools.

Volunteers also work with at-risk urban youths by offering improved education and opportunities for social development. Volunteer activities include informal counseling and organizing and promoting recreational, educational, employment opportunities, and crime prevention programs.

Urban Youth Volunteers are working with at-risk youths in marginal urban areas of the Caribbean city of Limón. During their first five months of service, these Volunteers developed a training program for the caretaker "aunts" who manage the children's shelters of the Costa Rican Children's Welfare Department. These efforts

were enthusiastically received by the host agency and are now being tested for possible implementation nationwide.

### Education

Volunteers are working on problems in Costa Rica's education system through three projects: adult education, community education, and integrated child development. Through the work of Volunteers in FY 1994, over 150 previously illiterate adults passed functional literacy tests, and more than 130 others passed middle school and high school equivalency exams. In addition, almost 20 new adult education classes began, and 80 teachers are now using improved adult education practices.

The community education project helps rural communities to identify and meet local development needs in basic education. Volunteers work with community members to establish pre-school programs, kindergartens, youth groups, adult education programs, income generation activities for women, and local infrastructure projects. The integrated child development project, by focusing on improving children's readiness for school, aims to reduce the number of primary school drop-outs, decrease failure rates, and identify learning problems. Volunteers train parents, teachers, and community members in early childhood education activities.

One Volunteer provided organizational support and training opportunities for a group of women artists in a remote rural community who wanted to market their "primitive genre" paintings for income generation. The Volunteer arranged for the women to receive art lessons and refine their skills, to obtain basic business skills training, and to develop markets for their art. The women now market their art internationally.

### Environment

The environmental education project was redesigned last year to increase the awareness of school children, teachers, and community members on sustainable utilization of natural resources and the prevention and resolution of environmental problems. Volunteer activities include model teaching and coaching, as well as organizing workshops and seminars to train teachers in incorporating environmental topics into their regular curricula. Volunteers design education campaigns on the management and control of pesticides, garbage, water and air pollution, and deforestation using various media (radio, press, posters, seminars, etc.). Volunteers developed an environmental-education curriculum guide that was used as a training and teaching tool for approximately 4,000 primary and secondary school students and over 1,200 teachers across Costa Rica. This curriculum has been adopted by the Ministry of Education as the official environmental education curriculum.

The natural resource management project is designed to improve environmental conditions in small rural communities in Costa Rica by concentrating on renewable natural resources. Volunteers in this program assist farmers and other community members in basic resource management and conservation, including agroforestry, soil conservation, watershed management, pesticide safety, and waste management. During FY 1994, farmers, school children, and other community members planted over 320,000 trees. More than 700 Costa Ricans received training from Volunteers on the implementation of new, improved practices of pesticide safety.

One Volunteer coordinated the writing of a script and music for a very successful school play dealing with environmental topics. The play won several local and regional theatrical contests. Over 100 students in the community participated in the play, and a multinational pineapple company donated tree seedlings to be given to each participating family.

Population: 7,447,000  
 Annual Per Capita Income: \$1,080  
 Number of Years Peace Corps in Country: 32

### Peace Corps Country Overview:

The Dominican Republic remains the second poorest country in the Caribbean and the sixth poorest in the Hemisphere. Seventy percent of the Dominican population is below the line of poverty. Rapid urbanization has transformed the country from 70% rural to 70% urban in one generation. The microenterprise sector accounts for 23% of GDP and is often the recourse for the poor and women who have limited opportunities and face discrimination in the formal sector. Only 60% of the population has access to electrical power. Land degradation is exacerbated by slash and burn agriculture and widespread use of fuel-wood and charcoal to meet domestic energy needs. This contributes to the high degree of soil erosion, destruction of watersheds, decreased flow of streams and rivers, and decreased agricultural productivity.

### Resources:

	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Dominican Republic Trainees	94	82	84
Average # of Volunteers	146	149	142
Program Funds (\$000)	2,704	2,527	2,548

### Peace Corps Program by Sector:

#### Agriculture

Volunteers work to improve the technical knowledge of small farmers and encourage more efficient, productive, and sustainable agricultural management practices. Two Volunteers developed a year-long training program consisting of field visits, soil and water conservation practices, and agricultural techniques such as intercropping, pest management control, and organic composting. Another Volunteer is working with the Secretariat of Agriculture to develop an extension program for 12 communities in the Samana Bay region.

Several Volunteers in the Dominican Republic are actively promoting the proven natural pesticide extracted from the seeds of the Neem tree. They coordinate with the Secretariat of Agriculture, local non-governmental organizations, and the German Development Agency to establish local nurseries, educate Dominicans on the benefits of Neem products, prepare demonstration plots, and coordinate field days. Last year, more than 2,000 Neem trees were planted.

#### Economic Development

The micro enterprise development Volunteers work to increase the availability of credit and improve the quality of management in 30 organizations serving small business entrepreneurs in rural and marginal urban areas. Volunteers are assigned primarily to savings and loan cooperatives and provide technical assistance so that the cooperatives can effectively serve their membership on a sustained basis. Volunteers work predominantly at the organizational level to improve business institutions. They provide technical assistance that focuses on appropriate managerial procedures or systems in the areas of finance, accounting and controls, credit and collections, planning, human resources and group processes, marketing, and computerization. One Volunteer designed three Spanish-language operations manuals to improve the public perception of a local credit

cooperative, increase administrative control over employees, and increase the transparency of financial operations.

### Education

The community education project works to improve primary education in the Dominican Republic through the implementation of simple, easily replicable, low-cost programs, such as development and distribution of locally-produced materials, on-the-job teacher training, improvement of physical facilities, and the start-up and strengthening of parent associations. Volunteers are assigned to the Ministry of Education and assist Parent/Teacher Associations to plan, oversee, and improve the physical infrastructure and human resources of the educational system and organize training workshops to provide new teaching practices to teachers.

Working with Volunteers, 15 Parent/Teacher Associations and community groups planned, implemented, and evaluated infrastructure improvement projects including latrine construction projects, school repair, annexation, and construction projects. Twenty-eight new schools were incorporated into the joint Ministry of Education/Peace Corps resource center program. Volunteers have delivered more than 70 teacher training courses to help train the new schools' teachers in the production and use of didactic materials. Due to the success of the pilot resource centers and training program, the Ministry of Education has requested Peace Corps' assistance in opening up an additional 10 centers and is currently making plans to expand the resource center program to the national level.

### Environment

Volunteers are working to reverse soil erosion and environmental degradation and strengthen awareness among Dominicans concerning proper interaction with the environment. Volunteers work with 1,000 low-income, rural farmers in four geographic areas of the Dominican Republic to promote reforestation activities and the introduction of agroforestry and soil conservation techniques. In education, Volunteers assist the Ministry of Education to develop and implement environmental education programs which will train teachers on how to incorporate environmental concepts into their education curriculum. Agro-forestry Volunteers also assist five Dominican organizations to improve their capabilities to train small farmers in appropriate soil conservation and agroforestry practices according to specific needs, including seedling production, establishment of fruit tree production, multiple-use tree plots, live and dead barriers, contour planting, and alley cropping.

Volunteers helped 150 small farmers establish multiple-use wood tree plots on their lands. The project entailed establishing five regional nurseries, transplanting more than 70,000 wood and fruit trees, and incorporating appropriate soil conservation practices on the farmers' lands. Another Volunteer developed an environmental school manual to train school teachers in environmental education themes. The manual has been used to train more than 500 school teachers.

### Health

Through projects that focus on children's health and water sanitation, Volunteers work to reduce the risk of infant mortality in low-income families and institutionalize the management of potable water systems. Thirteen Volunteers offered training programs to more than 500 mothers on breast feeding, oral re-hydration therapy, growth monitoring, and acute respiratory infection, and 90 health care workers received training in delivering preventive health care interventions. Volunteers are also working to reduce the spread of HIV/AIDS by assisting in the distribution of education materials.

Population: N/A

Annual Per Capita Income: N/A

Number of Years Peace Corps in Country: 33

#### Peace Corps Country Overview:

The Peace Corps Eastern Caribbean program presently serves seven island nations, Antigua, St. Kitts/Nevis, St. Vincent, Dominica, St. Lucia, Montserrat and Grenada, with Volunteers spanning a 350 mile archipelago. These island nations share many similarities. Economically, they rely on agriculture, mainly bananas, sugar and spices, with tourism as an important industry, particularly in Antigua, St. Lucia, St. Kitts, and Grenada. The education system has not kept up with the expanding population. Lack of trained teachers and classroom space prohibit primary school graduates entrance to secondary levels, and less than 50% of eligible children attend secondary school. Teachers, particularly those in primary grades, are not well trained, and a high teacher turnover rate exists because of lack of training and low salaries. Volunteers are focusing their efforts on youth services, vocational education, and counseling, especially in the area of substance abuse.

#### Resources:

Average # of Volunteers	113	131	134
Program Funds (\$000)	3,268	3,372	3,494

#### Peace Corps Programs by Sector

##### Education

Volunteers work as resource teachers in the areas of physical education, language arts, math, science, and art. These activities are taking place at the primary, secondary and higher levels of education. In the science and mathematics secondary school education project, Volunteers on St. Vincent and the Grenadines currently are involved in classroom teaching, teacher training, and establishing local resource centers for science and mathematics.

Nineteen Volunteers on Grenada developed a new curriculum for teaching language arts. Over the life of the project, additional community libraries will be established in all seven parishes of Grenada. Two Volunteers work in the St. Vincent language arts project to develop reading and writing skills among primary school children and to improve language arts instruction among primary school teachers.

##### Environment

Volunteers work as environmental education resource teachers, community-based environmental educators, foresters, and community resource persons working with communities to identify environment-based economic development opportunities. In Dominica, Volunteers organize field trips to allow students the opportunity to become acquainted with local fauna and flora and gain first hand experience with local practices that result in pollution and soil erosion. One Volunteer organized a field trip that took some of her students to the Archbold Tropical Research Center—a local facility that is managed by a consortium of US universities and is considered a premier site for the study of the rain forest.

**Health**

Volunteers work to improve the blood donation system for one island's health department, train first aid workers, provide direct nursing care at district health centers, conduct health education programs, and work to upgrade St. Lucia's rehabilitative services. Through the blood services project on St. Lucia, Volunteers are helping to increase the quantity and quality of blood to approximately 5,000 units per year and to upgrade blood quality control mechanisms. The first aid education project, which is under the auspices of the St. Lucia Red Cross, is designed to reduce morbidity and mortality at the immediate site of an accident. Four Volunteers are now assigned to the project, working in such areas as emergency firstaid, parenting and child health, and first aid for children. Volunteers have given HIV/AIDS education seminars to more than 500 people.

Population: 11,258,000

Annual Per Capita Income: \$1,170

Number of Years Peace Corps in Country: 33

### Peace Corps Country Overview:

Ecuador is a poor country with a weak institutional structure, and limited access to basic services. The standard of living is poor, with a high infant mortality rate (up to 60 per 1000 live births) and minimal per capita income. The emphasis of Peace Corps development work has been in rural areas with a focus on agriculture, reforestation, environmental education, and health. Working with a broad spectrum of Ecuadorians—teachers, farmers, parents, and youth—Volunteers provide technical assistance and training to improve the health and well-being of the poor and to maximize the use of scarce resources.

### Resources:

Ecuador	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	106	104	103
Average # of Volunteers	177	187	182
Program Funds (\$000)	3,330	3,358	3,386

### Peace Corps Program by Sector:

#### Agriculture

Volunteers are working to introduce new methods that increase crop production and income for farmers and ranchers. Volunteer efforts are predominantly directed to the poor indigenous populations and include planting fruit plantations and non-traditional vegetables, selling products directly to customers, and using organic fertilizers. Volunteers have presented alternatives to cattlemen, sheep ranchers, and agencies through direct technical assistance and the use of training and demonstration centers.

One Volunteer has promoted and established at least 40 small fruit plantations and vegetable gardens with the use of organic fertilizers and worms. He has also organized several field days, conferences, workshops, and visits to experimental centers with small farmers on agricultural issues and food processing issues.

Another Volunteer initiated two successful programs which benefited the small cattle-ranchers. She was able to initiate and complete a project to open a veterinarian supply store, which lowered prices and improved access to essential veterinarian supplies for more than 100 small ranchers in the area. Another Volunteer helped initiate a genetic improvement program through the acquisition of 50 imported Rambouillet rams from the United States. These rams will serve as a genetic base for obtaining 2,500 improved breeding animals to improve the production of wool and meat in Ecuador.

#### Economic Development

Since 1982 Ecuador has experienced a severe economic crisis: there are high rates of unemployment and under-employment, inflation, external debt, and decreased purchasing power. Volunteer activities in this sector are targeted at people living at or near the poverty level and designed to support them through technical assistance. Volunteers help develop lending programs, conduct technical and administrative training for individuals and organizations, and assist individuals in the creation of new businesses. One Volunteer is working with

approximately 300 women who produce hand-woven straw hats. His assistance is aimed at training the women in accounting and inventory skills, quality control, and marketing strategies.

### Education

Given the limited economic and human resources available to the Ministry of Education, Volunteers work with Ecuadorian educators to increase the quantity and quality of special education services to deaf and mentally and physically challenged students to increase their living skills, economic independence, and community acceptance. Volunteers assist in the development of strong organizations, such as clubs and associations of deaf individuals.

One Volunteer was assigned to work as a teacher trainer/consultant at the Institute for the Deaf and Blind. Her efforts have led to improvements in teacher performance. Teachers are now conducting appropriate diagnosis of students, writing appropriate individual educational plans, and evaluating results.

### Environment

Working with non-governmental organizations in Ecuador, Volunteers are implementing projects aimed at improving environmental education and the restoration and conservation of natural resources. These projects try to implement economically and ecologically-sound projects, such as agroforestry, sustainable management of biological resources, and urban forestry. The purpose of this project is to restore, manage, or protect trees, forests, natural areas, and urban vegetation in at least 60 rural and urban communities so that these resources will be available on a sustainable basis. With the leadership of one Volunteer, a new protected area was created in the Province of Esmeraldas.

### Health

Respiratory illnesses, parasites, dehydration caused by diarrhea, and malnutrition are the leading causes of death for children under the age of five in Ecuador. The rural health project has approximately 30 Volunteers assigned to work in clinics in communities where currently no other national or international development organization is addressing the population's health needs. Rural health nurses and extensionists provide health education to improve hygiene practices, expand nutritional meals, and increase the use of oral re-hydration treatment solutions. Visiting five households a day, Volunteers identify and register families with children under the age of five. This year, mothers of over 2,000 children have received "Road to Health" growth monitoring charts and are able to understand and interpret the growth monitoring curve of their children. To promote better water and sanitation, Volunteers are working on the construction of new water and latrine systems in the rural areas.

Three Volunteers organized a one-day symposium on HIV/AIDS prevention for 110 women. The event brought together the Ministry of Health, the Pan-American Health Organization, a national pro-family organization, and non-governmental organizations. Another Volunteer worked as a technical consultant in the re-design and construction of potable water systems, latrines, and local schools. Approximately 1,000 rural families benefited from this work.

Population: 5,479,000  
 Annual Per Capita Income: \$1,320  
 Number of Years Peace Corps in Country: 17

### Peace Corps Country Overview:

El Salvador is experiencing severe economic and environmental problems due to population pressures and agricultural practices. Recent estimates indicate that only 15% of the rural population has access to potable water and approximately 50% of the population does not have access to sanitation services. Peace Corps returned to El Salvador in June of 1993 after a 13-year absence. Volunteers are working with Salvadoran agencies to help rebuild communities and develop sustainable economic and environmental activities.

### Resources:

El Salvador	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	24	33	33
Average # of Volunteers	19	30	49
Program Funds (\$000)	680	863	1,023

### Peace Corps Program by Sector:

#### Economic Development

Salvadorans face a number of serious economic problems. Volunteers are assisting local community groups and cooperatives to develop income generating activities, such as the sale of artisan goods. They also help municipal governments manage development projects under the national reconstruction program and work with national and international non-governmental organizations that provide technical assistance to Salvadoran organizations. One Volunteer is working with a small community bank to provide marketing advice to women who produce food and clothing products for sale in local markets.

#### Environment

Ninety-eight percent of El Salvador's original forest has been cut, and soil erosion seriously affects 50% of the land—up to 1 inch of topsoil is lost annually. Volunteers work to increase acreage that uses sustainable agroforestry techniques, increase availability of on-farm fuel wood, and train individuals or groups on environmental related issues. Volunteers also train small scale farmers in nursery production, environmental education, rational use of pesticides, and soil conservation.

One Volunteer in Villa El Triunfo, Usulután, assigned to the Ministry of Agriculture extension program, works with individual farmers to promote the use of a plant that helps prevent soil erosion and improve soil fertility through plowing and mulch management for hillside farming.

#### Health

Access to potable water and sanitary services, especially in rural areas, is severely limited in El Salvador. Volunteers are helping communities build latrines, improve sanitary waste disposal systems, increase access to

potable water, and maintain water and sanitation systems. Volunteers also focus on educating the communities on good hygiene practices and the relationship between health and water quantity/quality.

One Volunteer's primary assignment is building latrines and water systems for individual families. His background in civil engineering also has enabled him to assist the community in building a bridge across a river which, during the rainy season, rises to a point beyond which neither people nor vehicles can pass. This prevented students and teachers from attending school in the neighboring town, and forced businesses dependent on the agriculture products from across the river to wait days for the water level to subside.

Population: 10,021,000

Annual Per Capita Income: \$1,110

Number of Years Peace Corps in Country: 32

### Peace Corps Country Overview:

According to the World Bank, 74% of Guatemala's population lives in absolute poverty. Only 41% of the population has access to running water, and only 52% has access to adequate sanitation. Guatemala also suffers from a high rate of infant and child mortality, lack of economic opportunities for its rural population, and widespread overuse of pesticides that are causing health and environmental pollution problems. Volunteers work with public and private institutions in Guatemala providing assistance through ten different projects in the agriculture, environment, health, and economic development sectors.

### Resources:

Guatemala	FY 1994 Actual	FY 1995 Estimates	FY 1996 Estimates
Trainees	118	114	113
Average # of Volunteers	210	219	206
Program Funds (\$000)	3,433	3,461	3,413

### Peace Corps Program by Sector:

#### Agriculture

Through the agriculture diversification project, Volunteers have helped farmers learn new farming techniques to increase agricultural production. In 1994, Volunteers worked on the construction of 10 green houses, where three new vegetable species were cultivated. Volunteers also helped establish more than 700 vegetable and fruit gardens which have been used for both home consumption and sale in Guatemala.

Corn and bean yields have been increased due to the use of improved seed selection technologies introduced through the seed improvement and post-harvest management project. Volunteers also have helped communities make significant reductions in their post-harvest losses by encouraging the use of cement silos. During 1994, the incomes of 60 integrated agriculture systems project participants increased by 20% due to the introduction of fish and small animals production practices.

#### Economic Development

A lack of adequate managerial skills is endemic among the small business owners in Guatemala. This has resulted in low incomes and difficulty in generating employment opportunities. Since Peace Corps' economic development project was started in Guatemala in 1988, more than 2,500 small entrepreneurs have received technical assistance training from Volunteers. One Volunteer developed a pamphlet which is currently being printed and used nationally by the Guatemalan National Cooperative Institute. Another Volunteer developed a pamphlet on accounting and administration practices, which is now being reproduced locally and used in more than twenty Guatemalan agency offices across the country.

## Environment
